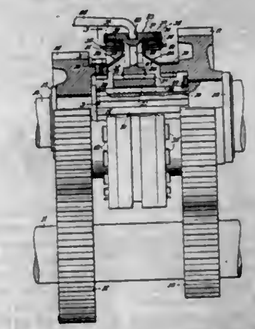
end of the stack in tiltable and rotatable relation therein together with a shank projecting from said head freely through the apertures of all of the socket members in the stack.

2,470,206
DISTILLATION OF ALCOHOLS FROM AQUEOUS MIXTURES OF ALKYL SULFATES AND SULFURIC ACID
Francis M. Archibald, Elizabeth, N. J., assignor, by mesne assignments, to Standard Oil Development Company, a corporation of Delaware
Application November 18, 1944, Serial No. 563,745
6 Claims. (Cl. 202—57)

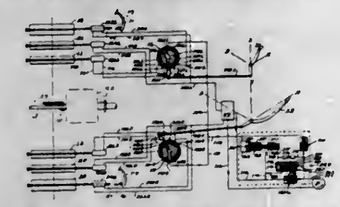


1. In a process for recovering alcohol from an aqueous mixture of alkyl sulfates and sulfuric acid, in which the acid has a concentration of about 45%, by distillation of the mixture to remove alcohol therefrom and wherein polymers, tars, and free carbon are formed as a result of the distillation, the improvement which comprises carrying out such distillation in the presence of a small amount of a hydrocarbon oil which is non-volatile under the distillation conditions and which is a flux for the polymers, carbon, tars, etc.

2,470,207
ISOBUTYLENE EXTRACTION
Bowman S. Garrett, Brooklyn, N. Y., assignor to Standard Oil Development Company, a corporation of Delaware
Application April 11, 1946, Serial No. 661,186
3 Claims. (Cl. 260—677)

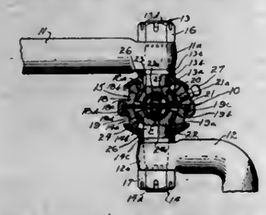
1. In a system for the recovery of isobutylene from a predominantly C_4 hydrocarbon feed stock comprising isobutylene involving contacting the feedstock with sulfuric acid in a reaction zone under conditions to form an extract, followed by removal of the extract from the reaction zone to a regeneration zone where the extract is heated under a pressure substantially less than that in the reaction zone to cause vaporization of a major portion of the hydrocarbons from said extract and recovery of the sulfuric acid and recycling of the recovered sulfuric acid to the reaction zone, the step of adding a mineral oil boiling in the range of 400° to 900° F. to the thus circulated sulfuric acid in sufficient amount substantially to eliminate foaming in the regeneration zone.

2,470,208
SYNCHRONIZER
Frank W. Avila, Columbia City, Ind., assignor to International Harvester Company, a corporation of New Jersey
Application April 9, 1945, Serial No. 587,409
14 Claims. (Cl. 192—53)



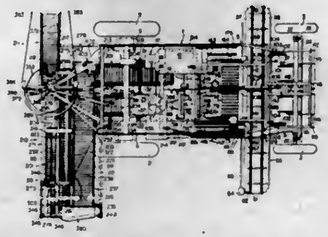
1. A synchronizer construction comprising a shaft, a driven member mounted on said shaft for rotation with respect thereto, an annular extension on said member, splines formed on said shaft, splines formed internally on said extension, a sleevelike member splined on said shaft for axial movement thereon, said sleevelike member being externally splined and engageable with the splines on said extension, a shifter member mounted on said sleevelike member for rotation therewith and for axial shifting thereof, said shifter member having an axially extending portion spaced from the sleevelike member, said portion being provided with an internally formed friction face, a synchronizer cone mounted for engagement with said face, means on the shifter member for limiting axial movement of said synchronizer cone, said synchronizer cone being formed internally with circumferentially spaced lugs forming slots therebetween, and a supporting structure for said synchronizer cone consisting of a spring structure having a cylindrical portion rigidly secured to the sleevelike extension of the driven member, and a plurality of spring fingers extending therefrom through the slots of the synchronizer cone, a substantial portion of said spring fingers being substantially narrower than said slots.

2,470,209
FLUID CONTROLLED VEHICLE CHANGE-SPEED STEERING APPARATUS
William O. Bechman, Chicago, and David B. Baker, Riverside, Ill., assignors to International Harvester Company, a corporation of New Jersey
Application October 8, 1945, Serial No. 620,894
8 Claims. (Cl. 180—9.2)



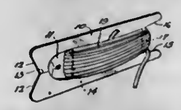
2. In a tractor propelled by units at opposite sides, change-speed gearing components for re-

spectively driving said propelling units, each gearing component comprising relatively low speed and high speed power trains for transmitting power in the same direction, sets of brakes respectively associated with each gearing component, each brake being associated with a respective power train of its gearing component and each being operable, when applied, to establish its power train in driving relation with its associated propelling unit, fluid actuated motors respectively for said brakes and operable to apply their brakes with a firmness constituting a function of the pressure of actuating fluid to which they are subjected, a source of motor actuating fluid, valve means respectively for each set of motors and operable to establish either individual



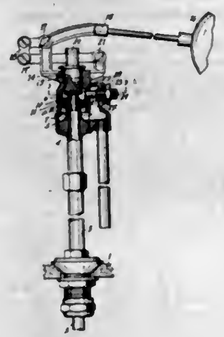
or concurrent communication between the brakes of its set and the source, pressure regulating means adjustable to change the pressure of the fluid imposable from the source onto the motors, valve operating means manipulatable to change each valve means from a status of individual communication establishment between one of its motors and said source to a status of individual communication establishment between the other of its motors and said source incident to creating an interim of concurrent communication of the motors with said source, and means operable under control of said valve operating means to adjust the pressure regulating means for modifying the pressure imposable on the motors to diminish the available firmness of brake engagement during said interim.

2,470,210
HIGH-ANGLE JOINT ASSEMBLY
James H. Booth, Detroit, Mich., assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application October 28, 1944, Serial No. 560,807
9 Claims. (Cl. 287—90)



1. A joint assembly comprising a floating housing, studs having heads tiltably mounted in and carried by said housing and shanks projecting freely from said housing, and said housing being arranged to move with one stud relative to the other stud whenever the shank of said one stud strikes against the housing.

2,470,211
BEET HARVESTER
Virgil F. Bozeman, Sr., Moline, Claude W. Walz and Robert D. Griff, Rock Island, and Howard F. Clausen, Moline, Ill., assignors to Deere & Company, Moline, Ill., a corporation of Illinois
Application October 7, 1944, Serial No. 557,696
12 Claims. (Cl. 55—9)

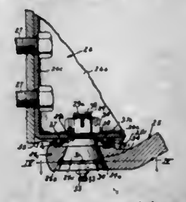


1. In a beet harvester, a frame, an elevator at the rear end of the frame, a clod separator unit positioned on the frame to discharge beets into said elevator, conveying means positioned on said frame, means on the frame and movable into and out of operative position for delivering beets from said conveying means to said clod separator unit, and means mounted on said frame and movable relative thereto, when said beet-delivering means is in its inoperative position, into a position for by-passing said clod separator unit and delivering beets from said conveying means directly to said elevator.

2,470,212
WINDER BOBBIN
Gustav A. Carlson, Chicago, Ill., assignor to The Boye Needle Company, Chicago, Ill., a corporation of Illinois
Application February 20, 1947, Serial No. 729,815
1 Claim. (Cl. 242—96)

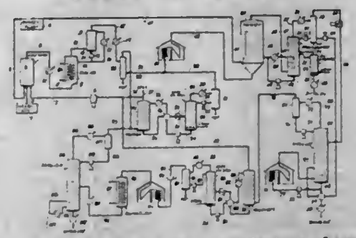
A winder bobbin, comprising a sheet body of substantially uniform thickness in cross-section throughout, providing a core for the receiving and winding of thread, a pair of arms at one end thereof extending outwardly to provide a winding recess therebetween, said body providing a straight wall between said pair of arms, a pair of arms extending outwardly and toward each other from an opposite end of said core to provide therebetween a closed winding recess, said second pair of arms extending outwardly and then inwardly along an inclination toward each other, the outer edges of said second pair of arms forming a V-shaped thread-guiding surface with the point of the V at the meeting surfaces of said last-mentioned arms and inwardly directed toward said closed recess, the recess provided by said arms being substantially half-moon shaped and providing a substantially straight wall at its inner side oppositely disposed to the straight wall provided between said first-mentioned pair of arms.

2,470,213
VALVE MECHANISM
Herbert D. Clemmons, Sturgis, Mich., assignor to Scovill Manufacturing Company, Sturgis, Mich.
Application December 4, 1944, Serial No. 566,589
4 Claims. (Cl. 277—51)



1. In a valve mechanism adapted for use on relatively high or relatively low water pressure systems, the combination of a valve body casing having an inlet chamber and a discharge chamber having a cylindrically walled portion aligned with said inlet chamber, an inlet pipe disposed centrally of said cylindrically walled portion of said discharge chamber and having a discharge nipple projecting into said inlet chamber, the end of said nipple constituting a valve seat, an inlet valve coacting with said valve seat, a resilient concavo-convex combined discharge and return check valve mounted on said inlet pipe to coact with the walls of said cylindrically walled portion of said discharge chamber and acting to yieldably resist the discharge of fluid from said inlet chamber to said discharge chamber and to prevent back flow from said discharge chamber to said inlet pipe, a by-pass passage connecting said inlet chamber to said discharge chamber and having a wall thereof spaced from said valve body casing and having a port opening through said valve body casing to said inlet chamber, said spaced wall of said by-pass passage having a threaded opening therein aligned with said port, and a threaded plug longitudinally aligned with said port and reversibly engageable with said threaded opening, said plug having an extension at one end thereof, said extension being of the diameter of the by-pass port and disposed to project into said by-pass port when said plug is arranged with its said extension inwardly, said plug being provided with a lock nut, said plug extension when in said port opening closing the same, said plug when reversed being spaced from said port opening and permitting passage of fluid therethrough, said concavo-convex check valve constituting means to yieldingly retard flow from the inlet chamber to said discharge chamber and to act as a silencer when the port opening is closed by said extension and the valve mechanism is used in relatively high pressure systems, said plug when reversed to open said port opening permitting the fluid to freely flow through the port opening from the inlet chamber to the discharge chamber, and adapting the valve mechanism for use in relatively low pressure systems.

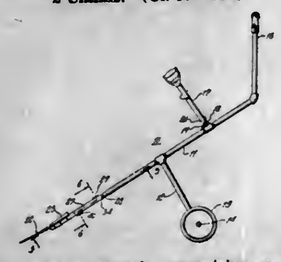
2,470,214
SODA LIME
Charles H. Egan, Belmont, Mass., assignor to Dewey and Almy Chemical Company, North Cambridge, Mass., a corporation of Massachusetts
No Drawing. Application March 12, 1947, Serial No. 734,235
4 Claims. (Cl. 252—192)



1. Soda lime rendered dust free by the incorporation in the same of a polymeric material selected from the class consisting of natural rubber, polyisophene, copolymers of butadiene and styrene, polychloroprene, and polyvinylidene chloride in an amount between one half of 1% and not over 4%.

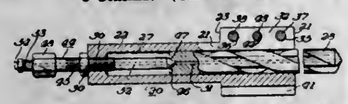
2,470,215
SWIVEL JOINT
Matthew P. Graham, Detroit, Mich., assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application April 12, 1946, Serial No. 661,655
5 Claims. (Cl. 287—91)

5. A joint assembly comprising a mounting member, an arm having an eye end defining an internal bearing surface, a stud extending from said mounting member having a head in bearing engagement on the bearing surface of said eye end, said eye end having a recessed portion on one face thereof defining a ledge therearound, an unbowed tubular seal ring seated in said recess, spring means between the shank of the stud and said seal ring urging the side walls of said ring into engagement with said ledge, and means for urging the end of said seal ring into sealing engagement with the bottom wall of the bracket.



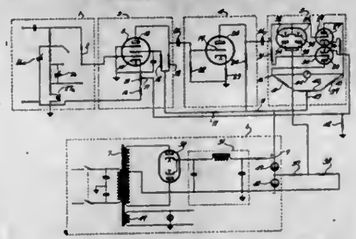
2,470,216
PROCESS FOR SYNTHESIZING MOTOR FUELS OF HIGH ANTIKNOCK VALUE
Percival C. Keith, Peapack, N. J., assignor to Hydrocarbon Research, Inc., New York, N. Y.
Application June 21, 1945, Serial No. 600,734
8 Claims. (Cl. 260—449.6)

1. In the process for the manufacture of gasoline hydrocarbons by the generation of synthesis gas consisting essentially of carbon monoxide and



hydrogen and by the catalytic conversion of said synthesis gas at elevated temperature and pressure to products including normally liquid hydrocarbons and carbon dioxide, the improvement which comprises passing in vapor phase said normally liquid hydrocarbons in the presence of at least about 2 mols of carbon dioxide for each mol of normally liquid hydrocarbon in contact with a solid, mineral-type contact agent, adapted to improve the antiknock value of gasoline hydrocarbons, in a treating zone at an elevated temperature to convert said normally liquid hydrocarbons to gasoline hydrocarbons of improved antiknock value, withdrawing a treated product stream from said treating zone, and recovering said gasoline hydrocarbons from said treated product stream.

2,470,217
SNOW SHOVEL
Arthur J. McLoughlin, Elmhurst, N. Y.
Application April 19, 1947, Serial No. 742,617
2 Claims. (Cl. 37—130)

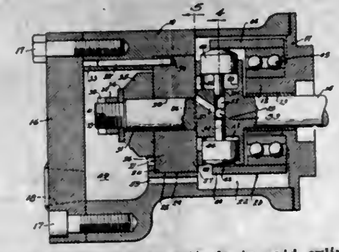


1. A portable shovel, comprising a tubular boom, running gear disposed approximately midway thereof, a pair of handle bars carried by the inner extremity of the boom, one of said bars being rotatable, a scoop hinged at the outer terminal of the boom, a latch controlling the hinge, and a flexible connection trained through the boom and cooperative with the rotatable bar to release the latch and dump the scoop.

2,470,218
TOOLHOLDER
Charles J. McNamara, Crafton, Pa., assignor to N. R. McNamara and C. F. Coate, doing business as Precision Instrument & Manufacturing Company, Pittsburgh, Pa., a partnership
Application February 24, 1945, Serial No. 579,531
5 Claims. (Cl. 279—46)

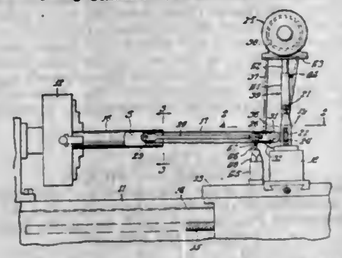
1. In an integral rotary tool holder the combination of a shank the perimetral surface of which is arranged to mate with the tool holder receiving surface of a machine, a split head on the outer end of the shank, a bore extending through the head into the shank and concentric to the latter to receive a tool having substantially the same diameter as the bore, means to contract the split head and clamp the shank of the tool in the bore independent means for expanding the head after the clamping means has been retracted to release the tool from the chuck, a threaded opening in the shank end of the tool chuck, a stop screw fitting the threaded opening and arranged to engage the inner end of the tool, and a nut to lock the stop screw and gauge the insertion of the tool in the bore.

2,470,219
LINEAR RESPONSE VACUUM TUBE VOLTMETER
Roy A. McNaughton, Emporium, Pa., assignor to Sylvania Electric Products Inc., Emporium, Pa., a corporation of Massachusetts
Application March 7, 1944, Serial No. 525,355
8 Claims. (Cl. 171—95)



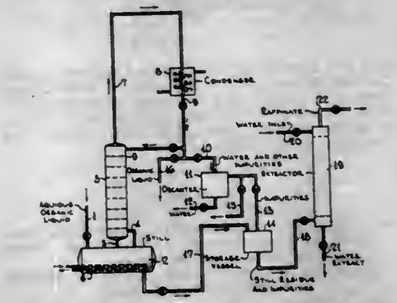
1. A vacuum-tube voltmeter comprising input terminals to receive alternating current voltages to be measured, output measuring terminals, an indicating meter connected to said output terminals; and in sequence between the said input terminals and the output terminals an alternating preamplifier, a half-wave rectifier, a pair of grid-controlled amplifier tubes each having a cathode, a control grid and an anode, said tubes having their respective grids connected in unbalanced relation to said rectifier, a rectifier load resistor connected between the grids of said tubes, a resistance bridge connected across the anodes of said amplifier tubes, a source of D. C. anode supply voltage adjustably connected to said bridge, said indicator device being connected across said anodes, a first resistor connected between the cathodes of said amplifier tubes, a second resistor connected in series with said first resistor and ground, said first resistor being proportioned with respect to the second resistor to compensate for the contact potentials applied to the grid of first amplifier tube through said rectifier tube, and D. C. negative feedback means connecting said second resistor to said preamplifier to maintain a linear relationship between the signal indications on said indicator and the voltages of the signals applied to said input terminals.

2,470,220
PUMP
Carl W. Mott, La Grange, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application September 11, 1943, Serial No. 501,985
20 Claims. (Cl. 103—161)



1. In a pump, a rotor having radially directed cylinders opening into its outer periphery, ports communicating with such cylinders, a closed fluid-containing chamber centrally of the cylinders, and bores communicating between the cylinders and said chamber; pistons reciprocable in said cylinders with an in and out motion radially of the rotor and comprising auxiliary portions disposed reciprocably in said bores to communicatively isolate their cylinders from said

chamber and in pressure imposing relation with the fluid in said chamber; a member having a circular force-reaction surface circumscribing the rotor in eccentric relation with the rotor axis to restrain outward axial movement of the pistons by the action of centrifugal force thereon during rotation of the rotor and to complement such centrifugal force in causing in and out pumping action of the pistons and their

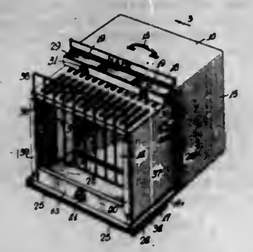


auxiliary portions respectively in said cylinders and said bores; and the chamber being operable through the medium of said fluid therein to transmit force from each auxiliary piston portion, as it is moved inwardly, outwardly upon the other piston portions for supplementing the centrifugal force in constantly maintaining the pistons in outward force exerting relation with the ring-like member.

2,470,221
APPARATUS FOR AND METHOD OF DRESSING CYLINDRICAL SURFACES
Carl W. Mott, La Grange, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application April 2, 1945, Serial No. 586,182
3 Claims. (Cl. 51—261)

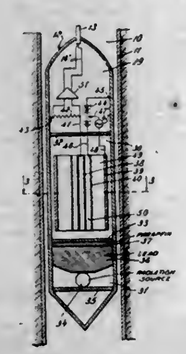
1. In apparatus utilizable with a mechanism comprising parts capable of relative movement along a line of approach and retraction and for dressing a cylindrical surface of a body while it is supported upon one of said parts and rotated coaxially of such surface about an axis in parallelism with such line of movement; the combination of an arm, means adapted to mount said arm on the other of said parts in a position reaching toward the one thereof, belt-carrying means comprising rollers spaced lengthwise of said arm and of which at least one is mounted on the reaching portion thereof for rotation about an axis transverse thereto, the axial surface elements in the circumferential periphery of said roller being convexly curved, said rollers being adapted to rotatively carry a dressing belt while presenting flights thereof lengthwise of the arm and on opposite sides thereof and said arm mounting means being adapted to adjust said arm laterally within a plane normal to the roller axes, a dressing belt on said rollers, the other of said rollers being adapted to be motor driven for rotating the belt, a driving motor unitarily assembled with said arm mounting means and means drivingly connecting the motor and said other roller.

2,470,222
DISTILLATION OF ALCOHOLS CONTAINING IMPURITIES LESS SOLUBLE IN WATER
John A. Patterson, Westfield, N. J., assignor, by mesne assignments, to Standard Oil Development Company, a corporation of Delaware
Application August 10, 1944, Serial No. 548,922
10 Claims. (Cl. 202—42)



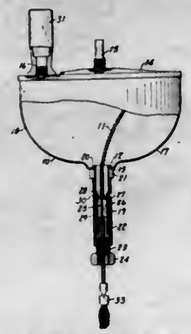
9. An improved process for purifying an oxygen-containing organic compound having substantial solubility in water, said compound being in a crude aqueous liquid mixture contaminated by organic impurities having less solubility in water, which comprises distilling from said mixture a low boiling distillate of said compound with water and impurities in a distillation zone, combining a water immiscible organic liquid into a solution with said impurities of the distillate, extracting the compound to be purified from said solution with water, returning the resulting water extract from said solution to said distillation zone, and withdrawing from said distillation zone a fraction of the compound to be purified.

2,470,223
COMBINATION ANIMAL CARRIER AND DISPLAY PEN
John Powels, New York, N. Y.
Application March 10, 1945, Serial No. 582,101
2 Claims. (Cl. 119—19)



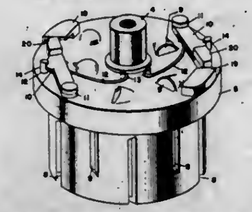
1. A combination animal carrier and display pen including a rectangular outer box complete in itself and having a bottom, a top, side walls and end walls, one of said end walls being hinged at its bottom to swing downwardly into alignment with said bottom to form a forward extension thereof, and a cage-like member dimensioned to telescope into and out of said box when said side wall is swung downwardly to open position, said cage-like member having a top, a bottom, side walls and a front wall, the cage being open at its rear whereby when the hinged side wall of the box is swung downwardly and the cage-like member withdrawn to its extended relation the compartment of the carrier will be enlarged; and means for guiding said cage-like member

in its outward movement and for holding and supporting it in its extended relation, said means comprising rails on the inner face of the bottom of the cage parallel to and adjacent the side edges thereof and rails on the inner face of said hinged



wall also parallel and adjacent its side edges, said last-mentioned guide rails being so located that when the hinged wall is moved downwardly to form an extension of the bottom, they will be in alignment with the guide rails adjacent the side edges of the bottom wall.

2,470,224
IONIZATION CHAMBER
Serge Alexander Scherbatskoy, Tulsa, Okla., assignor to Well Surveys, Incorporated, Tulsa, Okla., a corporation of Delaware
Application December 6, 1944, Serial No. 566,902
7 Claims. (Cl. 250—83.6)



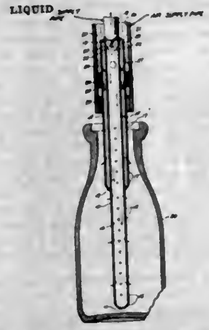
1. An ionization chamber adapted for use in detecting ionizing radiation that comprises in combination a casing, an ionizable medium in said casing under superatmospheric pressure, a pair of electrodes disposed in said casing and spaced from each other, a third electrode disposed between said electrodes, means for placing a direct potential across at least two of said electrodes and means for impressing an alternating potential across the third electrode and one of the pair of electrodes, the other one of said first recited pair of electrodes being a current collecting electrode and means for conducting the current collected to a point outside the ionization chamber.

2,470,225
PLUMBER'S SEWER SNAKE APPARATUS
Abraham Silverman, Pittsburgh, Pa.
Application April 3, 1948, Serial No. 18,797
1 Claim. (Cl. 15—104.30)

In plumber's sewer snake apparatus, the combination with a flexible sewer snake of a shell in which the snake may be coiled, said shell having a floor closing one of its ends and a feed aperture in its wall through which the snake may be projected, a tubular neck member fixed to the shell and axially aligned with the feed aperture, the outer portion of the bore of the neck member being internally threaded, a tubular clamp member exteriorly threaded and arranged to be screwed into the bore of the neck member and through which the snake may be projected, an annularly arranged set of gripping fingers formed at the inner end of the clamp member, a sleeve rotatably mounted on the neck member and arranged to be gripped by one hand of the operator while the shell is rotated to rotate the snake in the sewer, said sleeve being held against longitudinal movement relative to the neck member by nested annular depressions in the walls of the neck member and the sleeve, the inner surface of the depression in the wall of the neck member forming means engageable by the gripping fingers to clamp said fingers against the snake as the tubular clamp member is screwed into the bore of the neck.

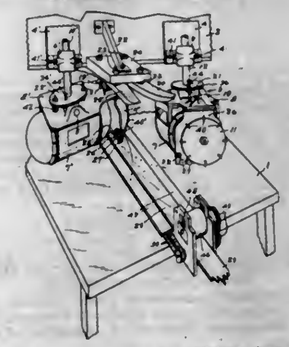
2,470,226
CAP-SECURING MEANS
Harry Dewey Weaver, Lancaster, Pa., assignor to Hamilton Watch Company, Lancaster, Pa.
Application February 28, 1945, Serial No. 580,236
1 Claim. (Cl. 220—55)

A cap for a cylindrical container and formed with a pair of diametrically opposite holes adjacent the rim thereof, an upstanding hub integral with said cap threaded to receive a shaft adapted



to be rotated at high speeds, a pair of latches pivoted substantially at the rim of said cap and in close proximity to said holes, a pair of notched upstanding pins on the rim of said container adapted to be received and project through said holes, a notch engaging edge on said latch for engaging the notched pins to hold the container attached to said cap, a pair of finger grips on said latches beyond said upstanding pins, said latches terminating in short flat sections beyond said finger grips, guide members integral with said cap engaging and housing the free end of said latches to insure movement of said latches in a plane parallel to the top of said cap, and means for normally holding said latches in engagement with said upstanding notch pins.

2,470,227
SKI
Carl L. Wheeler, Albuquerque, N. Mex.
Application September 15, 1947, Serial No. 774,024
2 Claims. (Cl. 280—11.13)

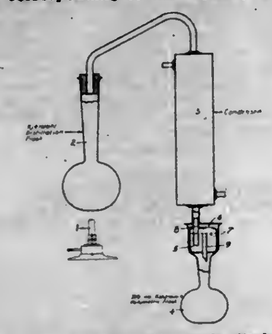


1. A ski comprising a plurality of superposed layers of material, the lower layer of which consists of fiber glass, and means for bonding said layers together.

2,470,228
APPARATUS FOR COOLING HOLLOW GLASSWARE
William E. Aksomitas, Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a corporation of Delaware
Application June 5, 1942, Serial No. 445,900
4 Claims. (Cl. 49—45)

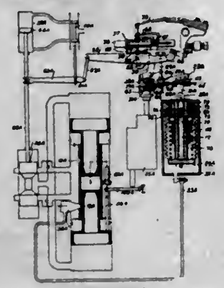
1. In apparatus for use in tempering hollow glass articles, a cooling nozzle having a body suitable to be projected into the interior of a hollow glass article, said body comprising an inner tubular member closed at one end, a second tubular member surrounding said first-named tubular member for only part of the length of the latter so that the closed end portion of the inner tubular member projects a substantial distance beyond the second tubular member, said second-named tubular member being of sufficiently greater diameter than the first-named tubular member to provide an annular passage between itself and the first-named tubular member, said first-named tubular member having longitudinally spaced jet holes in a wall of the portion thereof projecting beyond said second-named tubular member, the latter also having longitudinally spaced jet holes in a wall thereof, a liquid supply pipe located at the end of the first-named tubular member opposite the closed end of the latter and having liquid spray discharge holes arranged to direct a spray of liquid into the interior of the first-named tubular member, said first-named tubular member having air intake openings in its wall adjacent to the last-named end thereof, and air supply means arranged to deliver air both to said air intake openings and to the annular passage between said second-named tubular member and said first-named tubular member.

2,470,229
PATCH CUTTING MACHINE
Victor E. Anderson, Pacific, Wash.
Application April 7, 1944, Serial No. 530,015
10 Claims. (Cl. 144—2)



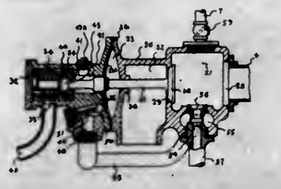
1. In a patch cutting machine, two motors each having a substantially horizontal driven shaft; two circular cutting members on the respective driven shafts beyond the ends of the motors; means supporting said two motors for rotary movement about two substantially parallel axes which are substantially vertical and are spaced apart and respectively disposed substantially perpendicular to said driven shafts and substantially mid way between the two ends of each of said motors, said axes of rotation of said motors being relatively positioned so that the paths of movement of said two circular cutting members will intersect and overlap as said motors are rotatively moved; and means for rotatively moving said two motors in constant angular directions and at the same angular speed and with the driven shafts of said two motors in relatively offset angular relation thereby avoiding interference of said cutting members where their paths of movement overlap.

2,470,230
DISTILLATION VAPOR LOSS DETECTOR
Arthur A. Andreasen and George M. Rust, Louisville, Ky., assignors to Joseph E. Seagram & Sons, Inc., Shively, Ky., a corporation of Indiana
Application October 25, 1944, Serial No. 560,320
1 Claim. (Cl. 202—185)



In the art of distilling materials and continuously condensing and collecting the condensate

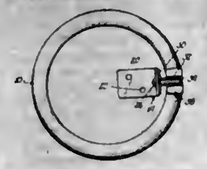
for the quantitative determination of volatile constituents thereof by subjecting a sample of the material to a distilling operation in an apparatus including a still and a condenser, a method of determining and maintaining a relatively constant and maximum rate of distillation substantially corresponding to the capacity of the con-



denser, comprising: continuously discharging all of the material from the condenser into an externally visible liquid bath at a point below the level of the liquid so that uncondensed vapors discharged into the bath will bubble visibly through the bath; and maintaining a rate of distillation in the still slightly below that rate at which bubbles appear.

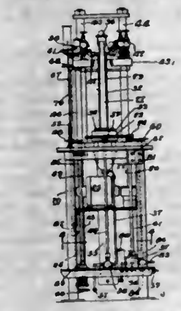
2,470,231
INTERNAL-COMBUSTION OPERATED FREE-PISTON MACHINE
Evelyn Stewart Lansdowne Beale, Staines, England, assignor to Alan Muntz & Company Limited, Hounslow, England, a company of Great Britain
Application June 30, 1943, Serial No. 492,865
In Great Britain June 25, 1942
30 Claims. (Cl. 123—46)

1. An internal-combustion-operated free-piston gas-generator, including a power cylinder, a power piston therein, an air-compressor cylinder, a compressor piston therein and connected to said power piston to form a free-piston assembly, said compressor cylinder being arranged to scavenge said power cylinder, and the mixture of combustion products and excess scavenge air delivered under superatmospheric pressure constituting the motive gas generated, means for maintaining a pneumatic cushion capable of receiving energy from said free-piston assembly during the expansion stroke in the power cylinder and of returning energy to said assembly during the compression stroke in the power cylinder, cushion-control means operable while the gas-generator is running for varying the quantity of gas in the cushion, a dead-point follower responsive to change in the inner dead point of the free-piston assembly, means responsive to change in the delivery pressure of the gas-generator, and a differential device capable of compounding the responses of said inner dead point follower and said pressure responsive means and thereby yielding a control influence for said cushion control means such that the quantity of gas in said cushion is increased and reduced as necessary to reduce changes in the overall compression ratio.



2,470,232
PRIMING DEVICE
Maxwell Kennedy Bennett, New Westminster, British Columbia, Canada
Application May 9, 1945, Serial No. 592,837
7 Claims. (Cl. 103—113)

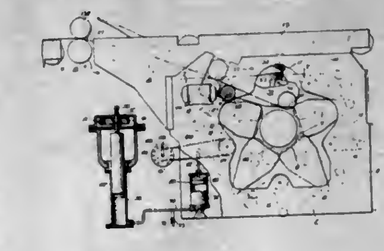
1. A primer for gas engine driven centrifugal pumps having a non-return valve on the delivery outlet comprising a casing including an exhaust receiving chamber, an exhaust outlet chamber, a diaphragm housing and a pressure chamber, said pressure chamber being adapted to be connected to the pump delivery and said exhaust chamber being adapted to be connected to the exhaust manifold, a normally closed valve forming communication between the exhaust chamber and the exhaust outlet chamber, a diaphragm in the diaphragm housing for opening said normally closed valve, an ejector in open communication with the exhaust chamber and adapted to be operated by exhaust gas entering said chamber, a suction passage forming part of the ejector, a pipe connecting the suction passage with one side of the diaphragm housing and a water passage between said side of the diaphragm housing and the pressure chamber.



2,470,233
FESTOON BRACKET
James H. Boye, Chicago, Ill., assignor to James H. Boye Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application September 13, 1945, Serial No. 616,022
6 Claims. (Cl. 160—330)

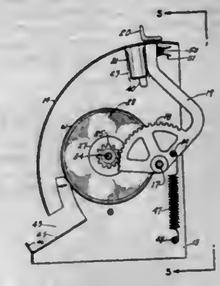
6. A drapery ring support comprising, in combination, a bracket for securement to a supporting structure, said bracket having a plurality of openings formed therein adjacent the free end thereof, an adapter including a base portion providing spaced projecting supporting prongs, a securing screw releasably securing the adapter to the bracket adjacent the free end thereof whereby the adapter may be rotated about said screw as an axis when the same is released, means on the base of the adapter having coacting relation with said openings in the bracket for holding the adapter in adjusted rotative position, and a

drapery ring having transverse recesses for receiving the supporting prongs whereby said ring is releasably fixed to said adapter.



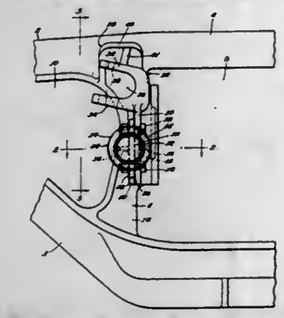
2,470,234
APPARATUS FOR FORMING PRECISION-BORE TUBING OR THE LIKE
Nathaniel Brewer, Newtown, Pa., assignor to Fischer & Porter Company, Hatboro, Pa., a corporation of Pennsylvania
Application December 20, 1944, Serial No. 568,980
15 Claims. (Cl. 49—7)

1. For forming a precision-bore, a mandrel adapted to receive an oversize thermoplastic tube, means operatively associated with said mandrel for evacuating the annular space intermediate said mandrel and said tube, means for heating said tube adjacent one end thereof, and means for automatically moving said heating means along said tube responsive to collapse of the heated evacuated tube upon said mandrel, said last-mentioned means including a nozzle disposed adjacent said tube and movable with said heating means, means for supplying air under relatively constant pressure to said nozzle, and a switch actuated by change in air pressure within said nozzle and adapted automatically to regulate movement of said heating means, said switch being adapted to start movement of said heating means when pressure within said nozzle drops due to collapse of said tube upon said mandrel and being adapted to stop movement of said heating means when pressure within said nozzle rises due to the nozzle coming to an uncollapsed portion of said tube.



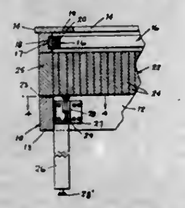
2,470,235
COILING MACHINE FOR STRIP MATERIAL
Benjamin S. Burrell, East Chicago, Ind.
Application August 31, 1944, Serial No. 552,192
12 Claims. (Cl. 242—78)

12. In a machine for coiling metal strips, the combination of a plurality of movable coil forming elements including a coil forming roller adapted to provide a substantially enclosed circular unobstructed coiling space, a guide frame journalling said coil forming roller at one end of the frame, means supporting the other end of the frame in a manner providing for lateral adjustment of said frame at the end journalling



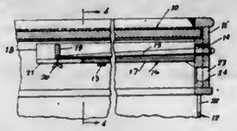
the roller whereby said roller is adjustable laterally to guide said strip and align the marginal edges, and other means supporting the frame and thus the roller for adjustment toward or from the coiling space to secure the proper pressure relation thereof on the coil as the same is being formed.

2,470,236
PACKAGE OPENER
Elliot Charlop, New York, N. Y.
Application September 5, 1945, Serial No. 614,555
26 Claims. (Cl. 30—2)



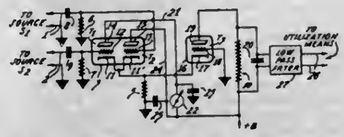
23. A cigarette package opening device comprising means for moving the package through the device, means for slitting the package partly across near one end at one location on the path traversed by the package through the device, and a member mounted on the device to project into said path, said member being located on the device to be passed by the package as it is moved through the device after the package has been slit, the projection of said member causing it to push against the package at the package's opposite end from where slit for causing one or more cigarettes to project from the package at the slit as the package is moved by said member.

2,470,237
SIDE FRAME AND BRAKE SUPPORT STRUCTURE
Claus J. Werner Clasen, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application July 17, 1947, Serial No. 761,598
6 Claims. (Cl. 188—205)



1. In a railway car truck, a side frame comprising a compression member and an upright column connected thereto, said column being of U section and comprising inboard and outboard walls and an intermediate wall connecting said inboard and outboard walls, a bracket on the inboard side of said frame integrally formed on said inboard wall of said column and the inboard side of said compression member and comprising a substantially vertical rectangular web extending laterally of said frame, a jawlike structure formed on the upper portion of said web and comprising spaced hanger-suspending elements, a web connecting one of said elements with said compression member and merging with the top edge of said first-mentioned web, said first-mentioned web being formed and arranged to afford support and connection for an associated brake part beneath said jawlike structure.

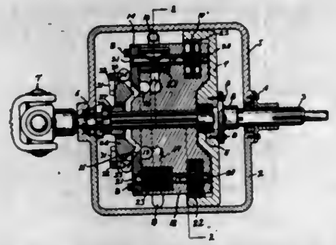
2,470,238
SHUFFLEBOARD-BILLIARD TABLE WITH REPLACEABLE TOP
Ernest Correale and Joseph Correale, Jersey City, N. J.
Application May 9, 1946, Serial No. 668,402
1 Claim. (Cl. 273—6)



In a shuffleboard-billiard table having a frame provided with side walls, rebound cushions for shuffleboard weights mounted on the inner faces of said walls a short distance down from the top edge thereof, said side walls having openings through which a shuffleboard-like top may be engaged to a position a short distance beneath said rebound cushions, a shuffleboard-like top engaged in said position and extending across said frame and having its sides engaging into the said openings in said side walls, and means for releasably forcing said shuffleboard-like top upwards so that its sides are clamped against the top faces of said openings in said side walls in order that said shuffleboard-like top does not work its way outwards of the openings in said side walls due to vibrations while players throw shuffleboard weights across said shuffleboard-like top and against said rebound cushions.

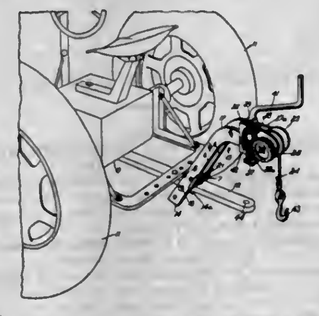
2,470,239
POOL TABLE WITH ADJUSTABLE CUE RACK
Ernest Correale and Joseph Correale, Jersey City, N. J.
Application August 22, 1946, Serial No. 692,253
1 Claim. (Cl. 273—11)

The combination with a pool table having a side wall provided with a plurality of openings for pool cues to be engaged into in order to have inner ends inwards of said side wall and outer ends outwards of said side wall and a support rack behind said side wall having a bottom support wall upon which the pool cues are rested as they project slightly from said openings, an end wall on said bottom support wall forming an abutment for the inner ends of said pool cues for controlling the amount that the outer ends of the pool cues project from said openings, and clamp screws slidably passing through elongated openings formed in said bottom support wall and engaging and holding said end wall in selected positions.



2,470,240
LIMITING DETECTOR CIRCUITS
Murray G. Crosby, Upper Montclair, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application July 31, 1945, Serial No. 608,018
17 Claims. (Cl. 250—27)

1. In a radio communication system comprising at least two sources of high frequency waves of a common frequency, a pair of electron discharge devices each having at least a cathode, control grid and anode, a resistive impedance common to the space current paths of said devices connected from the cathodes of the devices to a point of relatively fixed potential, means for applying the waves from each source to a respective one of the grids with the waves applied to at least one grid being of saturation amplitude, a third electron discharge device including at least a cathode, control grid and anode, means connecting said impedance in the space current path of the third device between the cathode thereof and said point, means

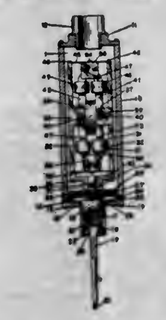


establishing the control grid of the third device at a fixed potential relative to its cathode, and an output resistive impedance in circuit with the third device anode.

2,470,241
ROTARY HYDRAULIC FLUID TRANSMISSION MECHANISM
Ray Diard, Newport, Wash.
Application March 29, 1948, Serial No. 17,716
6 Claims. (Cl. 192—61)

1. In power transmission mechanism of the hydraulic and gearing type, the combination with a housing forming an interior motive fluid chamber, a drive shaft and an axially alined driven shaft journaled in the housing, a driving head within the housing and rigid with the drive shaft, and a rotor rigid with the driven shaft and having a motive fluid transfer system in communication with said chamber, of planetary gearing coupling the drive head with the rotor, a plurality of hydraulic pumps for said system within the rotor and actuated by said gearing, and speed responsive centrifugally operated valve mechanism carried by the rotor for controlling the motive fluid transfer system.

2,470,242
LIFT ATTACHMENT FOR TRACTOR DRAWBARS
Urban S. Feising, Chosen, Fla.
Application May 15, 1946, Serial No. 669,958
5 Claims. (Cl. 254—166)



1. A lift attachment for a tractor drawbar for elevating a machine to be pulled into a coupling position with the drawbar comprising, a pair of oppositely arranged transversely spaced upright frame members adapted to receive the drawbar therebetween, a pair of transverse vertically spaced support members adjacent one end of said frame members for engaging opposite sides of the drawbar to support said frame members in an upright position on said drawbar, a winding drum rotatably supported adjacent the other end of said frame members, a cable windable on said drum adapted for connection with the machine to be pulled, and means at said other end of the frame members for rotating said winding drum.

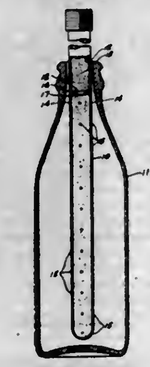
2,470,243
PRINTING APPARATUS
George O. Frostad, Milwaukee, Wis.
Application April 16, 1945, Serial No. 588,537
7 Claims. (Cl. 101—247)

1. Ribbon stock printing apparatus comprising, a frame, an impression cylinder journalled for rotation upon said frame about a fixed axis, a type cylinder coacting with said impression cylinder and being journalled for rotation upon said frame about a fixed shaft disposed beyond the periphery of said impression cylinder, a driving sleeve for said type cylinder surrounding but spaced from said shaft, means for effecting adjustment of said type cylinder longitudinally of said driving sleeve and across the face of said impression cylinder, and a pair of normally stationary but relatively adjustable and eccentric sleeves interposed in the space between said driving sleeve and said fixed shaft for effecting adjustment of said type cylinder toward and away from said impression cylinder.

2,470,244
ELECTRICAL REPRODUCING STYLUS
Robert A. Fryklund, Somerville, Mass., assignor to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application September 7, 1946, Serial No. 695,571
6 Claims. (Cl. 323—51)

1. In a system for reproducing the same relative motion between a work piece and cutter as

between stylus and pattern, a stylus member, a supporting frame therefor including a flanged element and a supporting ring upon which the flanged element rests, an electromagnetic means comprising a coil and linking core and a pair of coil and core linking elements independently linking the first coil and core element, means supporting said first coil and core element by spring suspension from said pair, said means having a bearing element bearing against said flange, a pair of coil and core elements being suspended in fixed position with regard to said other coil and core whereby motion of the stylus will move said coil and core with respect to said pair.



2,470,245

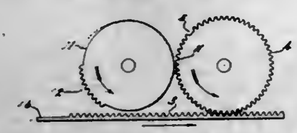
METHOD OF COOLING THE INTERNAL SURFACE OF A BOTTLE, JAR, OR OTHER HOLLOW GLASS ARTICLE

Thomas D. Green, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a corporation of Delaware

Application June 5, 1942, Serial No. 445,911

3 Claims. (Cl. 49—89)

1. The method of cooling the internal surface of a bottle, jar or other hollow glass article, as in tempering, which comprises applying distributed cooling jets thereto such that the fluid of the jets applied to one portion of said internal surface has less moisture content and cooling effect than the fluid of the jets applied to a different portion of said surface.



2,470,246

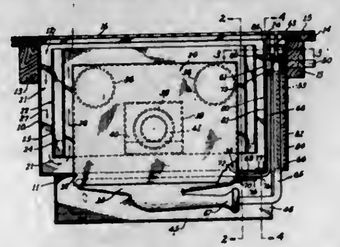
MECHANICAL MOVEMENT

Robert Heisman, Los Angeles, Calif.

Application September 14, 1946, Serial No. 697,019

6 Claims. (Cl. 74—32)

1. A mechanical movement comprising a driven segmental gear, a rack engaged by said segmental gear, and an idler gear constantly meshed with said rack and positioned to be engaged by said segmental gear after said segmental gear disengages said rack.



2,470,247

FLUID FUEL BURNING FLOOR FURNACE

James Stanley Johnson, Pasadena, Calif.

Application August 28, 1944, Serial No. 551,557

22 Claims. (Cl. 126—116)

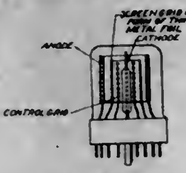
1. In a heating unit for installation in the floor of a building, said floor being disposed a distance above the ground sufficient to receive the heating unit when lowered through an opening of the floor, said heating unit including in combination: an outer casing having an open top and adapted for suspension in said opening to be disposed below said floor; a combustion-chamber structure fixed within said outer casing and spaced therefrom to define a circulating-air passage, said combustion-chamber structure defining a combustion chamber; a burner for burning fuel in said combustion chamber; means for conducting products of combustion from said combustion chamber; fuel-control means disposed within said outer casing below floor level but near the upper end of said outer casing to be accessible through the open top of said casing, said burner being located below said fuel-control means; a fuel-conducting pipe extending downwardly from said fuel-control means to said burner; a pilot extending into said combustion chamber, said pilot being disposed below said fuel-control means; a pipe means including a pilot-connected portion extending to and communicating with said pilot to supply fuel thereto, said pipe means including an upwardly-extending portion; and wall means within the outer confines of said outer casing and providing an upright space separated by said wall means from said circulating-air passage, said pipe means extending downwardly in said upright space.

2,470,248

ELECTRON DISCHARGE TUBE WITH METAL FOIL ELECTRODE

Johan Lodewijk Hendrik Jonker and Gesinus Diemer, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee

Application August 17, 1946, Serial No. 691,334



In Belgium May 1, 1945

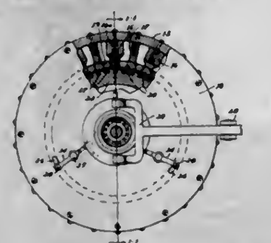
Section 1, Public Law 690, August 8, 1946

Patent expires May 1, 1965

4 Claims. (Cl. 250—27.5)

1. An electron discharge tube comprising a cathode, an anode and an auxiliary electrode interposed between said cathode and anode, said auxiliary electrode comprising a metal foil having a thickness of the order about 0.1μ to 0.2μ and having at potentials thereof of the order of 3 volts

positive relative to said cathode an electron permeability of the order of 30% to 50%.



2,470,249

PERMANENT MAGNET FIELD COUPLING

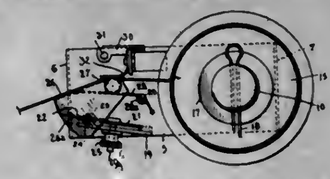
Samuel Karasick, Great Barrington, Mass.; Mary K. Karasick executrix of Samuel Karasick, deceased

Original application September 6, 1940, Serial No. 355,663, now Patent No. 2,376,150, dated May 15, 1945. Divided and this application April 27, 1945, Serial No. 590,707

9 Claims. (Cl. 172—284)

1. In a magnetic device, a circular unit containing spaced flux-carrying members radially arranged therein, a second circular unit provided with flux producing members, each member comprising a permanent magnet and a spaced part of soft ferrous material joined thereto to constitute opposite poles, the poles of said members being radially arranged in a pattern like that of the flux-carrying members, and means for relatively moving said units to bring said flux-producing members into contact with said flux-carrying members to develop a holding condition and being movable to a position out of contact therewith to introduce a high reluctance gap between said flux-producing members and flux-carrying members.

2,470,250



BELT CARRIED TAPE HOLDER FOR ELECTRICAL WORKERS

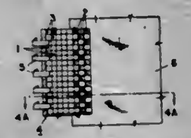
David Kienle, New York, N. Y.

Application February 6, 1946, Serial No. 645,788

1 Claim. (Cl. 242—55.4)

An electrical tape holder comprising a main frame plate adapted to be connected to a strap, a stub shaft connected to the plate and extending laterally therefrom and adapted to support rolls of electric tape, means removably connected to the stub shaft to prevent the displacement of the tape rolls therefrom, a member secured to the main frame plate and extending laterally therefrom and parallel to the stub shaft, cutting blade means secured to said member, a second member secured to the main frame plate and extending laterally therefrom above the first member and parallel thereto, a spring biased guard pivoted on the second member and adapted to be extended over the cutting blade means and serve as a support for the tape strips which have been freed from the rolls, a lever pivoted upon

the main frame plate and having a portion extending laterally above the tape strips and over the guard, pressure feet secured to said portion and engaging with the tape strips and guard to hold the tape strips upon the guard, said lever with the pressure feet being adapted to be elevated out of the path of the tape to permit the insertion of new rolls of tape.



2,470,251

SLIDE FASTENER

Oswald Kolbert, Flushing, and Albert Sherman Messer, Ozone Park, N. Y., assignors to Waldes Kohinoor, Inc., Long Island City, N. Y., a corporation of New York

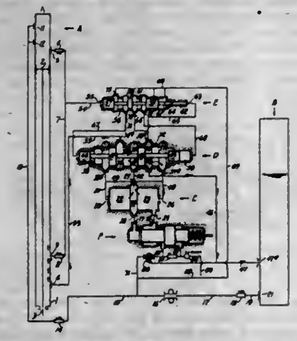
Application February 3, 1947, Serial No. 726,106

5 Claims. (Cl. 139—384)

1. In a stringer for a slide fastener providing closure means for an article, a woven fabric tape adapted to carry a bead along its longitudinal front edge, the longitudinal front edge zone of said tape being woven in part from threads or yarns of natural fibers which are arranged longitudinally, whereby the tape is substantially non-stretchable in the direction of its length, and the longitudinal rear edge zone of said tape which is adapted to be connected to the article being woven in part of threads or yarns of thermoplastic material, whereby the tape may be heat-sealed to the article along said rear zone.

2,470,252

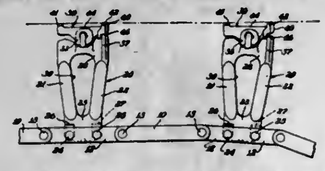
HYDRAULIC PUMPING JACK WITH CONTROL RESPONSIVE TO ABNORMAL CONDITIONS



Samuel Clyde Kyle, Berkeley, Calif., assignor to The Pelton Water Wheel Company, San Francisco, Calif., a corporation of California

Application November 9, 1945, Serial No. 627,597

6 Claims. (Cl. 60—51)



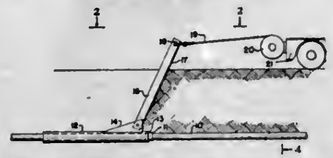
6. A hydraulic pumping jack system comprising a hydraulic jack; a hydraulic reservoir; a main pumping circuit for the circulation of fluid between said reservoir and said jack and from which drain fluid flows; a drain pumping cir-

cuit for restoring said drain fluid to said reservoir; and means responsive to excessive drain

fluid in said drain pumping circuit for reducing said circulation in said main pumping circuit.

2,470,253
CONVEYER CARRIER BLADES WITH EQUALIZER TOPS
Earl A. Lerner, Chicago Heights, Ill., assignor to American Brake Shoe Company, New York, N. Y., a corporation of Delaware
Application June 8, 1946, Serial No. 675,511
11 Claims. (Cl. 198—189)

4. In a conveyor for heat treating furnaces, the combination including a carrier member having means for securing it to said conveyor, said carrier member having an open frame-like construction embodying spaced upright supporting elements and a connecting web therebetween, spaced journalling members integral with and extending above said web, an article supporting member supported by said connecting web and having location between the journalling members, a retaining pin articulatedly connecting the article supporting member to said journalling members, said article supporting member having a pivot opening of special shape for receiving the pin whereby limited oscillating movement of said member may take place, and means provided by the carrier member including seats for contact with the article supporting member to support the said member in an operative substantially horizontal position when located at one extremity of its oscillating movement.

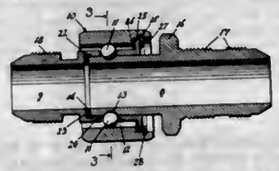


2,470,254
INSIDE THREAD CALIPER
John D. Lee, Redondo Beach, Calif.
Application May 21, 1946, Serial No. 671,159
2 Claims. (Cl. 33—163)

2. An inside thread caliper consisting of an elongated tubular body having an outside threaded portion, said body having a closure member at one end including a pointed member extending outwardly, said body having an elongated slot in its threaded portion parallel to the axis thereof, a spring-pressed plunger in said tubular body protruding from the open end of said body, said plunger having a pointed member at its outward

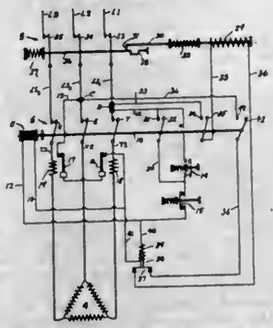
end, a stop pin protruding laterally from the side wall of said plunger extending through said slot in said body, an adjusting nut threaded on said threaded body portion adapted to engage said stop pin to fix the distance between said pointed members, and a lock nut also threaded on said threaded body portion.

2,470,255
PIPE-LINE RECOVERY DEVICE
Ben D. Marks and Orel Elton Dillon, Corpus Christi, Tex.
Application March 24, 1947, Serial No. 736,896
1 Claim. (Cl. 37—1)



A device for recovering buried pipe, comprising, a tubular sleeve member adapted to encircle a pipe and to be slidable longitudinally over said pipe, said sleeve member having a sharpened leading edge, a single flat, rigid blade member centered above said sleeve member and extending upwardly therefrom to above the surface of the ground overlying said pipe, said blade member having its leading edge sharpened and hardened to resist abrasion, a pivotal connection between the lower end of said blade member and said sleeve member, said connection consisting of a pair of spaced parallel plate members arranged on opposite sides of said blade member and rigidly connected to said sleeve member and a pivot pin extending transversely through said plate members and said blade member, the leading edges of said parallel plate members lying in a plane extending at approximately a right angle to the longitudinal axis of said sleeve member whereby earth is deflected substantially laterally by said plate members and said blade member, and means for connecting a pulling force to the upper end of said blade member.

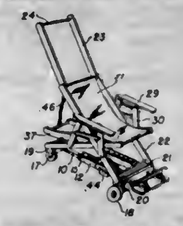
2,470,256
QUICK-ACTION COUPLING
Harold G. McIlroy, Burbank, Calif.
Application October 1, 1945, Serial No. 619,502
10 Claims. (Cl. 285—168)



1. In a coupling, a female coupling member having ball-retaining openings therein, a male coupling member having a ball-receiving groove

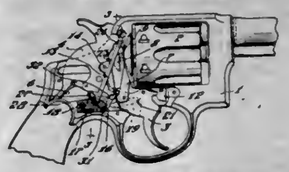
therein, balls mounted in said openings for movement into and out of said groove to lock and release said male member, and a rotary cam ring mounted on said female member and surrounding said balls so as to retain them in said openings, being rotatable one direction to force the

balls into and hold them in said groove and rotatable in the opposite direction to release said balls for movement out of said groove, there being ball-locking depressions on said cam ring in which said balls seat when the ring is turned to a position to force the balls into said groove.



2,470,257
ELECTRICAL PROTECTIVE SYSTEM
Milton K. Moore, Corpus Christi, Tex.
Application November 23, 1945, Serial No. 630,202
4 Claims. (Cl. 175—294)

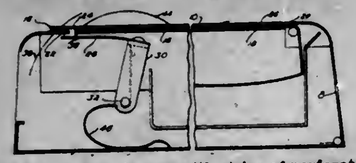
1. In an electrical circuit including a circuit breaker and a main switch, a holding coil controlling the main switch and a circuit for said holding coil, an auxiliary circuit including electromagnetic means controlling said circuit breaker, a pair of successively operating switches in said auxiliary circuit responsive to pre-determined movements of said main switch to control said auxiliary circuit, and a third switch in said auxiliary circuit controlled by said holding coil circuit to operate in the interval between the operation of said pair of switches.



2,470,258
COLLAPSIBLE WHEEL CHAIR
Ferhad Mustafa, Highland Park, Mich.
Application May 26, 1947, Serial No. 750,571
2 Claims. (Cl. 155—117)

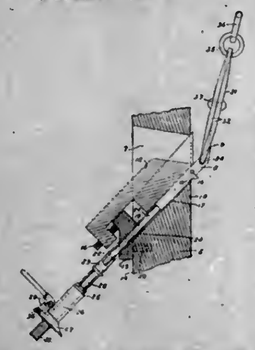
1. A chair of the kind described including a telescopic base frame composed of a relatively stationary rear member and a movable front member, each mounted on ground wheels, a pair of rails pivotally affixed to the front member and extending rearwardly, a pair of rails pivotally affixed to the rear part and extending forwardly, said first mentioned rails and said second mentioned rails being pivotally connected in a scissor type formation midway their respective lengths, a transverse rod connected to back ends of the first mentioned rails and another connected to front ends of said second mentioned rails, a flexible webbing to form a seat, said webbing extending between said transverse rods, the rails and the top portion of the cross rails respectively, an arm rest on each side of the chair and two vertical props for each arm rest, one of the props

being at the rear and one at the front, the two rear props being joined by a sliding bar resting on the second mentioned rails, a substantially horizontally disposed lever pivotally affixed to the mid portion of said second mentioned rails and extending rearwardly therefrom, the lever having on its underside a plurality of transverse recesses for selective engagement with the sliding bar, a coil spring anchored at one end to the rear member of the base frame and affixed at the other end to the lever to secure the same in a state of engagement with the sliding bar.



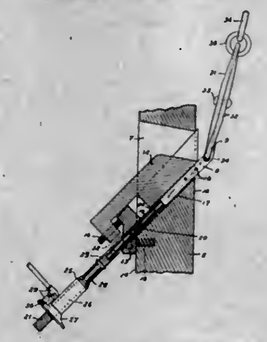
2,470,259
SAFETY DEVICE FOR REVOLVERS
Joseph W. Norman, Springfield, and Carl R. Hellstrom, Wellesley, Mass., assignors to Smith and Wesson, Inc., Springfield, Mass., a corporation of Massachusetts
Application April 2, 1946, Serial No. 658,944
2 Claims. (Cl. 42—66)

1. A firearm comprising a hammer movable back and forth between firing and cocked positions and having an intermediate position, a trigger, means responsive to rearward movement of the trigger for retracting the hammer from intermediate position to cocked position and then releasing the hammer, an actuator member movable along a predetermined path for retracting the hammer from firing position to intermediate position when the trigger is released, and a safety member movable transversely of said path into and out of position to obstruct movement of the hammer from intermediate position to firing position, one of said members having a cam slot and the other member having a pin extending into said slot, said slot having a rear face inclined to the path of the pin carrying member, and a front face more steeply inclined to said path than said rear face, said pin holding said safety member



in obstructing position with the trigger in normal position and said rear face camming the safety member into unobstructing position when the trigger is retracted into firing position, and said front face moving the safety member into obstructing position during continued forward movement of the trigger.

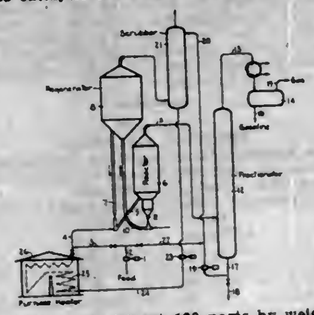
2,470,260
AUTOGRAPHIC REGISTER
Walter E. Oliver, Quincy, Mass.
Application January 27, 1946, Serial No. 4,692
2 Claims. (Cl. 282—21)



1. In a register for use with strips of perforated tickets each having a controlling hole at its head, a platen over which the tickets are successively positioned having a slot at its forward end, a rocker arm movable to opposite sides of the vertical, a spring projecting forwardly therefrom carrying at its end a hole-engaging pin which in the rearward position of the arm projects through the slot, the pin being smaller than the hole and having an overhanging projection at its leading face to engage over the forward margin of a hole to support the pin for rectilinear movement in an elevated position during the forward movement of the rocker arm with resultant upward flexure of the spring and releasing the same to the spring for movement to a depressed position below the paper at the first part of the rearward movement.

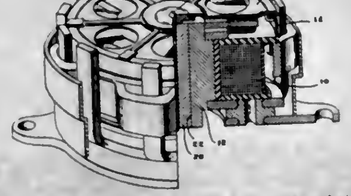
2,470,261
APPARATUS FOR HANDLING CHIPPER KNIVES
Stanley D. Payzer, Wausau, Wis., assignor to D. J. Murray Manufacturing Co., Wausau, Wis., a corporation of Wisconsin
Application October 9, 1944, Serial No. 557,808
3 Claims. (Cl. 144—176)

1. A blade removing assemblage for a wood chipper having a rotary disc provided with a slot and a flat blade normally confined within the slot, an elongated blade holding plate secured to the disc near the slot and rearwardly of the blade, said plate having an opening therethrough directed toward the blunt end of the blade and also having alined pivots associated with its opposite ends, the assemblage comprising, a U-shaped yoke having opposite side arms swingably suspended from said plate pivots and also having a jack mounted thereon between said side arms, and a cross-bar slidably confined between said yoke arms and having a pin movable through said plate opening toward said blade by coaction with said jack to eject the blade from its confining slot.



2,470,262
METHOD OF HANDLING CHIPPER KNIVES
Stanley D. Payzer, Wausau, Wis., assignor to D. J. Murray Manufacturing Co., Wausau, Wis., a corporation of Wisconsin
Original application October 9, 1944, Serial No. 557,808. Divided and this application August 27, 1945, Serial No. 612,740
1 Claim. (Cl. 29—148)

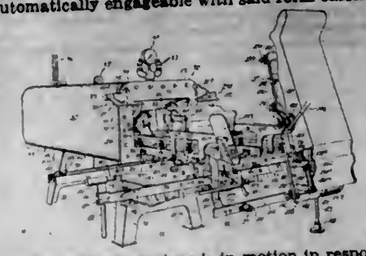
The method of removing a knife blade provided with opposite end detents and an intervening cutting edge from a chipper rotor revolvable about a horizontal axis and having a radial opening within which the knife is normally confined in an inclined position by a wedge bar disposed within the opening and a holding plate coacting with the bar and having opposite end sockets and transverse guide holes extending therethrough parallel to the blade, which method comprises, revolving the rotor to upwardly incline the blade with its cutting edge uppermost and releasing the wedge bar, slidably inserting pins within the guide holes and applying uniform pressure to the lower blunt end of the blade through the pins to partially eject the upper sharp blade end from within the rotor opening, and thereafter applying an upward pull to the blade detents to finally withdraw the blade bodily from within the rotor.



2,470,263
HYDROCARBON CONVERSION PROCESS
Norman E. Peery, San Francisco, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application July 27, 1946, Serial No. 686,639
4 Claims. (Cl. 196—52)

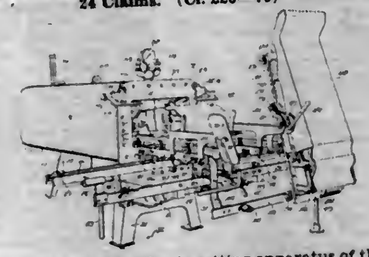
1. Process for the production of gasoline from higher boiling hydrocarbon oils through catalytic cracking which comprises passing recycled oil containing between 0.5 and 10 pounds per barrel of a suspended finely divided solid cracking catalyst through a cracking coil under conditions to produce a minor amount of thermal and catalytic cracking, quenching the product by the addition of virgin gas oil, subjecting the mixture to catalytic cracking in the vapor phase in

the presence of at least 100 parts by weight of said cracking catalyst per part of oil, fractionating the product to separate gasoline and a recycle oil, and subjecting the recycled oil to the above specified treatment.



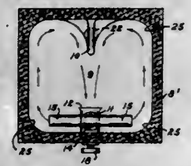
2,470,264
ELECTRIC MOTOR BEARING
Lloyd D. Richardson, Dayton, Ohio, assignor to Hansen Manufacturing Company, Inc., Princeton, Ind., a corporation of Indiana
Application January 18, 1947, Serial No. 722,860
1 Claim. (Cl. 172—36)

As a new article of manufacture; a substantially cylindrical bearing member composed of a mixture of graphite, metal powder and a binder to form a cylindrical bearing to receive a shaft; and a substantially cylindrical magnetic member molded directly around the periphery of said bearing member and physically united therewith and comprising a mixture of magnetic material and binder to support the said material in rigid form for mounting said article in a supporting housing.



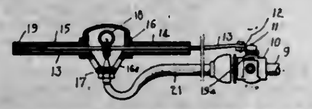
2,470,265
SETTING APPARATUS FOR TEXTILE FABRICS
Henry Richter, Kankakee, Ill., assignor to Paramount Textile Machinery Co., Kankakee, Ill., a corporation of Illinois
Application March 6, 1945, Serial No. 581,210
52 Claims. (Cl. 223—76)

1. The combination in setting apparatus of the class described, of a retort having an opening, a main carriage movable outside of said retort transversely to said opening, a form carriage mounted on said main carriage, and power means automatically engageable with said form carriage



while said form carriage is in motion in response to a manual impulse for further moving said form carriage from said main carriage into said retort.

2,470,266
EJECTOR MECHANISM FOR RETORTS
Henry Richter, Kankakee, Ill., assignor to Paramount Textile Machinery Co., Kankakee, Ill., a corporation of Illinois
Application October 31, 1945, Serial No. 625,781
24 Claims. (Cl. 223—76)

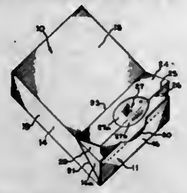


24. The combination in setting apparatus of the class described, of a retort having an opening, a door for closing said opening, a form carriage mounted for movement into and out of said retort, means actuated when said carriage is moved into said retort for storing energy for subsequently ejecting said retort, means for restraining said energy storing means, means including an electric circuit for performing the steps of closing said door, causing a flow of steam into said retort, shutting off the steam and exhausting the steam from the retort, then opening said door, and then releasing said restraining means to permit the ejection of said carriage from said retort by the operation of said energy storing means, a motor driven controller connected in said circuit for controlling the sequence and time duration of said steps, a switch actuated by the operation of said restraining means when said carriage enters said retort for initially starting said motor to drive said controller, said controller being arranged to maintain the circuit of said motor thereafter until the flow of steam into said retort has started and then to open the circuit of said motor, and thermostatic means located in said retort and connected in said circuit for restoring the circuit of said motor and thereby continuing the operation of said controller when a predetermined temperature is created by the steam in said retort, said controller having means for then maintaining the circuit of said motor during the remaining steps of the cycle.

2,470,267
PAPER PULP AGITATOR
John A. Rosmait, Appleton, Wis., assignor to D. J. Murray Manufacturing Co., Wausau, Wis., a corporation of Wisconsin
Application March 10, 1945, Serial No. 582,669
1 Claim. (Cl. 92—37)

A paper pulp agitator, comprising, a chest forming a centrally unobstructed pulp storage chamber bounded by a flat front upright surface and a rear surface having an upright chamber bounding wedge projecting centrally and forwardly therefrom toward the chamber center and toward the mid-portion of the front surface, said wedge having concavely curved chamber bounding surfaces merging along smoothly curved opposite side surfaces with said front surface and being of gradually increasing wedge-shaped transverse cross-section approaching the bottom of the chamber, and said chamber bottom being inclined downwardly and forwardly away from the largest lower wedge end and cooperating with the wedge bounding surfaces to provide a continuous smooth upwardly and rearwardly inclined liquid guiding surface extending from the lowest front portion of the chamber to the uppermost rear portion thereof, and a circulating pump located within said chamber near the lowest mid-portion of said front surface and having an unobstructed inlet in open communication with the chamber center and directed centrally away from the lower wedge extremity and also having an outlet directed upwardly along and laterally toward the opposite side surfaces of said chamber at said uppermost chamber portion.

2,470,268
SAFETY THERMOSTATIC CONTROL FOR GASEOUS BURNERS
Maurice Rowan, Richmond Hill, N. Y.
Application March 7, 1945, Serial No. 581,375
1 Claim. (Cl. 158—117.1)

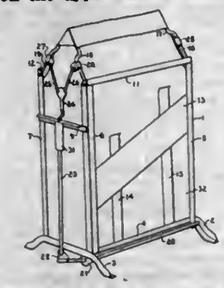


The combination with a stove having a plurality of gaseous burners, a pilot flame igniter having a burner and distributor chamber means supporting the burner and surrounding the same, a horizontal flame ignition tube extending to each burner from said chamber means, a gas supply pipe for the pilot burner, a turn valve therefor, a pair of tubes connected with the distributor chamber means and extending from opposite sides thereof in axial alignment with each other, the outer end of one of said tubes being closed, and a thermostatic rod having an end portion engaged with the closed end of said last-named tube and extending through the opposing tube and pivotally connected with the valve, said thermostatic rod extending through the chamber means and directly over the pilot burner to be heated by the flame thereof and adapted to contract when said flame is extinguished to close the valve by such contraction, said tubes being greater in internal diameter than the diameter of the rod whereby to permit the free deflection of the rod throughout its entire length and the turning of the valve through its pivotal connection therewith, said rod being contractible from its engagement with the one tube to its connection with the turn valve.

2,470,269
FRICTION MATERIAL
Ralph Schaefer, Cleveland, Ohio, assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application August 13, 1945, Serial No. 610,663
2 Claims. (Cl. 29—192)

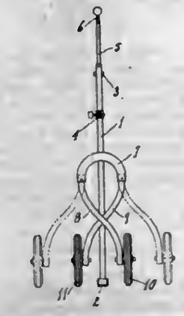
1. A friction material consisting of a mixture of metal powder of which the principal ingredient is copper and the oxides of aluminum, silicon, calcium, and iron compressed and sintered together into a unitary mass, the percentage of copper being 50% to 70% and the oxide component being 10% to 25% aluminum oxide, 25% to 50% silica oxide, 15% to 25% calcium oxide, and 10% to 30% iron oxide.

2,470,270
FOLDING BOX
Jesse Srofe, Cincinnati, Ohio, assignor to The Globe-Wernicke Company, Cincinnati, Ohio, a corporation of Ohio
Application August 29, 1946, Serial No. 693,759
2 Claims. (Cl. 229—9)



1. In a folding box comprising an outer case member, a flap forming a portion of the top of the said case member, said flap being hinged to the remaining portion of the top, a tongue hinged to the free end of the flap and extending downwardly at the end of the case member, a receptacle sliding within said case member, a viewing window formed both in said flap and in said tongue, a transparent closure over said window attached to said flap and tongue and extending across the hinge therebetween, a cutaway portion in the front of the receptacle cooperating with the portion of the window in the tongue whereby the contents of said box are exposed to view from the front and top of said box, and the hinge which connects the flap to the top of the case member being located rearwardly of the front of the case member.

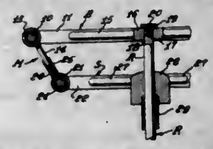
2,470,271
RECEPTACLE SUPPORT
Le Roy S. Steinbacher, Battle Creek, Mich.
Application September 4, 1945, Serial No. 614,263
11 Claims. (Cl. 248—97)



5. A receiving and holding means for a bag having an outturned and folded down top portion,

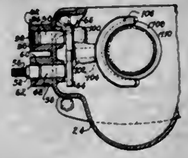
which includes an upwardly extending open top body portion, and a pair of balls pivotally mounted on the upper end of same, the upper

portion of said balls being adapted to be slipped into the outturned folds at the opposite sides of the top portion of said bag.



2,470,272
RETRACTABLE GOLF BAG CART
Russell S. Trimmer, Compton, Calif.
Application December 23, 1947, Serial No. 793,482
3 Claims. (Cl. 280—42)

1. A retractable golf bag cart comprising a center post, golf bag supporting means on said post, a yoke fixedly mounted on said post, a pair of arms journaled in said yoke and rotatable therein from retracted to extended position, and a wheel mounted on each arm, each of said arms being formed with a reverse curve therein whereby the wheel is moved from one side of the post to the other when the arms rotate in the yoke and move from retracted to extended position.

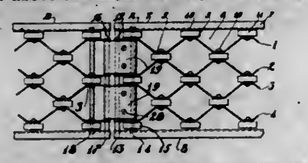


2,470,273
COMBINED STEERING WHEEL AND BRAKING MECHANISM
Murray G. von Uffel, West Los Angeles, Calif.
Application August 8, 1947, Serial No. 767,590
2 Claims. (Cl. 74—486)

1. A combined hand operated steering and braking mechanism for a vehicle which includes: a hand operated steering wheel which includes an annular core with a plurality of spaced hand grips provided thereon; a plurality of collars with each of said collars situated in one of said spaces and rotatably mounted on said core; a plurality of tubular members with each of said members supported from one of said collars; a plurality of springs with each of said springs positioned within the confines of one of said tubular members; a hand operated braking wheel which includes an annular core with a plurality of spaced hand grips provided thereon; a plurality of collars with each of said collars situated in one of said spaces and rotatably mounted on said braking wheel core; a plurality of rigid members with each of said members mounted on one of said braking

wheel collars and slidably engaging one of said tubular members whereby said springs maintain said braking wheel in an elevated position with relation to said steering wheel; and a rod member affixed to said braking wheel and adapted to actuate the brakes of said vehicle when said braking wheel is moved downwardly by the hands, with said braking wheel and said rod being returned to the elevated non-braking position by the expansion of said springs when the pressure of the hands is removed from said braking wheel.

2,470,274
AUTOMOTIVE TRANSMISSION
Nils Erik Wahlberg, Chicago, Ill., assignor to Nash-Kelvinator Corporation, Kenosha, Wis., a corporation of Maryland
Application July 30, 1942, Serial No. 452,861
13 Claims. (Cl. 74—473)

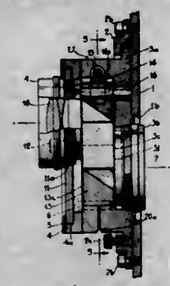


1. A shift mechanism for transmissions comprising a rock shaft, a shifting fork carried by said rock shaft, a second rock shaft, manually operable means for rotating said second rock shaft, and variable advantage interengaging toothed means each comprising a plurality of tooth elements between said rock shafts and fast to each of said rock shafts and each tooth extending from one rock shaft toward the other more than two-thirds of the distance between said rock shafts for multiplying the shifting force imparted by said second rock shaft to said first rock shaft.

2,470,275
ROLLERWAY CONVEYER
Nathaniel Warshaw, Brookline, Mass., assignor to Market Forge Co., Everett, Mass., a corporation of Massachusetts
Application February 20, 1946, Serial No. 649,108
7 Claims. (Cl. 193—35)

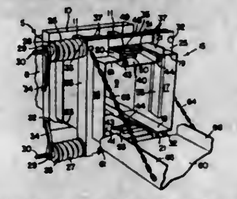
5. A conveyor comprising two parallel frame members, a plurality of relatively rigid strips between said frame members and having outwardly offset portions juxtaposed to each other to form a grill platform, the strips forming the outer

edges of the platform having offset portions juxtaposed to the frame members, the platform being connected to the frame members above their longitudinal center lines, and a roller interposed between and pivotally supported by each of the offset portions, the rollers being of such diameter that their top peripheries are in a plane spaced above the adjacent longitudinal edges of



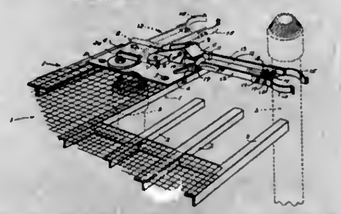
said frame members and their opposite peripheries are in a plane spaced above the other longitudinal edges of said frame members, thereby to provide in one position, a working plane of rollers above the top edges of the frame members and, in the inverted position of the conveyor, a working plane of rollers below the top edges of the frame members, the frame members constituting guide rails in the latter position.

2,470,276
OIL ADDEND
Franklin M. Watkins, Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine
No Drawing. Application November 29, 1945, Serial No. 631,771
2 Claims. (Cl. 252—52)



2. A petroleum oil, normally corrosive to copper by reason of its content of sulfur, containing an amount of tertiary-butyl hydroperoxide sufficient to inhibit such corrosion.

2,470,277
OPTICAL LENS UNIT WITH IMAGE REVERSING MEANS
Stephen N. Wekeman, Saddle River Township, Bergen County, N. J., assignor to Sun Chemical Corporation, New York, N. Y., a corporation of Delaware
Application October 25, 1946, Serial No. 705,627
5 Claims. (Cl. 88—57)



1. An optical unit for normal and reversed image projection comprising in combination, a pair of objective lenses disposed on respective parallel axes and spaced apart in an axial direction, means for mounting said lenses for relative movement into coaxial alignment and out of coaxial alignment a predetermined offset distance, and an image reversing prism set disposed in the space between said lenses, means for adjustably mounting said image reversing prism set for movement into and out of the optical path through said objective, said prism set having parallel entrance and exit axes spaced apart said predetermined distance, whereby said lenses may be selectively disposed in offset relation with said prism set interposed in the optical path to thereby produce a reversed projected image or in coaxial alignment with said prism set removed from the optical path to thereby produce a normal projected image.

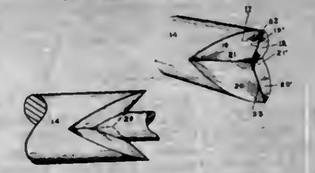
2,470,278
BALING PRESS
James Rex West, George B. Hill, and Marcus E. McClellan, Ottumwa, Iowa, assignors to Deere Manufacturing Co., a corporation of Iowa
Application December 6, 1946, Serial No. 714,360
7 Claims. (Cl. 100—23)

1. In a baling press, a bale case having a compression portion at one end comprising a pair of opposed channel shaped walls having flanges turned inwardly toward each other, a second pair of opposed walls disposed between said flanges and adjustable toward and away from each other, and a pair of longitudinally extending channel portions on the edges of said second pair of walls, said channel portions being open inwardly to receive binding wires or twine on bales passing therethrough, to prevent said wires or twine from slipping off the bales.

2,470,279
PIPE RACKING APPARATUS
John E. Whited, Shawnee, Okla.
Application October 10, 1945, Serial No. 621,486
2 Claims. (Cl. 214—1)

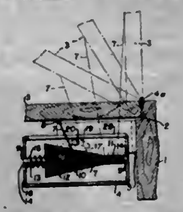
1. In apparatus for handling the upper ends of well pipe "stands," the combination with a stationary platform located above a derrick floor, of: a fitting pivotally mounted directly upon the platform for horizontal swinging movement with relation thereto; a rigid arm; vertically projecting longitudinally extending side flanges carried by the arm; a hinged connection between the fitting and one end of the arm whereby the arm may be folded upwardly over the platform into inoperative position; a pair of laterally movable fingers each having a longitudinal portion lying flatly against the outside surface of one of said flanges, and each having an arcuate portion projecting longitudinally beyond the free end of said arm, said arcuate portions confronting each other for engaging opposite surfaces of upper portions of said pipe "stands"; a plurality of bolts extending laterally through the flat portion of one of said fingers, and through the adjacent flange of said arm, said bolts projecting beyond the flange toward the longitudinal axis of the arm; an expansion spring around the projecting portion of each bolt; and a nut on each bolt for holding its spring under compression whereby said arcuate portions are resiliently urged into frictional engagement with said "stands."

2,470,280
SOCKET FOR MINIATURE BULBS AND THE LIKE AND MOUNTING THEREFOR
Ernest A. Ackerman, Shaker Heights, Ohio
Application August 1, 1945, Serial No. 608,164
1 Claim. (Cl. 173—328)



An electric socket for a miniature bulb of elongated cylindrical shape and formed of insulating material, said socket consisting of an intermediate base connected at one end to an open ended chamber adapted to receive a bulb and an enclosure at its opposite end removably, telescopically, frictionally engaging said base, said base being formed with a pair of parallel through openings, tubular contact members extending through and slidably fitting said openings, said openings inwardly of said chamber being enlarged, coiled springs mounted in said enlarged portions and engaging the adjacent ends of said contact members and tending to move them endwise, said contact members extending into said enclosure and provided with transversely crimped walls engaging said base to limit the movement of said contact members under the influence of said springs, and conductors extending through the end wall of said enclosure and into said contact members, said members being transversely crimped into engagement with said conductors to secure an electrical connection therewith.

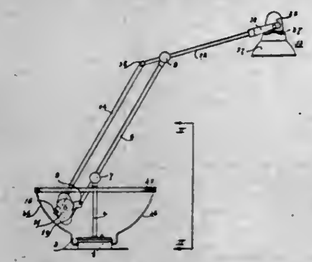
2,470,281
PRESERVATIVE COATINGS FOR FOODS
Wilber J. Allingham, Denver, Colo.
No Drawing. Application March 29, 1946, Serial No. 658,235
3 Claims. (Cl. 99—169)



1. A method of preserving meat against oxidation and dehydration comprising: coating said food with hydrous mixture of lecithin, and Irish moss gel.

2,470,282
MOUNTING FOR SHAFTS AND THE LIKE
Frederick C. Baker and Elbert Gary Spencer, Portland, Oreg.
Application July 28, 1947, Serial No. 764,110
3 Claims. (Cl. 33—50)

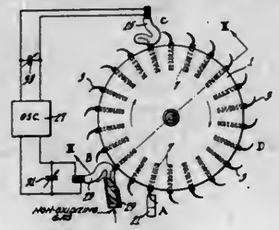
1. In a detachable mounting of the character described, a supporting element, a member movable into alignment with said element, said element and said member having opposed identically formed mating ends, means for holding the other end of said member in desired position, and means for causing said opposed ends of said element and member to bear against each other under a maintained longitudinal thrust, said opposed end of said element formed with two identical V-shaped grooves extending inwardly and forwardly from diametrically opposite points on the outer surface of said element to the end of said element, the bottom groove lines of said grooves meeting at the center point of said element end, said grooves intersecting each other on two converging lines of intersection extending outwardly and forwardly from said center point to diametrically opposite terminal points of said element end, the plane of said converging lines of intersection being perpendicular to the plane of said bottom groove lines of said grooves, said opposed end of said member being identically grooved with a corresponding pair of V-shaped grooves extending inwardly and forwardly from diametrically opposite points on the outer surface of said member to the center of said end of said member, whereby, when said member is placed in alignment with said element and said opposed ends are caused to bear against each other, the converging lines of intersection of the pair of grooves in each of said ends will coincide with the bottom groove lines in the other of said ends and the faces of said grooves of said ends will be in inter-engaging position.



2,470,283
DOOR CLOSING DEVICE
Fred H. Barger, San Fernando, Calif.
Application October 17, 1945, Serial No. 622,879
4 Claims. (Cl. 16—78)

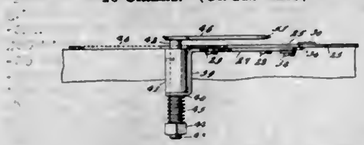
1. A door closing device comprising a casing containing a rotary element having straight and inverted conical portions, said element being journalled in said casing, a door closing cord

wrapped over a predetermined part of said element, means acting on said element for resisting the rotation of the element when a pull is exerted on the cord during the door opening operation, and means for changing the angle with which said element is presented to the cord in order to cause the cord to wrap itself around a different part of the element during the door closing operation when the element is actuated by said rotation resisting means.



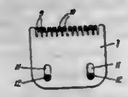
2,470,284
BAR SYSTEM AND LAMP FITTING COMPRISING SUCH A BAR SYSTEM
Jan Bergmans, Clamor August Lamberts, and Charles Henri Joseph Anderson, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 25, 1946, Serial No. 664,726
In the Netherlands September 10, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires September 10, 1962
2 Claims. (Cl. 248—280)

1. Apparatus for supporting an electrical element in a given position with respect to a base, comprising a pantograph-like framework member having interconnected arm portions and hollow insulating hinge portions, a counterpoise member, a rotatable support member, adjustable means for rockably supporting the said element, and circuit means for conducting current to the said element, said members being connected together to form a balanced rotatable structure, said circuit means being entirely concealed in said connected structure and said element.



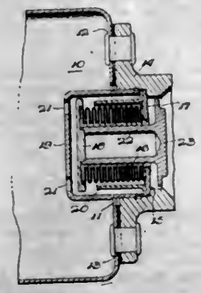
2,470,285
RADIO FREQUENCY APPARATUS FOR HEATING METALLIC ARTICLES OF LARGE SURFACE AREA TO VOLUME RATIO
Rudolph A. Bierwirth, Kingston, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 30, 1944, Serial No. 528,702
4 Claims. (Cl. 219—13)

1. Apparatus for heat treating ferro-magnetic articles to alter the hardness thereof which comprises a turntable adapted to support a plurality of said articles thereon in radially extending, circumferentially-spaced relation with the end portions of said articles extending beyond the periphery of said turntable whereby to expose said portions for heat treatment thereof, said turntable being rotatably mounted for conveying said articles along a path which includes an operating station, an induction heating device at said station spaced radially from said turntable and disposed on the same level as said articles for receiving and heating said exposed article end portions when they are in the magnetic field provided by said device, means for intermittently moving said turntable to periodically alternately first advance said articles along said path and then bring said articles to rest in said path with the exposed end portion of at least one of said articles in cooperative relation with said heating



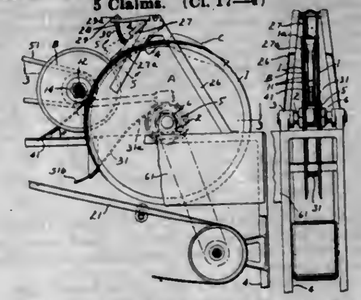
device, a source of high frequency current coupled to said heating device, and means associated with said current source for controlling the supply of current by said source to said heating device, said last named means being synchronized with said turntable moving means to cause said current source to deliver current to said heating device substantially only during rest periods of said articles whereby to heat the exposed end portions of the articles successively at rest at said station.

2,470,286
BLIND STITCHING MEANS
Sylvester J. Birginal, Chicago, Ill.
Application April 24, 1946, Serial No. 664,661
10 Claims. (Cl. 112—140)



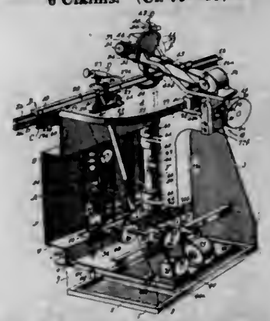
1. In a sewing machine having a reciprocal needle, apparatus of the character described rendering the machine readily convertible for blind stitching or conventional stitching, including: a throat plate for replacing the throat plate of the machine; a guide member insertable into a fold of the cloth to guide said fold while it is being stitched, and adapted to have the material guiding edge closely adjacent the path of movement of the needle; a mounting member having the guide member pivotally mounted thereon, the mounting member being movable in a plane perpendicular to the direction of movement of the needle; and actuating means for moving the mounting member to adjust the position of the guiding edge of the guide member with respect to the path of movement of the needle, the actuating means including a manually movable actuating member and a motion reducing actuating connection between said actuating member and the mounting member, said guide member, said mounting member and at least the major portion of said actuating means being contained within the periphery of the throat plate.

2,470,287
HAIR CLIPPER
Clarence E. Carter, San Francisco, Calif.
Application June 12, 1945, Serial No. 598,941
1 Claim. (Cl. 30—195)



A hair clipper, including in combination, a lower blade having alternately long and short notches, providing teeth each having a long and short cutting edge, a movable upper blade having cutting teeth with edges which are all of the same length, means to oscillate the said upper blade transversely across the lower blade, and means to move the lower blade forwards or backwards, so that when the lower blade is in a backward position the teeth of both blades will all be cutting teeth, and means to secure the lower blade in a backward position, and means to secure the lower blade in a forward position so that only the long cutting edges of the lower blade will come in contact with the cutting teeth of the upper blade, and the short cutting edges of the lower blade will not be in contact with the teeth of the upper blade, and thereby the hair will be thinned and only a part of it will be cut.

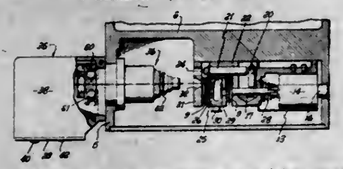
2,470,288
EXCESS PRESSURE PROTECTED PRESSURE RESPONSIVE DEVICE
Robert S. Childs, Englewood, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application April 24, 1944, Serial No. 532,469
2 Claims. (Cl. 137—156)



1. In combination, a pressure responsive device including an annular expansible and contractable bellows responsive to variable pressures acting thereon, a variable pressure chamber normally in communication with said device, means fixedly supporting one end of said bellows, an annular valve member whose diameter exceeds the diameter of said bellows secured to the opposite end of said bellows which is movable in response to changes in condition of said bellows, and means surrounding said bellows and cooperating with said valve member to form a protective chamber for said bellows which is substantially sealed from said variable pressure chamber when said valve member has been moved a predetermined distance by said bellows in response to change of pressure in said variable pressure chamber.

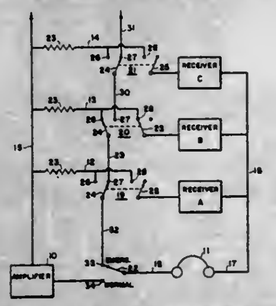
2,470,289
FISH BACKBONE REMOVING MACHINE
Andrew L. Christiansen, Willowbrook, Calif.
Application November 8, 1943, Serial No. 509,342
5 Claims. (Cl. 17—4)

1. In a means of the class described, a conveyor comprising a pair of axially spaced apart discs having their peripheral edges diverging outwardly with respect to each other from the middle portion of the discs, said discs being adapted to receive therebetween and to hold fish on their backs, a cutting means comprising a pair of cutting members extending with their cutting edges between and spaced from said discs, and a deflector positioned between said discs and directed at an acute angle with respect to the direction of movement of the conveyor to facilitate ejection of fish therefrom.



2,470,290
SAW GRINDER
John R. Chryst, Tacoma, Wash.
Application May 6, 1947, Serial No. 746,299
6 Claims. (Cl. 76—40)

1. In a saw grinder; means for holding a saw during grinding of the latter's teeth; a frame having a hollow shaft journalled thereon; a standard mounted on the shaft for swinging about the longitudinal axis of the shaft; a moveable platform supported by the standard and having a rotatable grinding wheel thereon; the wheel being moveable toward and away from the saw when the platform is correspondingly moved; the longitudinal axis of the shaft, when extended, passing through the point of contact between the wheel and a saw tooth being ground; the hollow shaft being provided with a slot in the wall thereof; a push rod slidably disposed in the bore of

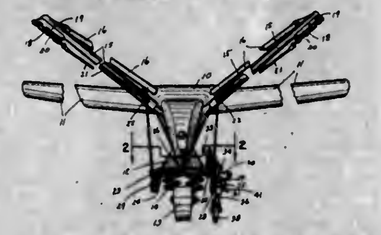


the shaft; a lift rod guided for movement in a direction paralleling the shaft; the lift rod engaging with the platform for raising the latter and thereby moving the wheel into non-grinding position when the lift rod is moved in one direction; means projecting through the slot in the hollow shaft for raising the lift rod when the push rod is raised; means for periodically advancing the saw and wheel relative to one another to present all of the saw teeth in succession to the wheel for grinding the teeth; and means for adjusting the standard, platform and wheel about said axis of the shaft into various angular positions to grind different angles of cross bevel on the saw teeth.

2,470,291
FILM IDENTIFYING AND PUNCHING DEVICE
Milford E. Collins, Los Angeles, Calif., assignor to Radio Corporation of America, a corporation of Delaware
Application July 4, 1945, Serial No. 603,209
7 Claims. (Cl. 95—1.1)

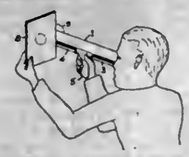
1. A film marking system comprising means for advancing film, a punch adapted to punch said film when said film is stationary, energizing means for said film advancing means, a solenoid for actuating said punch, means for energizing said solenoid, and an electrical relay, means energized by said film advancing energizing means for disconnecting said solenoid energizing means from said solenoid when said film advancing energizing means is energized.

2,470,292
SWITCHING SYSTEM
Robert L. Daniel, Baltimore, Md., assignor to Bendix Aviation Corporation, Towson, Md., a corporation of Delaware
Application March 27, 1946, Serial No. 657,578
5 Claims. (Cl. 250—20)



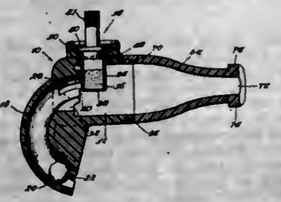
4. In an electric circuit comprising a plurality of branches, an interlocking switching system comprising: a double-pole, double throw switch in each of said branches, connecting means including said switches comprising a series circuit, each of said switches in one position completing the circuit of its respective branch, connecting the portion of said series circuit on one side thereof to said branch and interrupting the other portion of said series circuit; said switch in its other position interrupting its parallel branch, disconnecting said series circuit therefrom and completing said series circuit through said switch.

2,470,293
NOZZLE
Joseph B. D'Angelo, Tiffin, Ohio
Application February 14, 1946, Serial No. 647,498
1 Claim. (Cl. 128—239)



A syringe nozzle comprising a tubular barrel open at front and rear ends and having its rear end adapted for engagement with a fluid-supply tube, the front end portion of said barrel being of increased diameter and formed internally with a mixing chamber of greater diameter than the bore of said barrel and having an annular wall threaded from its front end, there being outlet openings extending radially from the rear end of the mixing chamber at a rearward incline through the annular wall thereof and spaced from each other circumferentially thereof, a head having an externally threaded neck at its rear end screwed into the mixing chamber of said barrel, said head being tapered towards its front end and having its front end portion reduced in diameter to form a tip, said head having a longitudinally extending pocket of less diameter than the mixing chamber forming a continuation of the mixing chamber at a rearward incline said head being formed with a centrally located outlet opening extending from the pocket through the tip longitudinally thereof and with other outlet openings surrounding the central outlet opening and extending from the pocket through side portions of the tip in spaced relation to each other circumferentially thereof, and an elongated medicant cartridge fitting loosely in the pocket of said head with its rear portion extending into the mixing chamber and its front end retarding free flow of fluid through the outlet openings of the head.

2,470,294
AIRCRAFT RELEASE DEVICE
Augustus H. Eberman, Geneva, Ill., assignor to The Rudolph Wurlitzer Company, Chicago, Ill., a corporation
Application May 10, 1945, Serial No. 593,040
8 Claims. (Cl. 244—3)

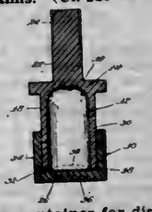


1. An aircraft release device including a control arm movably mounted upon the under carriage of the aircraft for ground contact, a releasable latch mounted on said aircraft, a connection between said control arm and latch, and elongated means slidably mounted and normally constrained to locking position and effective upon said arm leaving the ground to interlock said arm and latch connection and move said latch to releasing position upon displacement of said arm in striking the ground.

2,470,295
SPACE SCOPE
Albert Hanford Eckman, Ponca City, Okla.
Application July 19, 1946, Serial No. 684,844
1 Claim. (Cl. 272—8)

In an optical illusion device, a tubular member having an extended flange at one end with an opening through the flange positioned concentric with the axis of the tube and communicating with the interior of the tube and a second opening through the flange spaced from the former opening and axis of the tube, a distance corresponding with the distance between the eyes of the user of the device, the size of the said second opening being equal to that of the former opening, said tube having a downwardly extending handle positioned intermediate of the ends, and a tubular felt eye piece positioned in and extending from the end of the tube opposite to the end on which the flange is positioned.

2,470,296
INHALATOR
Mack R. Fields, Libertyville, Ill., assignor to Abbott Laboratories, North Chicago, Ill., a corporation of Illinois
Application April 30, 1948, Serial No. 24,319
21 Claims. (Cl. 128—266)

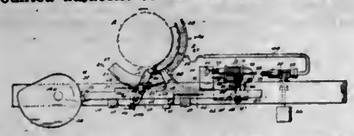


1. Equipment for introducing an airborne powdered medicament into body cavities, which comprises: a body defining a passage; said passage having an inlet; means for enabling the user to move successive charges of gas through said passage; a medicament container in said passage having an opening permitting exit of powder; a charge of medicament in said container; said medicament being powdered finely enough to pass out through said opening, at least when jolted; and means actuated by the flow of an initial portion of a normal charge of gas, for jolting said container to discharge medicament from said open end.

2,470,297
INHALATOR
Mack R. Fields, Libertyville, Ill., assignor to Abbott Laboratories, North Chicago, Ill., a corporation of Illinois
Application September 4, 1947, Serial No. 772,104
3 Claims. (Cl. 128—266)

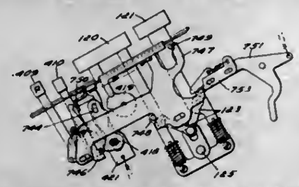
3. Equipment for introducing an airborne powdered medicament into body cavities, which comprises: a body defining a chamber; said chamber being formed with an outlet shaped to deliver fluid to the person of the user; an inlet to said chamber; a medicament container in said chamber having a foraminated wall; means actuated by the initial flow of inhaled gas through said inlet, for jolting said container to release an increment of medicament through said foraminated wall; said chamber being provided with an additional outlet for the exit of gas during exhalation; and an automatic check valve in said additional outlet to prevent inward flow.

2,470,298
POWDERED MEDICINE DISPENSER
Mack R. Fields, Libertyville, Ill., assignor to Abbott Laboratories, North Chicago, Ill., a corporation of Illinois
Application February 7, 1949, Serial No. 74,979
9 Claims. (Cl. 128—272)



1. A dispensing container for dispensing finely divided solids into a stream of air to render them airborne, comprising, in combination: a cylindrical container body having an open end; a foraminated closure at said open end adapted to support finely divided solids and to permit them to sift through when jolted; spaced lugs projecting radially from said body remote from said closure for suspending said body; and handle means coaxial with said body and projecting axially beyond said lugs.

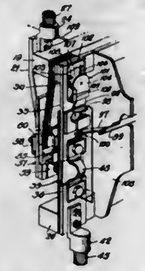
2,470,299
METHOD OF AND APPARATUS FOR LIQUID TREATMENT OF YARNS
William H. Furness, Haddonfield, N. J., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application July 26, 1946, Serial No. 686,341
14 Claims. (Cl. 8—151.1)



1. The process of applying liquid treatment to yarn being laid up on a reel in the form of a helix which comprises supporting a body of the liquid closely adjacent to the periphery of the reel and rapidly pulsating liquid of said body into and out of the same portion of the helix for a substantial period whereby the yarn is subjected to a scrubbing action.

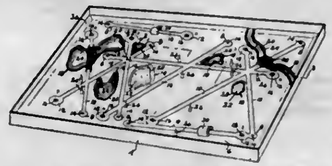
3. In apparatus for the liquid treatment of yarn, the combination of a reel on which the yarn is laid up in a helix, a liquid compartment mounted adjacent to the reel and perforate in

its face adjacent to the reel, and means for pulsating the liquid in the compartment back and forth through the perforate face into and out of the helix.



2,470,300
NONREPEAT MEANS FOR CALCULATING MACHINES
Herman Gang, Livingston, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a corporation of Delaware
Application March 17, 1948, Serial No. 15,374
5 Claims. (Cl. 235—62)

1. In a calculating machine having a register, cyclically operable differential actuators therefor, cycling means for said actuators, devices adjustable to enter values in said actuators, and an operation key manipulable to control registering movement of the actuators by said cycling means; normally inactive non-repeat means operable by said cycling means to limit the registering action of said actuators to a single cycle, including a settable non-repeat key, a member movable in time with the actuators, a transmission train driven by said member and including a normally ineffective element, a guide abutment settable conjointly by said non-repeat and operation keys to hold said transmission element in effective condition, a second operation key, and a slide operable under control of said second key to set the abutment into holding position independently of the non-repeat key.

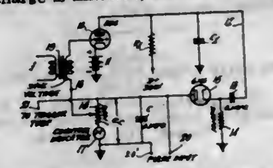


2,470,301
COMBINATION ELECTRIC SWITCH AND CIRCUIT BREAKER
Stephen S. Grady, New York, N. Y.
Application April 2, 1946, Serial No. 658,895
4 Claims. (Cl. 175—294)

1. In a circuit breaker for two conductors, the combination of a first bus bar for one conductor, a second bus bar, a contact connected to said second bus bar with its free end normally engaging said first bus bar, a third bus bar connected to the other conductor, means including a fuse for connecting the second bus bar to said third bus bar, an interposer slidably mounted between said first bus bar and contact, a lever operatively connected to said interposer, a spring biased in inoperative position and when released operatively associated to actuate said lever in turn to actuate said interposer into circuit breaking position, a latch for anchoring said spring in biased position, an electro-magnet positioned when energized to actuate said latch to release said spring, an ammeter including a pivotally mounted needle electrically connected to said second bus bar to record the amperage of the current flow when said fuse is intact, a pin insulated from

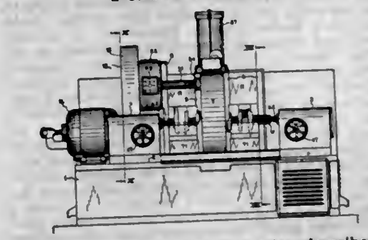
said ammeter, a conductor connecting said pin to said electro-magnet, and a second conductor connecting said electro-magnet to said third bus bar, said needle engaging said pin when the current is interrupted by the blowing of said fuse, in turn momentarily to establish a circuit after the fuse is blown between said ammeter and said third bus bar thereby to energize said electro-magnet in turn to actuate said latch.

2,470,302
GAME BOARD AND APPARATUS
Frederick E. Green, Spokane, Wash.
Application November 24, 1947, Serial No. 787,662
1 Claim. (Cl. 273—87)



A game board for simulated golf games comprising a base board, an upper board layer superimposed upon the base board and having irregularly shaped openings therein, layers of sand-coated material under some openings and layers of smooth metal foil under other openings, the walls of said opening being beveled, and said upper board having shallow ball-receiving depressions at the tees, and deeper ball-receiving depressions at the greens, and an enclosing wall about the game board.

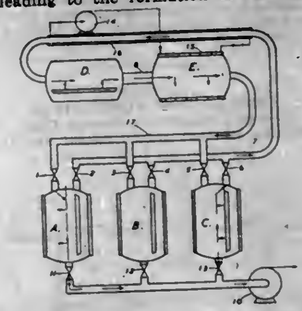
2,470,303
COMPUTER
Maurice L. Greenough, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 30, 1944, Serial No. 528,718
14 Claims. (Cl. 315—230)



1. The combination of an oscillation generator including a storage device, impedance means for controlling the rate at which current is stored in said device and a gaseous electron discharge device provided with an anode circuit arranged to

discharge said storage device and with a grid circuit arranged to control the potential at which said discharge is initiated, and means connected

between said storage device and said grid for applying to said grid a bias potential which is stabilized at successive predetermined values dependent on the charge of said storage device.

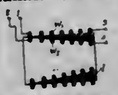


2,470,304
CRANKSHAFT LATHE
William F. Groene, Harold J. Siekmann, and Walter R. Meyer, Cincinnati, Ohio, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a corporation of Delaware
Application January 11, 1945, Serial No. 572,388
1 Claim. (Cl. 82—24)

In a machine of the character described, a frame having means defining a work axis of rotation, a tool carrier guided by said frame for reciprocation toward and from said axis, a rack on said carrier, a shaft journaled on said frame, a pinion on said shaft meshing with said rack, a gear on said shaft, a power cylinder on said frame, a piston reciprocable in said cylinder, a rod fixed to said piston and having a rack on its end meshing with said gear, guide means for said rack, and a stop pin threaded into said frame and positioned to be engaged by said rack to positively limit movement of said carrier toward said axis.

2,470,305
PROCESS FOR THE PRODUCTION AND REFINING OF ALUMINIUM
Philipp Gross, Slough, England, assignor to International Alloys Limited, Slough, England, a body corporate of Great Britain
Application April 18, 1945, Serial No. 589,093
In Great Britain April 19, 1944
16 Claims. (Cl. 75—68)

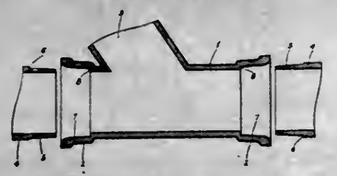
1. A process for obtaining aluminium as a distillate from material bearing the same, which comprises evaporating a halide of the class consisting of fluoride, chloride and bromide, contacting and reacting the halide vapour in an unsaturated condition with said material at elevated temperature whereby to volatilize the aluminium by a strongly endothermic reaction as unstable aluminium halogen compound vapours, said temperature, under the prevailing pressure, being below the temperature of direct evaporation of the aluminium from said material but high enough to enable said strongly endothermic reaction leading to the formation of the unstable



compound vapours to proceed, and converting said unstable vapours into aluminium and a stable halide by cooling said vapours to condense aluminium in the metallic state.

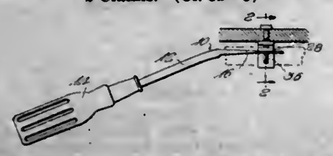
2,470,306
PROCESS FOR THE PRODUCTION AND REFINING OF METALS
Philipp Gross, Slough, England, assignor to International Alloys Limited, Aylesbury, England
No Drawing. Application July 22, 1947, Serial No. 762,627. In Great Britain March 27, 1946
Section 1, Public Law 690, August 8, 1946
Patent expires March 27, 1966
11 Claims. (Cl. 75—93)

1. A process for distilling a normally non-volatile metal from material bearing the same, which comprises reacting at elevated temperatures the metal contained in the material with the vapour phase of a reacting halogen containing substance, brought to said phase previous to reaction, thereby to vapourize the said metal by a strongly endothermic reaction as its unstable lower halide, said temperatures, under the prevailing pressure, being below the temperature of direct evaporation of the said metal from the said material but high enough to enable said strongly endothermic reaction leading to the formation of the lower halide to proceed, and converting said lower halide into the metal and a stable halide by condensation of the metal to recover the metal therefrom.



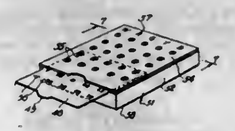
2,470,307
HIGH-FREQUENCY MATCHING TRANSFORMER
Gustav Guanella, Zurich, Switzerland, assignor to Radio Patents Corporation, New York, N. Y., a corporation of New York
Application April 5, 1945, Serial No. 586,766
In Switzerland February 25, 1944
2 Claims. (Cl. 178—44)

1. A matching transformer comprising a pair of conducting wires each wound into a helical coil, one of said coils being located concentrically and inside the other coil and both coils having a relative taper such that adjacent coil winding



turns are spaced at a progressively varying distance to form a continuous coiled two-wire transmission line having a wave impedance varying from one end to the other end of said line, and a tapering dielectric spacing member occupying the intervening space between said coils.

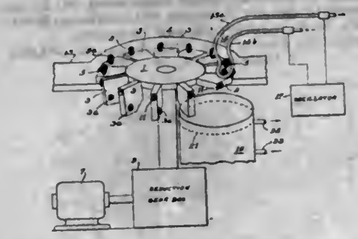
2,470,308
FITTING FOR FIBER PIPES
George F. Haddican, Delano, Calif.
Application January 3, 1947, Serial No. 719,998
1 Claim. (Cl. 285—210)



In a fitting for coupling together a metal bell portion and a fiber conduit comprising, in combination, a tubular cast metal fitting having an outwardly flared free end bell portion, said bell portion being formed internally with an outwardly facing shoulder disposed perpendicular to the longitudinal axis of the bell portion and disposed inwardly a predetermined distance from the rim of the mouth of the bell, the internal wall of the bell defining the bell portion of the fitting being tapered outwardly from the surface of said shoulder, said rim around the inner periphery of the mouth of the bell portion being rounded outwardly and a fiber conduit having a circumferential forward facing external shoulder positioned inwardly from the free end thereof a distance greater than the distance from the internal shoulder in the bell portion, to thereby extend beyond the free rounded end at the mouth of the bell portion, said fiber conduit having its free end portion outwardly of the forwardly facing shoulder exteriorly tapered to correspond to the angle of taper of the tapered internal wall of the bell portion, said fiber conduit having its free end formed with a flat edge rim surface disposed perpendicular to the longitudinal axis of the said conduit in flush abutting contact with the said outwardly facing shoulder in the bell portion, whereby the external shoulder of the fiber conduit is positioned and spaced outside the mouth of the bell portion adjacent the rounded inner periphery of the bell mouth when said flat edge rim surface of the fiber conduit and said outwardly facing shoulder in the bell portion are in abutting contact.

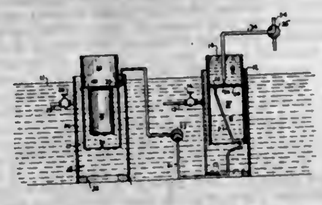
2,470,309
CLIP RETAINING TOOL
Peter P. Hepp, Aberdeen, Md.
Application October 25, 1945, Serial No. 624,408
2 Claims. (Cl. 81—3)

1. A clip retaining tool comprising a shank, and a claw at one end of said shank having transversely spaced arms threaded along their inner side edges for gripping engagement with threaded element to hold the clip against axial displacement on the latter.



2,470,310
INDICATOR CARD FOR BINGO OR LOTTO GAMES
Herman Heyman, Brooklyn, N. Y.
Application June 8, 1946, Serial No. 675,420
2 Claims. (Cl. 273—135)

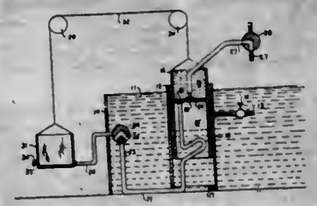
1. A game such as bingo where there are provided a plurality of cards each having a different group or arrangement of integers thereon selected from a larger predetermined number of integers, wherein each player receives one of said cards, wherein a dealer calls a succession of integers from said larger predetermined number of integers, wherein the players cover the integers called which integers happen to appear on their respective cards, and where the winner is determined by the player who is first to cover a predetermined number or arrangement of integers which have been called, characterized by the combination of a casing having a first support including a plate having a plurality of circular recesses, a second support in said casing below said plate and spaced therefrom to form a pocket, a dealt imperforate card having a predetermined group of integers impressed thereon in position to aline with the recesses in said plate when the card is positioned in said pocket, the recesses and integers being arranged in a plurality of rows, a plurality of groups of spherical bodies, one group for each row of recesses, the groups being optically distinguishable from one another, the edges of the plate surrounding the recesses being less in diameter than the diameters of the great circles of said spherical bodies to form seats for said spherical bodies in turn to receive and support said spherical bodies effectively and completely to cover the integers appearing on the dealt card which integers have been called by the dealer, and notations impressed on said plate, one notation at the top of each row of recesses to indicate the group of spherical bodies to be received in such row.



2,470,311
ROTARY CONVEYER
Cyril N. Hoyler, Princeton, and Rudolph A. Bierwirth, Kingston, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application April 16, 1943, Serial No. 483,258
1 Claim. (Cl. 198—209)

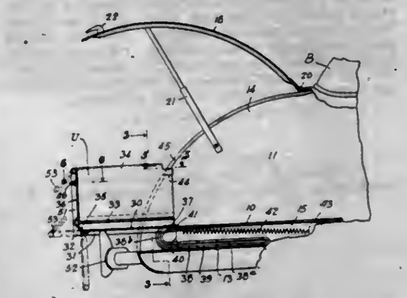
Apparatus of the character described comprising a stationary horizontal platform, a plurality of object holders pivotedly mounted in spaced relation for movement in a horizontal plane upon said platform and in a return path which extends beyond an edge of said platform, means for moving said holders beyond said edge of said platform whereby said holders are free to be swung downwardly on their pivots and caused to discharge any objects thereon and, upon continuation of said movement in said path, are returned

to their said horizontal position upon said platform.



2,470,312
RECIPROCAL BUOYANCY LIFT
Abraham J. Levin, Franklin, Mich.
Application March 22, 1948, Serial No. 16,305
8 Claims. (Cl. 253—1)

1. In combination, an open-ended upright partitioned housing immersed in a fluid body and having upper and lower chambers, a compressed air supply conduit in communication with the lower chamber, a second upright housing floating in said fluid and having a fluid compartment, an airtight bulkhead carried thereby creating a reserve buoyancy for said second housing, valve means in said conduit for controlling the flow of air to said lower chamber entrapping a column of air therein to develop a reserve buoyancy in said first housing causing said upper chamber to rise above said compartment creating a head of fluid in said upper chamber relative to said compartment, a fluid conduit interconnecting said upper chamber and compartment and valve means in said conduit alternately connectable with said compartment and with said fluid body.

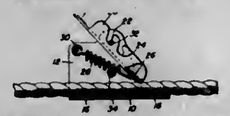


2,470,313
ACCELERATED VARIABLE BUOYANCY LIFT
Abraham J. Levin, Franklin, Mich.
Application March 26, 1948, Serial No. 17,297
7 Claims. (Cl. 253—1)

3. In combination, an open-ended upright partitioned housing immersed in a fluid body and having upper and lower chambers, a compressed air supply conduit in communication with the lower chamber, a fluid container, a plurality of pulleys, means interconnecting said housing and container suspending the same from said pulleys in spaced relation, a conduit providing communication between said upper chamber and container, valve means in said air conduit controlling the flow of air into said lower chamber entrapping a column of air therein to develop a reserve buoyancy in said housing causing said upper chamber to rise above said container creating a head of fluid in said upper chamber relative to said container, valve means in said fluid conduit controlling the flow of fluid between said upper chamber and container and adapted to alternately establish communication between said

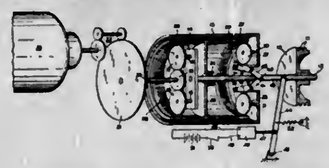
upper chamber and said fluid body, the reserve buoyancy in said housing increasing as fluid flows from its upper chamber reducing its weight, and in view of the upward thrust of its suspending means due to the increased weight of said container, and a fluid escape valve adjacent the lower end of said container to permit the withdrawal of fluid therefrom.

2,470,314
STORAGE ATTACHMENT FOR AUTOMOBILE BODIES
Peter Lim, Los Angeles, Calif.
Application May 7, 1945, Serial No. 592,314
9 Claims. (Cl. 296—26)



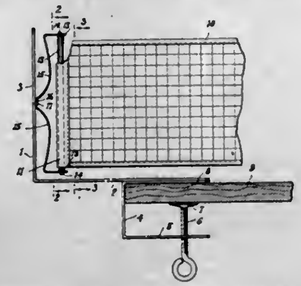
1. A storage attachment adapted for installation in an automobile body having a partition dividing it into upper and lower compartments, and a lid for closing the compartments, said storage attachment comprising: a storage unit having a bottom and sides mounted thereon for adjustment to occupy a side-forming position and a folded position wherein the unit forms a flat structure; and means mounting said unit on the body for adjustment to occupy a position for use wherein said bottom and sides form rearward continuations of said partition and of the body, respectively; said mounting means including guides by which the unit, when folded, will be guided in said lower compartment to occupy a non-use position therein; said guides having portions guiding said unit vertically when withdrawn from said lower compartment, to occupy said position for use.

2,470,315
MULTIPLE STAGE PULVERIZING AND DEHYDRATING TUBE MILL
Wallace L. McGehee, Kansas City, Mo.
Application April 29, 1944, Serial No. 533,274
4 Claims. (Cl. 241—54)



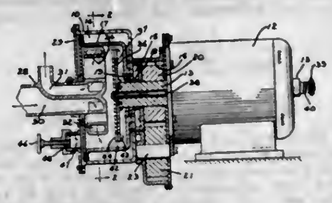
2. A continuous flow dehydrator of the character described, comprising a rotatable cylinder having its longitudinal axis disposed horizontally; means for rotating the cylinder; a hot gas inlet conduit axially disposed at one end of the cylinder; an outlet pipe axially positioned through the other end of the cylinder; means for feeding material to be dehydrated into said cylinder adjacent said hot gas inlet conduit; a suction fan in communication with the outlet pipe to create a current of gas through the cylinder from the inlet conduit to the outlet pipe; and a plurality of partitions setting off a series of divisions within the cylinder, each of said partitions being an annulus and extending radially inwardly from the wall of the cylinder, whereby to present an opening for the passage of the material being dehydrated, from one division of the cylinder to the next, one of said divisions having a number of grinder balls and a plurality of radially disposed shovels between the partitions forming that division, said shovels each having their outer ends spaced from the inner annular surface of the cylinder wall to allow free movement of the balls along the inner face of the wall of the cylinder and between the partitions forming the division containing the balls, said shovels each having its inner marginal portion forwardly angled out of the major plane of the shovel to retain the lifted material thereon until the remaining portion of the shovel passes a vertical position at the uppermost part of its path of travel.

2,470,316
ROPE HOLDER
John Zin Miller, Hagerstown, Md.
Application September 22, 1947, Serial No. 775,427
6 Claims. (Cl. 24—134)



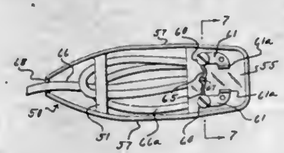
5. A rope holder comprising a housing having a base and sides, a rope engaging member, means for pivotally and adjustably supporting said member in said housing, means for resiliently biasing said member toward said base, friction conducive means associated with said member, and means for limiting the pivotal travel of said member, said supporting means including a pin secured to said sides, flanges on said member, pairs of aligned slots in said flanges having angularly disposed slots communicating with said first mentioned slots and selectively seated on said pin, said limiting means comprising a pair of stops secured to said sides engageable with said flanges, said limiting means including a spring detachably secured to said pin and said member, said friction means comprising a plurality of teeth adapted to engage a rope.

2,470,317
DISCONNECTIBLE COUPLING DEVICE
Norman B. Murphy, West Englewood, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application January 30, 1946, Serial No. 644,223
4 Claims. (Cl. 74—785)



1. In combination, a driving member, a driven member, a shaft for operating said driven member in accordance with the operation of said driving member, a support carried by said shaft, means comprising a planet gear journalled in said support for rotation relative to said shaft on an axis out of alignment with the axis of rotation of said shaft and driven by said driving member, a pair of spaced, interconnected and internally toothed annular gears sleeved on said shaft, one of said annular gears meshing with said planet gear for rotation thereby of both of said annular gears relative to said shaft, a spur gear engageable with the other of said annular gears and normally driven thereby, means for locking said spur gear against rotation whereupon both of said annular gears are held against rotation and said planet gear is caused to ride on said one annular gear to thereby drive said shaft in accordance with the operation of said driving member, and means comprising a toggle mechanism for operating said locking means.

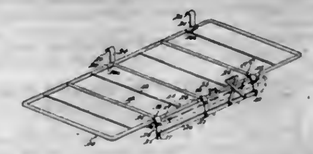
2,470,318
SUPPORT FOR TABLE TENNIS NETS
Samuel Nadelson, New York, N. Y.
Application December 15, 1945, Serial No. 635,139
2 Claims. (Cl. 273—30)



1. A net holder comprising, a bracket having an upright post, a leaf spring secured to the inner face of the post, said spring having a pair of resilient arm portions bowed or shaped to cause the same to extend toward the inner face of the post, lateral ends on said arm portions extending in a direction away from the post, a rod holding one end of a net, said rod being resiliently clamped between the lateral ends of the spring arms, said ends being apertured to receive the ends of the rod.

2,470,319
PUMP
Edward O. Norris, Westport, Conn.
Application January 15, 1946, Serial No. 641,254
16 Claims. (Cl. 103—113)

16. A liquid pump comprising a rotary cylindrical case, an air suction impeller connected to draw air from the interior of said rotary case for maintaining suction therein, an inlet duct for feeding liquid into said case due to the suction thereof, means rotating said case to maintain a peripheral film of liquid therein, and a discharge duct positioned in said case to receive liquid from said peripheral film under a pressure due to the centrifugal force developed by the rotation thereof.

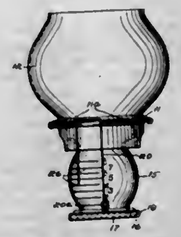


2,470,320
ELECTRICAL CONNECTION DEVICE
Herbert E. Page, Alhambra, Calif.
Application January 13, 1945, Serial No. 572,687
1 Claim. (Cl. 173—361)

In an electric wire connector device, an elongated casing open at its bottom and having a wire passing opening in an end, a base of shorter length than the casing mounted in closing relation to a portion of said open bottom at one end, plug means carried by the base and projecting therefrom for insertion in a plug receptacle member, means for connecting the plug means to a wire in the casing, and means for supporting a coil of excess wire in the casing comprising a cross piece fixed at its respective ends to opposite sides of the casing at a point between the base and the opposite end of the casing, said cross piece being narrow enough in relation to the open bottom end of the casing to permit access to the casing through the bottom thereof for the purpose of inserting said coil.

2,470,321
BODY POSITIONER ATTACHMENT FOR CASKETS
Earl R. Reese and Albertus Upton, Newton, Ill.
Application November 14, 1947, Serial No. 786,012
5 Claims. (Cl. 27—12)

4. A body positioner for a casket comprising a supporting frame adapted to be disposed in the bottom portion of a casket for supporting a corpse thereon, and means for supporting the longitudinal sides of the frame at different levels with respect to the casket bottom, said frame being

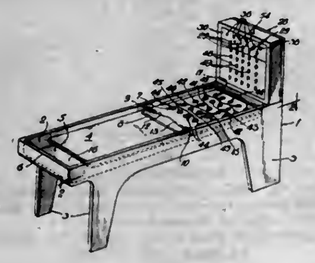


formed of separable head and foot sections, and said means being connected to said head section for supporting said head section separately or for supporting the frame as a unit.

2,470,322
THERMOSETTING PHENOLIC MOLDING COMPOSITIONS
Fritz Rosenthal, Gloucester City, N. J., assignor to The University of Tennessee Research Corporation, Knoxville, Tenn., a corporation of Tennessee
No Drawing. Application August 13, 1945, Serial No. 610,669
4 Claims. (Cl. 260—7)

3. A thermosetting molding composition comprising approximately four parts of phenol-formaldehyde resin, from three to four parts of cottonseed hulls and a flow modifier of from one to four parts of cooked oil-extracted cottonseed meal.

2,470,323
COFFEE MAKER
Roland L. Smith, Belmont, Mass., assignor to Nuproducts Corporation, Cambridge, Mass., a corporation of Massachusetts
Application June 4, 1945, Serial No. 597,518
2 Claims. (Cl. 99—292)

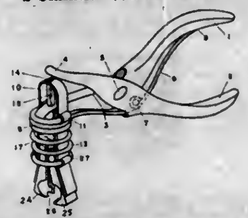


1. An infusion vessel for use with the lower water-heating vessel of a coffee maker, comprising a container having a tubular reservoir for holding ground coffee and a larger reservoir thereabove, a ring on and extending exteriorly about the infusion vessel between the two reservoirs for supporting the infusion vessel on and with its tubular reservoir depending into the lower vessel, a flexible filter over the bottom end of the infusion vessel, a draw string for maintaining the filter in place on the vessel, and means carried by the ring for receiving and anchoring the draw string.

2,470,324
GLYCIDYL ESTER COPOLYMERS
Hanns Peter Staudinger, Ewell, Donald Faulkner, Cambridge, and Maurice Dudley Cooke, Banstead, England, assignors to The Distillers Company Limited, Edinburgh, Scotland, a British company
No Drawing. Application December 9, 1944, Serial No. 567,527. In Great Britain December 3, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 3, 1963
5 Claims. (Cl. 260—86.3)

1. A process for the production of improved polymers of halogen-containing ethenoid compounds which comprises polymerising in aqueous emulsion a mixture of a halogen-containing ethenoid compound with from 1% to 50% by weight thereof of an unsaturated glycidyl ester containing an unsaturated aliphatic group.

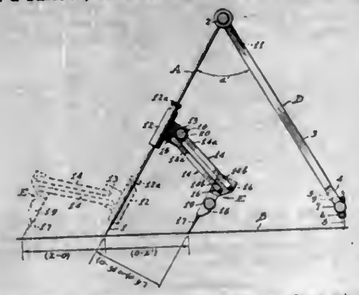
2,470,325
POCKETED BALL GAME
Theodore B. Stillman, Brooklyn, N. Y.
Application January 16, 1946, Serial No. 641,526
2 Claims. (Cl. 273—125)



1. A game comprising a target including a plurality of missile interceptors, each adapted to retain only momentarily a missile intercepted thereby, and a plurality of electrically operated signalling devices, each connected in an energizing circuit including a normally open switch and adapted to be completed by closing said switch, all but one of said energizing circuits including an additional normally open switch connected in a parallel branch circuit so that the energizing circuit can be completed by closing either switch, each of a number of said interceptors equal to the total number of normally open switches being provided with a normally open switch adapted to be closed momentarily by a missile intercepted by the interceptor, each switch being connected in a circuit containing a relay means for closing a corresponding one of the switches in the energizing circuits and for completing a hold-in circuit which maintains energization of the relay means when the interceptor switch opens, each of the remaining interceptors being provided with a normally closed switch adapted to be opened momentarily by an intercepted missile, the last mentioned switches being connected in a series circuit forming a part of each of the interceptor circuits associated with one of the energizing circuits which includes a plurality of switches.

2,470,326
EARTH ANCHOR
Oscar F. Tallman, St. Louis, and Kenneth R. Bunde, Lemay, Mo., assignors to James R. Kearney Corporation, St. Louis, Mo., a corporation of Missouri
Application April 24, 1947, Serial No. 743,552
3 Claims. (Cl. 24—136)

1. An earth anchor which includes an elongated anchor rod, and a clamping device associated with said anchor rod adjacent to an end thereof and adapted to attach a guy to said anchor rod, said clamping device comprising a longitudinally tapered housing of U-shaped cross-section having a wall portion in contact with which a portion of said guy is disposed, and wedge-shaped means located within said housing and interposed between a portion of said anchor rod and a portion of said guy in contact with said anchor rod and guy portions for forcing said portion of said guy into gripping engagement with the wall portion of said housing with which it contacts, a portion of said anchor rod forming a wall portion of said housing.

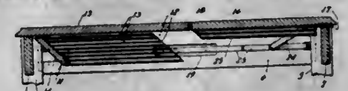


2,470,327
CLOCK HAND REMOVING TOOL
Wallis M. Tener, Lancaster, Pa.
Application February 8, 1946, Serial No. 646,276
2 Claims. (Cl. 29—232)

1. A tool for removing frictional held hands from shafts comprising a pair of manually operable pivoted levers terminating in hand grips at one end and jaws at the other end, spring means for normally forcing said jaws apart, a block secured to the lower of said jaws and formed with a central bore, a pin slidably mounted in the bore of said block, a yoke secured at a central portion to the upper end of said pin and extending downward on each side thereof, a pair of spring strips secured to opposite sides of said block and projecting downwardly therefrom, a coil spring depending from and secured to said yoke, the lower coil of said spring engaging the spring strips, a pair of hand gripping jaws of wedge shape formation secured to said spring strips, said hand gripping jaws being formed with cooperating semicircular grooves to receive and guide that part of the pin projecting below the block, the lower extremity of said jaws being formed to grip the hands to be removed, whereby manual operation of the levers will bring the upper jaw to bear against the yoke, the lower jaw moving the block and its hand gripping jaws upwardly while the upper jaw presses the yoke, the pin and the coil spring downwardly.

2,470,328
DRAFTING INSTRUMENT FOR DRAWING ELLIPSES
Robert G. Towle, San Francisco, Calif.
Application September 23, 1946, Serial No. 698,838
1 Claim. (Cl. 33—30)

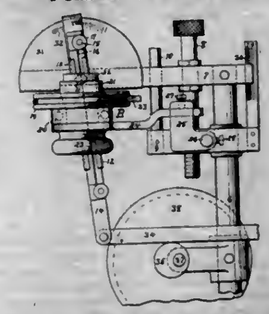
In a drafting instrument for drawing ellipses on a surface, an axial leg having a pointed end



arranged to be pressed into the surface at the intersection of the major and minor axes of an ellipse to be drawn, a sleeve rotatably and slidably disposed on the axial leg, an inscriber mounted parallel to the axial leg, a pair of parallel links interconnecting the inscriber with the sleeve and made to retain the inscriber parallel with the axial leg as the inscriber is moved around the axial leg for drawing an ellipse on the surface, a pair of downwardly diverging legs rigidly connected together at their tops and hinged to the top of the axial leg for supporting the latter at various inclinations relative to the surface, the lower end portions of the diverging legs extending parallel to each other, a bar extending between the lower end portions and having point-carrying clamps at its extremities, adjusting screws for the clamps pivotally connecting the clamps and bar to the lower parallel end portions of the diverging legs, a pointer arranged on the bar midway between the ends of the point-carrying clamps, points carried by the clamps and lying in the same plane as the pointer, whereby the pointer and points can be swung as a unit into positions perpendicular to the surface, the pointer being placed on the major axis.

2,470,329
ASPHALT MOLDING COMPOSITIONS
Raymond A. Barkhuff, Jr., Hazardville, Conn., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application January 27, 1948, Serial No. 4,710
3 Claims. (Cl. 260—17.4)

1. An acid resistant molding composition comprising asphalt admixed with a cellulosic fiber impregnated with a copolymer of styrene and maleic anhydride.

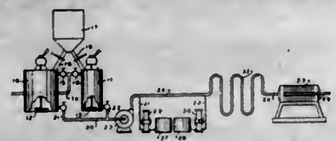


2,470,330
PIANO BENCH
Virgil D. Belfield and Elsie Belfield, Elkhorn, Wis.
Application March 7, 1946, Serial No. 652,696
4 Claims. (Cl. 45—64)

1. A piano bench comprising a frame including corner supporting legs, and front, rear and end rails rigidly connecting the upper ends of the legs, a horizontal sheet music rack mounted within the frame and comprising a casing open at one end and closed at the other end, and fixed horizontal partitions dividing the casing into similar superposed compartments, said partitions and compartments gradually receding relative to each other at said one end in an upward direction, and a flat bench top on the frame including a fixed section secured on one end of the frame and forming a fixed seat section, and a vertically

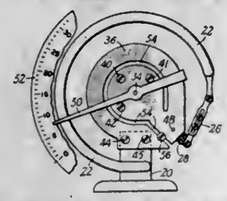
swinging section hinged on the other end of the frame and forming a lid section adapted to be opened to permit access to sheet music filed in the rack, said rack being located and always remaining in a horizontal position directly beneath the bench top and being positioned so that its open end is revealed adjacent but just beyond the inner end of the seat section when the lid section is opened.

2,470,331
MACHINE FOR LAPPING WIRE DRAWING DIES
Paul Bieberich, Fort Wayne, Ind.
Application December 15, 1945, Serial No. 635,260
4 Claims. (Cl. 51—67)



3. A lapping machine for wire drawing dies consisting of a supporting member, a rotatable die mount having supported connection with said member, means on said member for axially adjusting said mount, a guideway supported on said member provided with means for adjusting said guideway upon an axis that intersects at right angles the axis of said mount, a jig mounted in said guideway having longitudinal reciprocating movement therein, provided with a lapping wire that extends through the bore of a die compact supported on said mount and which extends in a plane parallel to that of the movement of said jig, and mechanism for activating the mount and said jig.

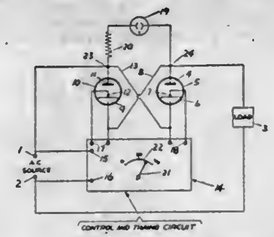
2,470,332
DECOLORIZATION AND CLARIFICATION OF SUGAR LIQUORS
Armand R. Bollaert, Palos Verdes Estates, and Gordon G. Halvorsen, Manhattan Beach, Calif., assignors to Great Lakes Carbon Corporation, a corporation of Delaware
Application September 29, 1945, Serial No. 619,412
5 Claims. (Cl. 127—50)



1. The method of simultaneously clarifying and defecating a sugar liquor by treatment with

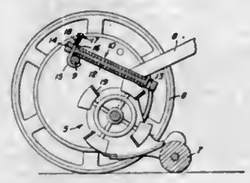
a filter aid in quantity sufficient for the clarification thereof and with reagents consisting of phosphoric acid and calcium hydroxide which comprises: dispersing said filter aid in said liquor; pumping a stream of said liquor under pressure toward a filtering medium; adding said reagents to said pressure stream individually and at spaced

points along its path of flow and gently mixing said liquor after both said reagents have been added, whereby a precipitate of calcium phosphate is formed in said pressure stream, and removing said filter aid and said precipitate by passing said stream under pressure through said filtering medium.



2,470,333
ZERO ADJUSTMENT MEANS
Hoel L. Bowditch, Sharon, Mass., assignor to The Foxboro Company, Foxboro, Mass., a corporation of Massachusetts
Application June 2, 1945, Serial No. 597,356
2 Claims. (Cl. 73—415)

1. In an indicating apparatus of the character described, in combination, a support, responsive means mounted on said support and movable to positions in response to changes in a variable condition, a supporting plate portion, a shaft rotatably supported by said plate portion and rotatable about a first axis, a lever pivotally supported by said plate portion and rotatable about a second axis spaced from the first axis, said lever being mechanically connected to said responsive means and to said shaft whereby movement of said responsive means rotates said shaft, an arcuate spring strip for supporting said plate portion from said support and being flexible to provide for arcuate movement of said second axis about said first axis as a center without imparting translatory movement to said first axis, whereby movement of said plate portion and second axis adjusts the rotational relationship of said shaft and said responsive element, and means for adjusting the strain of said spring strip to adjust said rotational relationship.

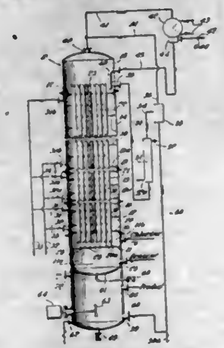


2,470,334
ALTERNATING CURRENT LOAD INDICATOR
Rufus L. Briggs, Melrose, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application June 13, 1946, Serial No. 676,398
5 Claims. (Cl. 177—311)

1. An indicator circuit for an alternating current load, including, in combination, a pair of parallel but oppositely-related controlled discharge tubes connected in series between a source of alternating current and a load adjustable control means connected to said discharge tubes and

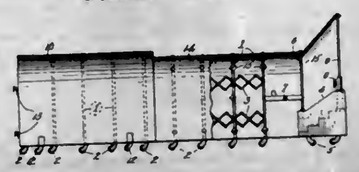
controlling them to conduct without substantial time delay between them, and a glow-discharge device connected across similar electrodes of said pair of discharge tubes.

2,470,335
LAWN MOWER SHARPENER
Leo J. Bromert, Hutchinson, Kans.
Application September 2, 1948, Serial No. 47,477
2 Claims. (Cl. 51—250)



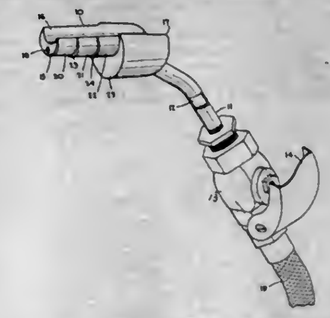
1. A sharpener for attachment to an existing cross-rod in the frame structure of a conventional reel-type lawn mower comprising a substantially flat rectangular plate provided on one side with abrasive media adapted for wiping contact with the cutting blades of the stated reel, said plate being provided at its corner portions with soles to accommodate fasteners, and fasteners, each fastener including an attaching hook and a shank portion, the shank portion being removably mounted in a selected hole and being provided with a cotter-key and further provided with a coiled spring, the coiled spring surrounding the shank between the cotter-key and an adjacent surface of said plate.

2,470,336
HALOGENATION OF AROMATIC HYDROCARBONS
Austin S. Brunjes, Plandome, N. Y., and Marcel J. P. Bogart, Teaneck, N. J., assignors to The Lummus Company, New York, N. Y., a corporation of Delaware
Original application June 22, 1942, Serial No. 447,983. Divided and this application July 20, 1945, Serial No. 606,250
2 Claims. (Cl. 260—650)



1. A continuous method of chlorinating benzene to produce maximum amounts of monochlorbenzene and minimum amounts of polychlorbenzene with high conversion of benzene, which comprises

providing a spaced group of long, catalyst packed reaction tubes extending vertically; continuously introducing gaseous chlorine into a confined space surrounding the lower ends of said tubes; continuously feeding liquid benzene into said confined space by means of a plurality of nozzles, each of which is directed into the lower end of one of the reaction tubes; removing the heat of reaction separately from vertically spaced sections of said group of tubes in accordance with the amount of heat generated therein to maintain an approxi-

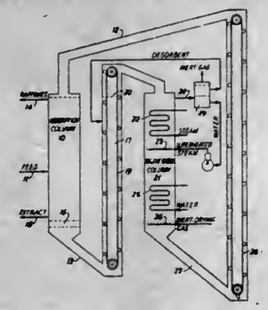


mately uniform temperature of 40° to 50° C. throughout the long reaction tubes; providing a confined collecting space around the upper ends of the reaction tubes; separately removing the vapor and liquid portions of the mixture of reaction products issuing from said reaction tubes; cooling the vapor portion thus removed to condense the benzene and chlorbenzene contained therein; venting the uncondensed hydrogen chloride; and returning the condensate to the collecting space.

2,470,337
EXTENSIBLE CANOPY
Richard L. Campbell, Carterville, Mo.
Application January 20, 1947, Serial No. 723,063
4 Claims. (Cl. 304—1)

3. An airport canopy comprising an extensible member, a shelter member and a step platform member connected together in alinement, the extensible member being composed of a series of parallel upright arches, lazy tongs connecting the arches, and a flexible waterproof fabric draped over the top and sides of the arches and connected for extension with or collapse by corresponding adjustment of the arches, the extensible member having a cover extension overlying the platform member, the platform member having an arch for vertically adjusting the cover extension relative to a height exceeding or less than that of the shelter member.

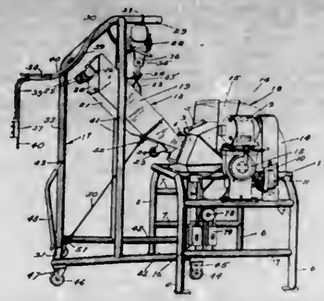
2,470,338
PROBE PRESSURE GUN
Ernest G. Chilton, Berkeley, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application November 29, 1947, Serial No. 788,911
2 Claims. (Cl. 175—183)



1. For use in combination with a probe element adapted to be inserted into a tube at the end of a cable, a fluid pressure device for forcing said element and cable through said tube, said device comprising an elongated barrel body having one end adapted to be inserted into the tube behind said probe element, said barrel body being formed of a plurality of cylindrical elements having diameters increasing in a step-wise fashion from said insertable end of the barrel body, said elements being arranged longitudinally and eccentrically of each other, so as to be tangent to a single plane parallel to the axis of said cylindrical elements, whereby a series of crescent-shaped shoulders is formed between said cylindrical elements, each of said shoulders being adapted substantially to close the orifice of a pipe when the adjacent cylindrical element of the smaller diameter has been inserted into said pipe, said barrel body having a longitudinal open groove cut therein from one end to the other symmetrically to said plane of tangency, said groove being adapted to receive and to guide the cable attached to said probe element, said barrel body having a bore formed therein co-longitudinally with said groove, said bore being open at the end of the barrel body insertable into the tube, pressure fluid conduit means in communication with said bore, and valve means for controlling the delivery of the pressure fluid from said conduit means through the open end of said bore to the space within the tube behind said probe element, whereby said probe element is propelled in said tube together with the attached cable entering said tube through said groove.

2,470,339
CONTINUOUS ADSORPTION PROCESS
William H. Claussen, Berkeley, and William H. Shiffler, San Francisco, Calif., assignors to California Research Corporation, San Francisco, Calif., a corporation of Delaware
Application July 30, 1945, Serial No. 607,730
15 Claims. (Cl. 196—147)

1. A process for continuously separating organic compounds capable of being selectively adsorbed by contact in the liquid phase with a solid adsorbent and wherein the specific gravity of the non-adsorbed fraction is less than that of the selectively adsorbed fraction, which comprises



continually moving particles of a suitable solid adsorbent aggregated into a columnar mass or bed downwardly by gravity flow through an adsorption zone, continually feeding the organic compounds in the liquid phase at an intermediate point into the adsorption zone into contact with the moving mass of adsorbent, continually withdrawing a liquid non-adsorbed fraction from the upper portion of the adsorption zone, maintaining adjacent said adsorption zone a column of a desorbent liquid in free fluid inter-communication with the base of the adsorption zone, said column having a vertically extending portion of sufficient height to bal-

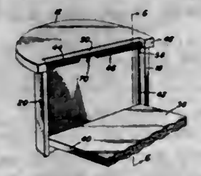
ance the column of liquid in the adsorption zone and a second portion extending upwardly to the base of said adsorption zone thereby constituting a desorption zone, withdrawing the solid adsorbent particles from the adsorption zone through said column whereby the selectively adsorbed fraction is desorbed by the liquid desorbent, withdrawing from the lower portion of the desorption zone the liquid fraction thus desorbed, separating the liquid desorbent from the solid adsorbent withdrawn from said column and continually adding to said column quantities of liquid desorbent corresponding to that withdrawn therefrom thereby maintaining the vertically extending portion at the required height.

2,470,340
DEBURRING AND POLISHING APPARATUS
Ernest E. Cook and Harry J. Sadler, Minneapolis, Minn., assignors to Almco, Incorporated, Minneapolis, Minn., a corporation of Minnesota
Application July 15, 1946, Serial No. 683,596
3 Claims. (Cl. 214—121)

1. A hoisting mechanism comprising, a horizontally-disposed forwardly-opening U-shaped hoist frame member, a vertically-disposed inverted U-shaped hoist frame member connected at its base to the opposite sides of the horizontal hoist frame member intermediate the ends thereof, a hoist-supporting element secured to the upper portion of said vertical hoist frame member and projecting forwardly intermediate the sides thereof, a hoist detachably secured to and depending from said hoist-supporting element, hook means carried by said hoist, a portable hoist pan adapted to pass between the side members of said horizontally-disposed U-shaped hoist frame member, a centrally-located transverse hoisting bar on said hoisting pan, a bail on said hoisting bar adapted to be engaged by the hook means carried by the hoist, and a cable secured at one end to the front end of the hoist pan and at its other end to the closed end of the horizontally-disposed hoist frame member, said cable being of a length to tilt the hoist pan forwardly

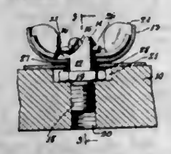
to dump its contents when said hoist pan has been elevated to a predetermined position.

2,470,341
METHOD OF FLAW DETECTION
William C. Darrah, Medford, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
No Drawing. Application March 7, 1946, Serial No. 652,824
8 Claims. (Cl. 250—71)



1. A method of processing a metallic body for the detection of flaws therein, comprising working a mixture of finely-divided powder of a material insoluble in a liquid and a powder of a fluorescent material soluble in said liquid into the flaws of said body, immersing the body in said liquid, and removing the excess liquid and powder from the surface of the body.

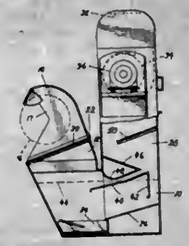
2,470,342
DISPENSER FOR ADHESIVE TAPES
Vincent L. De Luisi and Charles F. Murtaugh, Columbus, Ohio
Application September 27, 1946, Serial No. 699,720
3 Claims. (Cl. 242—55.5)



1. A dispenser for rolled tape of the type provided with a central tubular core comprising a pair of mating semicircular shells adapted for detachable connection with one another to form a substantially hollow cylinder, each of said shells being formed with a pair of inwardly projecting semicircular ledges adapted to form circular end hubs with the corresponding edges of the opposite shell when the two shells are connected, said hubs being adapted for insertion within the respective ends of said core to rotatably maintain the rolled tape within said cylinder, one of said shells being recessed along one of its adjoining peripheral edges to form a slot through which an end of the rolled tape may pass exteriorly of said cylinder, and a cutting edge carried by the outer curved surface of one of said shells.

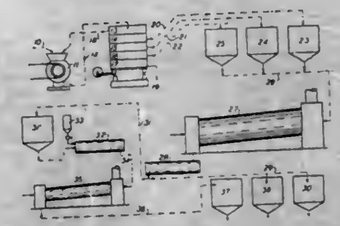
2,470,343
WALL TABLE STRUCTURE
Fred K. Dinger, Chisholm, Minn.
Application September 9, 1946, Serial No. 48,513
3 Claims. (Cl. 311—19)

3. A table structure comprising a support having an upper flat wall and a pair of side members, an anchor member secured to a supporting structural element, a panel hinged to said anchor member, guide slots provided in said side members, guides carried by said panel slidably received in said slots, the under surface of said upper wall having a notch, a reduced extension projecting from said panel and received in said notch for supporting said panel substantially coplanar with said upper wall, and means for locking said panel to said upper wall.



2,470,344
FASTENER
William Dzus, West Islip, N. Y.
Application July 21, 1945, Serial No. 606,313
3 Claims. (Cl. 24—221)

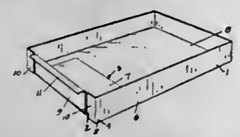
1. In a fastening device, a receptacle member of the type engageable with a stud member upon rotation with respect thereto and comprising a base plate having an aperture therein; handle means on said base plate for use in rotating the same; and a wire spring supported on said base plate and formed with a cross-bar portion extending across the aperture, loop portions connected to opposite ends of the cross-bar portion, and anchor portions connected to the outer ends of the loop portions and frictionally held and anchored in the handle means.



2,470,345
AIR WASHER
Orrin E. Fenn, Detroit, Mich., assignor to Peters-Dalton, Inc., Detroit, Mich., a corporation of Michigan
Application June 28, 1943, Serial No. 492,511
3 Claims. (Cl. 183—24)

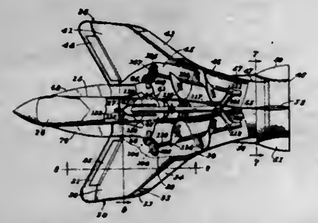
2. An air washer comprising, in combination, a tank adapted to hold a body of liquid at a predetermined level, a pair of upright juxtaposed casings surmounting said tank and opening thereinto above the level of the liquid body, one of said casings serving as an air washing chamber and the other as a collector of dust laden air, a dust collecting pan in the bottom of said tank below said dust collecting casing into which the heavier dust particles entering the liquid body fall directly, an inclined flow plate in said tank sloping upwardly from below the level of the liquid under said dust collecting casing to a point a slight distance above the level of the liquid body under said air washing casing and terminating spaced from the wall of the latter opposite to the dust collecting casing, an inclined floor section in said tank under said air washing casing sloping upwardly from the inner edge of said pan to the wall of the tank opposite thereto down which lighter dust particles removed from the air washing casing are conveyed to the pan, a substantially vertical baffle member in said tank positioned between the upper margin of said flow plate and said floor section and terminating spaced above

the latter to form in combination therewith and said wall of the tank a vertical passage opening out into the bottom of the tank in the direction of said pan for the downward and lateral movement of liquid in the tank, and means for causing dust laden air to enter and flow down into said dust collecting casing and across the surface of the liquid body and up through the air washing casing at such a velocity as to sweep liquid up said flow plate and over the upper margin thereof for return of the liquid to the liquid body above said vertical passage thereby creating a circulation of liquid in the tank aiding the flow of lighter dust particles down the sloping floor section into the dust collecting pan.



2,470,346
CALCINED DIATOMACEOUS EARTH PRODUCT
Charles A. Frankenhoff, Scarsdale, N. Y., assignor to Great Lakes Carbon Corporation, a corporation of Delaware
Original application April 30, 1946, Serial No. 665,986. Divided and this application November 12, 1946, Serial No. 709,316
3 Claims. (Cl. 252—194)

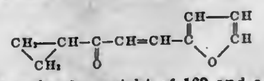
1. An anhydrous, freely permeable, granular dehumidifying agent for air and other gases, consisting essentially of massive particles of diatomaceous earth of about 0.5 inch to about 0.033 inch size prepared by calcining a raw diatoma-



ceous earth capable of absorbing not less than about 80% of water by weight, at a temperature of about 1200° F. to about 1800° F., said particles having a water absorption of about 93 to about 114% by weight, an abrasion loss not exceeding about 6% by weight, being free of water of hydration and from the tendency to slack when wetted by water, and having a high crushing strength, said particles containing a hygroscopic salt in proportions of not less than 0.1 lb. nor more than 0.39 lb. per pound of said calcined particles.

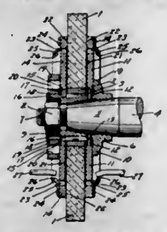
2,470,347
LETTER TRAY
Richard L. Gallagher, Erie, Pa.
Application December 2, 1946, Serial No. 713,523
4 Claims. (Cl. 206—74)

1. A letter tray comprising two sides, an end, and a bottom with one end thereof struck out, a substantially right angled member having the vertical side thereof forming the other end of said box-like member and the other portion of said right angled member forming a portion of the bottom of said box-like member and being disposed in the struck out portion thereof, and means for tilting said right angled member.



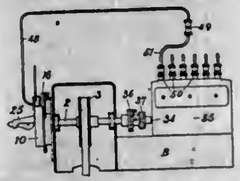
2,470,348
JET-PROPELLED AIRCRAFT
John Lewis Haight, Jr., Fort Worth, Tex.
Application July 20, 1944, Serial No. 545,823
9 Claims. (Cl. 244—15)

1. An aircraft comprising a body, means defining laterally elongated air intake openings at the sides of said body respectively, air conduits connecting said intake openings to rearwardly faced outlet openings at the rear of said body, each of said conduits including at its rearward end a cylindrical portion, turbine means including a combustion chamber in said body, compressor means in said body driven by said turbine means, a front air intake for the compression means, an outlet connection from the compressor means to said combustion chamber, exhaust conduit means for the turbine means having rearwardly directed jet openings within the cylindrical portions of said air conduits, and means driven from the turbine means for propelling air rearwardly in said air conduits.



2,470,349
CYCLOPROPYL FURYL PROPENONE
James W. Hansen and Carroll C. Cassil, Berkeley, Calif., assignors to California Spray-Chemical Corporation, Richmond, Calif., a corporation of Delaware
No Drawing. Application May 29, 1945, Serial No. 596,600
2 Claims. (Cl. 260—345)

1. As a new composition of matter, the compound



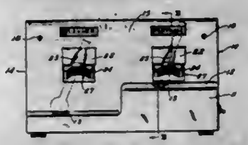
having a molecular weight of 162 and a regular rhombic crystalline form melting at 38–38½° C.

2,470,350
WATER-COOLED GRINDING WHEEL
John A. Harrington, Minneapolis, Minn., assignor to Continental Machines, Incorporated, Savage, Minn., a corporation of Minnesota
Application March 29, 1948, Serial No. 17,765
1 Claim. (Cl. 51—267)

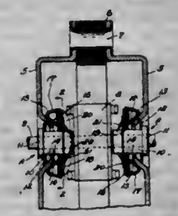
A grinding assembly including a rotary shaft having a tapered portion and a threaded end axially outwardly of said portion, a bushing having a tapered opening corresponding to the taper on said shaft and an axially outwardly opening recess at the smaller end of said tapered opening providing a shoulder, a nut engageable with said threaded portion and said shoulder to press said bushing on the tapered portion of said shaft, a radially outwardly-projecting circumferentially-extending flange integral with said bushing adjacent its inner end, a porous grinding wheel having an axially-extended central opening receivable on said bushing, a pair of axially-spaced annular clamping flanges axially slidable on said bushing one on each side of said grinding wheel, one of said clamping flanges abutting said flange integral with said bushing, means positively locking said clamping flanges against rotation with respect to said bushing, said bushing having a threaded portion adjacent its outer end, a clamping nut on said threaded portion engageable with the other of said clamping flanges to move said clamping flanges and said grinding wheel toward frictional locking engagement with each other and with the flange on said bushing, each of said clamping flanges being provided with a circumferentially-extended row of spaced apertures axially therethrough, said apertures being spaced uniformly from the axial center of said flanges and spaced radially inwardly from the periphery thereof, said flanges being provided with opposed annular recesses which extend radially from the central openings therein to a point beyond the spaced apertures, an annular lip carried by each of said flanges intermediate said rows of apertures and the peripheral edge of said flanges whereby to provide radially inwardly opening channels communicating with said apertures, and means for simultaneously supplying a fluid coolant to said channels radially outwardly of said bushing.

2,470,351
TESTING PHASE ANGLE AND INJECTION PERIODS OF FUEL INJECTION PUMPS
Leslie Hartridge, Buckingham, England
Application February 22, 1944, Serial No. 523,448
In Great Britain February 22, 1943
14 Claims. (Cl. 73—118)

1. A method of ascertaining the phase angle or timing between the pump stages of a multi-stage fuel injection pump, consisting in intermittently supplying liquid to an injector from a pump stage, directing the resulting sprays produced during successive injection periods of the pump stage through an aperture open to the spray only at the moment of commencement of each of said periods whereby that portion of the spray produced at this moment becomes visible at the side of the aperture furthest from the injector and repeating this procedure with a second stage of the pump, the angular displacement of the shaft of the pump being tested from the shaft position at which the preceding visible sprays occurred to the shaft position at which the succeeding visible sprays occur being noted and this angle being the phase angle between the said stages of the pump.



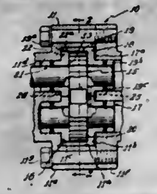
2,470,352
ELECTRICAL RESISTOR
Thomas Holmes, London, England, assignor to The Hartford National Bank & Trust Company, Hartford, Conn., as trustee
Application July 20, 1945, Serial No. 606,165
In Great Britain March 21, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires March 21, 1964
3 Claims. (Cl. 201—76)



1. An electrical resistor comprising a hollow tubular member of insulating material, a coating of carbon on the internal wall of said tubular member, connecting lead-in elements internally inserted into said tubular member, and a cement consisting of silvered copper powder suspended in a binder for securing said lead-in elements in position and simultaneously sealing the ends of said tubular member.

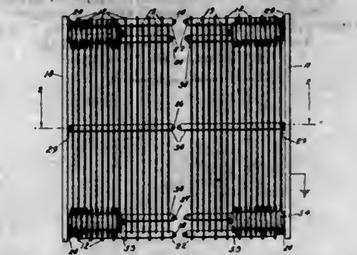
2,407,353
ANALYTICAL APPARATUS
Anthony G. Jordan, Battle Creek, Mich.
Application November 1, 1946, Serial No. 707,058
1 Claim. (Cl. 219—19)

Analytical apparatus which includes a base having a substantially horizontal top surface and a recess in the top surface, an integral flange rising from the base adjacent one side edge, the face of the flange joining the horizontal top surface being inclined upwardly and rearwardly as it recedes from its junction with the base, an apparatus support projecting outwardly from the inclined face of the flange in spaced relation to the top surface of the base, said support having an angularly disposed groove in its outer surface to receive chemical apparatus seated in the recess and hold it at an angle to the top surface of the base, said flange having a downwardly and forwardly inclined opening therein immediately below the bottom surface of the apparatus support, a heating device removably supported in said opening, said heating device having an arcuate recess therein partially to embrace a piece of chemical apparatus seated in the recess in the base and an electrically energized heating unit in said recess.



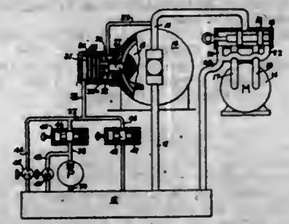
2,470,354
SELF-ALIGNING BEARING CONSTRUCTION
Theodore Y. Korsgren, Reynoldsburg, Ohio, assignor to Crise Manufacturing Company, Columbus, Ohio, a corporation of Ohio
Application November 28, 1947, Serial No. 788,593
7 Claims. (Cl. 308—72)

1. Self-aligning bearing construction comprising a sleeve formed for the reception of a rotatable shaft, a supporting frame having a laterally offset arcuate protrusion provided with an opening in which said sleeve is loosely positioned, means carried by said sleeve having edge contact with the wall surfaces of said protrusion on one side thereof, a washer loosely positioned on said sleeve in contact with the wall surfaces of said protrusion on the opposite side of the latter with respect to that contacted by the sleeve-carried means, a dust and dirt excluding disk of compressible composition and formed with an axial opening, said disk being positioned on said sleeve in contact with said washer, and fastening means engaged with said disk and sleeve to maintain the latter against longitudinal displacement with respect to said frame but admitting of limited rocking movement of the sleeve in the opening of said frame protrusion.



2,470,355
PRESSURE LOADED GEAR PUMP
John A. Lauck, Shaker Heights, Ohio, assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application November 23, 1945, Serial No. 630,471
7 Claims. (Cl. 103—126)

1. In a liquid pump comprising: means defining a main outside body housing composed of a first material and having a chamber therein, an inlet leading into and an outlet leading from said chamber; means including a rotary liquid displacement member in said chamber effective to draw liquid in said inlet and force the same out of said outlet; means defining a completely enclosing wear-resistant readily replaceable liner assembly received in said chamber in enclosing relation about said rotatable liquid displacement member, including a first bonnet-like bearing and pumping seal unit, said first unit comprising a radially extending annular plate having a first back face normally spaced from the adjacent end wall of said chamber forming therewith a motive pressure chamber for the reception of liquid under pressure for actuating said annular plate axially toward said rotary liquid displacement member, said first unit further comprising an axially extending tubular liner portion embracing the outer radial periphery of said rotary member, said tubular liner merging with the radial outer portion of said first annular plate and terminating at the opposite axial extremity thereof in spaced relation to the adjacent end wall of said chamber to provide for limited axial adjustment of said first unit, said radial annular plate also having a first front face engageable in bearing and pumping seal relation with said rotary liquid displacement member, a second bearing and pumping seal unit comprising a second radially extending annular plate having a second back face in engagement with the adjacent wall of said chamber and a second inner face engageable in bearing and pumping seal relation with said rotary fluid displacement member; and means placing said motive chamber in communication with liquid pressure generated by said liquid displacement means for maintaining said first inner face of said first radial annular plate in bearing and pumping seal relation with said rotary displacement member and said rotary displacement member in turn in bearing and pumping seal relation with said second inner face of said second radial annular plate.



2,470,356
ELECTRICAL PRECIPITATOR
Kenneth W. MacKenzie, Newton Highlands, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application June 20, 1946, Serial No. 678,146
6 Claims. (Cl. 183—7)

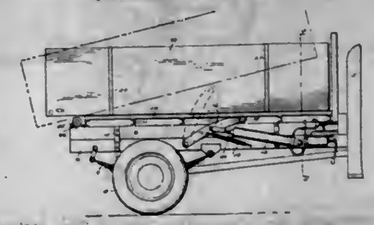
1. A precipitating device for electrical precipitators, comprising a pair of side walls forming the end walls of said precipitating device, a plurality of dust precipitating plates positioned parallel to said side walls and to each other, a plurality of tie rods extending from one of said side walls to the other and rigidly secured and electrically connected thereto, alternate of said plates providing ground plates and being supported by said tie rods, spacing bushings on said tie rods, one on each of said tie rods between any pair of successive alternate plates, a second set of tie rods extending through cut-away portions

and openings in said alternate plates and free from said side walls, the dust precipitating plates intervening said alternate plates and providing charge plates being mounted on said second set of tie rods, spacing bushings on said second set of tie rods one on each of said tie rods between any pair of successive charge plates, and insulators secured to said side walls and two of said charge plates for supporting all of said charge plates from said side walls in spaced relation to said alternate plates.

2,470,357
CONTROL SYSTEM FOR HYDRAULIC PUMPS SUPPLYING HYDRAULIC FLUID TO DOUBLE-ACTING RAMS OF HYDRAULIC PRESSES
Howard F. MacMillin, Mount Gilead, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware
Application July 10, 1944, Serial No. 544,221
20 Claims. (Cl. 60—52)

4. In a control mechanism for a hydraulic system including a fluid source and a motor connected to receive fluid therefrom and a flow-controlling member movable for reversibly controlling the delivery of fluid to the motor, a chamber, means movable in said chamber partitioning the same into two compartments and connected with said flow-controlling member for movement therewith, means for supplying fluid under pressure to one of said compartments for actuating said movable means to shift said flow-controlling member in one direction, means for entrapping the fluid in the said compartment including pressure relief means, and means connecting the other said compartment with the pressure side of said motor whereby a predetermined pressure therein of the pump will develop sufficient pressure in the first mentioned compartment to actuate said relief means.

2,470,358
FUSEE LIGHTER
Glen D. McKown, Cedar Lake, Ind.
Application July 18, 1947, Serial No. 761,763
2 Claims. (Cl. 102—70)



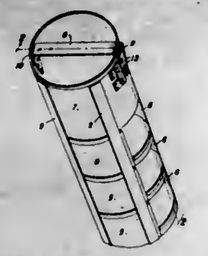
1. In a fusee lighter, in combination with a fusee body having igniting or match head material fixed to one end thereof, a flexible tape having one end bonded longitudinally to the fusee body, a striking element carried by said tape and disposed over the end of the fusee body containing the igniting or match head material and disposed in opposed relationship thereto, a protective member interposed between the striking material and match head material, and a wrapper of a readily tearable material enclosing said end of the fusee body and the portions disposed therebeyond, the opposite end of said tape being longer than the first mentioned, secured end thereof to protrude beyond the open end of said wrapper to form a tab adapted to be manually engaged and pulled in a direction away from the fusee body for tearing the wrapper from the fusee body and for releasing said member interposed between the striking surface and igniting material whereby said tab end of the tape may be swung relatively to the fusee body for scraping the striking element across the igniting material for igniting the latter and the adjacent portion of the fusee body.

2,470,359
HOSE COUPLING
Paul C. McLean, Hollywood, Calif.
Application February 21, 1946, Serial No. 649,271
2 Claims. (Cl. 285—90)

1. A unitary coupling comprising a flexible tube having an outer tubular flange and an inner tubular flange at each end of said tube, all said flanges being coaxial with the tube, whereby two grooves are defined between adjacent flanges for the insertion thereinto of ends of tubular members, said outer flanges having annular internal recesses to allow sealing expansion of adjacent portions of said tubular members when pressure is applied thereon, the outer flanges having reduced external diameters at the outer ends thereof, and the inner flanges having increased internal diameters at the outer ends thereof.

2,470,360
LUMBER LOADING TRUCK
Kirwan Y. Messick, Arlington, Va.
Application May 28, 1946, Serial No. 672,821
6 Claims. (Cl. 214—84)

1. The combination with a lumber truck, comprising members constituting a fixed floor shaped and dimensioned to receive a load of lumber with said lumber resting directly thereon and frictionally engaged therewith, of a roller disposed transversely of the truck across the rear portion thereof, and rearwardly of said floor, said roller being mounted in fixed bearings upon the truck and having its upper portion disposed enough below the floor level of the truck that the lumber will not contact said roller until the forward portion of the load of lumber is elevated, a second roller extending transversely of the truck, at a point forward of the center of gravity of the load of lumber thereon and below the level of said floor and power means for bodily elevating the latter roller while maintaining said roller substantially parallel with the first-named roller.



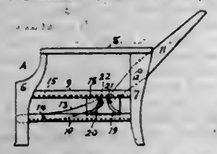
2,470,361
ART OF RECLAIMING PLASTIC SCRAP
Isador Miller, New York, and Arthur L. Beiser, Jackson Heights, N. Y., assignors to Gem Participations, Inc., New York, N. Y., a corporation of New York
No Drawing. Application June 27, 1945, Serial No. 601,940
4 Claims. (Cl. 260—486)

1. Process for utilizing polymer scrap derived from monomer containing the vinyl group which consists in decomposing the scrap by pyrolysis at subatmospheric pressures, and progressively increasing temperatures with said scrap immersed in a stable volatile liquid solvent internal heat transfer medium comprising a crude complex of low molecular weight compounds of specific gravity lower than that of the scrap and which is recovered as a residue in the purification of monomers by the fractional distillation of the products of pyrolytic decomposition of such polymer scrap.

2,470,362
CURRENCY CONTAINER
Dwight L. Moody and Henry Renek, Santa Monica, Calif.
Application March 1, 1948, Serial No. 12,448
6 Claims. (Cl. 206—0.80)

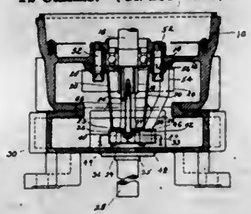
1. A multiple compartment valuables container of the character described, comprising a plurality of similar unitary cup-like sections, each having a side opening in the upper front portion thereof through which the currency may be inserted and removed, and a unitary open top cup-like uppermost section provided with a handle, all of said sections being of the same size and shape in horizontal section and being disposed and perma-

nently connected together in superimposed relation so that the bottom of each section except the



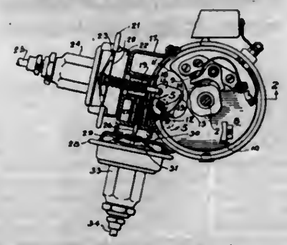
lowermost one closes the top of the section directly beneath the same.

2,470,363
MELAMINE-FORMALDEHYDE CASTING RESIN
Harold W. Mohrman, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application January 13, 1945, Serial No. 572,751
7 Claims. (Cl. 260—67.6)



1. A process for producing a melamine-formaldehyde casting resin which comprises heating a mixture of 1 molecular proportion of melamine and an aqueous solution of 2.5–4.5 molecular proportions of formaldehyde at a pH of 6.7 to 7.3 to form a polymethylol melamine, partially condensing the polymethylol melamine by continued heating until the product has a viscosity of 60–200 centipoises at 25° C. and at the concentration resulting from the use of aqueous formaldehyde solution having a formaldehyde concentration of 37%, raising the pH of the reaction mixture to 7.7 to 8.3 and dehydrating the reaction mixture by vacuum distillation.

2,470,364
RECLINING CHAIR
Homer Niederhauser, Berne, Ind.
Application June 4, 1947, Serial No. 752,332
7 Claims. (Cl. 155—116)



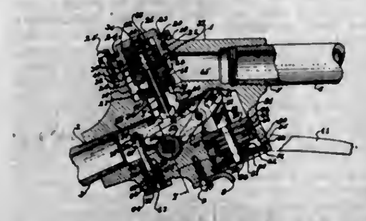
1. A reclining chair consisting of a frame having forelegs, rear legs, arm-rests, and parallel side rails spaced apart connecting said fore and rear legs, the upper side rails having longitudinal kerfs in their under portions, said lower side rails having rabbets in their upper portions, slides having longitudinal movement in said rabbets, retaining plates secured to the lower side rails confining said slides in said rabbets, a movable plate secured on each slide, the upper edge thereof extending into and having movement in the kerf of the corresponding upper side rail, each movable plate having arcuate downwardly divergent slots, a seat-frame pivotally supported in the chair-frame provided at its rear end with a cross-rod, the ends of which extend through and have guided movement in the foremost slots in said movable plates, and a back-rest pivotally supported in the chair-frame provided at its lower end with another cross-rod, the ends of which extend through and have guided movement in the rearmost slots in said movable plates, so that tilting of the seat and back-rest frames is concurrent.

2,470,365
OIL PUMP FOR DYNAMOELECTRIC MACHINES
Clarence O'Daniel, Richmond Heights, Mo., assignor to Century Electric Company, a corporation of Missouri
Application October 31, 1946, Serial No. 707,009
12 Claims. (Cl. 103—103)

12. In a dynamo electric machine, a rotatable shaft, a rotary impeller secured to and rotatable with said shaft, a chamber surrounding said impeller, and an oil duct that has one end thereof communicating with said chamber and has the other end thereof projecting upwardly from said chamber, said impeller having an upper wall that cooperates with said shaft to prevent passage of oil between said wall and said shaft, said impeller having a lower wall of annular form to provide an inlet for oil, and having a radially-extending flange that is offset from said wall by an abrupt bend of annular form, said impeller having a plurality of plane, radially-extending blades positioned between said upper and lower walls, said chamber having a top with an opening that receives and closely fits said shaft, said chamber having a bottom with an opening that is spaced from the outer periphery of said impeller blades and is spaced close to said annular flange.

2,470,366
AUTOMATIC SPARK ADVANCE MECHANISM
William Ostling, Los Angeles, Calif., assignor to California Machinery and Supply Company, Ltd., Los Angeles, Calif., a corporation of Delaware
Application February 17, 1947, Serial No. 728,984
40 Claims. (Cl. 123—117)

1. An automatic spark advance mechanism which comprises a breaker cam, a cam shaft, a

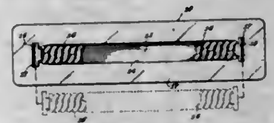


circuit breaker in operative association with said breaker cam, a rotatable mounting for said circuit breaker, means for rotating said breaker mounting about the axis of said breaker cam comprising a fluid pressure power means, a cam actuated driving connection between said fluid pressure power means and said mounting, pneumatically operated power means, and a cam actuated linkage connection between said pneumatic power means and said mounting.

2,470,367
HANDBAG PURSE
Harold G. Palma, New York, N. Y.
Application January 24, 1947, Serial No. 724,193
3 Claims. (Cl. 150—37)

1. A handbag comprising a cylindrical side wall formation having diametrically opposed openings therein, closure means for said openings, flanged circular top and bottom members secured about their peripheries to and in spaced relationship within said side wall formation, a circular dividing member disposed diagonally between said top and bottom members and having opposed peripheral sectors thereof secured at the junctures of said side wall formation with the top and bottom members respectively forming two full diameter compartments within said structure.

2,470,368
VALVE MECHANISM
Donald D. Paxton, Burbank, Calif., assignor to Adel Precision Products Corp., a corporation of California
Application June 15, 1946, Serial No. 677,007
6 Claims. (Cl. 137—144)



1. In a valve for controlling the flow of liquefied gases, a valve body having an inlet port adapted to be connected with a source of supply, an outlet port provided with a device affording a means of connection with a receptacle to be supplied, and manually operable valve means in said valve body comprising a pressure relieving port, a normally open valve operable to close said port, a normally closed pilot valve between said inlet and outlet ports, a main valve between said inlet and outlet ports, a valve operating device including a single manually operable lever and a member pivotally mounted on said lever; said manually operated device being constructed and arranged upon the movement of said lever in one direction, to release said normally open valve and then to open said pilot valve, and pressure responsive means effective upon the presence of pressure in said valve body between said pilot valve and said outlet port to cooperate with said manually operated device to open said main valve.

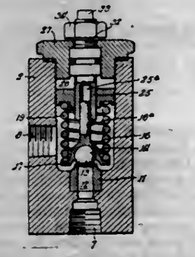
2,470,369
FURRING CLIP
Sidney J. Radeke, Ann Arbor, Mich.
Application February 18, 1946, Serial No. 648,264
10 Claims. (Cl. 72—118)

1. A clip for holding a wall board spaced from a supporting wall comprising a sheet metal blank laterally and parallelly slitted upon opposite sides of a central portion thereof to form a plurality of pairs of tongues, certain of said tongues being offset from but parallel to the original plane to embrace between the same and other of said tongues in said plane the wall board, and still other of said tongues being bent to extend perpendicular to the aforesaid tongues and the supporting wall into contact with the latter.

2,470,370
WATCH BAND DISPLAY PACKAGE
Saul Ritter, New York, N. Y.
Application November 15, 1945, Serial No. 628,937
2 Claims. (Cl. 206—78)

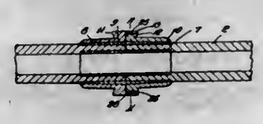
1. In combination an expansible and contractible watch band having end members of greater width than the width of the intermediate portion of the band, a solid container therefore comprised of a plurality of sheets of material consisting of a base board and an apertured sheet, the aperture in said sheet having the same general configuration as said band and having transverse notches to receive said end members, the distance between said notches being greater than the distance between said end members when said band is in normal contracted condition, said end members engaging the sides of said notches to retain the band in position in the container when the band is expanded and disposed in said recess under the contraction action of said band.

2,470,371
AUTOMATICALLY OPERABLE FIRE EXTINGUISHER
William L. Roessner, Cherry Hills Village, Colo., assignor to Norman A. Grassfield, Cherry Hills Village, Colo.
Application February 24, 1948, Serial No. 10,206
5 Claims. (Cl. 169—26)



1. An automatically operable fire extinguisher comprising a shatterable chemical containing grenade, a grenade holder including a slotted handle portion, grenade breaking means comprising a striker, striker actuating means pivotally mounted in the handle, a fusible link re-

leasably connected to the actuating means, and link restraining means mounted in the handle and releasably connected to the link, said grenade breaking means being housed within the handle when in restrained position and said striker



being moved by the actuating means in an arcuate path extending outwardly of the handle into grenade crashing position when the actuating mechanism becomes operable by release of the fusible link.

2,470,372
BALL TYPE PRESSURE RELIEF VALVE
Jay M. Roth, Euclid, Ohio, assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application July 17, 1944, Serial No. 545,254
1 Claim. (Cl. 137—53)

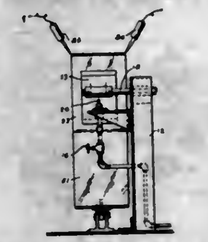
A pressure relief valve comprising a hollow housing defining a central chamber with a threaded open end and an outlet port; an inlet port in said chamber opposite said threaded end; a valve seat at the inner end of said inlet port; a valve ball normally engaged on said seat; a retainer having a stem and a frusto-spherical hollow boss surrounding the major portion of said ball and extending below the center thereof with its lower portion in-turned against said ball to anchor said ball to said retainer; an annular rim at said lower portion of said retainer; a follower adjustably mounted in the threaded portion of said chamber; a spring interposed between said follower and rim for yieldably urging said retainer in a direction to seat said ball; an apertured closure in the open end of said chamber; and follower adjusting means in said closure aperture, having a bore in which said retainer stem is guided whereby the tension of said spring is adjustable independently of and without disturbing said valve ball and retainer.

2,470,373
JOINTING OF FLEXIBLE PIPES
John Lawrence Sayers, Watford, England, assignor to Arnold Greening, Sparrows Herne, Bushey, England
Application June 12, 1945, Serial No. 598,976
In Great Britain July 13, 1944
7 Claims. (Cl. 285—193)

1. A coupling for connecting together the ends of flexible pipes, wherein a split sleeve is provided with external tapered ends, whilst a pair of sockets have tapered bores, these sockets being adapted to be drawn together over the tapered ends of the sleeve, and a circumferential outwardly projecting shoulder carried by each socket adjacent the inner ends of same, said shoulders being adapted to be engaged by a clamping tool.

2,470,374
PROCESS FOR THE PRODUCTION OF FOOD PREPARATIONS FROM POTATOES AND SIMILAR FARINACEOUS TUBERS
Martin Carl Schaul, London, England
No Drawing. Application August 17, 1946, Serial No. 691,398. In Great Britain February 22, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires February 22, 1963
3 Claims. (Cl. 99—207)

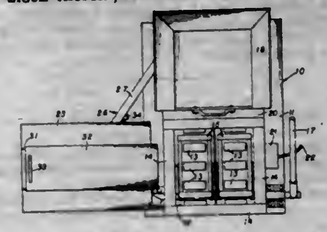
1. A process for the production of food preparations from potatoes which comprises first peeling said potatoes, then subjecting said peeled potatoes to a cooking treatment adapted to gelatinise part of the starch and to burst some of the starch cells without however completely cooking said potatoes, thereupon mashing the thus treated material, extruding the mashed product under atmospheric pressure and at atmospheric temperature into a form adapted for rapid and uniform drying, thereupon subjecting the product to a baking treatment as a temperature upwards of about 200° C. for a period up to 10 minutes, and finally drying the product to a low moisture content.



2,470,375
VENTILATOR
Alter L. Schwartzberg, Shreveport, La.
Application February 13, 1946, Serial No. 647,333
3 Claims. (Cl. 98—116)

1. In combination with a structure having an opening, a ventilator adapted to be supported in said opening including a casing having an inner and outer side wall, a closed top, bottom and end walls, said side walls having vertically spaced elongated horizontal openings, each of said openings being provided with an upwardly and inwardly directed vane, vertical guide channels at the ends of said casing on the room side thereof, a closure plate having vertically spaced elongated horizontal apertures formed therethrough slidably supported in said guide channels for controlling the flow of air through said louvers, said closure plate being formed with vertically aligned elongated guide slots, headed supporting members secured to the adjacent inside wall of said casing and extending through said slots, and an

inwardly extending closure plate operating tab on the bottom of said closure plate.

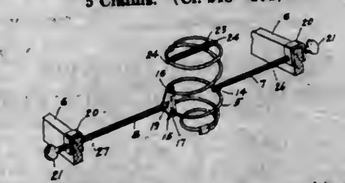


2,470,376
METHOD OF WELDING GLASS
Morton R. Shaw, Jr., Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
Application March 6, 1945, Serial No. 581,225
9 Claims. (Cl. 49—82)

1. The method which includes so arranging two similar pieces of glass that the parts to be joined are substantially only in line contact, arranging a third piece of glass in line contact with portions of the two pieces nearby their areas of line contact with one another, applying a series of closely spaced conductive coatings along a surface of the third piece of glass out of contact with the other pieces, including said third piece of glass and the series of coatings in parallel paths between a pair of electrodes, and applying heating potential to the electrodes as required to burn off the conductive coatings so as to heat the third piece of glass to conductivity and continuing application of the potential to melt and weld said third piece to said first two pieces by the Joule effect.

2,470,377
VIBRATING BLOCK MOLDING MACHINE
Albert C. Shepeck, Menominee, Mich.
Application June 10, 1947, Serial No. 753,622
2 Claims. (Cl. 25—41)

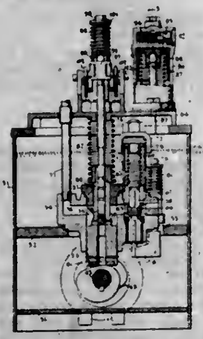
1. The combination with a block forming machine of the vibratory type having a mold box with an upper open end, a removable pallet within the mold box upon which the aggregate from which the block is formed and the completed block rests and means to lift the finished block and pallet clear of the upper end of the mold box, of a header plate pivotally supported on the machine adjacent the mold box to swing about a vertical axis into a position to close the upper open end of the mold box during the formation of a block therein, said header plate being also



adapted to swing from its position over the mold box to a position adjacent one side thereof and means on the upper side of the header plate adapted to be projected over the open upper end of the mold box to support the pallet and a finished block.

2,470,378
PRODUCTION OF CHROMIUM AMMONIUM CHLORIDE COMPLEXES
Ljubomir W. Skala, Chicago, Ill., assignor of sixty per cent to M. M. Warner and ten per cent to Henry Blech, Chicago, Ill.
No Drawing. Application June 7, 1944, Serial No. 539,182
6 Claims. (Cl. 23—87)

1. The method of producing a complex chromium ammonium chloride combination suitable for electrolytic deposition of chromium metal, including the steps of converting potassium bichromate in the presence of hydrochloric acid by specific reduction agents comprising predetermined quantities of zincs of the solid and mossy or porous type to a bivalent chromium chloride compound, converting further said bivalent chromium chloride compound into a bivalent chromium acetate compound, separating said acetate compound by washing and filtration from the solution and oxidising said bivalent compound to a trivalent complex chromium in reaction with ammonia, ammonium chloride and water and separating the ammonium chloride crystals from the resulting product by repeated washings.

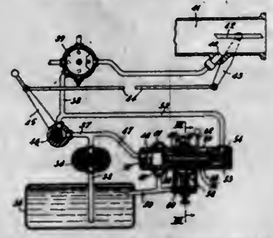


2,470,379
BABY'S BOTTLE HOLDER
Jay S. Swaim, Los Angeles, Calif.
Application August 27, 1945, Serial No. 612,769
5 Claims. (Cl. 248—104)

1. In a nursing-bottle support, in combination, a bottle holder and a pair of elongated extensible spring sections, each of said spring sections having one end attached to said bottle holder and its opposite end attachable to the side rail of a baby crib thereby to support a bottle above the bed portion of the crib, said bottle holder comprising

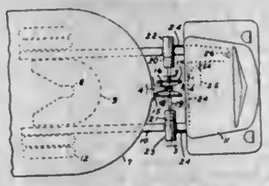
a wire coil of sufficiently large diameter to contain the bottle, one of said spring sections being attached to one side of said coil and the other of said spring sections being attached to the diametrically opposite side of said coil, and a plate having through it a pair of apertures, said apertures each having a side run of said coil passing through it, one of said elongated spring sections being attached to said plate.

2,470,380
VARIABLE-CAPACITY CONTROLLER FOR COMPRESSORS
Wolfgang Turnwald, Milwaukee, Wis., assignor to Nordberg Manufacturing Company, Milwaukee, Wis., a corporation of Wisconsin
Application April 20, 1945, Serial No. 589,357
8 Claims. (Cl. 230—25)



1. The combination of a compressor having inlet and discharge valves; at least one hydraulic motor operable to control the operation of an inlet valve; a hydraulic cylinder; a piston reciprocable in said cylinder and defining an impulse space therein; a connection between said impulse space and said hydraulic motor; a valve guided in said piston, shiftable in the direction of motion of the piston and serving by coaction with the piston to control a free vent from the impulse space, said valve being indifferent to pressure developed in the impulse space; means responsive to pressure developed by operation of the compressor and serving to adjust the position of said valve; an inlet valve for the impulse space; a loaded relief valve for releasing excess pressure developed in the impulse space; and means for reciprocating said piston in timed relation to cycles of the compressor.

2,470,381
UMBRELLA RIB TIP PROTECTOR
Peter Valentino, Brooklyn, N. Y.
Application December 19, 1945, Serial No. 635,901
5 Claims. (Cl. 135—36)

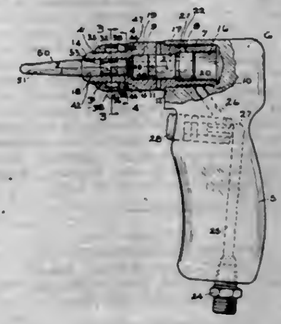


1. In an umbrella having ribs provided with enlarged tips, protective members adapted to be snapped on or off the enlarged tips, each of said members comprising a substantially spherical ball having a flattened surface, said ball comprising two complementary sections, one of said sections having said flattened surface thereon, said sections having means for releasably interlocking the same, said sections having complementary cut-outs forming a single compartment within the ball, said one of said sections having a reduced central opening therethrough into said cut-out thereof of a diameter slightly larger than the diameter of said rib tip, a resilient disc clamped between said sections between said cut-outs, said disc having a central opening therethrough of smaller diameter than the diameter of said rib tip, said disc having a plurality of radical slots extending from said central opening thereof toward the peripheral edge thereof thereby providing a plurality of yieldable tongues adapted to yield to the passage of said rib tip through said central opening of said disc in either direction and to snap back to their normal position coplanar with said disc after passage of said rib tip therethrough.

2,470,382
REGULATING AND FEED APPARATUS FOR INTERNAL-COMBUSTION ENGINES
Pierre Georges Vanni, Neuchatel, Switzerland
Application April 13, 1945, Serial No. 588,101
In Switzerland January 10, 1945
3 Claims. (Cl. 123—119)

1. A regulating and fuel feeding apparatus for internal combustion engines comprising a pump driven by the engine and producing a flow of fuel through a conduit at a speed proportional to the rotary speed of the engine, an adjustable throttle member in said conduit for producing a pressure drop in said conduit, the degree of which varies inversely with the degree of opening of said throttle, a cylinder, a piston slidably mounted in said cylinder intermediate the ends thereof dividing said cylinder into two opposed chambers with the ends of the piston forming movable walls of the two opposed chambers, pipes connecting one chamber with said conduit anteriorly of said throttle and the other chamber with said conduit posteriorly of said throttle, whereby the pressures in said conduit on opposite sides of the throttle will act upon said movable walls to balance the resultant thrust on said walls produced by the pressures in said conduit to cause the walls to assume a position of equilibrium, a reservoir for supplying fuel to said conduit, said cylinder having at least one first port communicating with said reservoir, said piston cooperating with said port for returning to the reservoir excess fuel in the conduit on the posterior side of the throttle in said conduit, to regulate the fuel feed to the motor according to the position of the adjustable throttle, said cylinder having at least one additional port communicating with said reservoir, said piston cooperating with said additional port, for returning to the reservoir, fuel in the conduit on the anterior side of the throttle, said additional port being open at the end of the displacement of said piston in the cylinder, by complete opening of the first port.

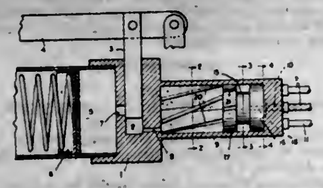
2,470,383
DEVICE FOR STABILIZING TRAILERS
Clifford M. Wakeman, Flint, Mich.
Application December 28, 1945, Serial No. 637,644
7 Claims. (Cl. 280—33.05)



1. In a device of the character described, including a trailer and a tractor, the combination of a bracket secured to the front end of the trailer, hydraulic cylinders on said tractor oppositely disposed with respect to said bracket, pistons in said cylinders, a shaft connecting said pistons, and means on said shaft for contacting opposite sides of said bracket.

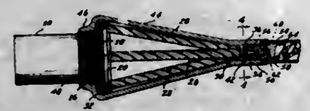
2,470,384
DOLL OR TOY FIGURE WITH ENCASED RADIO APPARATUS
Walter J. Waldron, Pomona, Calif.
Application November 29, 1948, Serial No. 62,584
4 Claims. (Cl. 250—14)

3. As an article of manufacture a radio apparatus encased within the figure of a doll, with articulated arms, comprising a vertical cylindrical casing having an elongated cross section, a horizontal deck plate, dividing the case into an upper and a lower compartment, a tuning condenser for the radio apparatus carried by said horizontal deck plate, an output transformer carried by said plate, a loudspeaker carried by said plate, arranged with its mouth piece turned upwardly and located near the upper end of the cylindrical case, a vertical deck plate, subdividing the lower compartments, tube sockets and tube held thereby carried by said vertical deck plate, intermediate transformers carried by said deck plate, aligned coaxial control shafts in the upper part of the upper compartment arranged at opposite sides of said loudspeaker and at diametrically opposite points of the cylindrical casing, said shafts projecting outwardly in opposite directions, means for transmitting a rotary motion from one of said shafts to said tuning condenser, said means including pulleys and a belt, a volume control arranged coaxially with the control shafts and carried by the case, said volume control being seated coaxially with the second shaft for direct operation by the same, means to fix the articulated arms of the doll figure to said shafts to serve as handles for the adjustment of the tuning condenser and of the volume control, a hollow doll head provided with openings, arranged directly above the upwardly turned mouth piece of the loudspeaker, to act as a sound conductor channel.



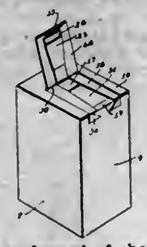
2,470,385
AIR HAMMER WITH BALL-TYPE TOOL RETAINING CHUCK
Russell J. Wenger, North Hollywood, Calif., assignor, by mesne assignments, to J. W. Merrick, Los Angeles, Calif.
Application March 8, 1946, Serial No. 653,075
9 Claims. (Cl. 125—33)

8. A power operated impact device, comprising: a body member having walls defining a cylinder; a hammer member adapted to reciprocate in said cylinder; power means for reciprocating said hammer member; an extension formed integral with said body member and having an annular wall defining a bore axially aligned with said cylinder and adapted to receive an end of a fabricating tool having a peripheral groove adjacent said end, said extension being provided with spaced holes extending radially through its annular wall; balls slidable in said holes, the diameter of said balls being greater than the thickness of said annular wall; an annular operating member rotatably mounted on said extension and provided with spaced recesses in its inner surface, said recesses having cam faces at their ends; retaining means for retaining said operating member in place on said extension with said grooves in longitudinal alignment with said balls, said operating member being adapted to be rotated to a position to cause said cam faces to project said balls radially inward into engagement with said peripheral groove of said fabricating tool when said tool is inserted in said bore to lock said tool in place in said device while permitting reciprocation of said tool under the ham-



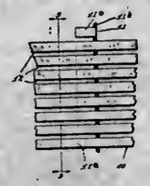
mering action of said hammer member and said operating member being adapted to be rotated to another position to radially align its recesses with said balls to permit said balls to move radially outward to release said tool to permit withdrawal of said tool from said device; and detent means for releasably holding said operating member in either of said positions.

2,470,386
LUBRICATING DEVICE
Hermann R. Abbrecht, Shaker Heights, Ohio
Application July 31, 1945, Serial No. 607,987
6 Claims. (Cl. 184—35)



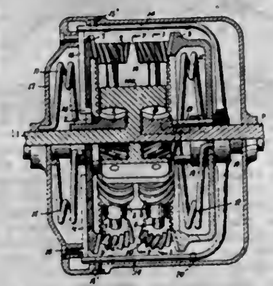
1. In a device of the character described, the combination of a cylindrical chamber, a vaned rotor fitted within said chamber, a head closing one end of said rotor save for restricted outlet openings for the spaces between the vanes of said rotor, a second head on said rotor, spaced from such first head and having a single discharge opening, the adjacent end of said cylinder having a plurality of outlet openings adapted successively to register with the opening in said second head as said rotor turns, and means adapted to supply a mobile liquid under pressure to said chamber at the opposite end thereof, whereby said rotor is caused to turn on its axis.

2,470,387
PENCIL SHARPENER
Lee Roy Baggett, Benton, Ark.
Application November 22, 1946, Serial No. 711,748
2 Claims. (Cl. 120—96)



1. A pencil sharpener comprising a ferrule for the reception of a pencil shank in line with the normal central axis of the ferrule, an outer casing threaded onto said ferrule and defining a pencil cutting chamber, a right hand end hollow tubular housing secured to the right hand end of the outer casing, the forward end of said ferrule extending into said pencil cutting chamber and having gear teeth formed thereon, a left hand end bearing washer in said casing, a right hand end bearing washer in said casing, a plurality of mutually inclined cutting rollers journaled at their ends in said washers and having gear teeth at one end for engagement with the teeth on said ferrule, and means extending through said right hand end housing for spinning said rollers about the central axis of said ferrule whereby the rollers are spun about their individual axes to sharpen a pencil therebetween.

2,470,388
DISPENSING CONTAINER HAVING CLOSURE LOCKING MEANS
Charles O. Ball, Toledo, Ohio, assignor to Owens-Illinois Glass Company, a corporation of Ohio
Application January 25, 1945, Serial No. 574,515
3 Claims. (Cl. 229—17)

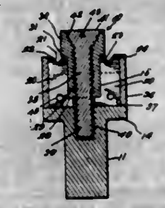


2. A container formed of sheet material and comprising a rectangular tubular body and top end flaps folded inwardly and forming a three-ply top for the container including an upper ply, an intermediate ply and a lower ply, said lower ply comprising a door section defined by weakened lines extending along the sides thereof and removable to provide a pour-out opening, said intermediate ply comprising a door section overlying said removable section and defined by weakened lines along its side edges, said upper ply having a door section having side edges defined by weakened lines, said door sections being adhered to each other and adapted to be severed along said weakened lines and form a door hinged to be swung to position to close said opening, said door section of the lower ply having its side edges protruding beyond the side edges of the overlying door section of the intermediate ply a slight distance such that as the said door is closed, said protruding edges pass between and engage beneath the adjoining edges of the intermediate ply and thereby releasably hold the door in closed position, the material forming the door being sufficiently compressible and resilient to permit said closing and releasable holding of the door.

2,470,389
METHOD OF MAKING GRILLES FOR RADIO SETS
Charles A. Bauer, Newburg, Ind., and William A. Barnes, Utica, N. Y., assignors to Hoosier Cardinal Corporation, Evansville, Ind., a corporation of Indiana
Application April 1, 1946, Serial No. 658,612
2 Claims. (Cl. 29—160)

1. The process of making a grille, comprising disposing on one face of a sheet-metal plate one or more metal reinforcing members each comprising a longitudinal flange and a web substantially normally thereto, securing the flanges of the reinforcing members to the plate, and then sawing the plate to provide a series of parallel slots transverse to the reinforcing members and extending through said plate and said flanges.

2,470,390
AUTOMATIC VARIABLE-SPEED TRANSMISSION DEVICE
Edward J. Consler, Detroit, Mich.
Application November 28, 1945, Serial No. 630,878
3 Claims. (Cl. 74—751)



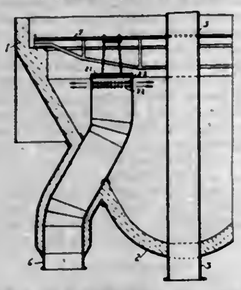
1. In a transmission of the type described, a driving shaft, a driven shaft, a series of worms tangential to and carried by said driving shaft, a hypoid-type rack carried by said driven shaft, pinions coaxial with and coupled to rotate said worms, said pinions being meshed with said rack, a worm wheel journalled on said driven shaft in mesh with said worms, and a resilient yielding coupling between said worm gear and said driven shaft to provide for partial rotation of said worm wheel on the driven shaft in relation to said rack.

2,470,391
TATTING SHUTTLE
Hilbert B. Daniello, Allentown, Pa.
Application April 18, 1947, Serial No. 742,390
1 Claim. (Cl. 87—58)

A tatting shuttle, comprising two walls of resilient material connected with each other at one end and severed from each other at the other end, the central portions of said walls having a pair of coaxial openings respectively formed therein, a bobbin having a shaft and a pair of disc-shaped sides, respectively spaced inwardly from the ends of the shaft, said central portions of the walls being yieldably bowed outwardly away from each other to receive said bobbin therebetween with the ends of said shaft journalled in said openings in the walls and with the peripheral edges of said disc-shaped sides of the bobbin in yieldable frictional contact with the bowed surfaces of the walls, said walls normally being in abutting engagement with each other at said severed end thereof whereby a spacer element may be inserted therebetween to decrease the friction between the bobbin and the walls, and the walls being bevelled at said severed ends thereof to facilitate the insertion of said spacer element.

2,470,392
TUBE CHAMFERING TOOL
Raymond M. Gassmann, Wilmette, Ill., assignor of one-fourth to Bernard M. Kollath, Roy Maier, and Albert P. Stein, Chicago, Ill.
Application October 25, 1945, Serial No. 624,449
3 Claims. (Cl. 77—73)

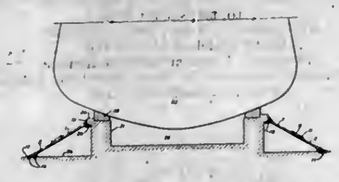
1. A chamfering tool comprising a shank portion, an enlarged annular table and a radially slotted boss of a diameter less than said table, a center bore extending through said boss, a plurality of similar generally rectangular blades V-notched at the outer ends thereof and having inwardly disposed toes on the inner ends thereof which latter ends seat on said table, a combined pilot post and thimble insertable in said bore and dimensionally and positionally adapted to guide work onto the tool and to space said blades apart and to engage said toes, and a ring adapted to seat upon said table and to frictionally engage outer edges of said blades to hold said blades against said thimble, said toes preventing accidental insertion of the blades in reversed position.



2,470,393
UREA FORMALDEHYDE TYPE OF MOLDING COMPOUNDS AND METHOD OF PRODUCING SAME
Eustace Glycofrides, Toledo, Ohio, assignor to Owens-Illinois Glass Company, a corporation of Ohio
No Drawing. Application September 2, 1944, Serial No. 552,578
2 Claims. (Cl. 260—17.3)

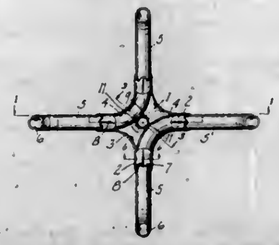
1. The method of producing a molding compound which comprises reacting together at a temperature not to exceed 80° C. for substantially one hour a wet mixture comprising the following ingredients in substantially the following proportions, namely, urea, 190 grams, a 40 per cent by volume solution of commercial formaldehyde, 380 grams, 10 cc. of 10 per cent sodium hydroxide, lignocellulose, 730 grams, coloring matter, 20 grams, zinc stearate, 20 grams; oven drying the reacting mixture at about 80° C. until the moisture content is reduced to about 5 per cent, milling the resultant product in rolls for from about 2 to 10 minutes with the rolls at a temperature of about 120° C. to 150° C., and grinding the rolled material to particle size.

2,470,394
FURFURYL ALCOHOL COMPOUNDS
Eustace Glycofrides, Toledo, Ohio, assignor to Owens-Illinois Glass Company, a corporation of Ohio
No Drawing. Application February 13, 1946, Serial No. 647,434
6 Claims. (Cl. 260—17.4)



6. The method which comprises reacting 100 furfuryl alcohol with one part by weight of a catalyst consisting of a metallic halide of an acid nature, other than ferrous chloride and stannous chloride, at a temperature within a range of 60° C. to 100° C., and thereby producing a thermoplastic resin, and thereafter combining the said resin and an organic acid, the amount of acid being 1 percent to 10 percent of that of the furfuryl alcohol, and furthering the reaction at a temperature above room temperature and not above 116° C. and thereby producing a thermosetting compound, said organic acid being an acid of the group consisting of benzoic acid, formic acid, lactic acid, tartaric acid, phthalic acid, tannic acid, maleic acid, fumaric acid, and oxalic acid.

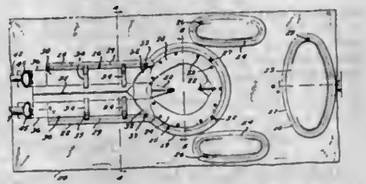
2,470,395
APPARATUS FOR CARRYING OUT CATALYTIC REACTIONS
Edwin J. Gohr and Charles W. Tyson, Summit, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application October 22, 1942, Serial No. 462,914
1 Claim. (Cl. 23—288)



An apparatus adapted for contacting gases and finely divided solids comprising an outer vertically elongated shell forming an enclosed vessel, a conduit leading from the upper portion of said shell for removing gaseous materials therefrom, a horizontal perforated grid positioned in the lower portion of said shell, a conduit communicating with said shell below said grid for introducing a stream of gases and finely divided solids into said shell, a vertical conduit projecting through the bottom portion of said shell and extending upwardly in said shell above said grid for removing a stream of finely divided solids from said shell, a plurality of return conduits communicating with the bottom portion of said last-named vertical conduit projecting into the bottom portion of said shell below said grid, heat exchangers positioned in each of said last-named conduits whereby finely divided solids withdrawn from above said grid may be passed through said heat exchangers and returned to said shell below said grid, said return conduits being in open communication with each other, and said return conduits having a plurality of restricted orifices through which said solids discharge into said shell.

2,470,396
SPUR SHORE
Joseph D. Guerette, Brunswick, Maine
Application November 14, 1944, Serial No. 563,431
1 Claim. (Cl. 248—354)

A device of the class described for forming a brace between the floor of a ship way and an upper edge of a ground way comprising a pair of pipe sections having telescoping inner ends whereby the device is adapted to be extended and contracted, a right angled pressure plate on the outer end of one section adapted to fit against said edge, an anchor plate on the outer end of the other section adapted to bite into said floor, said angle plates being swingable about axes transverse to that of the pipe sections for compensating movement to fit against said edge and floor, and means to extend said sections to tighten said plates comprising a cam swingable in one section for camming engagement with the inner end of the other section, said cam being constructed and arranged to be swung inwardly of said one section under thrust of the other section against the said cam and into an overthrow past dead center position against said one section whereby said cam is prevented from swinging out of camming engagement with the inner end of the said other section.



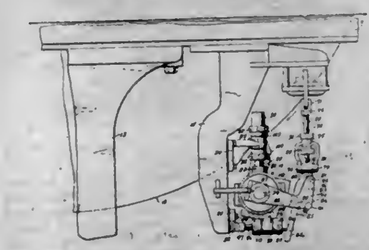
2,470,397
SWIVEL CHAIR BASE
Evan S. Harter, Sturgis, Mich., assignor to Harter Corporation, Sturgis, Mich., a corporation of Michigan
Application March 19, 1948, Serial No. 15,771
12 Claims. (Cl. 248—194)

1. A chair base or pedestal comprising a cruciform center member of generally concavo-convex shape facing downwardly and having inwardly curved side walls between the arms thereof, a pair of oppositely disposed tubular U-shaped leg members each constituting a pair of legs, the outer ends of the legs being turned downwardly, said leg members being disposed with their bights within the side walls of the center member and with their legs within the arms thereof, the arms of the center member being clamped around the

legs with the edges of the arms on the under sides thereof and welded together and to the under sides of the legs, a tubular spindle socket member disposed centrally through the top of the center member and between the bights of the leg members in supported engagement therewith and welded thereto, the socket member being also welded to the top of the center member, the upper end of the socket member being flanged outwardly to provide a spindle bearing element, and caster wheel sockets having bead-like flanges at their lower ends inserted in the downturned ends of said leg member with their said bead-like flanges abutting the ends of the legs.

2,470,398
THERAPEUTIC MATTRESS
Frederick Hayes, Los Angeles, Calif.
Application August 1, 1947, Serial No. 765,349
5 Claims. (Cl. 5—91)

1. A therapeutic mattress comprising a mattress base having a shape corresponding to that of a conventional box mattress, a plurality of flush-type fastening elements secured to the covering over one face of said base and arranged in predetermined patterns, a plurality of inflatable pads having respective marginal flanges, and a plurality of fastening elements secured in each of said flanges and engageable with fastening elements secured in the cover of said base to detachably secure said pads to said base in predetermined positions thereon, a pair of hollow-supports secured in said mattress base near one end of the latter and a pair of foot rests secured respectively to said supports, depressible to a position in which they are substantially flush with the upper surface of said base, and spring means in said supports resiliently urging said foot rests to a raised, foot-supporting position.

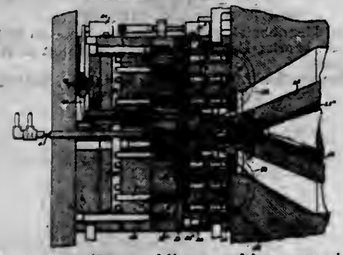


2,470,399
EJECTOR TYPE SOCKET WRENCH
Frank Holben, Middletown, R. I.
Application March 8, 1945, Serial No. 581,584
1 Claim. (Cl. 81—124.1)

In a tool of the class described, an elongated hand-grip, said hand-grip being centrally and axially bored and the bore extending through opposite ends of the hand-grip, said bore embodying graduated portions of varying diameters defining, at one end, a shank accommodating socket, a spring accommodating socket intermediate the hand grip ends, and a restricted plunger rod guide, the latter being at the inner or free end of the hand-grip, an elongated tubular shank having its inner end telescoping and secured in the shank accommodating socket of the hand-grip, said shank being provided at its outer or working end with a socket wrench, a plunger rod extending through the bore of the shank and having a head on its outer end located in said socket wrench, said rod also extending through and beyond remaining portions of the bore in said hand-grip and terminating at its other end in an operating knob, said knob being arranged exteriorly of the adjacent end of the hand-grip, a shoulder on said rod located in the

spring accommodating socket, and a coiled spring confined in said socket surrounding said rod and bearing against said shoulder and also against the adjacent inner end of said shank.

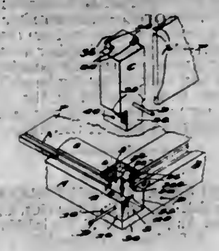
2,470,400
DOCTOR BLADE MOUNTING
Lloyd Hornbostel, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis., a corporation of Wisconsin
Application April 27, 1945, Serial No. 590,709
5 Claims. (Cl. 92—74)



3. A doctor blade mounting comprising a shaft, bearings for the ends of said shaft, a doctor blade assembly fixedly secured to said shaft, a doctor blade forming a part of said assembly, means adjustably supporting said bearings to align said shaft with respect to a roll to be doctored, fluid, pressure actuated mechanisms, hangers of adjustable length depending from said mechanisms, first levers fixedly secured to said shaft to rotate the same, second levers pivotally connected to said first levers, of adjustable effective length straps pivotally connected said second levers to said hangers, and removable means locking said first and second levers to provide a rigid unitary connection between said mechanisms and said shaft to hold said doctor blade in pressure contact with the roll, said second levers being operable upon removal of said locking means to increase the effective lengths of said straps to cause rotation of said shaft and movement of said doctor blade away from said roll.

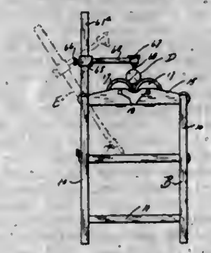
2,470,401
EXPLORATION BY SOIL ANALYSIS
Leo Hervits, Houston, Tex., assignor to Esso E. Rossire, Houston, Tex.
Application March 23, 1939, Serial No. 263,750
10 Claims. (Cl. 23—230)

1. In the art of exploration for oil, gas and related deposits in which the presence and proximity of such deposits to soil samples is indicated by the existence in the samples of diffused contituents from said deposits which have been modified in the soil into a form insoluble in the native environment of the samples, the method comprising collecting soil samples at spaced points in the area to be explored treating each soil sample successively with hydrochloric acid and an organic solvent for the wax-like material soluble in carbon tetrachloride contained in said soil samples, and measuring the amount of material extracted by the solvent whereby the amounts of said material extracted from the several soil samples may be correlated with soil sample locations to yield data useful in the location of the deposit sought for.



2,470,402
INJECTION MOLDING MACHINE
Conrad Jobst, Toledo, Ohio, assignor, by mesne assignments, to Owens-Illinois Glass Company, Toledo, Ohio, a corporation of Ohio
Application October 4, 1945, Serial No. 620,238
8 Claims. (Cl. 18—30)

8. An injection molding machine comprising die plates having a multiplicity of mold cavities, said plates being relatively movable to and from a closed position, an injector comprising a nozzle, a main sprue channel leading from the nozzle, lateral channels distributed at intervals along said main channel and extending from the main channel to the respective mold cavities, wells positioned at intervals along the main channel and opening thereinto at points remote from the nozzle and adjacent to said lateral channels, plungers mounted for reciprocation in said wells toward and from said main channel, power means operatively connected to the plungers for moving the latter toward the main channel, and means operable automatically by a predetermined pressure of molding material in said main channel for causing the operation of said power means and thereby effecting said movement of the plungers and increasing the pressure on the molding material in the said channels and mold cavities.

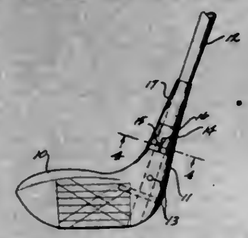


2,470,403
CORNER CONSTRUCTION
Roy Klemparens, Rosslyn, Va.
Application July 25, 1945, Serial No. 606,996
3 Claims. (Cl. 20—92)

1. A corner construction comprising two corner posts, each having end tenons, one of which end tenons is recessed to receive the other in overlapping relation, each corner post having a shoulder at the base of its tenon and perpendicular thereto, the two inner faces of said tenons,

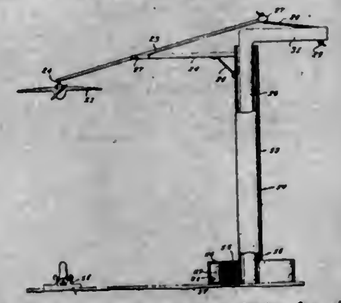
together with the shoulder at the base of each of the two tenons, defining a four-sided socket, and a third corner post, having an end tenon seated in said four-sided socket as defined by the tenons and shoulders of the first two corner posts.

2,470,404
SHAFT TRUENESS TESTER
Arnold Kloos, Sharon, Pa.
Application May 31, 1944, Serial No. 538,124
2 Claims. (Cl. 33—174)



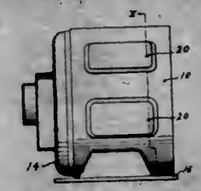
1. In a trueness testing machine for shafts and like objects the combination of a frame, means for horizontally positioning the object to be tested upon said frame, said frame including upper and lower horizontal bars, a gauge, an elongated supporting member pivoted intermediate its ends upon the upper bar and slidable therealong in parallelism with an object supported upon said frame, means on the lower end of the supporting member engaging the lower bar to hold a true linear position of the supporting member as it is moved along said upper bar for testing objects, and means mounting said gauge upon the supporting member above its pivot axis.

2,470,405
CUTTING FLUID
Hollis L. Leland, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 5, 1945, Serial No. 633,053
1 Claim. (Cl. 252—49.8)



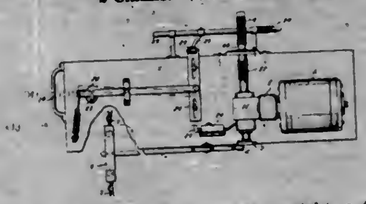
A water emulsifiable cutting oil consisting of approximately 70 parts by weight of mineral base oil, 5 parts by weight of oleic acid ester of partially dehydrated sorbitol, 15 parts by weight of the reaction product of palmitic acid ester of partially dehydrated sorbitol with ethylene oxide and 10 parts by weight of tricresyl phosphate.

2,470,406
IMPACT PRODUCING IMPLEMENT
Frederick W. Matzie, Los Angeles, Calif.
Application May 9, 1945, Serial No. 592,909
2 Claims. (Cl. 273—80)



1. A golf club comprising a wooden body formed with a substantially flat striking face; an elongate, tapered hosel formed integral with said body and extending upwardly therefrom; a shaft; said hosel being formed with a bore for receiving an end of said shaft; a sleeve having a wall of constant thickness encircling the upper portion of said hosel, said sleeve having a tapered, smooth, inner wall, the angle of taper of said wall being substantially the same as the angle of taper of said hosel, the inner diameter of each portion of said sleeve being less than the initial diameter of the corresponding portion of the encircled hosel so that the wood of that portion the hosel is held in hoop compression, the lower end of said sleeve being formed with at least one slot longitudinally extending upwardly from the lower edge thereof to a point substantially midway of said sleeve; and a ferrule fixed about said shaft in abutting engagement with said sleeve, said ferrule having an outer diameter at the end contiguous to said sleeve equal to the outer diameter of the latter and an outer diameter at the opposite end slightly in excess of the outer diameter of said shaft.

2,470,407
AIRPLANE TOY
Frank L. Murphy, Dorchester, Mass.
Application November 8, 1946, Serial No. 708,629
3 Claims. (Cl. 272—31)



1. A toy airplane operating device for giving to the airplane a circular motion or travel in a circular path comprising a vertically extending sleeve having a laterally extending arm thereon, a pivot arm attached to the outer end of the laterally extending arm for movement therewith, an airplane connected to the outer end of the pivot arm, a central member extending upwardly through the sleeve, a base for retaining the central member in its vertically extended position, and means for connecting the upper end of the central vertically extending member to the inner end of the pivot arm, and means for causing the rotation of the sleeve about the fixed vertical central member, whereby the airplane will be extended through a circular path.

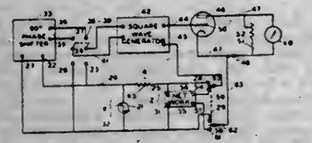
2,470,408
FRAME FOR DYNAMOELECTRIC MACHINES
Joseph Nader, Glen Ellyn, Ill., assignor to Nader Engineering Company, Chicago, Ill., a corporation of Illinois
Application March 12, 1947, Serial No. 734,272
4 Claims. (Cl. 171—252)

1. In a dynamoelectric machine, a magnetic structure, a sheet metal frame member surrounding said magnetic structure, said frame member having a plurality of integrally stamped, outwardly directed indentations spaced around the periphery thereof and outwardly spaced from the periphery of the magnetic member, said indentations extending axially beyond both end faces of the magnetic structure but terminating short of the edges of the frame, thereby defining a plurality of axially extending passages between said frame and the magnetic structure for cooling air flow.

2,470,409
POULTRY IMMERSER
Charles Nassivera, Glens Falls, N. Y.
Application September 27, 1946, Serial No. 699,911
2 Claims. (Cl. 17—11.2)

1. In a poultry immerser, an upright, a tank adapted to contain a scalding liquid arranged on one side of said upright, a table arranged above said tank and mounted for tilting movement about a horizontal axis into and out of horizontal position with respect to said tank, carrying means for suspendingly supporting a fowl mounted for eccentric movement and arranged at an angle with respect to said table and carried by the latter, power means on said table, means operatively connected to said upright and said table

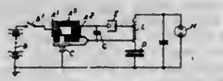
for effecting the tilting movement of the latter, automatic means for initiating the actuation of said power means, timing means operatively connected to said power means for automatically stopping the latter after a predetermined duration, and means operatively connecting said power means to said carrying means for effecting eccentric movement of the latter means, whereby when the table has been moved to a horizontal position the fowl carried by the carrying means is caused to be agitated within the liquid in said tank.



2,470,410
PREPARATION OF SILICA MAGNESIA CATALYSTS
Karl J. Nelson, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application April 9, 1946, Serial No. 660,841
5 Claims. (Cl. 252—457)

1. Process for the preparation of an improved silica-magnesia catalyst which comprises mulling a water suspension of silica hydrogel and magnesia, for a period of from 15 seconds to 20 minutes to form a slurry, aging the slurry at a temperature from about 125° F. to 200° F. for a period of about 2 to 12 hours, drying the slurry at a temperature in the range from about 225° F. to 600° F.

2,470,411
PROCESS OF PREPARING A SILICA-MAGNESIA GEL CATALYST
Eugene S. Corner, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application August 21, 1946, Serial No. 692,123
4 Claims. (Cl. 252—457)

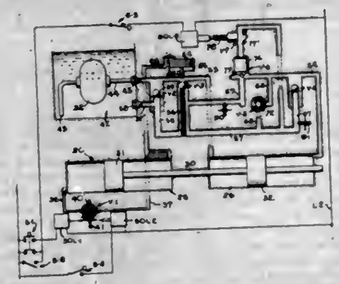


1. A process for preparing a catalyst comprising silica and magnesia, adapted for the conversion of hydrocarbon oils and having improved steam stability, which comprises preparing a hydrous oxide of silica selected from the class consisting of silica hydrogel and gelatinous precipitated silica, intermixing said hydrous oxide with magnesia and water to form a slurry containing not less than about 10% of solids, mulling said slurry for a substantial period sufficient to form an intimate homogeneous mixture of said silica and said magnesia, thereafter aging the mulled slurry at a temperature between about 60° F. and 90° F. for a period of about 8 to 150 hours and thereafter drying and activating the resulting product.

2,470,412
ALTERNATING CURRENT IMPEDANCE METER
Raymond G. Piety, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application December 7, 1943, Serial No. 513,312
13 Claims. (Cl. 175—183)

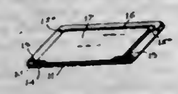
1. In an alternating current impedance meter, a source of alternating current, a resistance unit an impedance unit connected in series with said current source and said resistance unit, the impedance values of said units being so proportioned that the voltage drop across one of said units is negligible as compared with the voltage drop across the other of said units, a generator energized by said current source for producing a succession of square waves having a duration of one-half alternating current cycle and spaced by intervals of one-half alternating current cycle, an electron tube including an anode, a cathode, and control means for regulating the passage of electrons from the cathode to the anode, means for biasing said tube to reject voltages of less than a predetermined magnitude, an output circuit for said tube including a current source, the anode and cathode of said tube, and an indicating device, the components of said output circuit being connected in series, and means for electrically connecting said unit of lower impedance value and said square wave generator to said control means whereby the average current passing through said output circuit and said indicating device is controlled by the phase relationship between said square waves and the voltages developed across said impedance unit.

2,470,413
ELECTRICAL IGNITION SYSTEM
Frank Raymond Faber Ramsay, London, England, assignor to D. Napier & Son Limited, London, England, a company of Great Britain
Application February 17, 1947, Serial No. 729,089
In Great Britain February 20, 1946
14 Claims. (Cl. 315—209)



1. An electrical ignition system including an electrical impulse generator for producing high tension ignition current including a primary winding, a secondary winding, and a contact breaker; a source of high frequency energy including the said secondary winding and an auxiliary spark gap in series with it; a source of low tension energy including the said primary winding; and means for coupling a sparking plug circuit to the sources including low-pass impedance means in series with the said low tension source, so that the high frequency current resulting from an auxiliary gap spark will ionise the sparking plug gap, and a relatively low-tension discharge will follow it up to develop heat in the sparking plug gap.

2,470,414
FOLDING PEDAL WRENCH
Albert P. Rippenbein, New York, N. Y.
Application May 27, 1948, Serial No. 29,465
7 Claims. (Cl. 74—594.4)

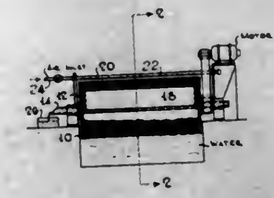


1. In a bicycle drive which includes a crank, a pedal shaft, a pedal rotatably mounted on said shaft, an aperture formed in the extremity of said crank, an end formed on said shaft for insertion in said aperture and surfaces formed on said aperture and said shaft end to frictionally engage each other as the shaft end is turned in the aperture, the improvement consisting of a planar surface formed on said shaft and means associated with said pedals and movable into engagement with said planar surface to prevent rotation of said pedal on said shaft whereby turning force may be applied through said pedal to turn the shaft end in the crank aperture.

2,470,415
DRIVE MECHANISM
Earnest Y. Seborg, Rockford, Ill., assignor to Barnes Drill Co., Rockford, Ill., a corporation of Illinois
Application March 18, 1947, Serial No. 735,406
12 Claims. (Cl. 60—97)

9. The combination in a machine tool having a reciprocable carriage, of a pair of cylinders supported below said carriage in axial alinement, a piston rod extending through both of said cylinders and operatively connected with said carriage, said rod having pistons working in the respective cylinders, valve means for admitting air to either end of one of said cylinders selectively to impart forward and return movements to the carriage, a source of liquid under pressure connected with one end of the other of said cylinders, and valve means controlling the discharge of liquid from the other end of said other cylinder to restrict the forward movement of the carriage to a feeding rate.

2,470,416
CANVAS PANEL FOR ARTISTS
Stan Silver, New York, N. Y., assignor to Master Technique Board Co., New York, N. Y.
Application November 10, 1947, Serial No. 785,004
2 Claims. (Cl. 41—4)

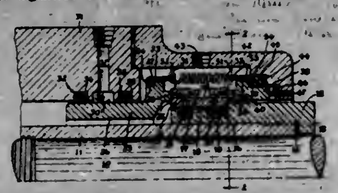


1. An artist's canvas panel, comprising a single layer canvas sheet impregnated with animal glue along the whole of one of its surfaces and a continuous rigid metal wire frame of lesser length and width than said canvas sheet, said sheet stretched over and secured at its marginal ends by the said glue around the said rigid frame, said frame defining the periphery of the panel.

2,470,417
EMULSION POLYMERIZATION IN THE PRESENCE OF SELECTIVELY HYDROGENATED TALLOW SOAPS
Byron M. Vanderbilt, Westfield, and John D. Hetchler, Rutherford, N. J.; said Vanderbilt assignor to Standard Oil Development Company, a corporation of Delaware, and said Hetchler assignor to Archer-Daniels-Midland Company, Minneapolis, Minn., a corporation of Delaware
No Drawing. Application December 30, 1944, Serial No. 570,749
10 Claims. (Cl. 260—84.5)

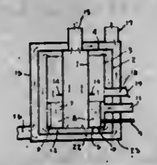
1. The process of producing emulsion polymerizates of conjugated diolefins having 4 to 6 carbon atoms per molecule which comprises effecting the polymerization thereof in aqueous emulsion in the presence of water-soluble soaps of selectively hydrogenated tallow acids as the emulsifying agent.

2,470,418
OIL SKIMMING DEVICE
Jules Verner, Linden, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application April 25, 1945, Serial No. 590,215
5 Claims. (Cl. 210—51)



1. A skimming device for removing from a body of liquids the upper of two stratified liquids having an interface, comprising an endless fine mesh screen, means for supporting said screen over the surface of said body of liquids with a lower portion thereof extending into said upper stratified liquid, said supporting means being arranged to position said lower portion of said screen substantially at said interface, means for continuously moving the screen through said upper liquid to accumulate said upper liquid in the mesh of said screen, blower means disposed above an upper portion of said screen to discharge said accumulated liquid therefrom, and collecting means disposed to collect said discharged liquid.

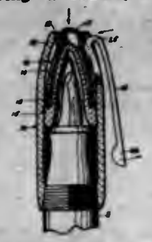
2,470,419
BALANCED, COOLED, AND LUBRICATED ROTARY SEAL
Charles F. Voytech, Chicago, Ill., assignor to Crane Packing Company, Chicago, Ill., a corporation of Illinois
Application January 12, 1948, Serial No. 1,854
6 Claims. (Cl. 286—9)



1. A fluid seal device for effecting a fluid-tight seal between a rotatable shaft and a housing therefor, said seal comprising a collar on the shaft and rotatable therewith, said collar having a pair of substantially radially disposed sealing surfaces disposed one on each side thereof, a sealing washer on each side of the collar, a radially outwardly extending abutment on each washer, a pair of cylindrical shells, one extending over each

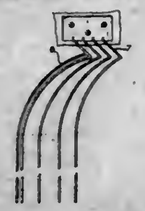
washer, an abutment on each shell adapted to bear against the abutment on the washer, and

resilient means connecting the shells whereby to hold the washers against the collar.



2,470,420
POT TYPE OIL BURNER AIR HEATING FURNACE
Fred E. Wilson, Milwaukee, Wis., assignor of one-half to George O. Wray, Milwaukee, Wis.
Application April 17, 1946, Serial No. 662,763
6 Claims. (Cl. 126—116)

1. A pot-type oil furnace comprising an outer drum having a top and a bottom, an inner drum located within said outer drum and having an open bottom spaced from the bottom of the outer drum and having a top extending to the top of the outer drum, the top of the outer drum serving to close the upper end of the annular space between the inner and outer drums, an annular oil pot surrounding said inner drum adjacent the bottom thereof, an annular baffle between said drums extending upwardly from said annular oil pot and having its top edge spaced from the top of said outer drum, the bottom of said annular oil pot being arranged to close the space between the annular baffle and the inner drum, a smoke pipe leading outwardly from the upper portion of said inner drum, fuel supply means for said annular oil pot, and means for conducting air for combustion to a position immediately adjacent said annular oil pot, said annular oil pot being spaced upwardly from the bottom of said outer drum, whereby the heated products of combustion will pass around and below said annular oil pot and will preheat the oil in said annular oil pot.



2,470,421
CLIP FOR PENS AND PENCILS
Joseph R. Woody, Navy Yard, Charleston, S. C.
Application July 18, 1947, Serial No. 761,829
2 Claims. (Cl. 24—11)

1. In combination with a pen or the like, a cap for said pen, said cap comprising a tubular member formed with an open pen-receiving lower end and a tapered open upper end, a first thimble, means for readily detachably securing said thimble in said member to provide a point-receiving cavity, a second thimble in said member upwardly of said first thimble and telescopically receiving said first thimble therein, said second thimble having an upwardly and radially inwardly-inclined skirt providing an outer cam surface and a rounded end portion providing a button adapted to project through the open upper end of said tubular member, a spring interposed between said thimbles for biasing said second thimble upwardly and project said button thereof upwardly through said open upper end of said member, a clip, pivot means pivotally mounting said clip on said tubular member adjacent said upper end thereof, said member being formed with a radially-directed opening therethrough, said clip having a radially-inwardly-directed

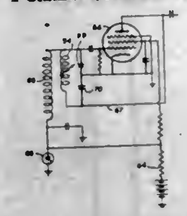
lever arm rearwardly of said pivot means, said lever arm extending through said opening in said member, spring means operatively associated with said clip and loading said lever arm thereof into engagement with said cam surface of said second thimble, said first-named spring being operative through said second thimble to load said clip into engagement with the exterior of said tubular member, and said cam surface and second-named spring causing inward movement of said lever arm whereby to release said clip when said second thimble is depressed downwardly.

2,470,422
DRAPERY FIXTURE
Mildred B. Wright, Berwyn, Ill.
Application October 26, 1945, Serial No. 624,856
10 Claims. (Cl. 160—84)

4. A drapery fixture comprising a plurality of curved fold retaining elements and means for supporting them adjacent an upper corner margin of a window frame in spaced apart position, said elements being spaced apart for receiving folded portions of a drape between their upper end portions and for retaining said folds in downwardly curving formations curved toward the middle of the window.

2,470,423
ELECTRICAL SPLICER
William H. Alford, Winston-Salem, N. C.
Application December 29, 1945, Serial No. 637,931
2 Claims. (Cl. 174—84)

1. An electrical wire splicer comprising in combination a pair of sleeve members, each of said members having a linearly extending wire end-receiving bore opening from its outer end, an enlarged threaded connector receiving bore opening from its inner end and a flared cam-providing bore portion connecting said aforementioned bores, the entire length of the thus provided opening through each sleeve being at least insulation-surfaced, an exteriorly threaded connector having its ends operatively engaged in the respective threaded bores of said sleeve members, said connector having a conductor receiving passage extending therethrough and communicating



with said enlarged threaded sleeve bores, electrical conductor means extending through said connector passage, opposed oppositely directed spring material arms at each end of said conductor means, a pair of opposed wire terminal-engageable jaws in the threaded bore portion of each sleeve and carried by the respective adjacent spring material conductor-carried arms, the outer ends of the jaws normally bearing against the sleeve bore inwardly of the outwardly flared cam portion thereof, and insulation piercing means projecting inwardly from each of said jaws.

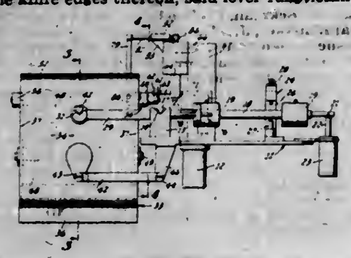
2,470,424
PRESERVATION OF FRUITS AND VEGETABLES
Dell Alves, Guadalupe, Calif.
No Drawing. Application May 16, 1946, Serial No. 670,314
5 Claims. (Cl. 99—103)

1. A wash solution for vegetable products comprising water and the reaction products of an alkali metal carbonate, water, and sulfur dioxide, the solution having a pH between about 5.0 and 6.0.

2,470,425
LOW-FREQUENCY DRIFT OSCILLATOR
John F. Bell, Chicago, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois
Original application February 13, 1943, Serial No. 475,779. Divided and this application October 20, 1944, Serial No. 559,618
1 Claim. (Cl. 250—36)

An oscillator circuit comprising a tunable inductor, capacitor means, and an electron discharge device having a heater element, said inductor being arranged to have low inductance drift with temperature changes and one which is substantially proportional to the inductance in all settings of the inductor, said capacitor means including two capacitors having temperature coefficients which compensate for changes of capacity and inductance in said oscillator circuit due to changes of ambient temperature, a resistor heater, means for supplying current to said heater element and to said resistor heater simultaneously, a temperature divider conductor extending from said heater resistor, and a heat conductor lead extending from one of said capacitors to an intermediate point on said temperature divider conductor, said intermediate point of connection of the heat conductor lead and said temperature divider conductor and the effective length of the heat conductor lead being such that heat is transferred from said resistor heater to the capacitor connected to the heat conductor lead at a rate and to an extent to provide capacity change in the circuit to compensate for changes in the frequency which would otherwise result from changes of parameters due to the heating up of the tube.

2,470,426
SPREAD BAND TUNING CIRCUIT
Zolmon Benin, Glen Ellyn, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois
Original application October 28, 1942, Serial No. 463,665. Divided and this application August 22, 1945, Serial No. 612,039
3 Claims. (Cl. 250—40)

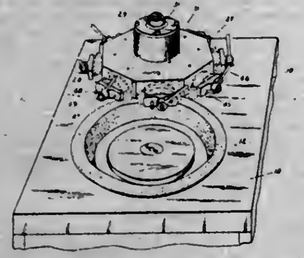


1. A tuning arrangement for a radio receiving system, and the like, for continuously tuning said system through a frequency spectrum and for simultaneously providing band spreading in selected bands of said spectrum, said arrangement comprising a tuning circuit including a first reactor, a variable reactor of opposite sign coupled in shunt with said first reactor for tuning said circuit through said spectrum, a first switching unit mechanically coupled to said variable reactor for selectively switching a plurality of further reactors of the same sign as said first reactor in circuit therewith, a second switching unit similarly coupled to said variable reactor for switching a further reactor of the same sign as said variable reactor in circuit therewith at said selected bands to provide band spreading therein, the values of the selected ones of said first mentioned further reactors being so related to the value of said second mentioned further reactor that the inductance-capacitance value of said circuit is constant at the switching points of said second mentioned further reactor, whereby said variable reactor continuously tunes said circuit throughout said spectrum.

2,470,427
ELECTRICAL SCALE
Damon D. Brodie, Los Angeles, Calif.
Application August 30, 1946, Serial No. 694,114
1 Claim. (Cl. 249—19)

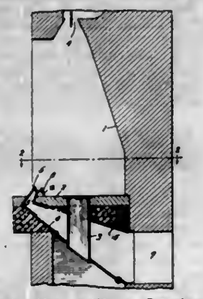
In a scale of the type designed to weigh and separate continuously flowing material into batches of a predetermined weight, a platform, a scale frame supported by spaced knife edges upon said platform and including a pair of spaced arms extended at one side of said platform and a beam extended thereover, counterbalancing weights on said beam, a bucket open at its top and formed with a discharge port, knife edges supporting said bucket for pivotal movement on said arms and a lever pivotally secured to said bucket below the supporting knife edges thereof, pivotally connected to a point fixed with

respect to said platform, and positioned below the knife edges thereon, said lever functioning to



maintain said bucket in a vertical position throughout its pivotal movement.

2,470,428
SUPPRESSION OF CORROSIVE ACTION OF CARBONIC ACID
Elza Q. Camp, Goose Creek, Tex., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application November 2, 1945, Serial No. 626,447
2 Claims. (Cl. 23—150)



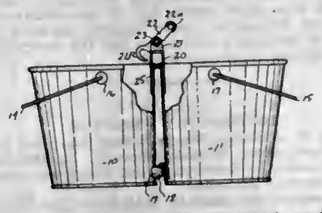
1. A method of reducing the corrosive action of a mixture consisting of water, air and carbon dioxide in contact with ferrous metal in steam boiler systems which comprises injecting in said system an inhibiting amount of carbon disulfide.

2,470,429
ROTARY TURRET TYPE WORKHOLDING FIXTURE
Walter A. Carlson, Sioux City, Iowa
Application June 13, 1946, Serial No. 676,511
3 Claims. (Cl. 51—134)

1. A fixture for holding articles to be ground comprising a body member, means for rotatably supporting said body member, a plurality of flat positioning surfaces on said body, a clamp bar for each of said surfaces, a pair of spaced studs projecting from each of said surfaces, one of said studs being longer than the other, holes through each of said clamp bars for relatively easily receiving the studs at the respective surfaces, a screw projecting from each of said surfaces, each clamp bar including a third hole for relatively easily receiving the screw at the respective surface, and a threaded clamp associated with each of said clamp bars, said clamp being adapted to engage the longer one of said studs on opening to limit movement thereof.

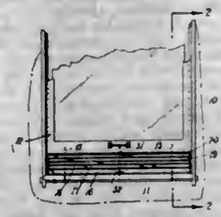
2,470,430
FIREPLACE AIR FEEDER CONSTRUCTION
Randolph Hicke Carter, Warrenton, Va.
Application June 30, 1945, Serial No. 602,511
7 Claims. (Cl. 126—120)

4. In combination with a fireplace including a combustion chamber having side and back walls, a hearth, a flue and a front opening communicating with the room to be heated, an elongated upwardly open aperture in said hearth extending from side wall to side wall of said combustion chamber, conduit means for supplying air to said aperture from the exterior of said room, means directed rearwardly upwardly and operatively associated with said aperture and serving as an extension of the upper edge of said aperture and thereby forming the front lowermost edge of said opening between said fireplace and said room for directing air issuing from said aperture upwardly into said fireplace toward said flue whereby the flue draft entrains a curtain of cool air across the front of said opening to effectively isolate the air in said room from the air in said combustion chamber and prevent the heated gases and smoke in said combustion chamber from entering said room.



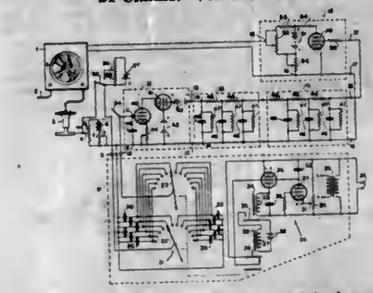
2,470,431
CLIP FOR FOUNTAIN PENS AND OTHER ARTICLES
David Coyne, New York, N. Y.
Application February 21, 1945, Serial No. 579,064
4 Claims. (Cl. 24—11)

2. A retaining device of the class described, comprising a pair of individually separate members having laterally extending attaching portions at their adjacent ends and having inner and outer confronting arms separable at their opposite ends, the portions of said arms adjacent said opposite ends being relatively flexible toward



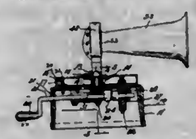
and away from each other in resilient article-gripping relation and said outer arm being less flexible than said inner arm, and interengaging means on said laterally extending end portions of said members for holding said arms in said confronting relation.

2,470,432
TWIN PAILS
Arthur Cusick, Youngstown, Ohio
Application January 22, 1946, Serial No. 642,737
2 Claims. (Cl. 220—23.4)



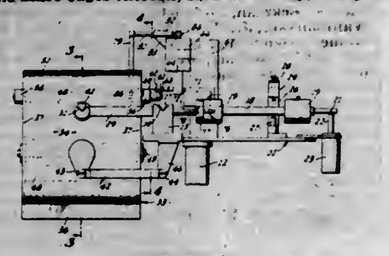
1. A pair of pails each having bails and each having a flattened side section so that they may be positioned adjacent one another, a bracket positioned on the flattened section of one of the pails and extending above the rim thereof, a pair of attachment members pivoted to the said bracket, and in spaced relation to one another, a handle spacing and holding the said attachment members at their uppermost ends, hooks formed on the lowermost end of the said attachment members, a plate positioned on the flat section of the other one of the said pails and extending above the rim thereof and having a pair of openings formed therein, the said hooks on the said attachment members being adapted to register with the said openings when the attachment members are in vertical position so that the twin pails may be carried by the said handle member and held in engaged position thereby.

2,470,433
SASH VENTILATOR
Edgar G. Davis, Detroit, Mich.
Application August 6, 1947, Serial No. 766,671
6 Claims. (Cl. 160—102)



1. In combination with a window frame having a sill and a vertically sliding sash, a plurality of slats arranged in face-to-face abutment between the lower rail of said sash and said sill in the closed position of said sash, a plurality of rods depending from said sash through said slats and into said sill, said rods being provided with means for progressively raising said slats into vertically spaced relationship as said sash is raised, said means supporting said slats in outwardly and downwardly slanting position when the sash is so raised.

2,470,434
ANALYZING METHOD AND APPARATUS
Donald P. Eckman, Philadelphia, and William H. Wannamaker, Jr., Flourtown, Pa., assignors, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application March 27, 1945, Serial No. 585,124
21 Claims. (Cl. 235—61)

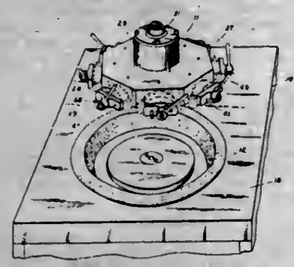


1. The method of simulating a control system comprising the steps of producing an electrical current having a substantially constant amplitude irrespective of the impedance through which it flows, passing said current through an impedance having electrical characteristics analogous to the characteristics of the control system being simulated to produce a voltage of magnitude jointly determined by the amplitude of said current and by said electrical characteristics, and varying the amplitude of said current as required to restore said voltage to a predetermined value upon departure of said voltage from said value.

2,470,435
MINIATURE TOY PHONOGRAPH
Ira Gold, Chicago, Ill., assignor to Atlas Toy Company, Chicago, Ill., a corporation of Illinois
Application February 21, 1948, Serial No. 9,985
2 Claims. (Cl. 274—9)

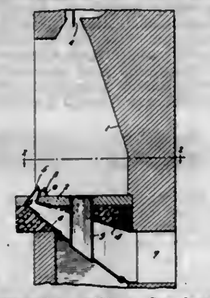
2. A miniature toy phonograph comprising a base having a hollow interior, a circular turntable rotatably mounted on said base, said turntable having a downturned edge around its circumference, said turntable adapted to receive and hold a grooved phonograph record, a drive shaft mounted within said base beneath said turntable, said driveshaft having on one end a hand crank manually operable from outside said base to rotate said drive shaft, a drive wheel mounted on said drive shaft with its outer edge contacting the lower surface of said turntable, a flywheel shaft extending through an opening in said base beneath said turntable, a flywheel mounted on said shaft within said base and a balance wheel mounted on said shaft above said base and beneath said turntable, said balance wheel having its outer edge in contact with the inside of the downturned edge of said turntable, said drive shaft, drive wheel, turntable, flywheel and bal-

respect to said platform, and positioned below the knife edges thereon, said lever functioning to



maintain said bucket in a vertical position throughout its pivotal movement.

2,470,428
SUPPRESSION OF CORROSIVE ACTION OF CARBONIC ACID
Elza Q. Camp, Goose Creek, Tex., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application November 2, 1945, Serial No. 626,447
2 Claims. (Cl. 23—150)



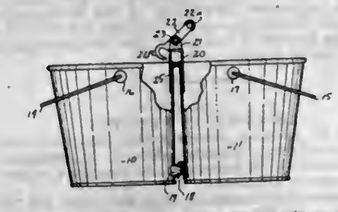
1. A method of reducing the corrosive action of a mixture consisting of water, air and carbon dioxide in contact with ferrous metal in steam boiler systems which comprises injecting in said system an inhibiting amount of carbon disulfide.

2,470,429
ROTARY TURRET TYPE WORKHOLDING FIXTURE
Walter A. Carlson, Sioux City, Iowa
Application June 13, 1946, Serial No. 676,511
3 Claims. (Cl. 51—134)

1. A fixture for holding articles to be ground comprising a body member, means for rotatably supporting said body member, a plurality of flat positioning surfaces on said body, a clamp bar for each of said surfaces, a pair of spaced studs projecting from each of said surfaces, one of said studs being longer than the other, holes through each of said clamp bars for relatively easily receiving the studs at the respective surfaces, a screw projecting from each of said surfaces, each clamp bar including a third hole for relatively easily receiving the screw at the respective surface, and a threaded clamp associated with each of said clamp bars, said clamp being adapted to engage the longer one of said studs on opening to limit movement thereof.

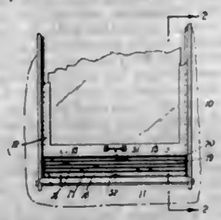
2,470,430
FIREPLACE AIR FEEDER CONSTRUCTION
Randolph Hicke Carter, Warrenton, Va.
Application June 30, 1945, Serial No. 602,511
7 Claims. (Cl. 126—120)

4. In combination with a fireplace including a combustion chamber having side and back walls, a hearth, a flue and a front opening communicating with the room to be heated, an elongated upwardly open aperture in said hearth extending from side wall to side wall of said combustion chamber, conduit means for supplying air to said aperture from the exterior of said room, means directed rearwardly upwardly and operatively associated with said aperture and serving as an extension of the upper edge of said aperture and thereby forming the front lowermost edge of said opening between said fireplace and said room for directing air issuing from said aperture upwardly into said fireplace toward said flue whereby the flue draft entrains a curtain of cool air across the front of said opening to effectively isolate the air in said room from the air in said combustion chamber and prevent the heated gases and smoke in said combustion chamber from entering said room.



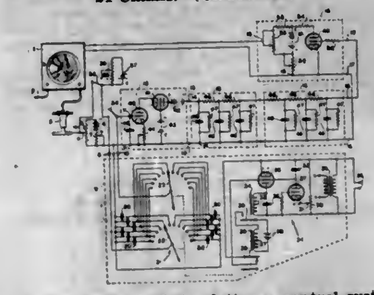
2,470,431
CLIP FOR FOUNTAIN PENS AND OTHER ARTICLES
David Coyne, New York, N. Y.
Application February 21, 1945, Serial No. 579,064
4 Claims. (Cl. 24—11)

2. A retaining device of the class described, comprising a pair of individually separate members having laterally extending attaching portions at their adjacent ends and having inner and outer confronting arms separable at their opposite ends, the portions of said arms adjacent said opposite ends being relatively flexible toward



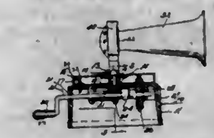
and away from each other in resilient article-gripping relation and said outer arm being less flexible than said inner arm, and interengaging means on said laterally extending end portions of said members for holding said arms in said confronting relation.

2,470,432
TWIN PAILS
Arthur Cusick, Youngstown, Ohio
Application January 22, 1946, Serial No. 642,737
2 Claims. (Cl. 220—23.4)



1. A pair of pails each having bails and each having a flattened side section so that they may be positioned adjacent one another, a bracket positioned on the flattened section of one of the pails and extending above the rim thereof, a pair of attachment members pivoted to the said bracket, and in spaced relation to one another, a handle spacing and holding the said attachment members at their uppermost ends, hooks formed on the lowermost end of the said attachment members, a plate positioned on the flat section of the other one of the said pails and extending above the rim thereof and having a pair of openings formed therein, the said hooks on the said attachment members being adapted to register with the said openings when the attachment members are in vertical position so that the twin pails may be carried by the said handle member and held in engaged position thereby.

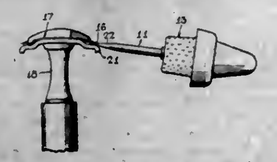
2,470,433
SASH VENTILATOR
Edgar G. Davis, Detroit, Mich.
Application August 6, 1947, Serial No. 766,671
6 Claims. (Cl. 160—102)



1. In combination with a window frame having a sill and a vertically sliding sash, a plurality of slats arranged in face-to-face abutment between the lower rail of said sash and said sill in the closed position of said sash, a plurality of rods depending from said sash through said slats and into said sill, said rods being provided with means for progressively raising said slats into vertically spaced relationship as said sash is raised, said means supporting said slats in outwardly and downwardly slanting position when the sash is so raised.

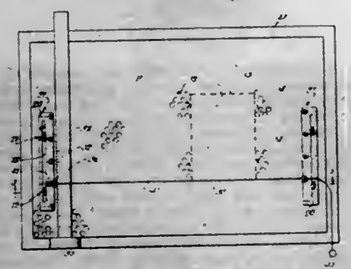
2,470,434
ANALYZING METHOD AND APPARATUS
Donald P. Eckman, Philadelphia, and William H. Wannamaker, Jr., Flourtown, Pa., assignors, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application March 27, 1945, Serial No. 585,124
21 Claims. (Cl. 235—61)

1. The method of simulating a control system comprising the steps of producing an electrical current having a substantially constant amplitude irrespective of the impedance through which it flows, passing said current through an impedance having electrical characteristics analogous to the characteristics of the control system being simulated to produce a voltage of magnitude jointly determined by the amplitude of said current and by said electrical characteristics, and varying the amplitude of said current as required to restore said voltage to a predetermined value upon departure of said voltage from said value.



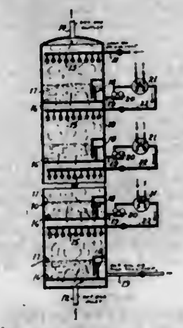
2,470,435
MINIATURE TOY PHONOGRAPH
Ira Gold, Chicago, Ill., assignor to Atlas Toy Company, Chicago, Ill., a corporation of Illinois
Application February 21, 1948, Serial No. 9,985
2 Claims. (Cl. 274—9)

2. A miniature toy phonograph comprising a base having a hollow interior, a circular turntable rotatably mounted on said base, said turntable having a downturned edge around its circumference, said turntable adapted to receive and hold a grooved phonograph record, a drive shaft mounted within said base beneath said turntable, said driveshaft having on one end a hand crank manually operable from outside said base to rotate said drive shaft, a drive wheel mounted on said drive shaft with its outer edge contacting the lower surface of said turntable, a flywheel shaft extending through an opening in said base beneath said turntable, a flywheel mounted on said shaft within said base and a balance wheel mounted on said shaft above said base and beneath said turntable, said balance wheel having its outer edge in contact with the inside of the downturned edge of said turntable, said drive shaft, drive wheel, turntable, flywheel and bal-



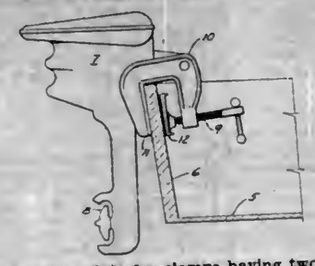
ance wheel adapted to rotate upon the manual operation of said hand crank, an arm pivotally mounted on said base, said arm having a circular end portion, a paper diaphragm mounted in said circular end portion, a vibrator attached at one end to the center of said diaphragm and extending radially from the center of said diaphragm at a sufficient distance therefrom to permit vibration of said diaphragm, said vibrator having its other end mounted in said arm, and adapted to receive and hold a phonograph needle, a horn mounted on said arm adjacent said diaphragm, said vibrator, diaphragm and horn adapted to receive through a phonograph needle vibrations from a grooved phonograph record on said turntable as said turntable is rotated, and to convert said vibrations into audible sound waves.

2,470,436
RAZOR BLADE STROPPER
Edward J. Gray, New York, N. Y.
Application May 18, 1946, Serial No. 670,749
2 Claims. (Cl. 51—205)



1. The method of stropping safety razor blades mounted in a safety razor blade holder, which consists of placing the finely pointed tip of a pin of hardened material between the underside of a safety razor blade edge mounted in said holder and the guard of said holder directly beneath said razor edge so that the conical portion of said pin is in contact with the underside of said razor edge, and lightly rubbing said conical portion of said tip along said razor edge one or more times prior to each use of said razor blade.

2,470,437
PRINTING FORM ALIGNING APPARATUS
Albert J. Hoerth, Des Plaines, Ill.
Application July 26, 1946, Serial No. 686,315
4 Claims. (Cl. 33—184.5)

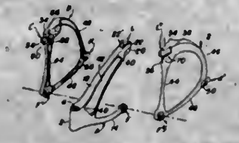


3. A device for aligning printing plates adapted to be detachably mounted on a base having a plurality of apertures for receiving the mounting means comprising in combination a plurality of pairs of plug elements each snugly engageable in an aperture of the base, a member associated with each said pair of elements, each said member and the elements individual thereto having mutually engaging means to permit the member to be adjusted laterally with respect to the base and secured in adjusted position, a post secured in each said member, each said post having a threaded portion and a thumb nut engageable therewith, an aligning wire, a clamping plate underlying said nut and having an aperture to engage the post and adapted to pinch the wire against said member, and the clamping plate having a slot for maintaining a straight position of the wire upon tightening of the thumb nut, the wire extending under tension between the posts to provide a reference line for positioning and aligning a printing plate.

2,470,438
ABSORPTION PROCESS
Robert M. Jackson, Baton Rouge, La., and Paul J. Harrington, Mountainside, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application September 17, 1943, Serial No. 502,756
5 Claims. (Cl. 183—120)

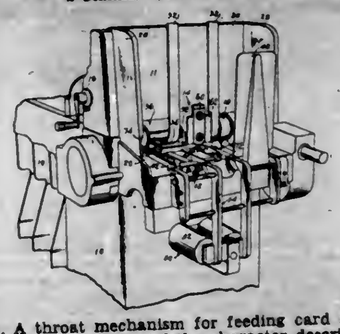
2. An improved tower for countercurrently contacting downflowing liquid and upflowing vapor streams, which comprises means for introducing a vapor stream into the bottom and means for withdrawing a vapor stream from the top of said tower, means for introducing a liquid stream into the top and means for withdrawing a liquid stream from the bottom of said tower, a plurality of contacting zones intermediate the top and bottom of said tower, said contacting zones comprising a pierced plate which permits the upflow of vapor from an adjacent zone to the zone above, said pierced plate having attached thereto a vertical weir extending above the plate, the ends of which are attached to the wall of the tower forming a trough whereby liquid on the top of said pierced plate flows over the top of said weir into the trough area, said contacting zone being further characterized by having a hood element over the top of said trough area, whereby the flow of gas from said trough area upwardly into the contacting zone is prevented, means for withdrawing liquid from the tower from the bottom of said trough area, cooling means for cooling the withdrawn liquid and means for reintroducing the cooled liquid into the zone below the zone from which it is withdrawn.

2,470,439
SAFETY PLATE
Frederick E. Kohler, Berkeley, Calif.
Application March 3, 1947, Serial No. 732,107
4 Claims. (Cl. 248—4)



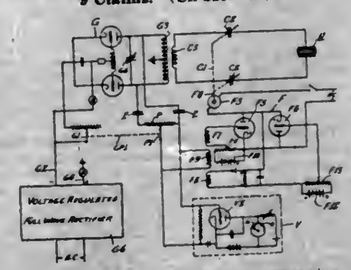
1. A safety plate for clamps having two faces inclined one with respect to the other, one face being rough and the other smoother, and means on the smoother face extending substantially along a line of constant thickness of said plate for engaging a clamp against sliding movement past the thinner edge of the plate.

2,470,440
MANUFACTURE OF DIAMOND ABRASIVE ARTICLES
Joseph N. Kuzmick, Clifton, N. J., assignor to Raybestos-Manhattan, Inc., Passaic, N. J., a corporation of New Jersey
No Drawing. Application March 10, 1945, Serial No. 582,164
13 Claims. (Cl. 51—298)



1. The method of making a resin bonded diamond abrasive body which consists in reacting a resorcinol aldehyde resin and furfuryl alcohol in an acid system, in preparing a mix thereof with diamond abrasive grains and in molding the mix under heat and pressure to convert the resin to the final infusible state.

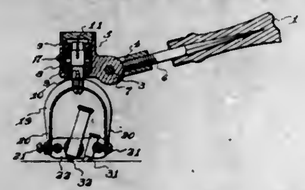
2,470,441
BICYCLE FRAME
Herbert N. Maier, Pottstown, Pa., and Theodore H. Pickering, New Rochelle, N. Y., assignors to Doehler-Jarvis Corporation, New York, N. Y., a corporation of Michigan
Application October 11, 1946, Serial No. 702,858
22 Claims. (Cl. 280—281)



1. A bicycle frame comprising a foot pedal bearing assembly, a saddle post assembly, and three frame body sections, said frame body sections comprising front fork support and rear wheel support frame sections, each carrying a mounting part for the foot pedal bearing assembly and a part adapted to mate with cooperating parts carried by the other two frame body sections, said mounting parts for the foot pedal bearing assembly being adapted to receive therein said foot pedal bearing assembly, and the mating parts, when mated, being adapted to receive therein said saddle post assembly, said foot pedal bearing assembly and said saddle post assembly serving to fasten said three frame body sections together to form a rigid bicycle frame which carries and supports the other parts of the bicycle.

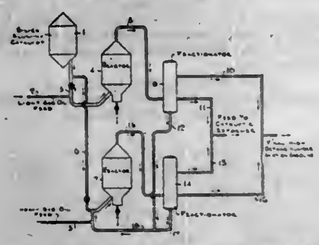
2,470,442
ADJUSTABLE THROAT MECHANISM FOR SORTING MACHINES
Gustav V. A. Malmros, Binghamton, and Edmund A. Barber, Jr., Johnson City, N. Y., assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application November 12, 1947, Serial No. 785,292
2 Claims. (Cl. 271—44)

1. A throat mechanism for feeding card and document assemblies of the character described comprising a vertically extending guide plate, a vertically extending throat plate secured to said guide plate and having a lower edge which is inclined slightly from the horizontal, a roller freely mounted for rotation about a horizontal axis and having an outer surface which is curved in a longitudinal direction, said roller being disposed beneath said inclined edge with its surface spaced from said edge a distance substantially equal to the thickness of one of the cards included in said assemblies.



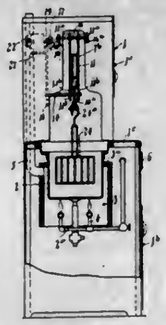
2,470,443
MEANS FOR AND METHOD OF CONTINUOUSLY MATCHING AND CONTROLLING POWER FOR HIGH-FREQUENCY HEATING OF REACTIVE LOADS
Eugene Mittelmann, Chicago, Ill.
Application July 21, 1944, Serial No. 545,917
9 Claims. (Cl. 219—47)

1. In high-frequency heating apparatus, the combination of an electronic oscillator having a tank circuit, a reactive heater, a continuously



variable coupler connecting the heater into an untuned branch of the tank circuit, a circuit for tapping off from the oscillator a voltage proportional to the resonant voltage across the tank circuit, and means connected to the coupler and controlled by the tapping off circuit to vary the coupling ratio in one direction when the tapped off voltage exceeds a predetermined value and in the other direction when the tapped off voltage is below said pretermined value, without stopping the oscillator.

2,470,444
GLASS CUTTER
George A. Philippe, Fort Smith, Ark.
Application February 21, 1946, Serial No. 649,170
6 Claims. (Cl. 49—52)

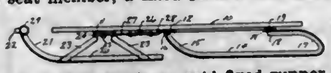


1. A glass cutter comprising a handle member, a head to which said handle member is connected, a cutter carriage yoke below said head, a vertical shaft carried by the upper portion of said yoke and rotatably mounted in the head, yieldable means for urging said yoke towards the plane of the axis of the handle, and a cutter carrying carriage rockably mounted within the yoke on pivotal points in the plane of the yoke.

2,470,445
PRODUCTION OF HIGH OCTANE NUMBER AVIATION GASOLINE
Kenneth M. Purdy, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
Application October 29, 1947, Serial No. 782,735
4 Claims. (Cl. 196—49)

1. The process of producing high octane number gasolines which comprises catalytically cracking light gas oil at temperatures of about 800–850° F. and at conversions of from 45–55 volume per cent, catalytically cracking heavy gas oil at temperatures of 950–1000° F. and at conversions of from 55–85 volume per cent, taking a C5–230° F. cut from the reaction product of the light gas oil cracking step and a 230–325° F. cut from the reaction product of the heavy gas oil cracking step, and blending these cuts to produce a high octane number aviation gasoline.

2,470,446
HEATING AND COOKING APPARATUS
Thomas B. Rankin, Brantford, Ontario, Canada
Application March 31, 1947, Serial No. 738,466
10 Claims. (Cl. 99—407)



8. In a heating apparatus, a heating section, a track comprising a first section mounted over the heating section and a second section extending beyond the heating section, suspending means supported on the track for suspending the material to be heated in the heating section, endless conveyors, the endless conveyors including lugs adapted to move the suspending means along the track, one conveyor being mounted adjacent the first track section and another conveyor being mounted adjacent the second track section, and a shaft positioned adjacent the junction of the track sections, each of said conveyors including a sprocket mounted on the shaft, one of said sprockets being a driver for one conveyor and the other of said sprockets being an idler for the other conveyor, a driving sprocket for the said other conveyor, means for driving the driving sprockets of the conveyors at different speeds, the first conveyor being driven at a relatively slow speed to move the suspending means to the end of the first track section and the second conveyor being driven at a relatively greater speed to then move the suspending means along the second track section without substantially interrupting the movement of the suspending means.

2,470,447
STABILIZATION OF LOW UNSATURATION ISOOLEFINIC POLYMERS
Carll F. Van Glider, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application July 11, 1945, Serial No. 604,519
6 Claims. (Cl. 260—94)

1. The polymerization process consisting of the steps in combination of mixing an isoolefin and 0.1–5% of a poly alkylated phenol and polymerizing the mixture at a temperature within the range between 0° C. and —164° C. by the application to the cold mixture of a Friedel-Crafts catalyst dissolved in a non-complex forming solvent which is liquid at the reaction temperature.

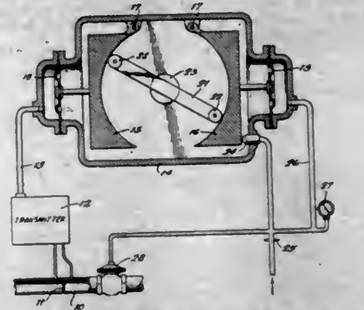
2,470,448
BOBSLED
Ralph Warrender, Sharon, Pa.
Application December 23, 1946, Serial No. 718,011
1 Claim. (Cl. 280—16)

A bobsled comprising a seat member formed of a plurality of cross pieces and a plurality of slats positioned thereon and affixed thereto, a pivot member affixed beneath one of the said cross pieces and a movable runner unit mounted beneath the said pivot member, the said runner unit including a U-shaped runner member, the arms of which are spaced apart and a U portion of which is upwardly curved, a steering bar affixed to the said upwardly curved portion of the runner unit and lying on the same plane as the said seat member, a fixed runner unit attached

beneath said cross pieces, said fixed runner unit disposed behind the said movable runner unit and including spaced runners having upturned ends forming connections with the said cross pieces, a rearward projection formed on the said movable runner unit and a forwardly extending projection formed on one of the said cross pieces and a coil spring positioned between the said projections and normally holding the said movable runner unit in axial alignment with the said fixed runner unit.

2,470,449
PHOSPHOR MATERIALS
Ferd E. Williams, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 17, 1945, Serial No. 622,625
1 Claim. (Cl. 250—80)

A compound phosphor consisting of calcium phosphate, a cerium activator therefor, a radium compound intermingled with said calcium phosphate and a coating of magnesium-germanate material with manganese activator having greater magnesium oxide content than ortho proportions.



2,470,450
TANNING WITH FREE FORMALDEHYDE AND MELAMINE SIMULTANEOUSLY
Wallace Windus, Bristol, Pa., assignor to John R. Evans & Company, Camden, N. J., a corporation of New Jersey
No Drawing. Application September 7, 1945, Serial No. 615,077
6 Claims. (Cl. 8—94.33)

1. Process of tanning which comprises submerging a tannable animal skin for at least three hours in a dilute aqueous solution containing at least about 5% by weight (on the basis of the wet skin) of melamine in suspension together with an amount of dissolved formaldehyde equivalent to at least 1.5 mols of said melamine, the melamine progressively passing into solution as the solution becomes depleted of melamine as the result of the tanning action.

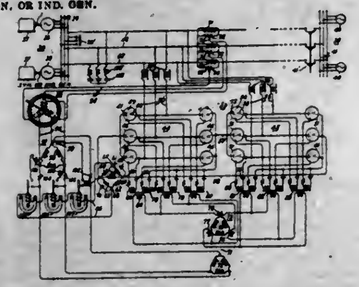
2,470,451
PHOSPHORS
Elton J. Wood, Hopewell, N. J., assignor to Radio Corporation of America, a corporation of Delaware
No Drawing. Application October 17, 1945, Serial No. 622,947
2 Claims. (Cl. 252—301.6)

1. A phosphor material consisting essentially of crystallized zinc sulphide and activators of copper, manganese and terbium, the copper and manganese being up to 1% of the weight of the sulphide and the terbium being from 0.01% up to 0.02% of the weight of said sulphide.

2,470,452
RATIO CONTROL DEVICE
Robert A. Ackley, Chicago, Ill., assignor to Republic Flow Meters Company, Chicago, Ill., a corporation of Illinois
Application September 26, 1947, Serial No. 776,274
5 Claims. (Cl. 137—153)

1. A ratio control device comprising a pair of movably mounted members having concentrically curved facing surfaces, a compression strut mounted for pivotal movement about the center of said surfaces and for longitudinal movement, the ends of the strut engaging the surfaces respectively, means to urge one of the members toward the other, and means responsive to movement of the members to urge said other member toward said one member to balance the first named means.

2,470,453
TREATMENT OF MATERIALS COMPOSED PARTLY OR WHOLLY OF WOOL OR SIMILAR FIBERS
Peter Alexander, Leicester, England, assignor to Wolsey Limited, Leicester, England, a British company
No Drawing. Application December 11, 1947, Serial No. 791,150. In Great Britain November 6, 1946
3 Claims. (Cl. 26—18.5)



1. A process for the treatment of wool for the purpose of rendering it substantially unshrinkable which comprises exposing the wool to the action of vibrations of a frequency of between 3 kilocycles per second and 3000 kilocycles per second, said vibrations having an intensity at least sufficient to coagulate a 0.1% solution of egg albumen at the iso-electric point and at a temperature below 50° F. in a period of less than five minutes, whilst immersed in an aqueous liquid, which is chemically inert to wool.

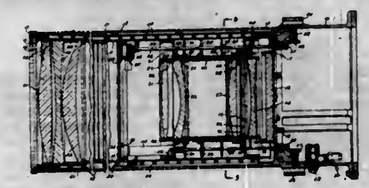
2,470,454
STABILIZER FOR ALTERNATING CURRENT POWER TRANSMISSION SYSTEMS
Ernst F. W. Alexanderson, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application May 13, 1947, Serial No. 747,787
26 Claims. (Cl. 172—237)

1. In a system of distribution having remotely situated alternating current dynamo-electric ma-

chines with an electrically long transmission line interconnecting the same, comprising a reactive power absorbing circuit for connection in parallel relation to the transmission line and including electronic means operable to control the amount of reactive power input to said absorbing circuit, and means independent of synchronizing forces transmitted by said transmission line and connected for response in accordance with the phase displacement between the voltages of said remotely situated alternating current machines for controlling said electronic means to vary the amount of reactive power drawn by said power absorbing circuit in a manner to maintain a synchronous relation between said machines.

SYN. OR IND. GEN.

13. A stabilizer adapted to control the transmission of power between an induction generator and a synchronous motor remotely situated and interconnected by an electrically long transmission line, comprising an electronic tube rectifier for connection as a parallel branch circuit to said transmission line at a point intermediate the generator and motor and provided with input and output circuits, the electronic tubes of said rectifier each being provided with a control electrode, a reactor connected in said input circuit, a closed circuit conductor constituting a virtual short circuit connected across said output circuit, a capacitor connected in parallel relation with said input circuit, and current responsive means for connection to said transmission line at the generator terminals and connected to energize each of said control electrodes.



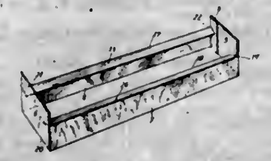
18. A variable reactive current device, comprising an electronic tube conversion unit including two groups of a plurality of electronic tubes with each group of tubes being connected as a rectifier, each of said tubes being provided with an anode, a cathode and a control electrode, means for connecting said rectifiers in series relation including a closed circuit conductor acting as a virtual short circuit for the direct current of said rectifiers, an alternating current input circuit connected to each rectifier group, inductive reactance means connected in each of the input circuits, means for energizing the anode-cathode circuit of each tube with a voltage of given phase, means for energizing the control electrode of each tube with a voltage variable in phase relative to said given voltage, and means for modifying the energization of said last mentioned means in accordance with the rate of change of phase angle between said voltages.

2,470,455

AUTOMATIC ALTITUDE AND PRESSURE COMPENSATOR FOR AERIAL CAMERA LENSES

Charles F. Avila, Milton, Mass., assignor to the United States of America as represented by the Secretary of War

Application June 18, 1946, Serial No. 677,620
10 Claims. (Cl. 95—45)



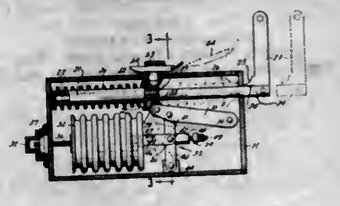
1. In an aerial camera containing a lens system comprising a plurality of lenses mounted in optical seriatim and including a single movable lens constituting the rear element thereof and also means whereby said rear lens is mounted to be movable manually relative to the other lenses, the improvement which comprises compensating means including pressure responsive means and also companion control means both operatively connected with said rear lens mounting means and being automatically actuated by variations in altitude and atmospheric pressure to move said rear lens relative to the other lens, whereby to compensate for the optical refraction of said lenses and the shift of focus due to such change in altitude and pressure and keep the image substantially fixed.

2,470,456

TRAY

Charles O. Ballar and Thomas L. Spalding, Menasha, Wis., assignors to Marathon Corporation, Rothschild, Wis., a corporation of Wisconsin

Application January 7, 1947, Serial No. 720,550
2 Claims. (Cl. 229—30)



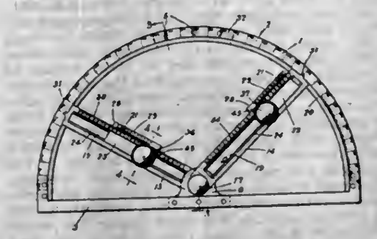
1. A tray for supporting articles formed of an elongated integral blank, the ends of said blank being partially overlapped and fastened together to form a rectangular band, said blank being provided with score lines to form opposed end walls and side walls, said side walls being provided with panel portions folded inwardly toward each other on a hinge line extending in parallel relation to the longitudinal edges of said side walls, and said panel portions being formed by cut lines extending downwardly from the top edge of the side wall at right angles thereto and terminating at said hinge line, said panel portions being adapted to assume a position for supporting articles thereon.

2,470,457

PARACHUTE RELEASE MECHANISM

Mario Eduardo Báncora, Rosario, Argentina, assignor to the United States of America as represented by the Secretary of War

Application June 10, 1946, Serial No. 675,643
6 Claims. (Cl. 244—150)



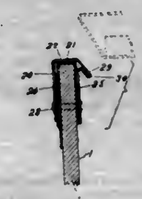
1. An automatic parachute release mechanism arranged for mounting on a parachute pack in association with the rip cord and the means for manually pulling said cord, said mechanism comprising a plunger and means for connecting it with the rip cord, said connecting means being movable on the inactive plunger when the rip cord is pulled manually, means for actuating said plunger to withdraw the rip cord automatically, and a snap action device to normally hold said plunger actuating means restrained above a certain altitude, said device including pressure responsive means to actuate it and suddenly release said plunger actuating means from restraint so as to operate the plunger for pulling the rip cord when the mechanism descends below said certain altitude.

2,470,458

PROTRACTOR

Francis A. Barr, Laureiton, Long Island, N. Y.

Application June 7, 1946, Serial No. 675,058
6 Claims. (Cl. 33—75)



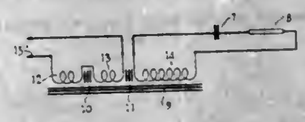
6. A measuring instrument comprising a protractor having an arcuate bar provided with a scale and a cross bar between ends of its arcuate bar, a post extending upwardly from the cross bar midway the length thereof, arms pivoted to the post and having their free ends provided with pointers cooperating with a scale provided along the arcuate bar, mounting members slidable along said arms and provided with scales companion to scales provided upon the arms, posts rising from the mounting members and provided with vertical scales, and sleeves threaded upon the last mentioned posts with their lower ends extending across the scales thereon.

2,470,459

TOBACCO HOGSHEAD

Harry Guthrie Bell, Paris, Ky., assignor to Gay and Bell, Paris, Ky., a partnership composed of Jacob Dougina Gay, Jr., Lexington, and John Wilson Bell and Harry Guthrie Bell, Paris, Ky.

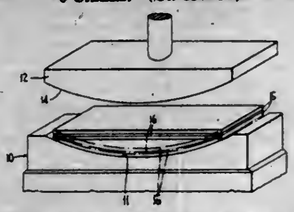
Application September 27, 1945, Serial No. 618,939
4 Claims. (Cl. 217—44)



4. In a tobacco hogshead, the combination with a body composed of staves, U-shaped metal reinforcements on their ends, hoops overlying said reinforcements, and other U-shaped members also embracing the ends of some of the staves and provided with abutments projecting from the inner sides of said staves, of common securing members passing through the two U-shaped members, the hoop and staves, of a barrel head having a diameter passing within said projections, peripheral latch members on the head capable of passing the projections upon inward movement of the head and cooperating therewith to arrest the movement of the head in the opposite direction.

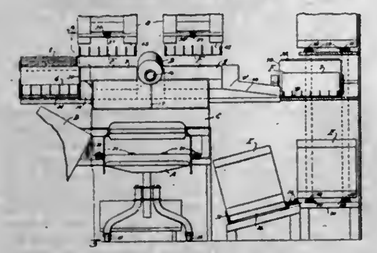
2,470,460

WATTAGE CONTROLLING SYSTEM



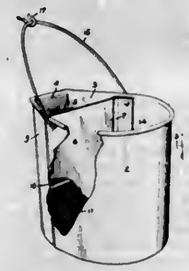
Lester F. Bird, Newark, N. J., assignor to Hanovia Chemical and Mfg. Company, Newark, N. J., a corporation of New Jersey

Application June 5, 1948, Serial No. 31,241
5 Claims. (Cl. 323—60)



1. A wattage controlling system comprising in combination, a transformer having a magnetic core structure and mounted thereon a primary current input system comprising a plurality of coils in spaced relation to each other with high reluctance magnetic shunts between them, a secondary coil system mounted on said magnetic core structure in spaced relation to the primary coils with a high reluctance magnetic shunt between the said primary coils and the secondary coil system, a stabilizing wattage control circuit comprising a capacitor connected between one of the terminals of said secondary coil system and a load so that all the current delivered from the secondary transformer winding to the load passes therethrough, said capacitor having a reactance at line frequency of approximately twice that of the self-inductance of the transformer secondary.

2,470,461
METHOD OF MANUFACTURING GLASS
Lloyd V. Black, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
Application April 19, 1944, Serial No. 531,756
6 Claims. (Cl. 49—84)

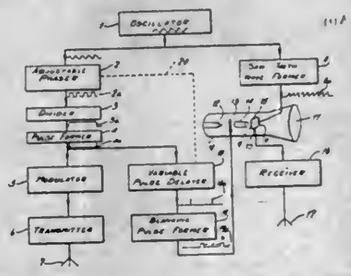


6. In the manufacture of bent laminated safety glass including superposed glass sheets and a substantially co-extensive interposed layer of organic plastic adherent to the inner surfaces of the glass sheets; the method steps which comprise assembling two first glass sheets with slight irregularities and particles thereon on opposite sides of a third glass sheet having a lower softening point than the two first sheets, heating the assembly of glass sheets until they are sufficiently soft to bend, bending together the glass sheets so assembled and heated while the interposed third sheet remains softer than said two first sheets, all irregularities and particles along the inner surfaces of said two first sheets impressing into the softer third glass sheet during the bending thereof with the third glass sheet materially uneffecting the inner surfaces of the two first glass sheets other than maintaining them in spaced relation, and removing said third sheet prior to the laminating of the two first sheets with the interposed plastic sheet.

2,470,462
EGG CANDLING BOOTH
Preston J. Blackwell, Emerson, N. J., assignor, by mesne assignments, to Robert Gair Company, Inc., New York, N. Y., a corporation of New York
Application May 15, 1946, Serial No. 669,748
4 Claims. (Cl. 88—14.5)

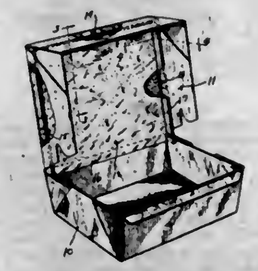
3. Egg candling apparatus consisting of a substantially closed darkened booth provided with an inlet opening in a wall thereof for the reception of successively fed filled cases of eggs, said opening being substantially closed by an egg case when positioned therein thereby maintaining the darkened condition within the booth, means extending from a point exteriorly of the booth through the inlet opening and into the booth forming a support along which a plurality of egg cases may be successively advanced into the booth and supported in operative position therein, a candler's seat in the booth, and a candling light positioned adjacent the candler's seat and proximate egg case, whereby the candler, in a sitting position, may candle the eggs from the case.

2,470,463
MAGAZINE FEEDBOX
John B. Botten, Chagrin Falls, Ohio
Application July 19, 1944, Serial No. 545,561
1 Claim. (Cl. 119—65)



A combined feed receptacle and water bucket of the character described, comprising in combination, a container of generally pail form provided with body and bail members, the body including imperforate bottom and side wall members, the side wall member being slightly tapered for nesting purposes and including a curved front portion and a rear portion formed by two parts in planes at right angles to each other to closely fit a stall corner and an intermediate part providing a lip for use in pouring when the receptacle serves as a water bucket, a removable partition, opposite parallel supports therefor mounted on the container side wall member and extending vertically along the lines where the ends of the curved portion of the side wall meet those portions thereof which are at right angles to each other, said partition dividing the space within the container into magazine and feeding compartments and having its lower edge spaced from the container bottom to provide communication between said compartments, and an inclined screen removably mounted in the bottom of the magazine compartment opposite said opening, said screen sloping toward the opening and providing a refuse receiving pocket beneath it, the bail having such contour as to enable the receptacle to be hung upon a support in the stall corner with its rear portion closely fitted between the walls thereof.

2,470,464
TIMING AND PHASE CONTROL CIRCUITS
Robert M. Bowie, Emporium, Pa., assignor to Sylvania Electric Products Inc., a corporation of Massachusetts
Application August 3, 1942, Serial No. 453,367
34 Claims. (Cl. 343—13)

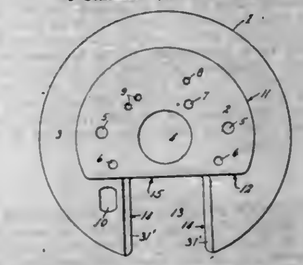


4. In a system of range finding by radio echo, a cathode-ray tube oscilloscope having three control elements one of which is a control grid and the other two are beam deflection controls, a

master oscillator, means to impress on one of said deflection control elements pulses at the master oscillator frequency, a frequency subdivider of the periodic pulse counting type for subdividing the frequency of a portion of the master oscillations, transmitter to transmit said subdivided frequency signals over a high frequency radio channel to an object, means to detect the said signals after reflection from the object, means to apply the detected signals to another deflection

control element, means for causing said tube to produce a zero setting indication in response to the direct transmission of signals from said transmitter to said detector, means connected to said control grid to select only a particular recurring period of the master oscillation frequency for comparison with the subdivided frequency means automatically effective to prevent cumulative error in said zero setting when said frequency subdivider miscounts as a result of the spurious injection of pulses into said divider.

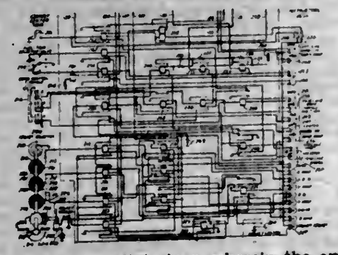
2,470,465
FROZEN FOOD PACKAGE
Frank L. Broeren, George E. Wauda, and Robert Kuehl, Neenah, Wis., assignors to Marathon Corporation, Rothschild, Wis., a corporation of Wisconsin
Application July 26, 1946, Serial No. 686,368
7 Claims. (Cl. 99—192)



1. A frozen food package comprising a receptacle portion filled with frozen food, and a cover portion, said cover being provided with an exposed moisture-absorbent layer on the inner face thereof and in direct contact with said food, said absorbent layer being substantially saturated with water and frozen for sealing the said food within said receptacle portion.

2,470,466
KEY CASE
Douglas J. Broughton, Springfield, Mass., assignor to Buxton, Incorporated, Springfield, Mass., a corporation of Massachusetts
Application September 3, 1946, Serial No. 694,547
1 Claim. (Cl. 150—40)

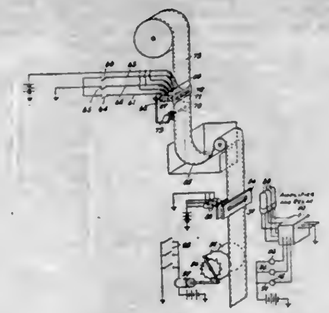
In a key case having a back member, a panel member comprising rear, intermediate and front members, the rear member being hinged to the upper edge of the back member of the case, a key supporting member having a key holder connecting portion and a plate portion depending therefrom, said plate portion being positioned between the rear and intermediate panel members, fastening means extending through said rear and intermediate panel members and said plate portion to secure the key supporting member to the case, the key holder connecting portion of the key supporting member being exposed above and along the upper edge of the intermediate panel member, the front panel member extending from the upper edge of the intermediate panel member and being folded downwardly over said fastening means.



2,470,467
STATOR UNIT FOR FLYWHEEL MAGNETOS
Allen L. Brownlee, West Springfield, Mass., assignor to Wico Electric Company, West Springfield, Mass., a corporation of Massachusetts
Application May 21, 1948, Serial No. 28,283
5 Claims. (Cl. 171—209)

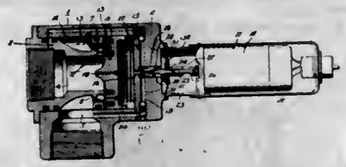
1. A stator unit for a flywheel magneto, comprising, a circular steel plate having a slot which extends from its outer periphery inwardly toward but terminates short of its center and which has two spaced side walls and an inner wall interconnecting the inner ends of the side walls, a laminated armature structure including an inner part located between the inner wall of the slot and the center of the plate and permanently secured to the latter and a core extending from said inner part outwardly along the center line of said slot, a generating coil mounted on said core and capable of being moved radially on or off the core through said slot, and a cover for said

slot of thin insulating and non-magnetic material, said cover consisting of a flat piece of a length to fill said slot and of a width greater than said slot with marginal portions overlapping said side walls and lying against the inner face of said plate, said cover having a portion bent outwardly to form a recess to receive part of said coil and extending outwardly through said slot, the engagement of the coil with said portion serving to hold the marginal portions of said flat part of the cover pressed against the inner face of said plate.



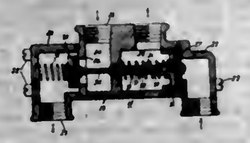
2,470,468
GROUND TRAINER FOR AIRCRAFT
Russell B. Buchanan, Lynbrook, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 28, 1946, Serial No. 718,917
13 Claims. (Cl. 35—25)

3. In an aircraft trainer, wherein the operation of the armament of an airplane is simulated, a train of counting relays, an instructor's desk, lamps at said desk responsive to said relays to indicate the simulated release of successive rockets, a rocket selector switch manually settable into a plurality of positions representative of the selected release of different groups of rockets, means for releasing said switch from its set position step-by-step in response to the operation of successive ones of said counting relays, a plurality of relays successively operable in successive positions of said switch, other lamps at said instructor's desk responsive to said latter relays to indicate the position to which said switch has been manually set, a trigger key, and means effective upon successive operations of said key and upon the successive operation of said latter relays to cause the successive operation of said counting relays.



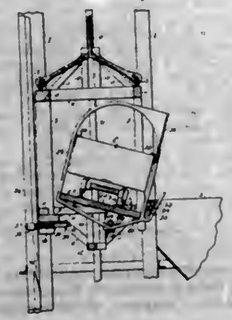
2,470,469
SEQUENCE INDICATION APPARATUS
Peter A. Bucky, Flushing, and Paul Sarason, New York, N. Y., assignors, by direct and mesne assignments, to Tell-a-Turn Corporation, New York, N. Y., a corporation of New York
Application December 8, 1945, Serial No. 633,652
1 Claim. (Cl. 177—353)

In a service system: means for indicating sequence of service, comprising a plurality of stations with customer-seating means, and an electrical circuit controlling means associated respectively with each station and independently operable, together with an indicator means visible to the occupant of the corresponding seating means and to an attendant for servicing said station; electrically-operated selector means, and independent electrical circuits between the respective circuit controlling means and selector means to advance the latter successively upon the closing of any of said circuit controlling means; means automatically controlled by the selector means to affect the indicator means of a corresponding station; and additional circuit controlling means at each indicator means and manually operable by



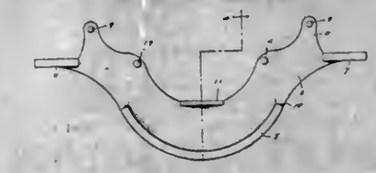
an attendant, together with independent electrical circuits respectively between the said additional circuit controlling means and the selector means to restore to normal upon said manual operation a corresponding indicator means previously affected by the closing of its first-named circuit controlling means.

2,470,470
VALVE OPERATING MECHANISM
Harry B. Carbon, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application April 10, 1945, Serial No. 587,582
3 Claims. (Cl. 137—139)



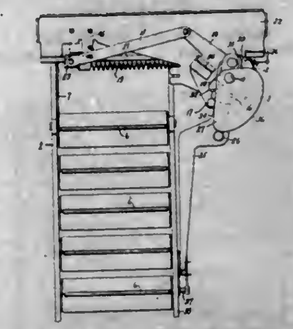
1. In a valve assembly a casing, a valve seat, a valve, a valve actuating means for moving the valve to and from its seat, said actuating means including a shaft rotatably connected to the valve, said shaft having a threaded section, a nut having a thread cooperating with the thread on the shaft, a flexible disk for supporting said nut, said threaded section being dimensioned so that when the valve is seated the nut will pass off from the threaded section on the shaft and flex the disk supporting the same said disc when flexed operating to hold said nut pressed against the threaded section for insuring engagement of the nut with the threaded section when the shaft is rotated in a reverse direction, and a reversible motor for rotating said shaft, said shaft being connected to said motor so that the shaft may move endwise with the valve toward and from its closed position.

2,470,471
DUAL CHECK VALVE
Granville E. Carleton, Beverly Farms, Mass., assignor to General Electric Company, a corporation of New York
Application February 6, 1944, Serial No. 521,543
2 Claims. (Cl. 277—3)



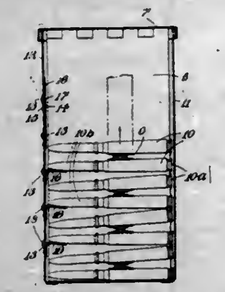
1. In a valve arrangement, the combination of a casing defining two separate passages therethrough, each passage including an inlet chamber and an outlet chamber with an opening communicating therebetween and surrounded by a valve seat, said valve seats lying in parallel planes and axially spaced, a first valve disk member adapted to sealingly engage one of said seats, a second valve member comprising a piston adapted to sealingly engage the other seat and slidably arranged in the housing for axial movement relative to the seat, separate spring means adapted to bias the valve disk and piston in the same direction against their respective seats, first and second stem members connected to said disk and piston respectively and arranged in telescopic relation with axial clearance therebetween whereby the piston may move away from its seat before the disk leaves its seat.

2,470,472
AUTOMATIC COAL DUMPING APPLIANCE
Frank E. Christopher, Morgantown, W. Va.
Application August 2, 1946, Serial No. 688,060
4 Claims. (Cl. 214—123)



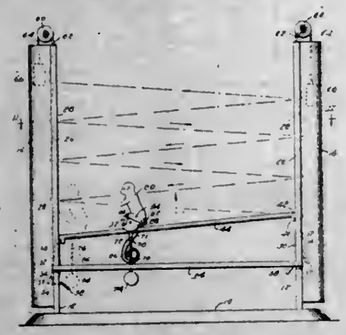
1. In a hoist-line appliance, the combination with an upright frame having an off-set guide rail, a vertically movable lift suspended in the frame, a cage pivotally mounted in the lift, and co-acting means on the cage and frame for overturning the cage, of a resiliently supported roller mounted on the lift in rolling contact with the inner side of said rail and adapted to pass through said gap for engagement with the outer side of said rail, and means for limiting the longitudinal movement of the roller mount.

2,470,473
ROCKING TOY
Raymond K. Daellenbach, Elwood City, Pa., assignor of one-half to Carl Humphrey, Grove City, Pa.
Application February 19, 1945, Serial No. 578,619
5 Claims. (Cl. 272—56)



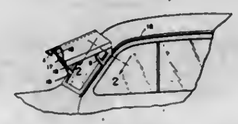
4. A rocking toy of the class described comprising a relatively wide rocker, an upstanding flange at the central portion of the rocker extending longitudinally thereof and projecting outwardly from opposite ends of the rocker, seats carried at the outer ends of the flange, and a seat supported on the upper edge of the flange at the central portion thereof and disposed below the level of the first mentioned seats, the bottom edge of the flange forming a continuation of the outer surface of the rocker and being curved in the opposite direction thereto for positioning the seats substantially beyond and only slightly above the level of the rocker ends.

2,470,474
VENDING MACHINE
Maurice F. Davis, Syracuse, N. Y., assignor to General Electric Company, a corporation of New York
Application January 2, 1947, Serial No. 719,749
9 Claims. (Cl. 312—92)



1. A vending machine comprising a reciprocably mounted pusher, a conveyor for moving a series of articles to be vended successively past said pusher, a motor, means connecting said motor to said pusher to effect movement of said pusher from a first position to a second position to eject an article from said conveyor and thereafter return said pusher to said first position, a member for advancing said conveyor to bring an article in front of said pusher, a second means movable to connect said motor to said member, and means operated by said pusher in moving to said second position for moving said second means to connect said motor to said member.

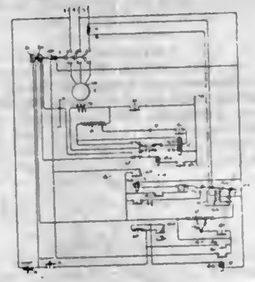
2,470,475
AMMUNITION BOX
Cecil Thomas Diaper, Bristol, England, assignor to The Bristol Aeroplane Company Limited, Bristol, England, a British company
Application September 17, 1945, Serial No. 616,833
In Great Britain September 27, 1944
1 Claim. (Cl. 89—34)



An ammunition box for belted ammunition comprising a casing to receive the ammunition belt in superposed layers, a plurality of shelves spaced one above the other within the casing, hinge means securing each shelf to the wall of the casing towards which the projectiles point and extending along said wall, and means to prevent movement of each shelf in a direction such that it supports one or more layers of belt whilst permitting freedom for the shelf to be displaced in the opposite direction by the withdrawing ammunition belt to a position against said wall.

2,470,476
TOY
Daniel C. Dozier, Norfolk, Va.
Application November 15, 1946, Serial No. 710,076
15 Claims. (Cl. 46—100)

1. A toy comprising a base, a pair of spaced upright supports at opposite ends of said base each including a pair of spaced walls forming a vertical guideway, and a generally tubular housing, vertical racks within said housings having substantially evenly spaced teeth, the teeth of one rack being staggered vertically to lie in different horizontal planes than the teeth of the other rack, a pulley mounted adjacent the top of each housing and having a flexible line extending thereover, a weight attached to one end of each of said lines for vertical movement within the associated housing, a crosshead attached to the other end of each line and including a runner slidably engaged in the associated guideway, a depending lever pivotally attached to each crosshead and including a laterally extending latch bar at its lower end successively engageable with the associated teeth and an actuating arm extending through the associated guideway, an inverted T-shape rail loosely engaged with said crossheads and extending therebetween, a carriage including a grooved wheel in rolling contact with said rail, a simulated animal figure on said carriage including articulated portions having mechanical connection with said wheel, and a counterbalance depending from said carriage and alternately engageable with said actuating arms for disengaging said latch bars from said teeth whereby said weights alternately move the corresponding ends of said rail upwardly to successively reversely inclined positions to cause said carriage to travel back and forth along said rail between said supports.

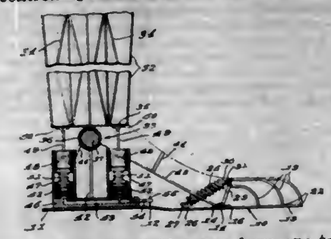


2,470,477
WINDSHIELD VISOR MOUNTING BRACKET
Frank E. Ellithorpe, Glendale, Calif., assignor to The Fulton Company, West Allis, Wis., a corporation of Wisconsin
Original application July 15, 1946, Serial No. 683,595. Divided and this application June 12, 1948, Serial No. 32,562
5 Claims. (Cl. 296—95)

1. A visor for the windshield of a vehicle having doors at opposite sides of the windshield, said visor comprising a rigid panel assemblage adapted for disposition above the windshield, a supporting bracket attached to each of the opposite ends of said assemblage, each of said brackets having an integral attaching flange reaching inwardly into the adjacent door opening and rearwardly beneath the corresponding door when closed, and attaching means coacting with the rearwardly reaching portions of said flanges and being accessible only when the adjacent doors are open.

2,470,478
SYNCHRONOUS MOTOR CONTROL SYSTEM
Samuel C. Ewing, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application June 11, 1948, Serial No. 32,287
2 Claims. (Cl. 318—176)

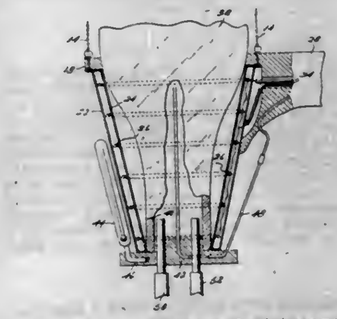
1. In combination, a synchronous motor having field and armature windings, a source of D.-C. excitation, means for connecting said field winding to said source comprising a field contactor provided with an operating coil, means for controlling said contactor comprising a field relay provided with a closing coil, a drop-out control coil, a contact for connecting said drop-out coil to the field circuit of said motor and with a contact in the coil circuit of said contactor, a starting switching device, a source of alternating voltage, a line contactor responsive to operation of said switching device for connecting said armature winding to said alternating source and provided with an interlock contact for energizing said closing coil to cause said field relay to pick up and connect said drop-out control coil to said field circuit, an auxiliary relay responsive to operation of said field relay for deenergizing said closing coil thereby to transfer control of



said field relay to said drop-out coil, a rectifier in circuit with said drop-out coil for supplying unidirectional current pulses to said drop-out coil to effect drop-out of said field relay in response to a predetermined duration of interval between successive impulses, and a normally closed contact on said field relay in the coil circuit of said field contactor for closing said field contactor to connect said field winding to said D.-C. source in response to drop-out of said field relay.

2,470,479
PROCESS FOR MAKING POLYSILOXANE RESINS
Charles S. Ferguson, Troy, and Charles E. Welsh, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
No Drawing. Application November 21, 1945, Serial No. 630,136
9 Claims. (Cl. 260—46.5)

6. The method of making a polysiloxane resin which comprises forming a solution of methyltrichlorosilane in a polyether solvent selected from the group consisting of bis (beta-ethoxyethyl) ether, ethylene glycol diethyl ether and mixtures thereof, adding to said solution an amount of water which is more than 25% and less than 75% of that calculated as necessary for complete hydrolysis of said trichlorosilane, the said water of hydrolysis being present in an amount equal to from 0.375 to 1.125 mols water per mol trichlorosilane, adding dimethyldichlorosilane to the partially hydrolyzed trichlorosilane and thereafter adding sufficient water to the resultant product to convert all of the chlorosilanes to polysiloxanes.

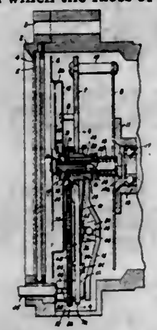


2,470,480
ARTIFICIAL FOOT
Stanley R. Fogg, Terre Haute, Ind.
Application April 23, 1946, Serial No. 664,298
9 Claims. (Cl. 3—6)

1. In an artificial limb, the combination with a lower limb portion, an ankle plate secured thereto, a sole plate pivoted at a raised point to the ankle plate, hydraulic cushioning means between the ankle plate and the heel of the sole plate in front and rear of the pivot, and means for controlling said hydraulic means, a connection

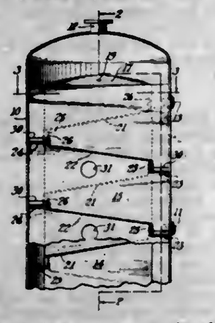
through which the fluid passes from one to the other, and means for controlling the passage of fluid through said connection.

2,470,481
FLUID HEATER
Ethelyn Freeman, Muskogee, Okla.
Application November 15, 1946, Serial No. 709,947
1 Claim. (Cl. 128—214)



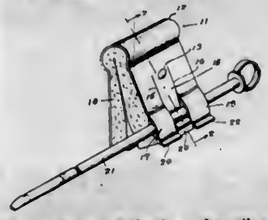
A heater for a container for intravenous fluid injections comprising a stand, spaced supporting rings for suspending the container in an inverted position from the stand, a pair of spaced heating walls having electrical heating elements carried by said supporting rings therebetween, said walls forming a base for the container, temperature controls for the heating elements, a cap for the inverted container, a vent for the container through the cap, and an injection tube extending through the cap.

2,470,482
DIRECTION INDICATOR
Samuel Gabrielson, South Lynnfield, Mass., assignor to General Electric Company, a corporation of New York
Application September 20, 1946, Serial No. 698,129
5 Claims. (Cl. 116—129)



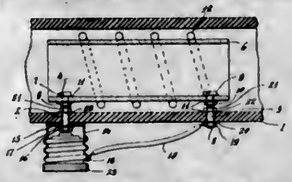
4. The combination with a direction-indicating instrument of the type having a fixed dial, a rotatable direction-responsive shaft extending through a hole in said dial from the rear and a pointer attached to said shaft in front of said dial for indicating direction on said dial, of a second course-setting pointer mounted in front of said dial on a bushing member carried on said shaft, said bushing member extending through

said hole in said dial and having extending therefrom a portion forming one face of a clutch, a hollow clutching member surrounding said bushing member and having a portion forming a mating face of said clutch, said clutching member being rotatably supported so that it is radially spaced from said bushing member and axially slidable to cause engagement of the mating faces of said clutch, means for frictionally restraining said bushing member so that it rotates with said shaft, means for biasing said clutching member to a position in which the faces of said clutch are



disengaged so that both of said pointers rotate with said shaft, means for axially moving said clutching member to cause engagement of the faces of said clutch and means for rotating said clutching member to adjust said second pointer relative to said shaft comprising a pinion carried by said clutching member, a rotatable gear meshing with said pinion, the width of said gear being sufficient to permit the required clutch-engaging axial movement of said pinion without unmeshing the pinion and gear and means comprising a manually rotatable shaft for rotating said gear.

2,470,483
APPARATUS FOR CONTACTING A LIQUID AND A VAPOR
Truman A. Gadwa, Mount Vernon, and David B. Flaws, New York, N. Y., assignors to The Lummus Company, New York, N. Y., a corporation of Delaware
Application May 8, 1947, Serial No. 746,658
4 Claims. (Cl. 261—113)



1. In a distillation column a plurality of segmental troughs, a plurality of vertical rows of transversely sloped screen decks, each of said decks extending from a trough at its upper end to a trough at its lower end and having its lower end adjacent the upper end of the screen next below but in an adjacent row and a continnous longitudinal baffle between each of said rows of sloped screen decks to restrict liquid flow to a single deck in a row, said baffle having openings adjacent the end of each deck whereby the lower end of each of said decks in one row is in direct communication with the upper end of the deck next below but in an adjacent row.

2,470,484
OIL STICK WIPER
James Gall, Jeannette, Pa.
Application June 19, 1947, Serial No. 755,625
2 Claims. (Cl. 15—210)

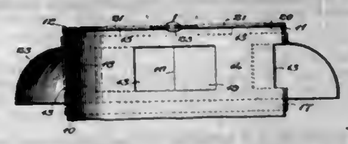
1. An oil stick wiper of the type described, comprising a sheet of absorbent material which is of V-form in cross-section, a holder mounted on the outer surface of said material, means for clamping said holder on said material, and clamping elements on said holder for retaining said holder on an oil stick for a motor vehicle engine.

2,470,485
ELECTRIC CIRCULATORY WATER HEATER ATTACHMENT FOR CONVENTIONAL INTERNAL-COMBUSTION ENGINES
Earl Haugland, Hampden, N. Dak.
Application May 22, 1947, Serial No. 749,836
1 Claim. (Cl. 219—38)

An electric circulatory water heater attachment for conventional internal combustion engines comprising an insulating water-and-heat-resistant open tube which fits loosely into a radiator hose; an electrical heating coil being wound upon the outer side of said tube; a threaded conductive bolt being extended from one terminal of said heating element through said hose, said tube, the center of the bottom of a screw base plug, an insulating disk and having said screw base plug secured to its end portion; another threaded conductive bolt being extended from the other terminal of said heating element through said hose and being connected by means of a wire outside of said hose to the shell of said screw base plug, and nuts on said bolts being interposed between said tube and said hose for keeping said tube in spaced relation to the inner side of said hose, all substantially as described.

2,470,486
PROCESS OF REGENERATING MAGNESIUM SILICATE ADSORBENTS
Russell J. Hawes, Cranford, N. J., assignor to Tide Water Associated Oil Company, Bayonne, N. J., a corporation of Delaware
No Drawing. Application January 14, 1947, Serial No. 722,075
7 Claims. (Cl. 252—412)

1. A method for improving the adsorbing efficiency of a magnesium silicate adsorbent which has decreased in adsorbing efficiency by having been contacted with an oil for decolorization thereof by adsorption from said oil of color-imparting bodies adsorbable by said adsorbent which comprises removing said color-imparting bodies from said adsorbent to improve the adsorbing efficiency of said adsorbent, and then subjecting said adsorbent to intimate contact with an aqueous solution containing magnesium ions to still further improve the adsorbing efficiency of said adsorbent.



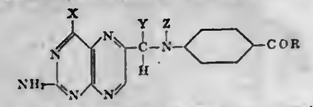
2,470,487
ADJUSTABLE ANVIL
Robert F. Hollis, Alton, Ill., assignor to Alton Box Board Company, Alton, Ill., a corporation of Delaware
Application April 13, 1944, Serial No. 530,919
2 Claims. (Cl. 93—55.1)

1. A device of the kind described comprising, a standard, a fitting adjustable vertically on said standard, a shaft extending radially from said fitting, said fitting comprising a tubular portion telescopically arranged on the standard whereby the shaft is capable of being adjusted circumferentially about the standard, an expansible anvil member mounted on said shaft, and means for expanding said anvil and maintaining the same expanded.

2,470,488
AIR FLOW CONTROL MEANS
Friedrich Honerkamp and Franz J. Kurth, New York, N. Y., assignors to Anemostat Corporation of America, New York, N. Y., a corporation of Delaware
Original application August 16, 1943, Serial No. 498,842. Divided and this application November 28, 1944, Serial No. 565,509
4 Claims. (Cl. 98—40)

1. Air flow control means comprising an air supply conduit member including side and end walls each having therein an annular row of spaced apart openings for outlet of air therefrom, and a cap member rotatably mounted on said conduit member and including side and end walls each having therein an annular row of spaced apart openings for alinement with and disalinement from the openings of the corresponding row in the side and end walls of said conduit member, respectively, by rotation of said cap member relative to said conduit member, thereby to control discharge of air from said conduit member through the sets of openings in the side and end walls thereof, respectively, and air deflector means mounted on one of said members and disposed to intercept air discharged through the

openings in the side walls of said conduit member and said cap member and to cause it to take a desired direction of flow relative to the direction of flow of air discharged through the openings in the end walls of said conduit and said cap members, said air deflector means extending around said cap member and being open at one end and closed at its other end and being secured at its closed end to the member on which it is mounted.



2,470,489
RIFLE ROCKET MISSILE
Nevil Monroe Hopkins, New York, N. Y.; Raymonde B. Hopkins, executrix of said Nevil Monroe Hopkins, deceased, assignor to Raymonde Briggs Hopkins, New York, N. Y.
Application June 12, 1944, Serial No. 539,906
6 Claims. (Cl. 102—49)

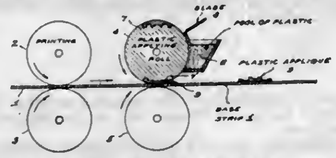
1. A rocket missile fashioned to be fired from a rifled gun, said rocket missile comprising an outer tubular member with rifle-engaging fins, an inner tubular member having a surface drive fit within said outer tubular member and rotated by virtue of such drive fit by said outer tubular member, a centralized plug member rigidly attached to the interior of said inner tubular member, a war-head member rigidly attached to said centralized plug member, a charge of explosive and a firing device therefor disposed in said war-head member, a rocket fuel in said inner tubular member, and a combustion chamber at the end of said inner tubular member, said chamber having a driving nozzle for the escape of the products of combustion of said rocket fuel.

2,470,490
PROCESS OF PURIFYING PTEROYLGLUTAMIC ACID AND RELATED COMPOUNDS
Brian L. Hutchings, Pearl River, N. Y., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application April 22, 1948, Serial No. 22,720
8 Claims. (Cl. 260—251)

1. A process of separating zinc salts of compounds having the general formula

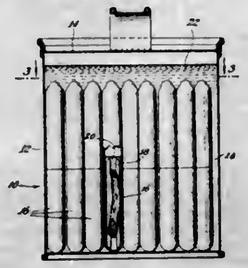
in which X is a member of the group consisting of hydrogen and —OH and —NH_2 radicals, Y and Z are members of the group consisting of hydrogen and lower alkyl radicals, and —COR an acidic radical of the group consisting of carboxy radicals and amino acid amides thereof from other pteridines which comprises the steps of preparing a solution of said compound and a soluble zinc salt at a pH within the range 10.5 to 11.2, removing insoluble matter, adjusting the pH to within the range 6.5 to 7.0 by the addition of an acidic zinc salt and recovering the insoluble zinc salt of the said compound which forms.

2,470,491
PROCESS FOR PUBIFICATION OF PTEROYLGLUTAMIC ACID
Brian L. Hutchings, Pearl River, N. Y., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application December 12, 1946, Serial No. 715,637
6 Claims. (Cl. 260—251)



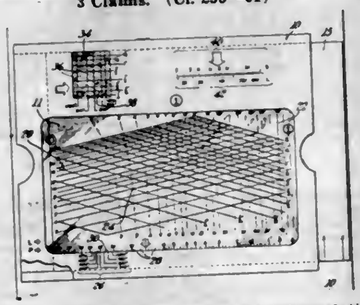
1. A process of separating the zinc salt of pteroylglutamic acid from related pterins which comprises the steps of preparing a solution of a soluble zinc salt and pteroylglutamic acid at a hydrogen ion concentration within the range pH 10.5 to pH 11.2 and separating the soluble substance from the insoluble matter, adjusting the pH of the solution to within the range 6.5 to 7.0 and separating insoluble zinc pteroylglutamate therefrom.

2,470,492
PICNIC SET
Albert W. Jenkins, New York, N. Y.
Application January 30, 1946, Serial No. 644,327
2 Claims. (Cl. 30—147)



1. The herein-described implement comprising one member having a can-and-bottle-cap-opening tool at one end and having a U-shaped handle portion whose upper longitudinal flange edges are inwardly-curled, a second flat member having on its handle portion a notch which engages an inwardly bent portion of said can-opening tool when said second member is slid into the U-shaped handle portion of said first member, a third member having a flat handle portion which has a knob at one side and which is adapted to be slid into the U-shaped handle portion of said first member above said second member, and a fourth member having a curved main portion and a flat handle portion which is provided with knobs on one side and with an aperture adapted for engaging the knob on said third member when the handle of said fourth member is inserted between the third member and the inwardly curled edges of the U-shaped handle portion of said first member, said inwardly curled edges being provided with recesses adapted to engage the knobs on one side of the handle portion of said fourth member, all substantially as described.

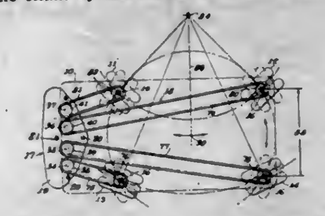
2,470,493
METHOD OF MAKING SHELF EDGING
Edward Karfiol, Great Neck, and William A. Roehm, Rockville Centre, N. Y., assignors, by mesne assignments, to Virtu, Inc., Brooklyn, N. Y., a corporation of New York
Application November 25, 1944, Serial No. 565,154
4 Claims. (Cl. 154—97.5)



1. The herein described method which comprises: printing a design onto a surface of a base member, and then applying over at least a portion of said design a pre-formed transparent plastic applique which covers the same and registers therewith, whereby the covered portion of the printed design is visible through the thus applied transparent plastic applique.

2,470,494
SHIPPING PACKAGE OF SUTURE TUBES OR THE LIKE
Adrian B. Kennison, Plainfield, N. J., assignor to Johnson & Johnson, a corporation of New Jersey
Application July 15, 1947, Serial No. 761,064
14 Claims. (Cl. 206—63.3)

9. A shipping package of rigid but frangible hermetically sealed tubes adapted to be ruptured for removal of the contained material, whose outer surfaces are sterile, and which are ready for immediate surgical or medical use of the contained material upon the removal of the tubes from the package at shipping destination, said package comprising in combination: a hermetically sealed metal can; a plurality of such tubes vertically sustained in substantially parallel relation within said can; and a sterilizing liquid surrounding and substantially covering said tubes and filling a substantial proportion of the volume of said can, whereby said tubes are hydraulically cushioned against shock and continuously under the effective influence of the sterilizing liquid.



2,470,495
CALCULATOR
Harold B. Kohn, Bronx, and Morris Schneiderman, Brooklyn, N. Y.
Application September 13, 1946, Serial No. 696,862
3 Claims. (Cl. 235—61)

2. A calculator for indicating the inter-relation of factors of thickness, temperature, diameter, length and pressure of unfired pressure vessels in accordance with established formula whereby any unknown factor can be obtained when the other factors are known, which comprises an envelope having a face formed to provide a first transparent portion with a grid of crossing lines, one family of which represents thickness and the other of which represents diameter, and a correlated logarithmic temperature scale, and a second transparent portion having a grid of crossing lines representing thickness and temperature, said face being also provided with a length to diameter ratio scale; and a slide member relatively movable in said envelope, said slide member having on the side adjacent the transparent portions of the face of said envelope a family of curves representing length indexable with the grid of thickness and diameter lines, a correlated logarithmic pressure scale indexable with the temperature scale, and a system of lines representing diameter concurrently indexable with the grid of thickness and temperature, whereby limitations imposed by formula on the solution obtained by use of the first transparent portion will be indicated at the second transparent portion, the back of said envelope and the side of said slide adjacent thereto being formed to provide relatively movable cooperating scales of thickness and diameter, two separate relatively movable sets of cooperating scales of pressure and temperature, all of said scales being concurrently indexable and the selection of a set of pressure and temperature scales being governed by indications read on the grid of the second transparent portion and the length to diameter ratio scale.

2,470,496
WHEEL STEERING MECHANISM
Stephen Krilanovich, North Hollywood, Calif.
Application September 22, 1947, Serial No. 775,424
7 Claims. (Cl. 280—91)

5. A transmission for steering the four wheels of a vehicle comprising at least two shafts; a sprocket wheel on each shaft; a steering post, a sprocket wheel thereon; a cam on the steering post; a pair of sprocket wheels mounted for opposed movement under control of said cam; a second cam on said steering post; and a sprocket wheel mounted for movement transverse to the movement of the sprocket wheels controlled by the first cam; said sprocket wheels all being coplanar; a chain trained about the sprocket wheels whereby they all rotate in unison upon manual rotation of the steering post; and whereby the mentioned opposed movement of said pair of sprocket wheels effects a greater distance of travel of that portion of the chain engaged with the sprocket wheel of one of said shafts, with a corresponding greater angular travel of the latter sprocket wheel and its shaft, than is imparted to the chain by the mentioned manual rotation

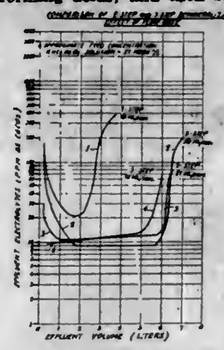
of the steering post and its sprocket wheel; and whereby the transversely movable sprocket wheel, under control of the second cam, moves to effect a shortening of that portion of the chain extending between the sprocket wheel having the greater angular travel and the sprocket wheel on the other shaft to reduce the travel of that portion of the chain engaged with the latter sprocket wheel, with a corresponding lesser angular travel in the same direction of said latter sprocket wheel and its shaft; a second pair of shafts; gearing connecting the latter and the first-mentioned shafts for rotating the second pair of shafts in a direction opposite to that of the first-mentioned shafts; a vertically disposed horizontal pivot for each wheel; and chain and sprocket means operatively connecting the four mentioned shafts and each respective wheel pivot.

2,470,497
PREPARATION OF POLYSILOXANE RESINS
Harry F. Lamoreaux, Ballston Lake, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application November 21, 1945, Serial No. 630,134
10 Claims. (Cl. 260—46.5)

1. The method of hydrolyzing a mixture of chlorosilanes containing a major portion of methylchlorosilanes, methyltrichlorosilane forming a major portion of the methylchlorosilane component of said mixture, the said mixture having a monovalent hydrocarbon-to-silicon ratio greater than 1.0 and less than 1.5, which method comprises slowly adding said chlorosilane mixture to a hydrolysis medium comprising a mixture of water in excess of that necessary for complete hydrolysis of said chlorosilane mixture, a high-boiling hydrocarbon solvent, and a solvent selected from the class consisting of dioxane, bis-(beta-ethoxyethyl) ether and ethylene glycol diethyl ether, and maintaining said hydrolysis medium at a temperature above room temperature but not exceeding the boiling point of water during at least a major portion of the hydrolysis period.

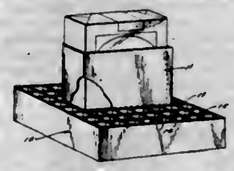
2,470,498
DEVICE FOR MEASURING THE THICKNESS OF WALLS OR THE LIKE, SUBJECT TO EROSION
Howard Y. Lankford, Gary, Ind., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application October 21, 1946, Serial No. 704,645
5 Claims. (Cl. 33—143)

1. A thickness-measuring device for walls or the like comprising a tube having one end adapted to be inserted through an opening in a wall, a slide rod extending into the other end of said tube, a detent pivoted on said rod within said tube, said tube having a slot adjacent said one end permitting tilting of the detent to a position transverse to the rod in which it is engageable with the inner edge of said opening and a gauge rod slidable on said tube having a portion adapted to engage the exterior of the wall.



2,470,499
PIPE FITTING
Chester A. Lapp, Cleveland, Ohio
Application April 19, 1947, Serial No. 742,609
10 Claims. (Cl. 285—210)

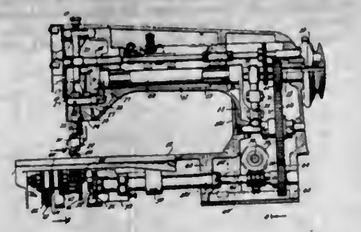
1. A pipe fitting comprising a tubular body formed from a pressed sheet metal blank, the walls of the abutting edges of the formed blank defining a seam, perforate cups on the ends of said tubular body and a strip overlying the portion of the seam intermediate the cups.



2,470,500
DEMINERALIZING
Franklin I. Latimer Lawrence, Bradford, Pa., assignor to The Permutit Company, New York, N. Y., a corporation of Delaware
Application August 25, 1945, Serial No. 612,704
4 Claims. (Cl. 99—1)

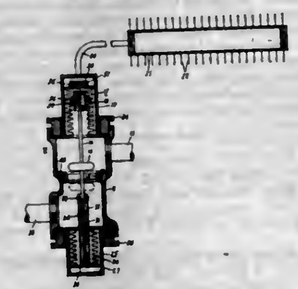
1. The process of removing electrolytes from an acidic solution containing salts which comprises bringing the solution first in contact with an anion exchanger to remove acids from the solution; thereafter bringing the solution in contact with a cation exchanger to remove metallic cations present and to replace them with hydrogen ions forming acids; and then bringing the

solution in contact with an anion exchanger to remove acids formed in the solution during the cation exchange reaction.



2,470,501
ASH TRAY
James Leaman, New York, N. Y.
Application March 26, 1945, Serial No. 584,834
1 Claim. (Cl. 131—235)

A tray of the class described comprising a substantially rectangular shallow container, and a filler removably fitted therein and comprising strips arranged in crossed right angular relation to form parallel rows of upright cells of a size to snugly receive one end of a cigarette, and a sheath of rectangular form adapted to contain a package of cigarettes and having slots in one end straddling said strips whereby said sheath is frictionally interlocked with the strips in upstanding position, said sheath extending above said cells a distance sufficient to hold a package of cigarettes therein seated on said strips and extending part way out of said sheath.



2,470,502
SEWING MACHINE
Harold J. Le Vesconte, Glendale, Calif., and Oscar Quist, Chicago, Ill., assignors to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application October 20, 1945, Serial No. 623,536
7 Claims. (Cl. 112—214)

1. In a sewing machine, a frame having a base, a vertical standard and an overhanging arm, said base and standard combining to provide a lubricant retaining housing, a power receiving shaft extending into said housing, a continuously driven work feeding wheel mounted in said base, an operating shaft for said wheel which extends into said housing, and reduction gearing within said housing for interconnecting said power receiving shaft and said operating shaft, said gearing being arranged to disperse lubricant within said housing to lubricate the relatively

moving surfaces therein including all of the gearing connecting said power receiving shaft with said operating shaft.

2,470,503
AUTOMATIC INVERSE MODULATION VALVE
Samuel J. Levine, West Orange, N. J., assignor to General Electric Company, a corporation of New York
Application September 7, 1946, Serial No. 695,535
8 Claims. (Cl. 236—1)

2. An automatic inverse modulation valve having an inlet and an outlet and having in combination relatively movable through-throw valvular members having a relatively closed position intermediate a pair of open positions for controlling the flow of fluid from said inlet to said outlet, and a pair of condition responsive devices, one having connections for effecting relative movement of said members each way between said pair of open positions, and the other having connections for preventing said relative movement between said relatively closed position and one of said open positions.

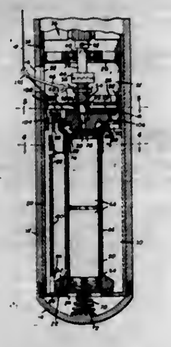
2,470,504
CONDENSING FATTY ACID HALIDES WITH AROMATIC ACID HALIDES
Eugene Lieber, New York, N. Y., and Aloysius F. Cashman, Bayonne, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application August 22, 1945, Serial No. 612,121
4 Claims. (Cl. 260—590)

1. The process which comprises condensing ½ to 5 mols of a fatty acid halide having the general formula RCOCl in which R represents an aliphatic hydrocarbon group having more than 10 carbon atoms, with 1 mol of an aromatic acid halide having the general formula ArCOCl, in which Ar represents an aromatic hydrocarbon nucleus, using a reaction temperature of about 400° to 700° F., and recovering from the reaction mixture a product having an average molecular weight of at least 700.

2,470,505
SLOW SETTING CEMENT AND PROCESS OF MAKING THE SAME
Norman C. Ludwig, Chicago, Ill., assignor to Universal Atlas Cement Company, a corporation of Indiana
No Drawing. Application June 28, 1946, Serial No. 680,091
7 Claims. (Cl. 106—92)

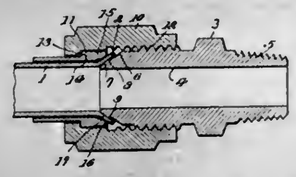
1. A cement composition for cementing oil wells having all of the characteristic properties of Portland cement except for a retarded setting rate that is substantially equal for temperatures within a range of between approximately 140 degrees F. and approximately 200 degrees F., the said composition consisting principally of Portland cement and an effective quantity of a retarding agent for retarding the stiffening rate of the said cement at the said temperatures, the retarding agent being composed of maleic acid and modified starch, the maleic acid and starch being proportioned to effect approximately equal stiffening times for the cement composition at elevated temperatures within the said range.

2,470,506
PICKER STICK
Carl Brynolf Lundstrom, Little Falls, N. Y.
Application October 19, 1948, Serial No. 55,400
6 Claims. (Cl. 139—157)



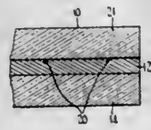
1. A wooden picker stick for use in looms, said stick having integral portions in which wood fibers, in number materially exceeding the number characteristic of a similar cross sectional area of untreated wood, are present, are bonded together in a transversely compressed state and afford localized densified portions to resist wear and impact, said densified portions being so limited as to location and transverse extent that the picker stick has throughout substantially its entire length a zone in which the wood is not densified.

2,470,507
ELECTRIC FISHING REEL
Dempsey A. Luton and Karl M. Johnson, Jackson, Wyo.
Application January 13, 1947, Serial No. 721,784
6 Claims. (Cl. 242—84.4)



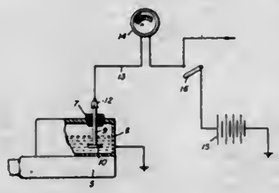
1. A unitary, power driven reel assembly, for fishing rods, comprising: a casing, an axially apertured closure at one end of said casing, a first and second partition axially spaced and intermediately disposed in said casing and forming a reel chamber, a motor chamber and an intermediate chamber, an axially extending reel rotatably mounted in said reel chamber, an electric motor axially positioned in said motor chamber, a drive shaft and clutch connected with said motor and mounted in said intermediate chamber and gearing means in said reel cham-

ber connecting said drive shaft and said reel, said reel having an axial bore, dry cell batteries in



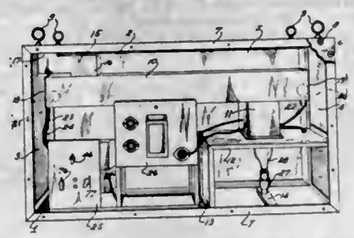
said axial bore and circuit means operably connecting said batteries and said motor.

2,470,508
COUPLING FOR TUBES
Walter Maky, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application September 22, 1944, Serial No. 555,327
1 Claim. (Cl. 285—86)



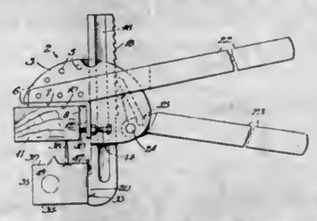
A coupling for metal tubes having the ends thereof flared comprising coupling members having a threaded connection, one of said members having a seat against which the flared end of the tube is clamped, said seat having an inner conical portion and an outer conical portion substantially parallel thereto which is offset inwardly of the inner conical portion so as to provide a shoulder therebetween so that the inner portion of the flared end of the tube contacts initially with said inner conical portion of the seat, the other coupling member having associated therewith a clamping head provided with an outer conical portion disposed radially outwardly from said shoulder so as to initially engage the outer face of the flared end of the tube in the region opposed to the outer conical portion on the seat so that the end of the tube will be bent over said shoulder into intimate contact with said outer conical portion of the seat when the coupling is closed, said head having an inner conical surface initially out of contact with the flared end of the tube and adapted to clamp the flared end of the tube against the inner conical portion on the seat when said coupling is closed.

2,470,509
METHOD OF MAKING HEATED WINDOW GLASS
Herman R. Marini, New Kensington, Pa., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
Application May 2, 1945, Serial No. 591,556
7 Claims. (Cl. 154—2.81)



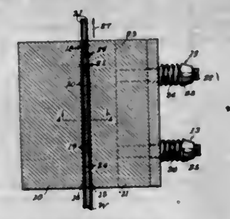
1. In a method of making a laminated defrosting unit including glass plates bonded upon opposite sides of an adherent plastic interlayer; the steps which comprise applying an interlayer of adhesive plastic material on one side of a glass plate, applying a second glass plate in superposed relation upon the exposed side of the interlayer with an interposed non-adhesive medium to prevent the second plate from adhering to the interlayer, applying heat and pressure to the assembly thus formed until the plastic is pressed and molded to the final shape of the interlayer, subsequently removing the second plate and non-adhesive medium from the interlayer, applying wires to the exposed molded surface of the interlayer, applying a glass plate to the molded interlayer in contact with the wires and bonding the elements thus assembled under the action of heat and pressure to form a composite laminated unit.

2,470,510
LIQUID LEVEL GAUGE
Nathan Ross Matson and Leo A. Milewski, Glendale, Calif., assignors of thirty-three and one-third per cent to Albert Earl Hedrick, Glendale, Calif.
Application June 20, 1947, Serial No. 755,818
1 Claim. (Cl. 73—304)



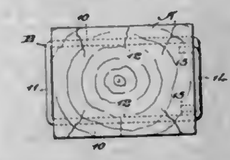
A liquid level gauge comprising a chamber containing fluid included in a circuit with a gauge instrument, an insulation sleeve in the top of the chamber, and an electrode slidable in the sleeve and frictionally held in vertically adjusted position, said electrode having its upper end connected in said circuit, said electrode having a flange at its lower end immersed in the liquid to provide a variable resistance in the circuit in accordance with variations of the level of the liquid, said gauge instrument being responsive to such variations to indicate the level of the liquid.

2,470,511
DETECTION OF IMPURITIES
Rex D. McDill, Cleveland Heights, Ohio, assignor to James B. Shaver, University Heights, Ohio
Application July 12, 1944, Serial No. 544,562
3 Claims. (Cl. 98—1)



1. Measuring apparatus comprising a casing, a horizontal extending conduit therein for sampling air to be conditioned in an enclosure, removable light-tight closures at the ends of said conduit, a source of light within said conduit adjacent one of said closures, a light sensitive element within said conduit and an air sample therein and adjacent the other said closures, a depending inlet conduit communicating with said first mentioned conduit, an upwardly extending exhaust conduit communicating with said first mentioned conduit adjacent its other end and having a plurality of offsets, the inlet and outlet conduits communicating with the first mentioned conduit between the source of light and the light sensitive element, a heating device positioned below the lower end of the inlet conduit, electrical amplifying apparatus within the casing and responsive to said light sensitive element and arranged to operate a relay, a source of current controlled by the relay, and electrically operated air conditioning apparatus for said enclosure operated by said current and controlled by the relay.

2,470,512
ELECTRICAL OUTLET BOX ATTACHING TOOL
Sidney A. Moore, Phoenix, Ariz.
Application June 13, 1947, Serial No. 754,492
6 Claims. (Cl. 1—47)

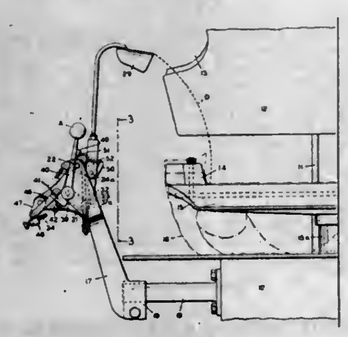


1. A tool for attaching outlet boxes to wall frame members comprising a plate-shaped body having a jaw thereon with a pressure plate thereon, a location and depth gauging plate in right angular relation thereto, a movable jaw having a box holding pressure plate with spring elements adapted to retain an outlet box thereon, and a slide operating in said frame so as to move said box toward said pressure plate on said body jaw in parallel relation therewith and means for forcing said movable jaw and box holding pressure plate toward said pressure plate on said frame jaw including a hand lever on said body, having a pawl, and a ratchet operated thereby on said movable jaw slide.

2,470,513
FILM GAUGE
Clarence W. Morse, Santa Monica, Calif., and Hans Christian Deichert, Youngstown, Ohio; said Deichert assignor to said Morse
Application December 7, 1946, Serial No. 714,762
2 Claims. (Cl. 91—53)

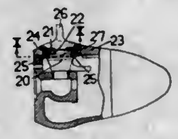
1. A liquid coating thickness controlling device for webs comprising a pair of relatively yieldingly movable blocks, raised rib means on the operative face of each block engaged with the opposed faces of the web to locate the same, and means on at least one of said block faces as a coated web is passed between the blocks for dividing the coating of the web into spaced strips of one thickness, then gradually spreading said strips of coating and simultaneously gradually thinning the same and then connecting the strips to form a uniformly spread coating thinner than the thickness of the strips, and having a cross-sectional area substantially equal to the sum of the cross-sectional areas of the spaced strips of coating.

2,470,514
ANTISPLITTING MEANS FOR ARTICLES OF TIMBER
George W. Muller, Miami, Fla.
Application September 6, 1946, Serial No. 695,262
2 Claims. (Cl. 20—0.5)



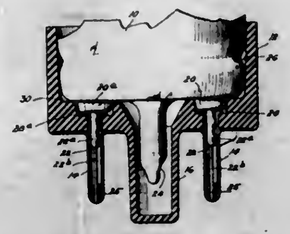
2. An article of timber having a pair of holes bored therein and extending therethrough adjacent to an end and adjacent to two opposite surfaces thereof, respectively, a rod of U shape including a pair of legs extending through said holes and a bight portion connecting said legs together and disposed against one of two other opposite surfaces of said article, the free end portions of said legs being bent toward and into overlapping relationship to each other against the other of said last mentioned surfaces and having their terminals inturned and driven into said article, whereby the end portion of the article is held against splitting longitudinally and spreading transversely in any direction.

2,470,515
PLASTICIZED PROLAMINES
Latimer D. Myers and J. D. Fitzpatrick, Cincinnati, Ohio, assignors to Emery Industries, Inc., Cincinnati, Ohio, a corporation of Ohio
No Drawing. Application July 5, 1946, Serial No. 681,598
5 Claims. (Cl. 106—153)



1. A composition of matter consisting essentially of zein plasticized with mixed products resulting from the heating of a higher unsaturated aliphatic nitrile with a chromic acid oxidizing solution for a sufficient time to cause cleavage of the double bond of a substantial portion of the unsaturated nitrile, the said mixed product being present in the zein in quantity sufficient to plasticize said composition.

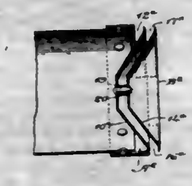
2,470,516
AUTOMATIC RELEASE COLLAR CLAMP
Edmund N. Neckel, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a corporation of Ohio
Application July 3, 1947, Serial No. 758,863
3 Claims. (Cl. 38—13)



2. A shirt pressing machine of the character described, comprising a stationary frame, cooperating relatively movable head and bed members movably mounted thereon, the head being movable downwardly from open to safe closed position to close the press and the bed being movable upwardly against the closed head to apply final heavy pressure to the work, a neck band supporting block mounted upon the bed, and releasable means for clamping the neck band thereto, comprising an arm pivotally mounted upon the frame and carrying a clamp adapted for embracing and clamping relation with a neck band on said block, means normally biasing said arm toward clamp open position, and manually operated mechanism for turning said arm in one direction to advance the clamp to clamping relation with the block, said mechanism including yieldable over center toggle mechanism having a knuckle movable across dead center to a holding position as the clamp is advanced to clamping position, said toggle mechanism being so arranged that as the bed rises to apply final pressure to the work consequent rising motion of the clamp with the bed retracts said arm and returns the toggle knuckle across dead center to a position in which the arm is subjected to its bias means and is thereby returned to clamp open position.

2,470,517
VARIABLE-PITCH PROPELLER
Heinrich Obrist, Zurich, Switzerland, assignor to Escher Wyss Maschinenfabriken Aktiengesellschaft, Zurich, Switzerland, a corporation of Switzerland
Application March 27, 1945, Serial No. 585,039
In Switzerland April 27, 1944
2 Claims. (Cl. 170—160.24)

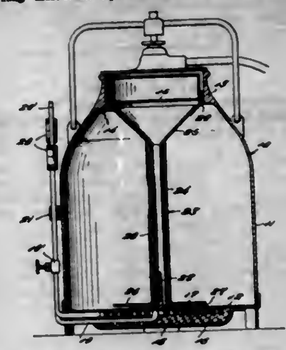
1. In a variable pitch propeller, the combination of a hollow hub having its peripheral portion constructed as a continuous un-split shell, said hub having near its axis a plurality of radially disposed bearings one for each blade root and a plurality of generally circular apertures in said peripheral portion and respectively centered on the axes of corresponding radially disposed bearings, each aperture having opposed notches for the passage of bayonet locking lugs; a plurality of blades each having a root, each of said roots having at its inner end a trunnion adapted to work in a corresponding radially disposed bearing and having near its outer end a journal the diameter of which is slightly less than that of a corresponding one of said apertures, each root having between said journal and trunnion an integral arm radial to the axis of the root; bayonet locking lugs sustained by respective roots against relative axial displacement at least in the direction toward the trunnion end thereof, said lugs having connection with and projecting radially outward beyond the journal adjacent the inward end thereof, said lugs being dimensioned to enter said shell through said notches and engage the inner surface of the shell; and bearing-forming means interposed between each journal and the surrounding portion of said shell.



2,470,518
BASING OF RADIO TUBES AND THE LIKE
Mark J. Orr, Emporium, Pa., assignor to Sylvania Electric Products, Inc., a corporation of Massachusetts
Application November 20, 1946, Serial No. 711,106
6 Claims. (Cl. 250—27.5)

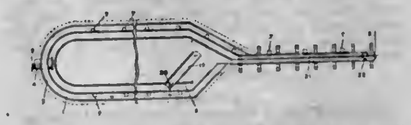
1. A radio tube comprising a glass envelope having a generally flat end, a plurality of metal leads extending through said flat end, a glass

collar surrounding each of of said leads and integral with said end, a base of insulating material having a series of cavities slightly larger than said collars and arranged to receive the collars, and an upstanding tubular portion adapted to receive said glass envelope, a plurality of metal tubes secured to said base, one tube in each of at least several of said cavities and projecting from the opposite surface of the base, the bore of said tubes being larger than the maximum diameter of said leads, said leads being secured to said tubes at their ends remote from the end of said envelope, one of said collars being larger than others and one of said cavities being larger than others to assure unique orientation of the base with respect to the envelope, and a central projection from said base having a circularly asymmetrical orientation portion.



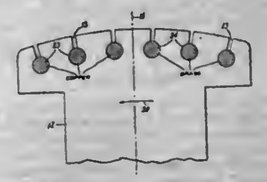
2,470,519
NOZZLE
Arthur S. Peterson and Carl K. Johnson, Elmwood, Conn., assignors to Anemostat Corporation of America, New York, N. Y., a corporation of Delaware
Application September 13, 1946, Serial No. 696,692
10 Claims. (Cl. 299—142)

1. A nozzle comprising a tubular element open at its rear end for supply of air thereto and including an end wall closing its front end, said tubular element including a side wall having therein a discharge opening for egress of air from said element, a second end wall disposed in front of and spaced from said first mentioned end wall, and a pair of side walls between said end walls at the peripheries of the latter, said pair of side walls being disposed in spaced apart relation to each other circumferentially of the nozzle to provide an air inlet opening and an air outlet opening for the space between said end walls, said inlet opening being disposed outside of planes which radiate from the axis of said tubular element and which define the angular limits of said discharge opening, and said outlet opening being disposed at least in part between said planes.



2,470,520
REFRIGERATED MILKER PAIL
Theophil J. Pfetcher, Norwalk, Wis.
Application August 8, 1946, Serial No. 689,307
4 Claims. (Cl. 31—4)

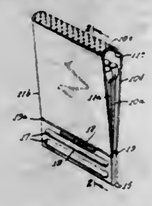
1. A refrigerated milker pail which includes a receptacle adapted to receive fresh warm milk from a supply source, means on the receptacle to refrigerate an area thereof, a tube extending into the receptacle into which fresh warm milk is delivered from the source, a spreader carried by the tube adjacent the discharge end thereof, said spreader being of an area substantially equal to the refrigerated area and feet on the spreader resting on the refrigerated area to space the spreader a small distance from the refrigerated area to create a restricted passage in which the inflowing milk is spread into a thin layer over



the refrigerated area and becomes chilled before it enters the receptacle around the tube.

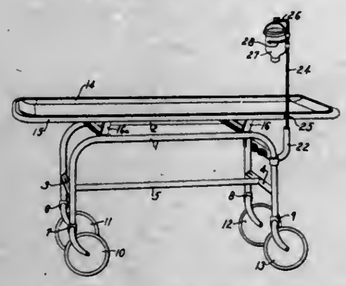
2,470,521
CURRENT CONVEYER
Everett W. Preble, Anson, Maine
Application September 21, 1945, Serial No. 617,869
1 Claim. (Cl. 302—14)

A log conveyer comprising an elongated pool having a wall with a plurality of spaced recesses, a casing mounted in each of the recesses and having a vent, a grating covering the vent, a propeller assembly mounted in the casing, and a conveyer passage extending from the pool, said propeller assemblies and the forward walls of the recesses being inclined toward the passage.



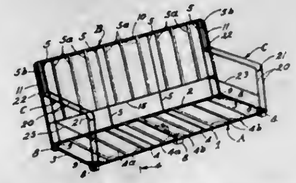
2,470,522
DAMPER WINDING FOR DYNAMOELECTRIC MACHINES
Andrew W. Rankin, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application August 7, 1947, Serial No. 767,155
5 Claims. (Cl. 171—252)

1. A dynamoelectric machine having salient pole pieces of magnetic material with winding slots therein, and a damper winding in said slots, said winding having reactance-resistance ratio characteristic in the leading half of each pole



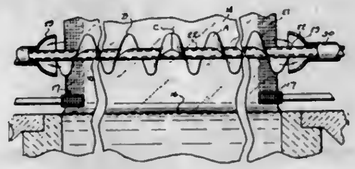
piece which, when measured at standstill, is unsymmetric with respect to the reactance-resistance ratio characteristic of said winding in the trailing half of each pole piece.

2,470,523
MATCH BOOK
Giuseppe Russo, New York, N. Y.
Application November 15, 1944, Serial No. 563,471
2 Claims. (Cl. 206—29)



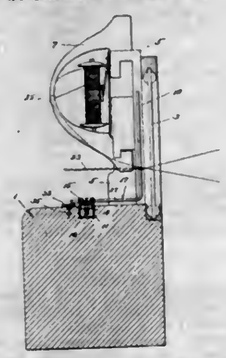
1. A match book comprising a strip of book matches having striking heads and a paper cover therefor, said cover having protective side portions on opposite sides of said strip secured to the base thereof, and free opposed ends adjacent to said striking heads, and preformed complementally reversely curved overlapping and interfitting stiffened portions on said free ends for retaining said portions in protective relation to said striking heads, one of said curved portions being shorter than the other curved portion to permit the curved portions to be pressed into interfitting relation by pressure applied to said side portions.

2,470,524
INTRAVENOUS STAND ATTACHMENT FOR WHEEL STRETCHERS
Eliot R. Scudder, Palmer, Mass., assignor to Jarvis & Jarvis, Inc., Palmer, Mass., a corporation of Massachusetts
Application July 13, 1946, Serial No. 683,574
1 Claim. (Cl. 311—10)



In a wheel supported stretcher having a lower chassis with vertical supports and an upper bed frame supported thereon, said bed frame having a peripheral guard rim positioned laterally beyond the vertical planes which encompass said chassis, means for suspending a jar of intravenous fluid over and above said bed frame comprising a bracket detachably secured to said chassis beneath said bed frame, said bracket having a pair of telescoping bars with clamp portions adjacent their outer ends for engaging vertical supports of said chassis and screw adjusting means at the inner ends of the bars to draw the same together in clamping engagement with said chassis, with the outer end of a bar extending beyond its clamp portion and being upwardly turned to lie in substantially vertical alignment with the edge of said peripheral guard rim, and a vertical stem rising from said vertically disposed outer bar end and extending within the peripheral guard rim of said bed frame to a point above said bed frame, said stem having at its upper end a hook member projecting inwardly over said bed frame for the suspension of said jar.

2,470,525
COUCH FRAME
Frank J. Schultheis, Lakewood, Ohio, assignor to Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey
Application April 21, 1945, Serial No. 589,631
3 Claims. (Cl. 155—194)



1. A metal furniture frame comprising rectangular, tubular, metal base and back frames having one side in common and defining an included obtuse angle, tubular braces connecting the sides of said back frame between its ends, tubular arm frames comprising inner and outer parallel tubes connected to and extending up from the front corners of the base frame and connected to the back between its sides, and brace tubes connecting the upwardly extending parts of the inner arm tubes to tubes of the back frame.

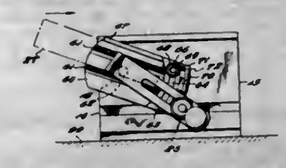
2,470,526
APPARATUS FOR DRAWING SHEET GLASS
Donald E. Sharp, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application December 8, 1944, Serial No. 566,857
9 Claims. (Cl. 49—17)

1. Apparatus for producing sheet glass comprising a receptacle adapted to be continuously supplied with a pool of molten glass, means for drawing a sheet upwardly from said pool, and rotary air flow devices positioned transversely of the sheet in its zone of formation, said devices being positively driven and having pitched blades for inducing a flow of air laterally of the sheet in both directions from the center thereof toward both edges.

2,470,527
WEFT DETECTOR
Samuel F. Siciliano, Westerly, R. I., assignor to George C. Moore Company, Westerly, R. I., a corporation of Rhode Island
Application December 6, 1945, Serial No. 633,069
20 Claims. (Cl. 139—370)

1. In a narrow fabric loom having a lay and a plurality of reeds and shuttles thereon, in combination, a weft feeler adjacent each of a plurality of reeds and positioned by engagement with a weft thread extending from a shuttle to the fabric being woven by the latter, and means calling a change in the action of the loom when any of the feelers fails to be positioned by a weft thread as the lay beats up.

2,470,528
MOUNTING BRACKET ASSEMBLY FOR CUP DISPENSERS
Clark D. Sims, Elmhurst, Ill., assignor to Lily-Tulip Cup Corporation, a corporation of Delaware
Application April 30, 1947, Serial No. 745,009
4 Claims. (Cl. 248—293)

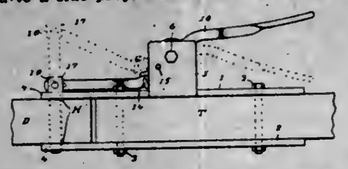


1. A mounting bracket assembly for mounting a dispenser for paper cups in a recess comprising, a bracket secured in the recess, a bracket secured to the dispenser, a pivotal connection between the brackets for swinging the upper end of the dispenser out of the recess to permit filling thereof, inter-engaging parts on the brackets for retaining the upper end of the dispenser in the recess, and cam means on the brackets for securely holding the inter-engaging parts on the brackets together.

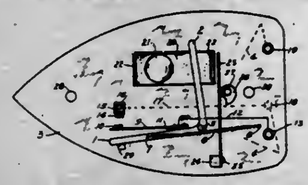
2,470,529
PESTICIDAL COMPOSITION OF POLYETHYLENE POLYSULFIDE AND NICOTINE SULFATE
William D. Stewart, Yonkers, N. Y., assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application June 13, 1945, Serial No. 599,317
1 Claim. (Cl. 167—24)

A composition capable of protecting plant life from destruction by fungi and insects comprising an aqueous dispersion containing a polymeric ethylene polysulfide having a polymer particle size of 1 to 3 microns and having a sulfur content of 80 to 85%, and nicotine sulfate.

2,470,530
GRINDING BLOCK ARRANGEMENT
Joseph M. Stryhal, Miami, Fla.
Application May 28, 1946, Serial No. 672,731
3 Claims. (Cl. 51—217)



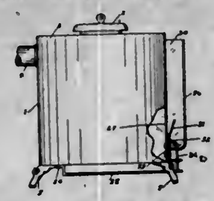
3. In a grinding block arrangement for holding work pieces and tools during the grinding operation, a prismatic block, provided with at least one T-shaped groove running in substantial parallelism to the edges of the prismatic block and further provided with holes and an adjustable clamping device provided with a clamping arm, a counter plate in contact with said arm, a clamping bolt slidable in said T-shaped groove and adapted to press said clamping arm against said work piece, and a counter pressure bolt fixed in said counter plate and pressing against said block, a swivel block provided with grooves and stops for aligning the work piece in a fixed direction on said block and further provided with a pivot, adapted to fit in one of the holes of the grinding block, an arcuate slot, a graduation scale in parallelism with said slot, a fixation means for the swivel block fixed in the grinding block and passing through the arcuate slot, adapted to fix said swivel block at the desired angle, said clamping device holding the work piece when aligned on said swivel plate.



2,470,531
WAGON TONGUE HITCH
Richard Warren Suhl, Sullivan, and Elmer C. Marxmiller, Arthur, Ill.
Application October 2, 1946, Serial No. 700,760
1 Claim. (Cl. 280—33.15)

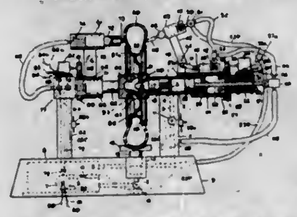
A quick detachable tongue hitch comprising top and bottom plates adapted to be fitted respectively on the top and bottom of the tongue and to extend forwardly beyond the end thereof, the forward ends of said plates having holes and

adapted to receive between them a draw bar having a hole therein, said top plate having projections extending upwardly from the sides thereof, a sleeve extended between the projections, means for securing the sleeve to the projections, a hand lever pivoted intermediate its length on said sleeve, said lever being bent to have its intermediate portion offset from its ends and to lie at the opposite side of the sleeve and adjacent one of the projections, and a coiled spring anchored to the lever at one end of the spring and to a side projection of the plate at the opposite end of the spring, said spring surrounding the sleeve and being extended over substantially the full length thereof, and a hitch pin secured to one end of the lever for alignment with the holes of the plate and with the hole of the draw bar, said spring being biased to hold the hitch pin in place, said lever being bent to form a compound curve in a vertical plane so that its forward portion when the lever is down and the hitch pin in place will lie parallel to and square with the top face of the top plate, said sleeve having an annular flange at one end and said spring urging the lever against said annular flange.



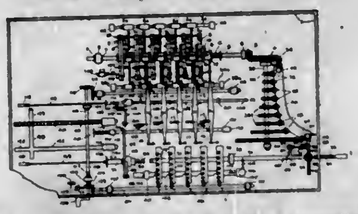
2,470,532
ELECTRIC IRON WITH THERMOKINETIC SWITCH
Albert G. Thomas, Lynchburg, Va.
Application August 14, 1943, Serial No. 498,621
8 Claims. (Cl. 219—25)

1. An electric iron comprising, an ironing element, a heating element therefor, a handle, a switch for opening and closing a circuit including said heating element, snap-acting spring-operated means for holding said switch closed or open, an iron-motion-responsive weight for moving the snap-acting means to close said switch, and time-delay means for moving the snap-acting means to open said switch.



2,470,533
AUTOMATIC STOVE
Albert G. Thomas, Alexandria, Va.
Application March 7, 1945, Serial No. 581,361
3 Claims. (Cl. 236—93)

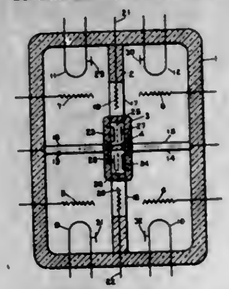
1. In a stove, an air duct connected with an opening in a wall of said stove, a flap valve for said opening pivoted to said stove adjacent the lower part of said valve, an arm extending from said valve and tending by means of its weight to assist in moving said valve in a direction away from said opening, a substantially vertically movable element adapted when lifted to strike said arm to move said valve in a direction toward said opening, and an elongated bimetal element attached adjacent one end thereof to said stove beneath a bottom surface thereof, said vertically



movable element being associated with said bimetal element adjacent the other end thereof to cause movement of said valve toward said opening upon rise of temperature of said bimetal element.

2,470,534
CIRCUMFERENTIALLY TRAVELING TYPE POWER-OPERATED TIRE MOUNTING AND REMOVING DEVICE
Albert G. Thomas, Alexandria, Va.
Application April 26, 1945, Serial No. 590,495
7 Claims. (Cl. 157—1.24)

1. In a tire handling device, means for holding a wheel carrying said tire, a first cylinder coaxial with said wheel, a first piston movable in said cylinder, a sleeve rotatable and slidable on said cylinder, means connecting said piston and sleeve, a second cylinder carried by said sleeve, a second piston movable in said second cylinder, a tire-removing element attached to said second piston, means for rotating said sleeve around said first cylinder, and means for producing fluid pressure in said cylinders to actuate said pistons.

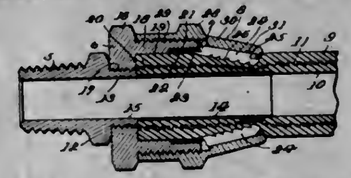


2,470,535
CALCULATING MACHINE
Albert G. Thomas, Lynchburg, Va.
Application September 3, 1946, Serial No. 694,627
16 Claims. (Cl. 235—61)

1. A calculating machine including computing mechanism comprising a plurality of numeral

wheels, a numeral wheel shaft on which said wheels are mounted, a gear carrying shaft geared to said numeral wheel shaft, said gear carrying shaft having thereon a series of gears the diameters of which increase in one direction in geometrical ratio, and a depressible multiplier key controlling each gear of said series.

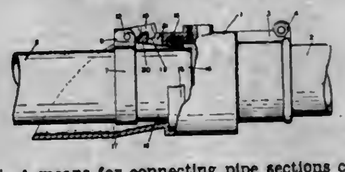
2,470,536
ELECTRONIC SWITCH
Albert G. Thomas, Lynchburg, Va.
Original application January 18, 1945, Serial No. 573,366. Divided and this application October 31, 1947, Serial No. 783,295
13 Claims. (Cl. 250—27.5)



1. An electron discharge device comprising, an envelope, a cathode adjacent one end of said envelope, another cathode adjacent the opposite end of said envelope, anode means forming a partition intermediate said cathodes, and control means intermediate said cathodes and said anode means.

2,470,537
MINERAL OIL COMPOSITIONS
Stanley P. Waugh, Westfield, N. J., assignor to Tide Water Associated Oil Company, Bayonne, N. J., a corporation of Delaware
No Drawing. Application June 26, 1947, Serial No. 757,325
7 Claims. (Cl. 252—56)

1. A lubricating composition suitable for use under aqueous conditions and characterized by forming upon admixture with water a water-in-oil emulsion having lubricating properties which comprises a mineral oil in major proportional amount having dissolved therein (a) at least about 1% but less than about 15% by weight of a blown semi-drying fatty oil and (b) about 0.05 to about 1.0% by weight of (1) a hexitol anhydride partially esterified with a fatty acid of at least 12 carbon atoms and (2) about 0.05 to about 1.0% by weight of a polyoxyalkylene derivative of a hexitol anhydride partially esterified with a fatty acid of at least 12 carbon atoms.

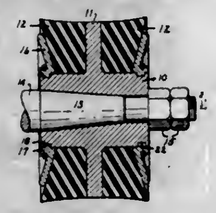


2,470,538
FOUR-PIECE HOSE COUPLING
John N. Wolfram and Shirley W. Packard, Cleveland, Ohio, assignors to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application February 16, 1944, Serial No. 522,899
5 Claims. (Cl. 285—86)

1. In a hose coupling of the character described, a nipple formed to provide a thin cylindriform extension insertible in the end of a hose to be clamped and a socket sleeve threaded on the nipple to provide a stepped annular chamber for receiving said hose end, a clamp sleeve contracting nut threadable on the socket sleeve and having a tapered camming surface surrounding the hose and the cylindriform extension inserted therein, and a contractible clamp sleeve sur-

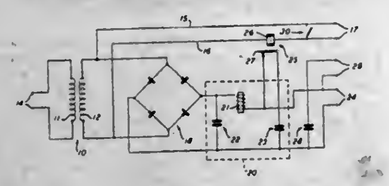
rounding the hose within the stepped portion of the socket sleeve and the nut and having one end abutting and held against endwise movement by the socket sleeve and its other end presented for engagement by the camming surface of the nut for being contracted against the external surface of the hose as the nut is threaded home on the socket sleeve.

2,470,539
LOCK FOR IRRIGATION PIPE JOINTS
Raymond C. Wyss, Tillamook, Oreg.
Application March 5, 1947, Serial No. 732,593
2 Claims. (Cl. 285—170)



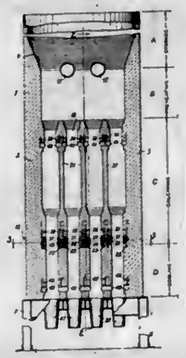
1. A means for connecting pipe sections comprising a coupling formed with a collar to engage a pipe section, a flaring skirt open at the front and top and extending outwardly from the collar to permit introduction at an incline of an abutting pipe section when connecting pipe sections together, the collar having an annular interior groove adjacent the inner end of the skirt, a packing in the groove, the skirt in rear of the open portion having an opening for a lock when pipe sections are coupled together.

2,470,540
PROTECTIVE SLEEVE FOR PUMP RODS
Henry B. Young, Houston, Tex., assignor to Mission Manufacturing Company, Houston, Tex., a corporation
Application October 8, 1943, Serial No. 505,463
10 Claims. (Cl. 74—579)



1. A reciprocating pump rod and sleeve therefor fitting closely about the rod including means to thread the sleeve on the rod, and a resilient seal to prevent leakage along the rod inside of said sleeve, said seal comprising a lip type packing disposed in the end of said sleeve.

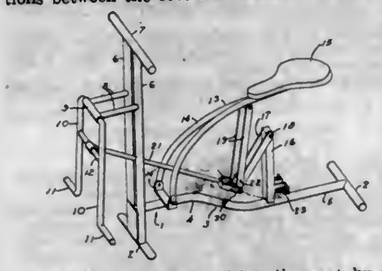
2,470,541
SLUSH PUMP PISTON
Henry B. Young, Houston, Tex.
Application June 2, 1947, Serial No. 751,702
9 Claims. (Cl. 309—4)



1. In a slush pump piston having a body on which a sealing packing is mounted, means for securing the sealing packing on the piston against displacement therefrom comprising a plurality of dished end plate sections, cooperating tongue and groove means on the piston body and the inner edges of said end plate sections, each end plate section having a snap ring receiving groove adapted to form a groove when the section is in assembled position on the piston body, and a snap ring placed in the thus formed groove.

2,470,542
ELECTRICAL POWER SUPPLY
Walter W. Zimmerman, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application October 29, 1947, Serial No. 782,719
4 Claims. (Cl. 171—97)

4. An electrical power supply network for connection to an alternating current source to modify the current therefrom and comprising an inductive voltage modifying unit to be connected to the source, a current rectifying unit having the input thereof connected to the output of the inductive unit, a pair of alternating current output terminals connected in parallel with the rectifier to the source, an alternating current buzzer having the operating coil thereof connected in the connection between one of the alternating current output terminals and the source, a filter unit having its input terminals connected across the output terminals of the rectifying unit and including a condenser in the filter circuit, a pair of direct current output terminals connected across the output of the filter unit, and a second pair of direct current output terminals also connected across the output of the filter unit but with a condenser in series between one of the said terminals and the filter unit, the armature of the buzzer being connected as a relay contact in the filter circuit in series with the filter circuit condenser to make and break the circuit through the said condenser when the buzzer is actuated.

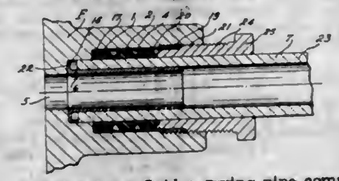


2,470,543
CALCINING APPARATUS
Victor J. Azbe, Webster Groves, Mo., assignor to Azbe Corporation, University City, Mo., a corporation of Missouri
Application October 24, 1946, Serial No. 705,259
8 Claims. (Cl. 263—29)

1. A kiln comprising a vertical hollow shaft wherein material to be calcined gravitates downward from a storage zone constituted by the uppermost portion of the shaft successively through a preheating zone, a calcining zone and a cooling zone, means including a plurality of firing walls extending from the lower end of said shaft through said cooling and calcining zones substantially to the upper end of the calcining zone dividing these zones into a plurality of vertical passages, each passage constituting a channel for downward flow of said material and having an outlet at the lower end of the shaft, whereby material flowing downward from the preheating zone is divided to flow independently in the respective channels, each firing wall and the walls of said shaft having ducts therein for introduction of fuel independently into each of said channels at the lower end of said calcining zone, gas offtakes within said kiln for withdrawing diluent gas therefrom, said offtakes being located, respectively, at the upper end of the preheating zone and in the firing walls and walls of said shaft adjacent the upper end of the calcining zone, each firing wall and the walls of said kiln having ducts therein for introducing said diluent gas into said channels adjacent the lower end of said calcining zone.

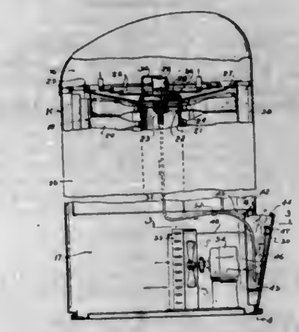
2,470,544
EXERCISING DEVICE
Joseph D. Bell, San Francisco, Calif.
Application September 24, 1948, Serial No. 50,983
7 Claims. (Cl. 272—79)

7. An exercising device comprising an elongated base frame having a post at its front and a second post rearward thereof, a seat member having a link connected to the same, a second link having one end connected to the first link and the other end to the second post, a foot rest member mounted on the first post and connections between the foot rest member and one of



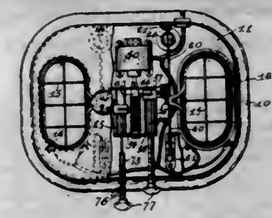
the links operable for raising the seat by the movement of the foot rest member.

2,470,545
VULCANIZING RUBBER
Edward S. Blake, Nitro, W. Va., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application June 22, 1944, Serial No. 541,661
12 Claims. (Cl. 260—79)



1. The process of vulcanizing a sulfur vulcanizable rubber comprising a conjugated butadiene hydrocarbon polymer which comprises heating the said rubber in the presence of, as the sole vulcanizing agent, at least 2.15 but not more than 6.8 parts by weight on the rubber of a di(hydroxy aryl)sulfide containing more than one atomic weight proportion of sulfur for each molecular weight proportion of hydroxy aryl radical.

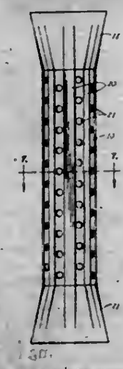
2,470,546
TUBE SECURING MEANS
Bert G. Carlson, Gates Mills, Ohio
Application March 30, 1946, Serial No. 658,372
2 Claims. (Cl. 285—166)



1. A fitting for a fluid carrying pipe comprising a body having an opening for an end of such a pipe and having a recess defined in part by a cylindrical surface coaxial with said pipe and an abutment surface at a substantially right angle to said pipe axis, an annular metal shell having a mid-portion engageable with said cylindrical surface and side portions extending divergingly inward, a resilient annulus in said shell, said side portions and annulus engaging with the outer surface of said pipe, and a sleeve having a face substantially at right angles to the pipe axis and being movable adjustably endwise into said recess, the inner edges of said shell initially engaging the abutment surface and sleeve face whereby axial movement of the sleeve into the body serves to force the inner edges of the shell toward each other and to increase the radial length of said side portions and the pressure of said portions and said annulus on said pipe and to deform the latter inwardly.

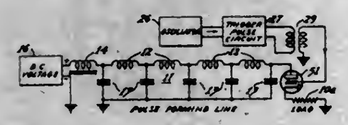
2,470,547
REFRIGERATOR HAVING CONDENSATE DISPOSAL MEANS
Harry S. Childers, Fresno, Calif., assignor to Vendoriator Manufacturing Company, Fresno, Calif.
Application June 30, 1945, Serial No. 602,441
8 Claims. (Cl. 62—103)

1. In combination: a cabinet having a compartment therein, having an air inlet opening and an air outlet opening; an electrical refrigerating apparatus having a cooling coil in said cabinet above said compartment, a condensate collecting pan for said coil; a fan for circulating air from said inlet opening outwardly of said outlet opening; and a disposal system for the condensate collected in said pan, comprising, a door in said air outlet opening having a receptacle thereon, means for conducting condensate from said pan to said receptacle and a wick-like material on said door, in the path of air leaving said outlet opening, and so extending into said receptacle as to have contact with the condensate in said receptacle.



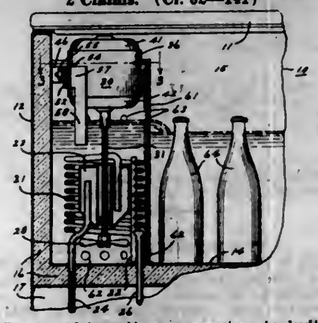
2,470,548
AUTOMATIC EGG BOILER
Norbert Desjardins, Montreal, Quebec, Canada
Application February 14, 1945, Serial No. 577,767
3 Claims. (Cl. 99—336)

1. A portable, automatic egg-boiler comprising, in combination, a water well, means for heating the water, an egg-holding basket lowerable into the water, a spring urging said basket upward and a latch for retaining said basket in lowered position, a threaded lead screw constantly rotated and held against longitudinal movement, a block slidable parallel to said screw



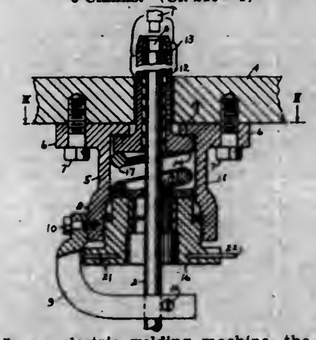
and adapted to trip the latch, an extension arm pivoted to said block and engageable with the screw threads so as to be propelled by the screw, and means for selectively engaging the arm with the screw at preselected points therealong corresponding to time intervals required by the block to reach the latch tripping position, said screw being unthreaded at this position.

2,470,549
TEXTILE THREAD CARRIER
Charles K. Dunlap, Hartsville, S. C., assignor to Sonoco Products Company, a corporation of South Carolina
Application April 1, 1946, Serial No. 656,842
5 Claims. (Cl. 242—118)



1. A textile thread carrier comprising a fibrous tubular body formed with integral conical end portions and reinforcing ribs, said end portions and reinforcing ribs being formed by folding said tubular body at intervals parallel with its longitudinal axis but in a longitudinal extent terminating short of each end of said body and flattening the folds thus formed against said body whereby said reinforcing ribs are set in place.

2,470,550
PULSE PRODUCING APPARATUS
John Evans, Hightstown, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 28, 1946, Serial No. 650,967
13 Claims. (Cl. 250—27)

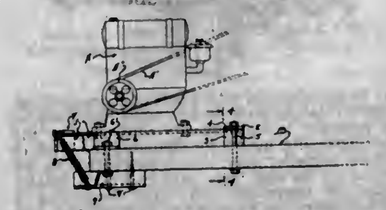


2. The method of utilizing a time delay network for producing and applying to a load high voltage impulses of short duration at time intervals long in relation to said short duration, comprising charging said network and periodically discharging said network into said load substantially without reflection at the load end of said network but with reflection at the other end of said network.

2,470,551
LIQUID COOLER, INCLUDING AGITATOR MOTOR AND HEAT REMOVING DEVICE THEREFOR
Mortimer W. Fish, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application September 13, 1946, Serial No. 696,646
2 Claims. (Cl. 62—141)

1. In a refrigerating apparatus including a cabinet having a plurality of walls forming an insulated compartment therein for the reception of articles to be cooled and stored, a body of liquid in said compartment, an evaporator of a refrigerating system for cooling said liquid, an agitator for circulating the liquid over said evaporator, an electric motor above the level of the body of liquid in said compartment and connected to said agitator for operating same, said motor including a casing, a rotor and a stator within said casing, said stator surrounding said rotor and engaging the inner wall surface of said motor casing, means for conducting heat directly from said motor casing to said body of liquid in said compartment, and said means comprising a metallic member having an arc-like band portion embracing a part of the outer wall surface of said motor casing within the horizontal plane of said stator and having integral spaced apart fin-like leg portions depending into said body of liquid.

2,470,552
ELECTRIC WELDING MACHINE
Lionel J. Gottschalk, New Orleans, La.
Application February 28, 1945, Serial No. 580,130
6 Claims. (Cl. 219—4)

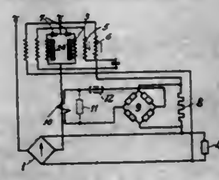


1. In an electric welding machine, the combination of a pressure applying electrode member, a fixed electrode member in alinement therewith, a movable non-current conducting member in spaced relation to said fixed electrode member, and a resilient member tending to urge said movable member forwardly whereby the work is subjected to predetermined pressure when a circuit is established through the work upon forward movement of said pressure applying electrode.

2,470,553
PROTECTING RELAY FOR LIQUID-FILLED ELECTRICAL APPARATUS
Erik Gudmundsson, Ludvika, Sweden, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a Swedish corporation
Application August 6, 1947, Serial No. 766,705
In Sweden November 6, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires November 6, 1961
1 Claim. (Cl. 200—84)

A protecting relay for liquid-filled electrical apparatus, comprising a casing through which the liquid may flow, two switches, a float in the casing, means so connecting one of said switches to said float that an initial lowering of the float actuates said switch, a movable screen actuated by the flow of liquid through the casing, means for connecting the other switch to said screen, and a catching member actuated with the said screen and engaged by the said float when the latter is in a lower position.

2,470,554
PORTABLE MOTOR MOUNTING
Homer S. Hammond, Madison, Wis.
Application July 9, 1945, Serial No. 603,958
2 Claims. (Cl. 248—19)

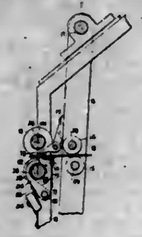


1. A motor supporting platform associated with any type of machine, to which driving power is to be applied, comprising a transversely disposed clip pocket secured to the platform, angular webs at the ends of said pocket, an alined transversely disposed clamp having end webs, a coil spring connecting the clamp and platform, a motor base, and rails secured to the base, the opposite ends of the rails being engageable with the clip pocket and clamp.

2,470,555
FORMALDEHYDE CONDENSATION PRODUCTS OF MERCAPTANS AND PROCESS FOR MAKING SAME
Marion W. Harman, Nitro, W. Va., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application October 9, 1945, Serial No. 621,387
6 Claims. (Cl. 260—306.6)

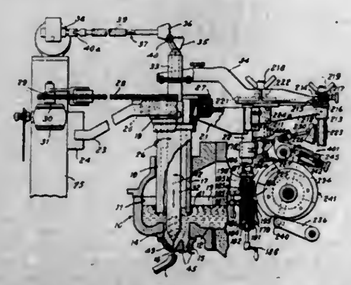
1. The process which comprises heating three molecular proportions of a mercapto thiazole with at least five molecular proportions of formaldehyde and approximately one molecular proportion of ammonia in aqueous medium producing a condensation product of said reactants which contains at least 5 but less than 7 molecular proportions of formaldehyde combined with 3 molecular proportions of said mercapto thiazole, sulfur and nitrogen atoms in the ratio of 3:2 and oxygen, with the elimination of water as a by-product of the condensation.

2,470,556
RECTIFIER WITH A VOLTAGE REGULATING REACTOR SATURABLE BY DIRECT CURRENT
Sven-Eric Hedström, Ludvika, and Uno Lamm, Kopparberg, Sweden, assignors to Allmanna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a Swedish corporation
Application November 14, 1946, Serial No. 709,850
In Sweden November 16, 1945
10 Claims. (Cl. 321—25)



1. An electric rectifying and voltage regulating device comprising a rectifier, a direct current saturable reactor controlling the direct current voltage of said rectifier, saturating components opposing each other on said reactor acting to keep said direct current voltage normally constant, and means, actuated by a time integral of the direct current from said rectifier and acting to limit the said time integral to a permissible value.

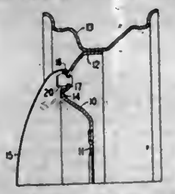
2,470,557
GATHERING MACHINE
John George Herrmann, Baldwin, N. Y., assignor to Conveyor & Machinery Manufacturers, Inc., New York, N. Y., a corporation of New York
Application March 24, 1948, Serial No. 16,731
18 Claims. (Cl. 271—57)



1. In combination with a gathering machine of the type having a movable card-transfer member for moving a card to a predetermined discharge position, a discharge member disposed forwardly of said card-transfer member and spaced therefrom for receiving and supporting a card being operatively moved by said transfer member toward said discharge position, an electric switch, a lever operatively engageable with said switch and movable between a predetermined switch-actuating position and a non-switch-actuating position, a movably mounted

detector finger adjacent said lever and adapted to engage the lever for operatively moving it into its said switch-actuating position, said lever being normally yieldably held in its said non-

switch-actuating position, the path of said card in moving towards said discharge position being between the said lever and said finger, whereby the card will constitute a separating barrier between the lever and finger.



2,470,558
APPARATUS FOR AND METHOD OF FEEDING MOLTEN GLASS
William T. Honiss, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a corporation of Delaware
Application July 7, 1943, Serial No. 493,699
13 Claims. (Cl. 49—55)

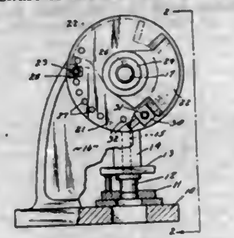
1. Glass feeding apparatus comprising a container for molten glass having an open-topped well in its bottom and a feed orifice and an auxiliary orifice in the bottom of the well and adjacent to each other, and a refractory implement depending into the glass in the well for cooperation therewith to control downward flow of glass through the well to both said orifices and having its lower end adjacent to the level of and wholly within the confines of the upper end of said auxiliary orifice so that said implement will conduct directly into the auxiliary orifice all cords moving downwardly along the implement in the well from a higher level in the container.

9. The method of feeding molten glass from a supply body in a container which comprises passing glass from the supply body downwardly through a well in the bottom of the container to a plurality of adjacent orifices in the bottom of the well simultaneously, and directing to only one of said orifices such cords as pass downwardly into the well from an upper portion of the supply body.

2,470,559
VEHICLE WHEEL
Harry J. Horn, Lansing, Mich., assignor to Motor Wheel Corporation, Lansing, Mich., a corporation of Michigan
Application March 29, 1946, Serial No. 658,036
11 Claims. (Cl. 301—37)

1. The combination of a wheel having a wheel body, a cover therefor, and means for detachably connecting said cover to said wheel, said cover comprising a dish shaped member having a relatively flexible radially inturned marginal rim, said means comprising a plurality of angularly spaced generally U-shaped relatively rigid straps attached adjacent the extremities of the legs thereof to said wheel body and projecting axially outwardly therefrom, said straps being formed to provide radially outwardly projecting humps spaced axially of said wheel body and over which said cover is adapted to be forced, the radially outer extremities of said humps being arranged on a circle of slightly greater circumference than the inner circumference of the inturned portion of said rim, whereby the relatively flexible rim of the cover is distorted when forced over said humps on the relatively rigid straps.

2,470,560
OPPOSITELY ROTATING PROPELLERS
Walter S. Hoover, Montreal, Quebec, Canada
Application June 13, 1939, Serial No. 278,860
14 Claims. (Cl. 170—135.27)

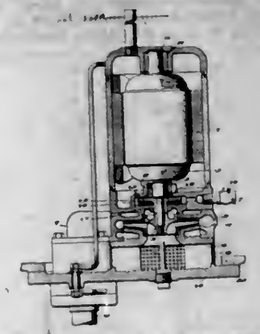


1. In combination with a pair of concentric oppositely rotating propellers in which the pitch of one propeller is hydraulically controlled by the other, hydraulic means for changing the pitch of said one propeller, valve means for controlling the flow of oil to and from said hydraulic means, means for operating said valve comprising a member operatively connected by a pin and cam connection with, and operable by the pitch changing movements of said other propeller.

2,470,561
PRESS
Hasen P. Hunter, Washingtonville, Ohio
Application April 17, 1947, Serial No. 742,055
6 Claims. (Cl. 164—102)

1. In a press including a pair of dies and means for moving one of the said dies with respect to

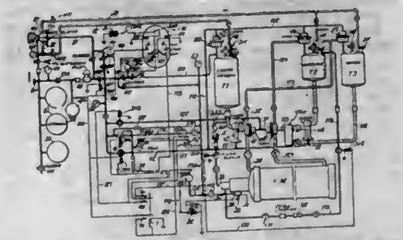
the other, said means comprising a crank shaft having a fly wheel thereon, means for imparting striking force to the moving parts of the said press at such times at they slow down or stop, said means comprising a weight pivoted to the crank shaft of the said press, means on said



fly wheel in the path of said weight, the said weight freely movable between the said means on the fly wheel so that it is normally revolved with the fly wheel by the said means and is capable of moving to strike the said means when the fly wheel slows down or stops.

2,470,562
ORGANOSILOXANES AND METHODS OF MAKING THEM
James Franklin Hyde, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application April 12, 1944, Serial No. 530,749
7 Claims. (Cl. 260—46.5)

2. An organosilicon composition comprising a copolymeric organo-siloxane comprising in the molecule, oxygen atoms and units which correspond substantially to the general formulae $=SiR_2$, $RSi\equiv$ and $R'R''R'''Si-$, respectively, said units being the only silicon units present in said organosilicon composition and being joined to each other by said oxygen atoms through silicon oxygen-silicon linkages, where R, R', R'', R''' are monovalent hydrocarbon radicals which are attached to silicon through carbon silicon linkages.

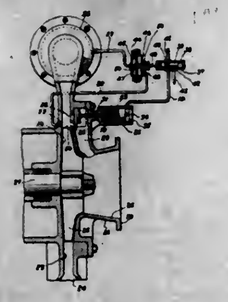


2,470,563
PUMP
Irving C. Jennings, South Norwalk, Conn.
Application January 3, 1944, Serial No. 516,787
6 Claims. (Cl. 103—87)

1. In a motor driven pump unit of the type adapted to be operated while submerged in a liquid, the combination comprising a casing provided with upper and lower end walls to define a motor chamber substantially sealed against the inflow of liquid, an electric motor in said chamber having a rotor and an upright shaft on which said rotor is mounted, bearings for said shaft, one of said bearings being mounted in said lower casing wall, a main rotary pump outside said motor chamber driven from said motor shaft, a rotary auxiliary pump outside said motor chamber and below said last-mentioned bearing, driven from said motor shaft, and having a rotor with its suction side in communication with the interior of said motor chamber through the relative slide faces of said last-mentioned bearing, whereby leakage liquid is drawn by said auxiliary pump from said motor chamber and along said bearing faces, and a gas vent pipe for said motor chamber adapted to extend above the surface of the pump submerging liquid to prevent pressure build-up in said chamber greater than that di-

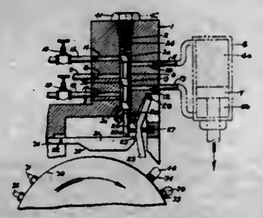
rectly above the surface of the submerging liquid.

2,470,564
REACTION MOTOR CONTROL SYSTEM
Lovell Lawrence, Jr., Pines Lake, Paterson, and James H. Wyld, Pompton Lakes, N. J., assignors to Reaction Motors, Inc., Pompton Plains, N. J., a corporation of New Jersey
Application November 15, 1944, Serial No. 563,596
7 Claims. (Cl. 60—35.6)



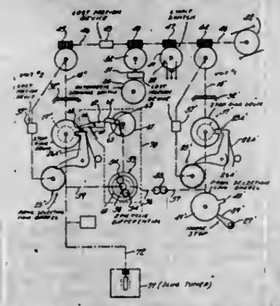
1. In a starting system for a reaction motor, a combustion chamber having an ignition device, in combination with a reservoir containing a liquid fuel, a conduit between said chamber and reservoir, a normally closed valve in said conduit, a source of gas pressure, means for connecting said reservoir to said pressure source to create pressure in the reservoir, means responsive to the pressure in said reservoir when it reaches a predetermined value for causing gas from said pressure source to purge said ignition device, and means effective upon completion of said purging for automatically opening said valve and for operating the ignition device, whereby fuel under pressure is fed to the chamber and ignited.

2,470,565
SURGE PREVENTING DEVICE FOR CENTRIFUGAL COMPRESSORS
Isidor R. Loss, Rowayton, Conn., assignor to Ingersoll-Rand Company, New York, N. Y., a corporation of New Jersey
Application October 9, 1945, Serial No. 621,193
5 Claims. (Cl. 230—115)



1. In combination, a centrifugal compressor having an inlet channel and a discharge channel,

an impeller to pump fluid from the inlet channel into the discharge channel, a relief port for the discharge channel adjacent the tip of the impeller, and means acting in response to an abnormal ratio of pressure values substantially at



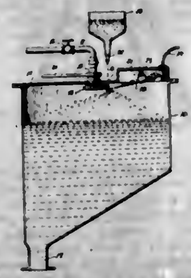
the impeller and at a point existing at a point relatively spaced from the first mentioned point to valve fluid from the discharge channel and thereby prevent the surging of compressed fluid from the discharge channel back through the impeller.

2,470,566
FLUID CONTROL VALVE MECHANISM
Hugh C. MacConnell, Jr., West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a corporation of Delaware
Application November 30, 1946, Serial No. 713,242
6 Claims. (Cl. 121—147)

1. In combination, a valve housing formed to define a bore therein and having a transverse fluid inlet passage, a pair of transverse fluid feed passages, and a pair of transverse fluid exhaust passages extending from said bore to the exterior of said valve body, a spool valve having a pair of annular grooves formed therein, said spool valve being movably disposed in said bore and having one end projecting from said valve housing to serve as a tappet member, a horizontal pivotally mounted valve lever cooperatively disposed with said end of said spool valve, a pivoted latching member secured for cooperative engagement with said valve lever, and actuating means cooperative with said valve lever and said latching member to position said spool valve in each of three operating positions, said three operating positions of said spool valve regulating the flow of pressurized fluid from said inlet passage to each of said feed passages and from said feed passages to said exhaust passages by way of said annular grooves, in timed sequence.

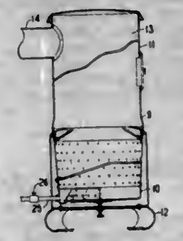
2,470,567
SELECTIVE CONTROL APPARATUS FOR RADIO SYSTEMS AND THE LIKE
Richard W. May, Cedar Rapids, Iowa, assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa
Application April 26, 1946, Serial No. 665,107
22 Claims. (Cl. 192—142)

1. An arrangement for selectively positioning a rotatable shaft such as a control shaft for radio apparatus and the like which shaft undergoes more than one complete rotation before arriving at a certain final selective angular orientation, comprising a first automatic shaft positioning unit arranged to act as a turn controlling device to determine the number of complete rotations for said control shaft, a second similar automatic shaft positioning unit arranged to control the additional fractional rotation of said shaft to bring it to said final selective orientation, and a differential gear system operated under control of both said units to cause said shaft to be selectively stopped by the second unit only after said shaft has executed a number of complete rotations under control of the first unit.



2,470,568
SPARK PLUG
John D. McCrumm, Inglewood, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application April 6, 1946, Serial No. 660,665
4 Claims. (Cl. 175—115)

1. A spark plug, comprising: a hollow metallic body adapted near the one end for mounting

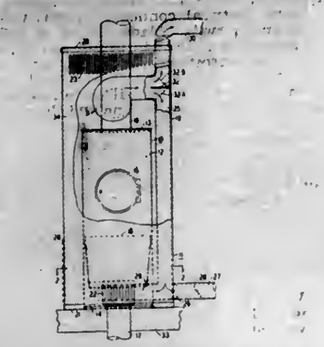


in an ignition space and adapted near the other end for connection to an electrical conductor; a frangible dielectric sleeve, bearing an annular projection, disposed coaxially in the first said end of said body and longitudinally coextensive therewith for the greater portion of the length of said sleeve, the outer end of the sleeve extending outwardly of said body end; a dielectric powder loosely and unstressedly interposed between said sleeve and said body and surrounding said projection so as to floatingly support said sleeve in said body, said powder being disposed along a major portion of the coextent of said sleeve and said body so as to separate said sleeve from all physical, electrical and thermal contact with said body throughout said coextent; an electrode of low thermal conductivity, and bearing an annular projection, disposed coaxially in said sleeve in longitudinally substantially coextensive correspondence therewith and projecting from the inner end thereof, said electrode operating at an ultra-high heat level and under a high electric potential; and a dielectric powder loosely and unstressedly interposed between said electrode and said sleeve and surrounding said projection so as to floatingly support said electrode in said floatingly mounted sleeve; whereby to relieve said sleeve of substantially all mechanical stresses and to exclude therefrom electric and thermal shocks originating in said electrode and in said plug-body.

2,470,569
APPARATUS FOR COMMINUTION OF MOLTEN METALS
Merl H. Meighan, River Edge, and Kenneth N. Brown, Teaneck, N. J., assignors to F. W. Berk & Company, Inc., New York, N. Y., a corporation of Maryland
Application February 1, 1947, Serial No. 725,920
2 Claims. (Cl. 18—2.5)

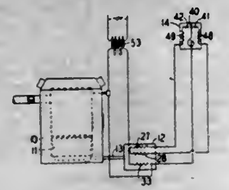
2. In combination with a tank having an opening to receive molten metal being poured from a container above said opening, a rotary head spray adjacent said opening and continuously supplying water under pressure of 50 pounds per square inch and also beneath said opening and in juxtaposition with said rotary spray head, an adjustable nozzle spray, said adjustable nozzle spray also supplying water continuously and at the rate of 50 pounds per square inch, and so positioned that the water from the said adjustable nozzle spray striking the end of said molten metal forces said molten metal into the path of the water being emitted from the rotary spray head, thereby preventing the accumulation of waste material on the side of the tank opposite the rotary spray and creating a greater degree of fines and also producing a more irregular fine, substantially as described.

2,470,570
VAPORIZING TYPE OIL BURNER
John W. Miller and Waldo G. Smith, Lansing, Mich., assignors to Motor Wheel Corporation, Lansing, Mich., a corporation of Michigan
Application May 21, 1945, Serial No. 594,986
10 Claims. (Cl. 158—91)



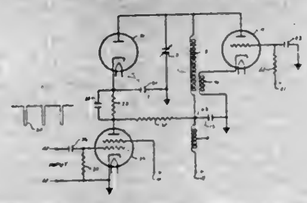
1. A burner of the vaporizing pot type comprising a tubular side wall provided with a plurality of vertically and horizontally spaced apart air inlet openings therein, said side wall being round in horizontal cross-section, a bottom wall attached to said side wall, said bottom wall having a depression therein adjacent said side wall and concentric therewith adapted to receive liquid fuel, said depression extending along the perimeter of said burner bottom wall, generally upright baffle means located adjacent the inner perimeter of said depression and having upright ends engaging said side wall, said baffle means cooperating with said side wall to provide an open topped enclosure extending substantially entirely around the perimeter of said depression, and auxiliary baffle means located within said enclosure and extending radially thereof between said side wall and said first named baffle means, said burner having a fuel inlet adjacent said depression and having means connected to said fuel inlet for delivering liquid fuel to said depression.

2,470,571
FORCED AIR AND GRAVITY CIRCULATING HEATING APPARATUS
John W. Miller, Lansing, Mich., assignor to Motor Wheel Corporation, Lansing, Mich., a corporation of Michigan
Application December 29, 1945, Serial No. 638,152
2 Claims. (Cl. 126—110)



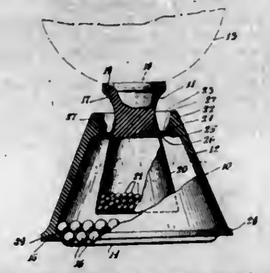
1. In a heater of the circulating type including a heat exchanger and a casing enclosing said heat exchanger in spaced relation thereto, said casing having openings therein at the top and bottom thereof for the circulation of air therethrough by gravity; the improvement which comprises, in combination, an air duct attached to said casing, said air duct having an inlet opening and a pair of spaced apart outlet openings communicating therewith exteriorly of said heat exchanger, said outlet openings being located adjacent the top and bottom of the heater respectively and being adapted for connection with conduits leading to rooms remote from the room in which said heater is located for conducting heated air to said remote rooms, an air circulating fan in said casing, said fan being located adjacent the top of the heat exchanger and arranged to discharge air from said casing into said duct through said air inlet opening, and a baffle in said duct, said baffle being adjustable in said duct to two extreme posi-

tions to divert air entering said air inlet opening selectively toward one or the other of said outlet



openings for selectively heating one of said remote rooms.

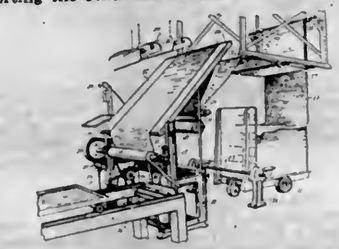
2,470,572
FUEL FEED CONTROL
John W. Miller and Raymond E. Fell, Lansing, Mich., assignors to Motor Wheel Corporation, Lansing, Mich., a corporation of Michigan
Application December 29, 1945, Serial No. 636,153
4 Claims. (Cl. 236—68)



4. A fuel feed control comprising a reciprocable metering valve, spring means biasing said valve to open the latter, a member contacting said valve and adapted when moved in one direction to move said valve toward closed position, mechanism acting on said member for holding the latter in adjusted position, a pair of heat motors associated with said member and adapted when heated to move the member in opposite directions, said heat motors comprising warpable bars and electrical heating coils in heat exchange relation therewith, a flasher-type thermostat comprising a pair of spaced warpable bars which move in opposite directions when heated, heating coils in heat exchange relation with said last named pair of warpable bars, means connecting each of said second named heating coils in series with said first named heating coils respectively, and a temperature responsive warpable blade located between said second named warpable bars and adapted to move into contact with one of said thermostat warpable bars above a given temperature and with the other of said thermostat warpable bars below said given temperature, and electrical conductors connecting said blade in circuit with one of each pair of heating coils when said blade is in contact with one of the bars of said thermostat.

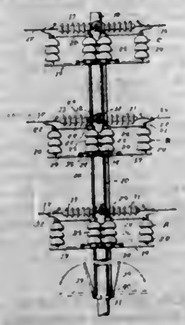
2,470,573
OSCILLATOR MODULATING SYSTEM
Robert C. Moore, Philadelphia, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application June 10, 1944, Serial No. 539,701
12 Claims. (Cl. 332—15)

2. In a signalling circuit, an oscillating circuit comprising an oscillator tube and a tank circuit connected thereto, a diode connected across said tank circuit, a direct-current circuit for said diode and a resistance and a parallel combination resistor and condenser connected in series with said diode in said direct current circuit.



2,470,574
GOLF BALL TEE
Earl J. Nelson, Jackson Heights, N. Y.
Application August 23, 1946, Serial No. 692,653
4 Claims. (Cl. 273—33)

1. A tee for the game of golf which comprises a hollow base member having a bottom wall, a side wall, and a hollow neck at its top end, a tee-head member having a head to accommodate a golf ball and a shank depending therefrom extending into said hollow base member, means securing said shank to said base member at the neck of said base member said means suspending said shank in the center of said hollow neck and being flexible to provide universal movement of said shank, and means including a weighting material acting in the manner of a plumb bob secured to the lower end of said shank to maintain it in vertical position when said tee is placed with its bottom wall on the ground.

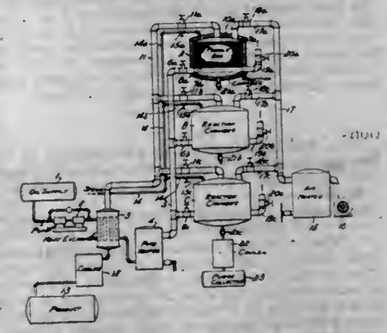


2,470,575
CLOTH INSPECTION AND HANDLING SYSTEM
Oscar J. Norton, Danville, Va., assignor to Dan River Mills, Incorporated, a corporation of Virginia
Application October 18, 1945, Serial No. 623,007
6 Claims. (Cl. 26—70)

1. In a cloth inspection machine having a frame structure supporting an inspection table and a driven cloth skewer rotatably mounted on said frame structure for drawing cloth over said inspection table and winding the inspected cloth in rolls, means for mounting said cloth skewer comprising a driven chuck journalled on said frame structure for engaging one end of said cloth skewer, a pivoted journal mounting disposed on said frame structure for slidably supporting the other end of said cloth skewer, and

means for selectively retaining said cloth skewer against sliding movement in said pivoted journal mounting for engagement with said driven chuck or for releasing said cloth skewer for sliding movement whereby said cloth skewer may be disengaged from said chuck and pivoted about said journal mounting to dispose a roll of inspected cloth wound thereon in a position extending from the machine and thereby allow said roll of cloth to be stripped from said cloth skewer.

2,470,576
GANG OPERATED SWITCH
John A. Pollock and Erskine H. Coppinger, Bainbridge, Ga., assignors, by direct and mesne assignments, to W. N. Matthews Corporation, St. Louis, Mo., a corporation of Missouri
Application December 23, 1946, Serial No. 717,864
4 Claims. (Cl. 200—48)

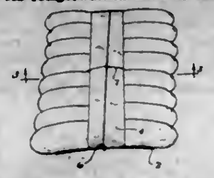


1. In a high tension electric current line switch, a supporting structure, a pair of relatively long insulators secured to said support to extend outwardly therefrom, said insulators being positioned to form an angle, an electric current feed line attached to the outer end of one insulator, an electric current outlet line attached to the outer end of the other insulator, a vertically disposed insulator structure supported rigidly beneath the feed line, an arm disposed beneath the insulator to which the outlet line is attached, a vertically arranged insulator unit supported upon the outer end of said arm for rotation on a vertical axis, a switch terminal mounted upon the top of the first mentioned vertical insulator and having electrical connection with the adjacent feed line, a switch blade having an end secured to the top of the rotatable insulator and adapted to extend across the angle formed between the horizontal insulators for electrical connection with said switch terminal, an electrical connection between the outlet line and the attached end of the switch blade, and means pivotally supported upon said supporting structure and operatively coupled with the pivoted insulator for effecting the turning of the pivoted insulator and movement of the switch blade relative to said switch terminal.

2,470,577
COMPLEX CALCIUM CARBONATE-SILICATE PIGMENT PRODUCT AND METHOD OF MAKING SAME
Howard F. Roderick, Grosse Ile, and Fritz M. Zorn, Wyandotte, Mich., assignors to Wyandotte Chemicals Corporation, Wyandotte, Mich., a corporation of Michigan
Application October 11, 1945, Serial No. 621,718
5 Claims. (Cl. 106—306)

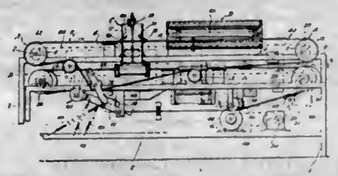
4. The method of making a complex calcium carbonate-calcium silicate product which comprises, adding in water solution, an alkali metal hydroxide to an alkali metal silicate having a silica-alkali metal oxide molar ratio in the range of water glass to adjust the resultant molar ratio of silica to alkali metal oxide in such solution in the range of 1.1–1.55 to 1, adding an alkali metal salt of carbonic acid thereto in an amount sufficient to correspond stoichiometrically to 40–85% by weight of calcium carbonate in the final product, and then adding calcium chloride to precipitate simultaneously therefrom an insoluble complex calcium carbonate and calcium silicate product.

2,470,578
THERMAL MOLECULAR ALTERATION OF CARBON COMPOUNDS
Percy H. Royster, Bethesda, Md.
Application October 3, 1942, Serial No. 460,658
3 Claims. (Cl. 196—55)



1. The process of decreasing the average molecular weight of a fluid reactant containing at least one carbonaceous component thermodynamically unstable and rapidly reactive at an elevated reaction temperature to produce a product of reaction by heating the reactant to the said

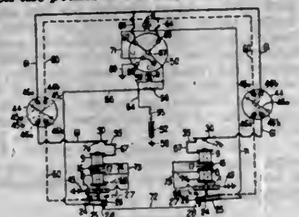
temperature for a minimum length of time, sufficiently long to effect the said reaction to a predetermined extent, and for a maximum length of time, so short that an undesired amount of decomposition of reacted product is inhibited, which comprises, as a thermal adjusting step, establishing in thermally insulated, broadly-extended, freely-bedded masses of relatively small, thermally responsive, refractory, solid, mineral particles a spatial distribution of temperatures comprising five zones of temperature in immediate mutual juxtaposition consisting in a cold zone, a thermal wave, a central hot zone, a second thermal wave and a second cold zone, the said first and second cold zones being substantially isothermal at such low temperatures that molecular alteration of the reactants and products are slow, the hot zone being substantially isothermal at the said elevated reaction temperature, the first thermal wave exhibiting large positive thermal gradients measured in the direction of fluid flow, and the second thermal wave exhibiting large negative temperature gradients similarly measured; and, as a first operating step, forcing the fluid reactant to enter the first cold zone, to traverse the first thermal wave whereby the reactant is heated to reaction temperature, controlling the rate of fluid flow, whereby the duration of exposure of the reactant in its passage through the hot zone is delimited between the said maximum and minimum, whereby the reacted product is rapidly quenched to inertness in transit through the second thermal wave, and whereby the reacted product is discharged through the second cold zone; continuing the first operating step while as (1) the two thermal waves are convectively displaced in the direction of fluid flow, (2) the first cold zone increases in spatial extent, (3) the second cold zone decreases, and (4) the central hot zone is subjected to displacement through the particles; terminating the first operating step before the disappearance of the second cold zone: and, as a second operating step, forcing the fluid reactant to traverse the said five zones in reverse sequence, whereby the translation of the two thermal waves and of the hot zone is reversed in direction and while as the second cold zone increases and the first cold zone decreases; continuing the process as a repetitive alternating succession of first and second operating steps, while as the hot zone is repeatedly reciprocated within the massed particles, the spatial extent of the two thermal waves continually and irreversibly increases, and the temperature gradients therein decrease in absolute magnitude; and terminating the described succession of first and second operating steps when the thermal waves cease sharply to define the said five zones.



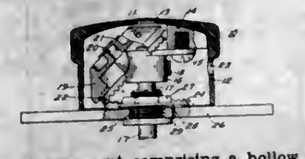
2,470,579
PACKAGING FOOD PRODUCTS
Dean E. Bueckert, Mokena, Ill., assignor to Swift & Company, Chicago, Ill., a corporation of Illinois
Application January 19, 1946, Serial No. 642,257
5 Claims. (Cl. 99—174)

1. The method of packaging elongated pieces of food products into a tight, compact, attractive bundle, which comprises, arranging a plurality of said pieces crosswise in a layer on a paper board backing of a width substantially coextensive with the length of said pieces, pulling a printed identification band somewhat taut longitudinally over the crosswise pieces in the layer and fixing the ends of the band to the backing, said band being of a width substantially narrower than said backing, tying said bundle by a cord pulled longitudinally over the band and tensioning said cord by a crosstie, said crosstie having the effect of bowing said paper board backing about its longitudinal axis to strengthen the

package and said string laying over the band in a manner to form a relatively wide obtuse angle with said band, whereby the tendency of the crosstie to sheer through the band is minimized.



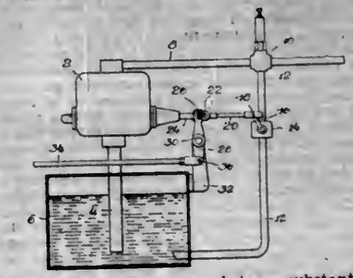
2,470,580
SPRAY COATING MECHANISM
Gerhard Gunther Schneider, Maplewood, and Clifford J. Hughes, East Orange, N. J., assignors to National Union Radio Corporation, Newark, N. J., a corporation of Delaware
Application November 2, 1944, Serial No. 561,592
7 Claims. (Cl. 91—45)



1. In a coating mechanism of the kind described, the combination comprising a conveyor for carrying pieces to be coated, means for spraying a coating material on to the exposed surface of pieces carried by the conveyor, means for continuously driving the conveyor at a predetermined speed, a second conveyor for carrying pieces to be coated arranged with the receiving end thereof adjacent the discharge end of said first mentioned conveyor, means for spraying a coating material to the exposed surface of pieces carried by said second mentioned conveyor, means for transferring pieces from the discharge end of said first mentioned conveyor to the receiving end of said second mentioned conveyor and turning the pieces over in the transfer, and means for continuously driving said second mentioned conveyor at a speed greater than the speed of the first mentioned conveyor to compensate for lag introduced when the pieces are being transferred from one conveyor to the other.

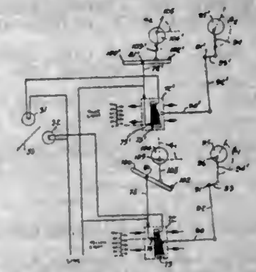
2,470,581
LOCKING SYSTEM
Francis E. Seaman, Columbus, Ohio
Application June 15, 1946, Serial No. 677,069
11 Claims. (Cl. 70—264)

1. A door locking system comprising electromagnetic units on each door to be controlled, a locking unit on each door controlled by the electromagnetic unit on such door, all of said electro-magnetic units being connected in a main circuit, a control switch for said circuit, and means for indicating each time said electro-magnetic units are energized, said means comprising a shunt circuit connected to the main circuit and including a signal, and a resistance element connected in said main circuit between the points where the shunt circuit is connected thereto so that the shunt circuit will receive sufficient current to actuate the signal only when said circuits are energized.



2,470,582
INDICATING CONTROL KNOB
Albert A. Seasongood, Melrose Park, Pa., assignor to Leeds and Northrup Company, Philadelphia, Pa., a corporation of Pennsylvania
Application March 14, 1947, Serial No. 734,808
4 Claims. (Cl. 116—124)

1. An arrangement comprising a hollow control knob having a window in its face, a conical dial member having indicia successively visible through said window, structure for supporting said dial member within said knob for rotation therewith and for rotation about an axis inclined with respect to the axis of rotation of the knob, a driven member attached to and rotatable with said dial member, and a stationary driving member operatively engaging said driven member to effect rotation thereof about its said inclined axis as said knob is rotated about its own axis.

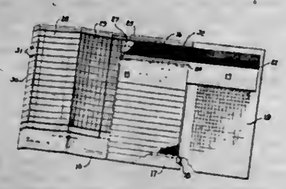


2,470,583
RELIEF VALVE CONTROL SYSTEM
Robert K. Sedgwick, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application May 22, 1944, Serial No. 536,653
15 Claims. (Cl. 103—42)

1. In an hydraulic system comprising a pump mechanism including a yoke for adjustably varying the discharge rate thereof, the suction side of said mechanism being connected to a fluid reservoir, and the discharge side of said mechanism being connected to a supply line adapted for communication with an associated hydraulic device, the combination of a valve comprising a casing with an internal chamber communicating with an inlet port connected to said line and a downstream outlet port connected to said reservoir, a bore within said casing, a valve stem reciprocally mounted within said bore and comprising means for closing said outlet port in the closed position of said stem, said stem having an area adapted to be acted upon by pressure fluid admitted through said inlet port for moving said stem to its open position, a chamber associated with said casing and housing yielding means for continuously urging said stem toward its closed position, a passageway through said stem for effecting hydraulic communication between said chambers in the open position of said stem to convey pressure fluid into said second-mentioned chamber for acting on an opposed area of said stem in the same direction as said yielding means, said

second-mentioned area being substantially smaller than that acted upon by pressure fluid from said inlet port, an adjustable orifice in the connection between said outlet port and said reservoir, means for adjustably varying the area of said orifice, and means operatively connecting said last-mentioned means to said yoke for actuation thereby.

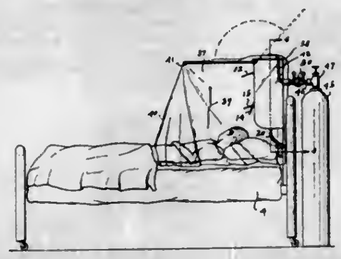
2,470,584
ILLUMINATING SYSTEM AND CONTROL DEVICE FOR PHOTOGRAPHIC ENLARGERS
Alfred Simmon, Jackson Heights, N. Y., assignor to Simmon Brothers, Inc., Long Island City, N. Y., a corporation of New York
Application June 20, 1947, Serial No. 755,920
5 Claims. (Cl. 88—24)



1. In combination, an illuminating and a control device for photographic enlargers, said illuminating device comprising a plurality of light sources, filters of different colors for said light sources, and means to superimpose the light quantities transmitted by said filters upon each other, said control device comprising means to adjust the intensity of each light source, a first mechanism, and a second mechanism, said means to adjust the intensity of each light source comprising a plurality of rheostats, one in series with each light source and each comprising a support, a resistor element and a sliding contact element in current conducting relationship therewith, one of the two last named elements stationary relative to said support, and the other one movable relative to said support and to said stationary element, said first mechanism com-

prising a first set of manually and simultaneously operated driving movements and a first set of elements driven thereby, said driven elements comprising a plurality of pivoted levers, each having a pivot point and a point of contact with one of the relatively movable elements of one rheostat, respectively, whereby an operative relationship between said lever and said movable rheostat element is established, and said first set of driving movements comprising means to adjust the angle of said levers by rotating them on their respective pivot points, whereby said levers may assume all possible positions between two extremes, said second mechanism comprising a second set of manually and simultaneously operated driving movements and a second set of elements driven thereby, said last named driven elements being formed by said aforementioned rheostat supports, and said second set of driving movements adapted to move said supports in a substantially straight line parallel to one of the possible positions of said levers and substantially at right angles to the direction of movement of one rheostat element relative to the other, whereby the distance between the respective pivot points and contact points may be adjusted, and whereby the relative displacement of said two elements of each rheostat is rendered proportional to the product of the angular adjustment effected by said first mechanism and the straight line adjustment effected by said second mechanism, the driving movements of one set being in phase with each other, whereby the displacement of all corresponding driven elements is changed in the same ratio, and the driving movements of the other set being out of phase with each other, whereby an harmonic motion is given to the corresponding driven elements, the sum of their displacements being constant.

2,470,585
PREPARATION OF 2-THIOUREIDO-4-METHYL THIAZOLE HYDROCHLORIDE
Russell L. Sperry, Glendora, Calif., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application December 6, 1946, Serial No. 714,651
3 Claims. (Cl. 260—302)



1. The hydrochloric acid addition product of 2-thioureido-4-methyl thiazole.

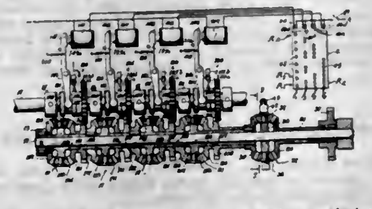
2,470,586
MEANS FOR MAINTAINING MULTIPLE RECORDS
Joseph H. Tathwell, Charlotte, N. C.
Application March 21, 1945, Serial No. 583,947
12 Claims. (Cl. 282—9)

1. A means for maintaining multiple records comprising a plurality of forms arranged in overlapped relation, whereby appropriately designated areas on each form are disposed in extending relation beyond the next underlying form; a sheet fixed in underlying relation to said overlapped forms and having an extensible portion adapted to be folded under said overlapped forms, said sheet having appropriately designated areas on its underlying portion and on said extensible portion disposed for registration with said first mentioned areas on said forms, and impression transfer means for duplicating entries made on said designated areas of the overlapped forms on the extensible portion of said sheet when in folded position, or on the underlying portion of said sheet with said extensible portion in extended position and in relation to entries duplicated on said extensible portion.

2,470,587
OXYGEN ADMINISTERING EQUIPMENT
Thaddeus A. Taylor, Lufkin, Tex.
Application June 3, 1948, Serial No. 30,797
5 Claims. (Cl. 128—191)

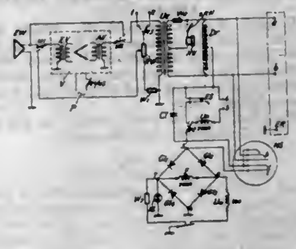
1. Oxygen administering equipment comprising, a cabinet, anchoring means adapted to be releasably secured to the head end of a mattress support, a standard supporting the cabinet, means pivotally connecting the standard to the anchoring means to pivot on a horizontal axis, means for adjusting the standard about said axis and for securing the standard at a selected point of adjustment, a retaining arm pivoted at one end, to the anchoring means and movable to active position between the support and a mattress on the support, and to inactive position clear of the mattress.

2,470,588
SAFETY RAZOR COMBINED WITH BLADE CONDITIONING MEANS
Godfrey Thornfield, London, England
Application December 9, 1943, Serial No. 513,537
In Great Britain November 27, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires November 27, 1962
15 Claims. (Cl. 30—34)



9. In a safety razor of the Gillette type comprising a base element, a blade and a clamping element by which the blade is clamped down on the base element, said clamping element having disposed on its under side a surface adapted to recondition the razor blade, in combination; a screw threaded handle, a correspondingly threaded means on said base element adapted to cooperate with said handle to keep the base, the blade and the clamping element assembled, and means on said handle axially adjustable thereto, for advancing said clamping element into blade clamping position or for retracting it into a position in which it is free to rotate for blade

reconditioning, means for rotating said clamping element when so positioned, and means for

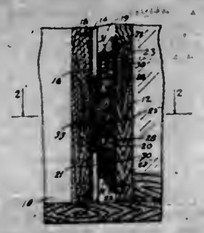


holding the blade against rotation while the clamping element is so rotated.

2,470,589
TORQUE CONVERTER
Torkel E. Torkelson, Baldwin, N. Y., assignor to Associated Development & Research Corporation
Application March 27, 1947, Serial No. 737,633
10 Claims. (Cl. 74—751)

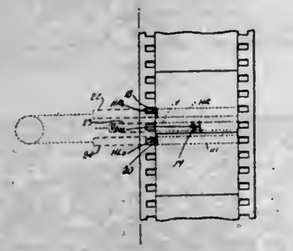
1. In an automatic speed-change transmission, a power shaft, a driving shaft, and a driven shaft; a planetary system interposed between said driving shaft and said driven shaft and providing power transmission means therebetween, said planetary system including a spider rotatable relative to said driving and driven shafts according to the torque differential thereof, said spider having means resiliently urging it in one direction of rotation; a series of planetary gear systems arranged on an idler shaft, each said planetary system including spaced sun gears and spider-mounted planet gears meshing therewith, said planet gears being mechanically interconnected with a sun gear of the succeeding system, the said driving shaft comprising an element of the last of said series of planetary systems; a normally disengaged clutch system individual to each said planetary system mounted on said power shaft, and each having a clutch element in driving relationship with its associated planetary system; an electromagnet individual to each clutch system for actuating the same into engaged position; and an electric system responsive to torque differential between said driving and driven shafts to energize said clutch electromagnet singly or in combination to establish a desired speed of the driving shaft, said system including a commutator carried by said spider for rotation therewith; a fixed contactor including contacting finger means individual to each said electromagnet, and a plurality of mutually insulated, conductive studs arranged in rank and file on said commutator for circuit closing engagement with said fingers upon rotation of said commutator, there being a file of said studs for each electromagnet, and the number and disposition of studs in the respective ranks determining the number of clutch actuating circuits which will be closed when a rank comes into operation relationship with the fingers of the contactor.

2,470,590
REMOTE-CONTROLLED AUTOMATIC TELEPHONE FOR LOUD TRAFFIC
Otto Tschumi, Soleure, Switzerland, assignor to Autophon Aktiengesellschaft, Soleure, Switzerland, a joint-stock company of Switzerland
Application May 12, 1944, Serial No. 535,299
In Switzerland December 21, 1942
4 Claims. (Cl. 179—81)



1. A remote control automatic telephone subscriber's station comprising a transducer, an amplifier having input and output connections from the amplifier to the transducer and to terminals for connecting the station with an exchange line, connections from the amplifier to another line differing from the exchange line, a first relay having operating contacts for reversing the input and output connections of the amplifier to control the speaking direction, a full wave rectifier bridge arrangement, connections including a condenser for connecting the rectifier bridge with the exchange line including a condenser in parallel with said first relay, a second relay connected across the rectifier bridge and responsive to current supplied by the exchange line through said condenser, said second relay having operating contacts for switching the amplifier from the connections with said other line to the connections with the exchange line.

2,470,591
WINDOW CONTROL DEVICE
Paul A. Viola and Vincent Viola, Bridgeport, Conn.
Application October 6, 1948, Serial No. 53,005
6 Claims. (Cl. 292—74)



1. A window control device comprising a metal strip to be mounted on the bottom of the sash guide in a window frame and extend longitudinally thereof, a support to be mounted on the sash including a housing, a pressure block mounted in the housing, a pair of cam blocks in the housing having inclined surfaces engaging opposite ends of the first block, springs tending to

shift the cam blocks against the pressure block to shift it laterally, and a pressure shoe carried

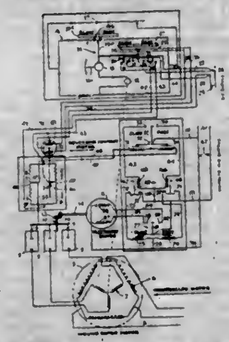
by the pressure block to slide along the surface of the metal strip.

2,470,592
CONTROL BAND FOR GUNNERY TRAINING APPARATUS
Fred Waller, Huntington, N. Y., Willis Robert Dresser, Long Hill, Conn., and Robert E. Swain, Huntington, and Raymond William Wengel, Rochester, N. Y., assignors to The Vitarama Corporation, Long Island City, N. Y., a corporation of New York
Application May 20, 1944, Serial No. 536,578
7 Claims. (Cl. 88—19.5)

3. As an article of manufacture, a control band having a plurality of frames adapted to be used in connection with a picture band having a plurality of corresponding frames carrying the image of a target to be fired upon, a frame of said control band being formed with indicia components such as apertures in one or more of a plurality of separately allotted parallel horizontal zones respectively representing azimuth and elevation, the indicia components in all of said zones together defining the position of a single aim spot or target on the corresponding picture frame.

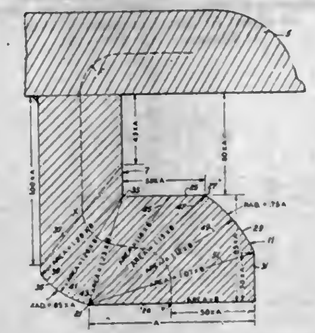
2,470,593
HARDENED SILICONE SURFACED COOKING IMPLEMENT
Paul S. Webb and John R. Koster, Boulder City, Nev., assignors to Processed Surfaces, Inc., New York, N. Y., a corporation of New York
Application March 17, 1947, Serial No. 735,258
1 Claim. (Cl. 220—64)

A metallic cooking implement having a cooking surface consisting of a thin coating of a hardened, non-viscous, high molecular weight alkylated siloxy composition in which a substantial portion of the silicon atoms are attached to two carbon atoms, said coating providing a surface



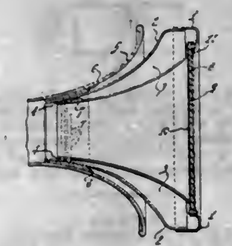
very easily cleaned so long as said coating remains continuously adherent to the metal.

2,470,594
TAPERING CLIP FOR HAIR CLIPPERS
Roy Whitney, Decatur, Ill.
Application January 21, 1948, Serial No. 3,454
4 Claims. (Cl. 30—200)



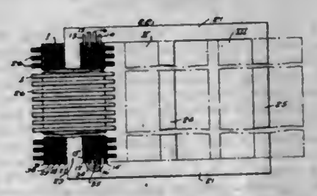
1. A tapering clip for hair clippers comprising a body of sheet material, a pair of parallel spaced hook members integral therewith and extending each from the same end of said member; said body member shaped to define on its sides opposed integral flanking flanges and the forward portion of said body bent back upon its self to function as a tapering clip for a hair clipper; whereby said hook members may be slidably hooked over the forward end of the clipper and whereby said side flanges will resiliently clamp against the adjacent side of said hair clipper to hold the tapering clip in operative position thereon.

2,470,595
APPARATUS FOR CONTROLLING THE SPEED OF ELECTRIC MOTORS
Fred Winterburn, Cornwall, Ontario, Canada, assignor to Howard Smith Paper Mills Limited, Montreal, Quebec, Canada
Application July 9, 1945, Serial No. 603,887
7 Claims. (Cl. 318—327)



1. Apparatus for controlling the speed of a wound rotor motor having primary and secondary windings in separately supplied circuits comprising, a variable resistance in the secondary winding circuit, a magneto driven by and in direct proportion to the speed of the motor, the voltage output of the magneto being in direct proportion to its speed, a Wheatstone bridge, a battery across the input terminals of the bridge, the magneto across the output terminals of the bridge, a galvanometer in circuit with the magneto, a slide wire potentiometer means at one output terminal the movable contact of which is actuated by the galvanometer to balance the magneto output against the battery input at a preselected speed of the motor, and means responsive to the cooperative operation of the galvanometer and moving element of the potentiometer for controlling the operation of said variable resistance to adjust the motor speed and rebalance the bridge.

2,470,596
TOROIDAL MAGNET FIELD FOR DYNAMO-ELECTRIC MACHINES
Martin P. Winther, Waukegan, Ill., and Anthony Winther, Kenosha, Wis., assignors to Martin P. Winther, as trustee
Application May 5, 1948, Serial No. 25,246
15 Claims. (Cl. 171—252)

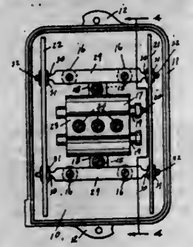


1. A pole structure for a dynamoelectric machine having an inductor, an annular field coil of rectangular section, and magnetic pole rings enveloping the coil; comprising oppositely extended interdigitated poles extending from said rings across the coil and having substantially rectangular pole faces opposite the inductor, the opposite ends of which faces track in planes within the planes of the rings, each ring having notches between its poles the bottoms of which diverge at approximately 45° from the sides of the coil, each pole being formed at a root portion between the notches by a shape converging toward the inductor and away from the adjacent notches and in its extension being formed by a radial portion converging away from the inductor, said extension having a substantially right-triangular face lying with its base near one side of the coil and its apex near the other side of the coil, a first non-radial portion extending from the apex of said triangular face to the end of the extension and flaring outward from the former to the latter, a second non-radial portion at said root portion and extending from the ring end of the pole face to the outside of the ring and flaring inward from the former to the latter, said second non-radial portion lying substantially upon an arc centered on said triangle base, and said first non-radial portion lying substantially upon an arc centered at a point between said ring end of the pole face and the center of the pole face.

2,470,597
ACOUSTIC ATTENUATOR
J. Guy Woodward, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 31, 1946, Serial No. 644,525
7 Claims. (Cl. 84—400)

1. An acoustic attenuator for a wind instrument comprising a resonant cavity having one end insertable within the bell of said instrument, an opening adjacent said insertable end and means having relatively high acoustic resistance positioned within said cavity adjacent said opening.

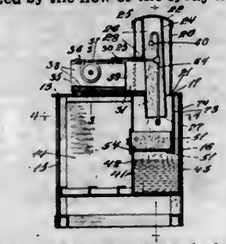
2,470,598
TRANSFORMER WINDINGS
William B. Biebesheimer, Toledo, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 29, 1948, Serial No. 5,073
9 Claims. (Cl. 175—361)



3. In an alternating-current electrical apparatus comprising concentrically arranged inductively related windings including a primary winding and a pair of secondary windings, the secondary windings comprising a nested group of an even number of concentrically related single layer coils of electrical conductors, the successive turns in each coil layer having the same diameter as the other turns in that coil layer and following a cylindrical helix path, the number of winding turns in adjacent coil layers varying so that the odd-numbered layers of the group have a like number of turns and the even-numbered layers of the group have a like number of turns different from that of the odd-numbered layers, one of the secondary windings of said pair including the innermost and the outermost coil layers of the nested group of single layer coils and the other one of the secondary windings of said pair including the next innermost and the next outermost coil layers of the nested group of layers.

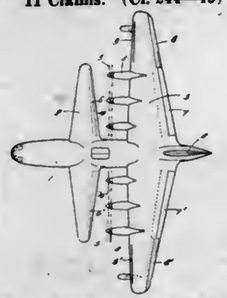
2,470,599
LONG DRAFT APRON
Bruce R. Billmeyer, Lancaster, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania
Application July 31, 1941, Serial No. 404,781
17 Claims. (Cl. 19—131)

1. A long draft apron for use in fiber drawing comprising a tubular body of twine disposed in the form of a helix, a wear-resistant layer of synthetic rubber composition interiorly of said body, and a wear-resistant facing of synthetic rubber composition secured to said body.



2,470,600
ELECTRIC CHIME DEVICE
Gisbert L. Bossard, Cleveland, Ohio
Application September 28, 1946, Serial No. 700,133
6 Claims. (Cl. 177—7)

1. A signal device comprising a front cover having walls thereabout embracing a resonance chamber, the side walls thereof being provided with a plurality of spaced apertures, inwardly extending bosses carried by said front cover, an electromagnetic actuating unit secured to one set of said bosses and provided with a pair of striking plungers, a pair of mounting straps secured to the other set of said bosses on opposite sides of said actuating unit, and spaced tonal bars carried by opposite ends of said straps positioned to be struck by said plungers, said bars extending parallel with and spaced from said walls opposite said apertures.



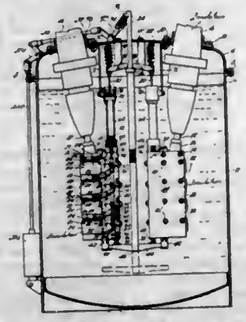
2,470,601
DUST COLLECTING APPARATUS
John R. Burke, Pawtucket, R. I.
Application July 8, 1946, Serial No. 682,110
4 Claims. (Cl. 51—273)

1. In a dust collecting apparatus for a polishing unit comprising an abrading wheel, a generally vertical suction duct extending at substantially right angles to the path of movement of the dust cast off from said wheel by centrifugal force, said duct having inlet and outlet openings therein with the inlet opening positioned in a side wall thereof opposite said wheel, means at the upper end portion of said duct for directing and discharging a liquid under pressure in said duct to pass said inlet opening in a spray, said inlet opening being positioned in the path of movement of said dust to receive therethrough dust cast off by the polishing wheel tangential thereof to be intercepted by the flow of the spray at substantial

right angles to the path of travel of the dust cast into said duct.

2,470,602
TANDEM WING AIRCRAFT
Thomas Cochrane Campbell, Hessle, and Eric Vincent Hall, Hull, England, assignors to Blackburn Aircraft Limited, Brough, England
Application October 16, 1945, Serial No. 622,624
In Great Britain December 6, 1944
11 Claims. (Cl. 244—45)

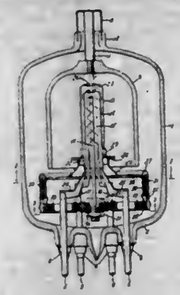
1. An aircraft comprising a main wing and a smaller leading wing and a plurality of tractor propellers disposed intermediate said wings, said propellers having their axes in the same plane as said leading wing and being disposed sufficiently close to the trailing edge of said leading wing as to induce a slipstream effect of airflow past said leading wing to increase the lift thereof, said propellers being so spaced between said wings as to induce substantially equal changes in lift per unit area due to slipstream effect on both wings so as to maintain said aircraft in balance about the center of gravity for power-off and power-on conditions.



2,470,603
COLLET TYPE ELECTRODE
John H. Coulter and Arthur F. Wood, Indianapolis, Ind., assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application December 12, 1946, Serial No. 715,890
13 Claims. (Cl. 219—4)

1. In a welding electrode, the combination which comprises an electrode holder, a cap rotatably mounted on said holder, seating means in said holder for receiving a welding tip with

a portion thereof extending inside said cap, said portion of the tip defining an interspace with the inner surface of the cap, at least one clamping member in said interspace having inner and outer circumferential surfaces of increasing radial distance from each other, and means for connecting one of the two elements including said cap and said holder to said clamping member whereby upon rotational relative displacement of said two elements said clamping member will be slidably and rotationally displaced in said interspace with respect to the element to which it is not connected and will become wedged between the welding tip and the cap.

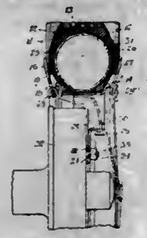


2,470,604
CIRCUIT BREAKER
James M. Cumming, Turtle Creek, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 21, 1944, Serial No. 564,447
15 Claims. (Cl. 200—150)

1. In a circuit breaker, a liquid container having side, bottom and top walls, separable contacts supported from said top wall so as to be positioned in said container below the liquid level thereof, said contacts being biased apart to an open circuit position, means located adjacent said contacts for latching said contacts closed, actuating mechanism supported on said top wall, liquid motion transmitting means also supported from said top wall and connected between said mechanism and contacts for closing said contacts against said bias when said mechanism is operated in one direction, and said mechanism having a relatively light movable rod which is separate from said motion transmitting means and contacts and extends downwardly in said container into proximity with said latching means for releasing said latching means by movement independent of said contacts in response to operation of said mechanism in the opposite direction.

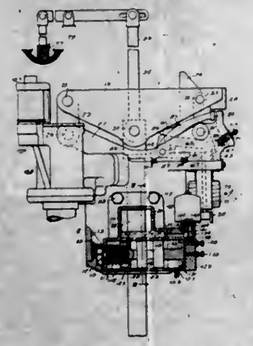
2,470,605
ELECTRIC DISCHARGE DEVICE WITH INTERNAL CAPACITOR
Harold B. Cummings, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application February 14, 1947, Serial No. 728,553
4 Claims. (Cl. 250—27.5)

1. An electric discharge device including an envelope, a plurality of conductors sealed through said envelope, a generally planar body of insulating material supported from said conductors, a pair of cylindrical conducting members supported from said insulated member in closely



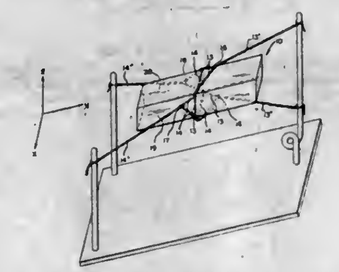
spaced relation and providing the plates of a capacitor, one of said conducting members having an inwardly directed flange, and a grid supported from said flange.

2,470,606
COMBINED BELT BUCKLE AND BOTTLE CAP REMOVER
Robert Case Dennison, Manchester, Conn.
Application March 1, 1946, Serial No. 651,160
1 Claim. (Cl. 24—178)



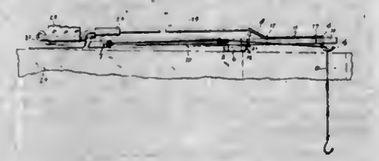
A belt buckle adapted to serve as a bottle cap remover and comprising spaced side portions, a forward end cross-bar portion extending fully across to said side portions, a rearward end cross-bar portion, an intermediate cross-bar portion extending fully across to said side portions and serving to fit under the bottom edge of a bottle cap while the forward end cross-bar is on top of the cap, a pin pivoted on the rearward end cross-bar portion and adapted, when the belt end is introduced between the forward and intermediate cross-bar portions and by passage through a hole in the belt end to engage the forward cross-bar portion to retain the belt end in position, and a narrower handle tongue-like portion forming an integral rearward extension of the rearward cross-bar portion for providing lifting leverage for the buckle as it is used to remove a cap, said handle portion being shaped to be concealed by an attachment loop of the belt.

2,470,607
TRACTION DEVICE
Theodore D. Dritz, Mount Vernon, N. Y.
Application June 26, 1947, Serial No. 757,110
3 Claims. (Cl. 152—221)



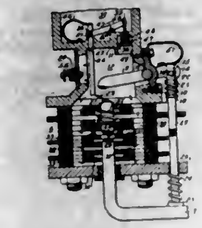
2. A traction device for a vehicle wheel having a pneumatic tire, including a plurality of flexible pads adapted to be arranged on the tire and a circular spider secured to the wheel, said pads having a base, shoulder portions and attaching means secured to both ends of said pads, said base being relatively thin and adapted to be fitted over the tread of the tire, said shoulder portion disposed at opposite sides on the walls of said tire, said spider having a plurality of radial arms extending therefrom, hooks on said arms adapted to detachably engage said attaching means at one end of said pads, the opposite ends of said pads being connected together through a strap arrangement whereby said pads will be maintained in operable position when said wheel revolves.

2,470,608
CIRCUIT BREAKER
Gilbert J. Easley, Forest Hills, and Ralph O. Bonine, Edgewood, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 18, 1944, Serial No. 545,438
15 Claims. (Cl. 200—82)



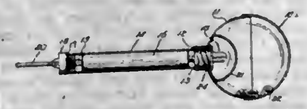
1. An operating mechanism for a circuit breaker comprising a fluid motor, means for admitting fluid pressure to said motor to operate said breaker to closed position, a valve operable to an open position during a closing operation of said motor to cause quick collapse of the fluid pressure on the working side of said motor, actuating means comprising a valve actuating piston operable by fluid pressure to initiate an opening operation of said valve, said valve being operable by fluid pressure to full open position independently of said valve actuating piston following said initial opening operation thereof.

2,470,609
PIEZOELECTRIC CRYSTAL
William C. Elmore, Swarthmore, and John F. Marshall, Primos, Pa., assignors to the United States of America as represented by the Secretary of War
Application December 10, 1945, Serial No. 634,083
8 Claims. (Cl. 171—327)



1. In a holder for a piezoelectric crystal having a longitudinal axis and opposed pairs of rectangular faces substantially parallel thereto, a supporting structure including two loops extending about said crystal substantially in a plane perpendicular to said axis, four supporting threads, means engaging one pair of said threads to one said loop at portions adjacent an opposed pair of crystal faces, means engaging the other pair of said threads to the other said loop at portions adjacent the other opposed pair of crystal faces, and yieldable means supplying tension forces in the supporting structure whereby said loops are drawn into engagement with each other and with said faces to maintain said crystal in substantially fixed position within said holder.

2,470,610
ICE FISHING JACK
Loring L. Elsemore, Bangor, Maine
Application December 26, 1946, Serial No. 718,450
2 Claims. (Cl. 43—17)



1. In a fishing jack, a body member, line-holding elements at the edge of said body, a member pivotally connected to the said body, a flagstaff secured to the upper surface of said member, said flagstaff having spaced shoulders between its ends, a signal on the outer end of said staff, a weight slidable on the said staff between the shoulders, and a guide for a fishing line on the outer end of said member whereby pull on the fishing line swings said member to a vertical position and changes the position of the flagstaff.

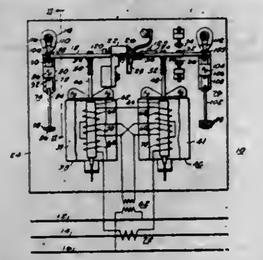
2,470,611
CIRCUIT INTERRUPTER
Robert E. Friedrich, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 25, 1947, Serial No. 724,425
9 Claims. (Cl. 200—150)

1. In a circuit interrupter of the fluid blast type, a relatively stationary contact, a movable contact separable from the stationary contact in one direction to establish an arc, a separate and independently movable arcing electrode disposed in proximity to the relatively stationary contact and adapted for movement in the opposite direction, and means responsive to the magnitude of the current being interrupted for causing movement of the arcing electrode in the said opposite direction to thereby cause transfer of the terminal of the arc from the movable contact to the arcing electrode to shorten the length of the arc.

2,470,612
ILLUMINATED RATTLE FOR BABIES' CRIBS
Oscar Galter, Chicago, Ill.
Application November 18, 1947, Serial No. 786,675
1 Claim. (Cl. 240—6.4)

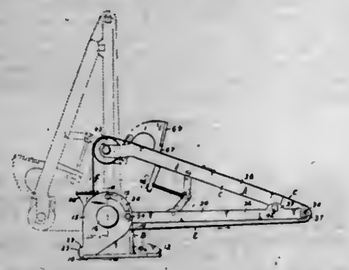
A combination baby's crib lamp and rattle comprising a lower hollow translucent head portion having screw threads at its open upper portion, an upper hollow translucent head portion having screw threads at its open lower portion removably engaging the screw threads of said lower head portion, said lower head portion having a flanged open portion with screw threads at its lower end, a combination hollow handle and battery-holder having screw threads at its upper end removably engaging the screw threads in the flanged open portion of said lower head portion, a socket attached to said handle adjacent its upper end, an electric light bulb removably mounted in said socket and extending within said lower head portion, the lower end of said handle being open and having screw threads, a cap having screw threads removably engaging the screw threads at the lower end of said handle for closing the lower open end of said handle, a contact member attached to said cap and adapted when the cap is screwed forwardly on said handle to contact said battery and illuminate said bulb, said contact member adapted when said cap is screwed rearwardly to move away from contact with said battery and extinguish said bulb, a plurality of rattle members loosely housed in said head portions, a guard attached to the lower head portion and surrounding the top and sides of said electric light bulb to protect it from breakage by said rattle members, and an attaching means on said handle for removably attaching the device to a crib to act as a lamp.

2,470,613
ELECTRIC CAM SNAP SWITCH
Arthur C. Gaynor, Stratford, Conn., assignor to Joseph F. Gaynor, Milford, Conn.
Application April 18, 1945, Serial No. 589,026
11 Claims. (Cl. 200—68)



11. An electric switch comprising a casing having two separable halves, one of said halves having an opening therethrough; a contact fixedly mounted in the other half of the casing; a metal arm mounted in the contact-carrying half of the casing, the arm being movable and adapted to engage and disengage the said contact, and being yieldably maintained in engagement with the latter; a sloping projection on the arm; an operating member extending into the opening of the said one casing half for pivotal movement therein, said member having a portion engaging the projection of the arm for camming operation of the latter whereby opposite movements of the lever and arm-engaging portion thereof cause the said arm to respectively engage and disengage the contact; bearing plates on opposite sides of the operating member, pivotally connected to the latter, the walls of the opening of the said one casing half being recessed to slidably receive and nest the bearing plates and prevent the same from turning; and means associated with the bearing plates and operating member for preventing movement of the latter beyond either of two limits at which the arm respectively engages and disengages the contact.

2,470,614
RELAY
Ralph A. Geiselman and William H. Cuttino, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 27, 1944, Serial No. 533,098
7 Claims. (Cl. 200—98)



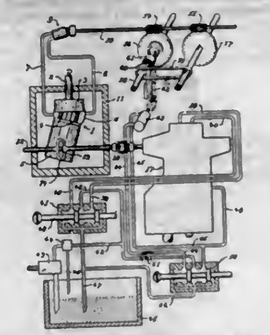
7. In a relay, in combination, a pair of spaced stationary contact members, a movable contact member, a contact arm for carrying the movable contact member, a pivot for mounting the contact arm, a pair of electromagnets disposed in spaced relation on opposite sides of the pivot to actuate the contact member, each of the electromagnets having a core member, a voltage responsive winding, and a pair of current responsive windings symmetrically placed with respect to the voltage responsive winding on the core member, the pair of current responsive windings being connected in series but being oppositely wound, the windings on the one core

member being so proportioned that when oppositely energized to the energization of the corresponding windings on the other core member the core members are simultaneously positionally varied in opposite directions to thereby actuate the contact arm to move the movable contact into selective engagement with the stationary contact members, a pair of adjustable weights positioned in spaced relation to one another in the path of movement of the pivot-

ally mounted contact arm, the weights being disposed to be selectively carried by the contact arm depending upon the direction of movement thereof about the pivot, the weights cooperating with the energization of the windings to control the selective engagement of the contact members, and magnetic means associated with the contact arm effective when a weight is carried by the contact arm to effect a positive accelerated action in the selective engagement of the contact members.

2,470,615
SANDER
Lyndon V. Grover, Los Angeles, Calif.
Application April 4, 1947, Serial No. 739,304
5 Claims. (Cl. 51—135)

1. A sander including two arms pivoted together adjacent similar ends, means connecting said arms to relatively adjust them with scissors-like action, pulleys on said arms, an endless belt trained about said pulleys, and means carried by one of said arms underlying said belt to provide a backing surface for the belt, said adjusting means including two toggle links connected together at similar ends and at their other ends pivotally connected respectively to said arms, a bolt connected at one end to the pivotal connection of said links to each other, a support as a part of one arm receiving said bolt and means threaded on said bolt and bearing against said support to effect movement of the pivotal connection of said links towards and away from said support to thereby vary the angular adjustment of said arms.

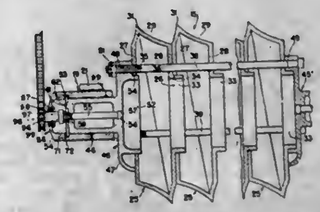


2,470,616
SHOCK ABSORBER
Ralph M. Harmon, Wichita, Kans., assignor to Beech Aircraft Corporation, Wichita, Kans., a corporation of Delaware
Application June 25, 1946, Serial No. 679,054
5 Claims. (Cl. 267—64)

1. The herein disclosed shock strut construction comprising companion tubular piston and cylinder members, an extension stop for limiting the extension movement of said members including a stem projecting inwardly from the outer end of one of said members, having an extension stop head at the inner end of the same and a stop plate carried by and at the inner end of the other of said members in position to operate freely over said stem in back of said extension stop head, a rebound check cylinder extending from the outer end of said other member inwardly over said extension stop head and having a ported orifice plate at the inner end of the same disposed between the stop plate carried by said last mentioned other member and said extension stop head carried by the first mentioned member and means for guiding said check cylinder for free longitudinal shifting movements between the outer end of said member and said stop plate at the inner end of said member and whereby said ported orifice plate at the inner end of said check cylinder will be jointly controlled by said stop plate and said extension stop head at the opposite sides of the same.

2,470,617
CONTROL FOR VARIABLE DISPLACEMENT PUMPS
William M. Hoddinott, Springfield, Mass., assignor to Van Norman Company, Springfield, Mass., a corporation of Massachusetts
Application August 28, 1944, Serial No. 551,466
4 Claims. (Cl. 103—38)

1. A hydraulic drive comprising a variable delivery pump adjustable on both sides of neutral to preset feed and rapid traverse positions, and means for adjusting the pump comprising a rod, a pair of plungers connected to the rod to move it in opposite directions, a single abutment positioned to limit said movement of both said plungers, and means to shift said abutment between

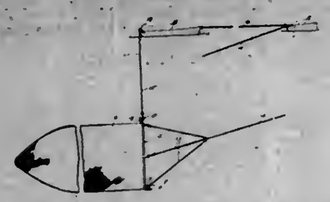


positions giving respectively a long and a short travel to the plungers.

2,470,618
ELECTRICAL APPARATUS
Lawrence T. Holden, Boston, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application March 26, 1946, Serial No. 657,303
4 Claims. (Cl. 173—324)

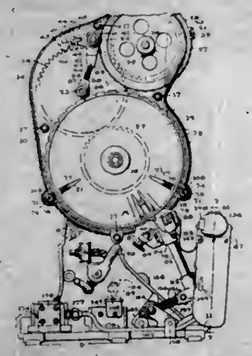
2. In an electrical assembly for mechanically and electrically coupling first and second chassis cards which are disposed substantially in a single plane and have adjacent edges opposing each other, the combination of a plurality of straps of springy electrical conducting material disposed in substantially parallel spaced relationship and spanning the said edges, each of said straps having a proximal end portion secured to the first card and having a distal end portion extending beyond the said edge of said second chassis card, said straps being secured to said first card at spaced points along its said edge, the distal end portions of successive straps being sprung slightly in opposite directions and provided with oppositely extending eyelet engaging projections, a like plurality of eyelets secured to the second chassis card adjacent its edge aforesaid so as to be lined up respectively with the several straps aforementioned, so that the eyelet engaging projection on each strap may engage one of said eyelets, the distal end portions of successive straps being positioned on opposite sides of the second card, and the spring action of the straps maintaining the projections in separable operable engagement with the respective eyelets.

2,470,619
SOIL PULVERIZER
William A. Hyland, Horicon, Wis., assignor to John Deere Van Brunt Company, a corporation of Wisconsin
Original application May 28, 1943, Serial No. 488,930, now Patent No. 2,418,937, dated April 15, 1947. Divided and this application August 30, 1944, Serial No. 551,926
5 Claims. (Cl. 55—77)



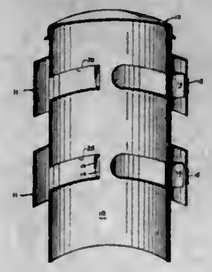
1. In a soil packer, pulverizer, or the like, a plurality of soil-engaging wheels, each consisting of a member having laterally spaced sides the outer portions of which are connected by a rim portion of V-section, forming a cutting edge that is disposed in a plane making an acute angle with respect to the axis of said wheel member, the sides of said wheel member being disposed in parallel planes perpendicular to said axis.

2,470,620
UNITARY CLOSURE AND MASK FOR CATHODE-RAY TUBES
Donald Jackson, Cambridge, England, assignor to Pye Limited, Cambridge, England, a company of Great Britain
Application November 15, 1946, Serial No. 710,119
In Great Britain September 27, 1945
2 Claims. (Cl. 178—7.5)



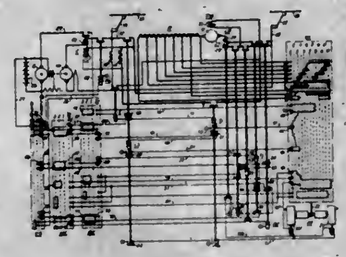
2. A closure for mounting on a television receiver cabinet in closing relation to an opening therein and in front of the cathode ray tube of the receiver, said closure consisting of a one-piece moulding of transparent material including a front portion and a flange portion forming a side wall extending around the periphery of said front portion, said front portion comprising a portion which is of outwardly curved cross-sectional configuration and merges into a peripheral marginal portion surrounding said outwardly curved portion, said marginal portion being flared divergently outwardly from said curved portion, a coating of opaque material applied to said flange portion and to said marginal portion to render said flange portion and said marginal portion opaque to form a masking frame surrounding said curved portion of said front portion which is left transparent to form a viewing window.

2,470,621
FISHING NET
Arne Jacobsen, Accord, N. Y.
Application March 2, 1945, Serial No. 580,530
1 Claim. (Cl. 43—7)



In a trolling net, a net portion, a rectangular rigid frame secured to the open end of the net, providing the mouth of the net, a wide fin pivotally connected with the lower side of the rectangular frame, arms secured to the lower side of the frame, said arms having openings, adjusting bolts secured to the fin and being extended through said openings, and nuts on the adjusting bolts and adapted to regulate the angle of operation of the fin, thereby controlling the depth of operation of the net.

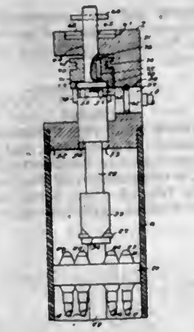
2,470,622
LAUNDRY MARKING MACHINE
William J. Keuper, Cincinnati, Ohio, assignor to The National Marking Machine Company, Cincinnati, Ohio, a corporation of Ohio
Application August 10, 1944, Serial No. 548,863
8 Claims. (Cl. 101—94)



1. In a machine of the class described including a type assembly adapted to locate type at printing position, the combination of a platen-carrier rockable from normal to printing position and return, a platen slidably mounted on said platen-carrier and on which an article to be marked is adapted to be held by the operator, fluid pressure means for moving said platen toward type at printing position to take an imprint therefrom, an electro-magnetic device controlling said fluid pressure means, an electric circuit including said device and a source of electric current, a switch in said circuit, and means adapted to close said switch upon movement of the platen-carrier to printing position.

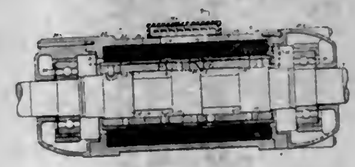
2,470,623
VENTILATOR CAP
Jack W. Kice, Wichita, Kans., assignor to The Coleman Company, Inc., Wichita, Kans.
Application July 11, 1947, Serial No. 760,480
2 Claims. (Cl. 98—66)

1. A vent cap comprising: an inner shell formed by bending a flat sheet of material into substantially cylindrical form with the ends of the sheet over-lapped; a cap closing one end of the formed shell and adapted to aid in holding the ends of the sheet in overlapped relation; perforated outwardly projecting ears, one cut from each overlapped end of the sheet; a bolt through the perforations in said ears; a nut on the bolt for rigidly clamping the open end of said shell in operating position on the open end of a vent pipe; circumferentially spaced outwardly projecting brackets cut from the material of said sheet; a vent opening in the shell between each adjacent pair of said brackets; and a shield for said vent openings supported in spaced concentric relation to the inner shell by the outer ends of said brackets, said shield also being formed by bending a flat sheet of material into substantially cylindrical form with the ends of the sheet overlapped, and having perforations for receiving the outer ends of said brackets, at least one of said brackets having its outer end passed through the overlapped ends of the shield.



2,470,624
DYNAMIC BRAKING CONTROL SYSTEM
Bernard J. Krings, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 13, 1947, Serial No. 734,333
7 Claims. (Cl. 318—375)

1. In a control system, in combination, a motor, power conductors for the motor, electro-



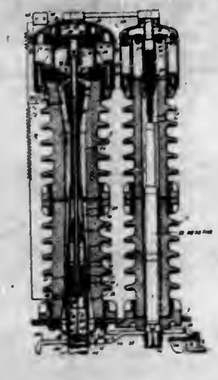
magnetic switching means for establishing dynamic braking circuit connections for the motor, a controller for controlling the operation of said switching means, a source of power for energizing said controller, and relay means responsive to the dynamic braking current and the voltage of said power conductors for maintaining the energizing circuit for said controller during dynamic braking.

2,470,625
NO-LOAD TAP CHANGER
Edmund W. Kuhn, Cortland, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 20, 1947, Serial No. 775,319
6 Claims. (Cl. 200—4)

1. A tap changer for transformers comprising an insulating tube, a horizontally disposed terminal board of insulating material within the tube, a plurality of stationary contact members mounted on and extending upwardly from said terminal board and arranged substantially in the arc of a circle, a shaft extending vertically upwardly centrally of the circle of said contact members, a contact arm carried by and offset from said shaft and a bridging contact member mounted on said contact arm and adapted to engage a pair of said stationary contact members, an operating mechanism mounted at the upper end of said tube and comprising a housing, a follower shaft within the housing connected to said first named shaft, a driven gear keyed to rotate with said follower shaft and having a plurality of downwardly extending teeth, a driving gear comprising a cylindrical body portion positioned with its axis at right angles to the axis of the shaft and having a single tooth movable eccentric of the axis and continuously engaging the follower shaft to raise and lower the shaft, the tooth of said pinion gear being so arranged as to engage between two adjacent teeth on said driven gear for rotating the shaft a predetermined amount corresponding to the arc between successive switch positions while the shaft is in its upper or circuit open position, said gears being operable during each rotation of the driving gear to raise the shaft to a switch interrupting position, rotate the shaft to the next step position of the switch, and to lower the shaft to a switch closing position.

2,470,626
ELECTROMAGNETIC TORQUE RESPONSIVE DEVICE
Bernard F. Langer and Kenneth L. Wommack, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 30, 1946, Serial No. 694,062
3 Claims. (Cl. 73—136)

1. Strain responsive apparatus comprising, in combination, a stationary electromagnetic flux producing unit, a rotor assembly including a pair of spaced magnetic rings having projections disposed in interlocking relation so that small magnetic airgaps are formed therebetween, said rings being resiliently connected to permit relative movement in a direction to vary said magnetic airgaps, said rotor being disposed to be linked by the flux produced by said electromagnetic unit, and means of nonmagnetic material disposed in said rotor and being constructed and arranged to form gaps of lesser dimensions therebetween than said magnetic airgaps to limit the range of movement of said rings and, hence, the variation of said magnetic airgaps.



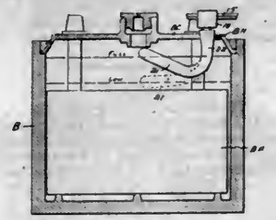
2,470,627
PHOSPHOR
Humboldt W. Leverens, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
No Drawing. Application October 24, 1945, Serial No. 624,322
1 Claim. (Cl. 252—301.6)

A phosphor material for a cathode ray beam tube consisting of zinc fluoride crystallized with cadmium and 0.001 to 0.1 mole of manganese activator per mole of zinc fluoride, said cadmium fluoride being not more than 90% of the zinc fluoride.

2,470,628
CIRCUIT INTERRUPTER
Leon R. Ludwig, Wilkinsburg, Herbert J. Webb, Forest Hills, and Benjamin P. Baker, Turtle Creek, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 24, 1944, Serial No. 537,074
11 Claims. (Cl. 200—148)

1. In a circuit interrupter of the gas blast type, means defining an orifice, a stationary contact disposed above the orifice on the low pressure side thereof, a movable contact separable from the stationary contact and movable through the orifice to draw an arc therethrough into the high pressure side of the orifice, a conducting member disposed adjacent to the orifice, and impedance means constantly connected in parallel with the contacts and having a tap connection to the conducting member to control the division of recovery voltage after arc extinction between each of

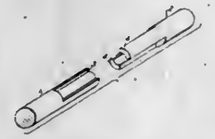
said contacts and said conducting member generally in accordance with the dielectric strength



of the gaseous medium on the respective sides of said orifice.

2,470,629
PROCESS OF EMULSION POLYMERIZING BUTADIENES
Gerry P. Mack, Jackson Heights, N. Y., assignor to Advance Solvents & Chemical Corporation, New York, N. Y., a corporation of New York
No Drawing. Application October 30, 1944, Serial No. 561,158
2 Claims. (Cl. 260—23.7)

2. In a process of emulsion polymerizing, a monomeric material selected from the group consisting of the monomer of butadiene-1,3, isoprene, 2,3-dimethyl butadiene-1, 3,2-halo-butadiene-1,3, and mixtures of these monomers with other monomeric vinyl compounds capable of forming with said monomers solid copolymers in aqueous emulsion, the steps of emulsifying the monomeric material with water in the presence of an emulsifying agent and of an emulsion stabilizer which is the condensation product of about 3 moles of naphthalene beta-sodium sulfonate and about 3 moles of a sodium sulfonate of a mixture of ortho, meta and para terphenyl with about 5 moles of formaldehyde, and subjecting the emulsion thus formed to heat polymerization.

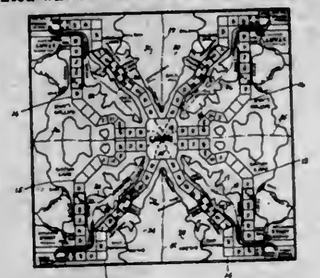


2,470,630
LIQUID LEVEL ALARM PARTICULARLY FOR STORAGE BATTERY ELECTROLYTES
Rene J. Marcou, Newton, Mass.
Application September 7, 1946, Serial No. 695,514
9 Claims. (Cl. 200—84)

5. In a device for signalling the electrolyte level of storage batteries of the type having one or more cells containing electrode plates and having cell top covers, an elbow-like hollow rubberous tube comprising generally horizontal and vertical legs and a curved flexure-hinge portion connecting them, the horizontal leg being integrally closed at the free end for buoyant reception by electrolyte of a battery cell and the vertical leg defining a portion for pendent support by a cell top cover and having a non-conductive stopper closing and sealed in the upper end thereof, external connector posts carried by the stopper, insulated conductors connected to said posts and extending to a point adjacent the closed end of the tube and there presenting bare terminal portions, and gravity movable circuit closer means held in and by the tube for movement toward and from the

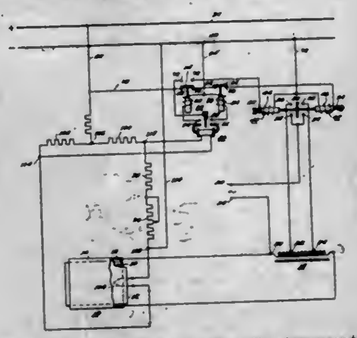
integrally closed end and cooperating with said terminal portions to make and to break a circuit thereat upon flexing lowering and raising of said end respectively.

2,470,631
SLIDING JOINT FOR TRANSMISSION LINES
Cyril E. McClellan, Catonsville, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 28, 1943, Serial No. 496,520
3 Claims. (Cl. 174—21)



1. A concentric transmission line comprising a core conductor provided with a sliding joint comprising a first member having a plurality of arcuate projecting fingers of conducting material separated circumferentially by gaps, and a second member of conducting material having the same outside diameter, and having a plurality of circumferentially displaced channels positioned and dimensioned to engage said fingers in sliding contact, the two portions of said linear conductor projecting in opposite directions from said joint, and a sheath conductor comprising two tubular portions of the same inside and outside diameters one said portion having projecting fingers circumferentially separated by gaps and the other having channels adapted to engage the surfaces of said fingers in sliding contact.

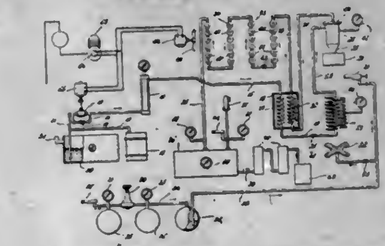
2,470,632
CHANCE CONTROLLED GAME BOARD
Norman McLeod, Cleveland, Ohio
Application December 29, 1945, Serial No. 638,026
14 Claims. (Cl. 273—134)



1. In a board game apparatus, a board acting as a playing field having portions simulating land areas and other portions simulating water areas with one of said simulated water areas being substantially in the center of said board, a plurality of lanes superimposed upon said board along portions of the board simulating water

areas, each of which lanes passes through the simulated water area at the center of the board,

and each of said lanes having division means to form spaces which carry one or more numerals.

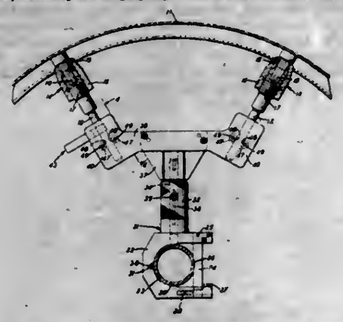


2,470,633
TEMPERATURE CONTROL SYSTEM
Clarence L. Merahon, Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 30, 1947, Serial No. 794,526
2 Claims. (Cl. 219—20)

1. In a system for controlling the temperature of a window having a resistor heating element associated therewith, in combination, a transformer disposed to be connected in circuit between the resistor heating element and a source of supply, a tap changing means including a pair of windings disposed to be selectively energized to control the connections of the transformer in said circuit, a pair of contactors disposed to be selectively energized, one of the contactors being disposed when energized to connect one of the windings to be energized, the other one of the contactors being disposed when energized to effect the deenergization of the other one of the windings, said pair of contactors cooperating when deenergized to connect said other one of the windings to be energized, a polarized relay disposed for operation to control the selective energization of the contactors, and a resistance bridge circuit having a resistor associated with the window whereby the resistance thereof varies as the temperature of the window varies, the polarized relay being connected across the resistance bridge circuit to be energized in accordance with the electrical unbalance thereof.

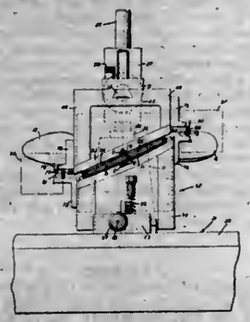
622 O. G.—57

2,470,634
APPARATUS FOR DELEADING GASOLINE
John D. Morgan, South Orange, Sylvan R. Merley, Riverton, and Wayne E. Smith, Haddonfield, N. J., assignors to Cities Service Oil Company, New York, N. Y., a corporation of Pennsylvania
Original application May 8, 1945, Serial No. 592,578. Divided and this application February 7, 1946, Serial No. 646,032
2 Claims. (Cl. 196—2)



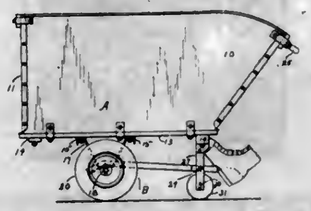
1. A portable unit for removing ethyl anti-knock compounds from gasoline comprising an inlet for liquid ethyl gasoline, a pump connected to said inlet, a pipe coil defining a heating zone, a first conduit connecting the outlet of said pump with the inlet of said zone, means for regulating the quantity of liquid ethyl gasoline delivered by said pump to said coil, a gasoline burner for heating said coil, means for regulating said burner said pump and burner regulating means serving conjointly to control the temperature in said coil within the range of from 750° F. to 850° F. whereby to vaporize such gasoline and decompose its contained ethyl anti-knock compounds, a centrifugal separator for separating ethyl decomposition products from vapor generated in said coil, a second conduit connecting the outlet of said coil to the inlet of said separator, a series of interconnected finned tubes serving as a vapor condenser, a fan for discharging air at normal atmospheric temperature over said tubes, a third conduit connecting the outlet of said separator with the inlet of said condenser, and a heat interchanger having its hot side constituting a portion of said third conduit and its cold side constituting a portion of said first conduit.

2,470,635
GAUGE FOR CHECKING THE POSITIONS OF PARTS MOUNTED ON THE INNER PERIPHERIES OF CYLINDRICAL ARTICLES
Earl C. Moss, Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application July 10, 1946, Serial No. 682,674
4 Claims. (Cl. 33—180)



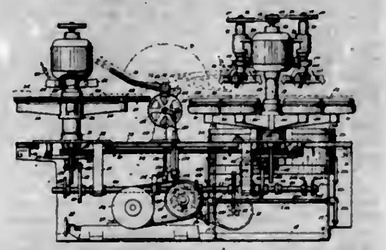
3. A gage for checking the position of a part, mounted on the inner periphery of a cylindrical article, with respect to a given line radially of the centerline of the article, the gage comprising a bar, a chuck supporting the bar and actuable for mounting on the part and securing the bar in alignment with the part, a support mountable with its centerline coinciding with the centerline of the article, a carriage movable in a guided path on the support relative to the bar, an arm supported by the carriage, movable therewith in the guided path and having a gaging surface, lying in a plane parallel with the said given radial line, to engage the bar, means cooperating with the gaging surface and the bar to indicate

whether or not the part is within predetermined limits of the said given radial line in one direction, and spaced gaging members carried by the



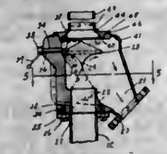
arm and extending at like angles from the gaging surface to receive the bar therebetween if the part is within predetermined limits of the said given radial line in another direction.

2,470,636
GAUGING APPARATUS
Earl C. Moss, Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application July 12, 1946, Serial No. 683,180
2 Claims. (Cl. 33—174)



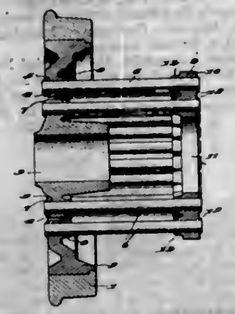
2. A gaging apparatus comprising a base having a horizontal, plane reference surface, a vertical shaft rigid on the base and conditioned to removably receive and rigidly support a correspondingly bored article to be gaged, a horizontally extending arm slidably and rotatably supported on the shaft, a first gage member shiftable on the arm radially of the shaft and vertically slidable with the arm on the shaft to be applied to one surface of a specific portion of an article on the support at a predetermined site thereon and in predetermined orientation thereto, a second gage member removably and adjustably supportable on the base to be applied to an opposite surface of the said portion of the article, aligning means on the first gage member, and aligning means on the second gage member to coact with the aligning means on the first gage member to effect accurate registration of the two gage members in predetermined relation.

2,470,637
FEED TRUCK AND MEANS FOR REMOVING FEED THEREFROM
John B. Olson, Fort Atkinson, Wis., assignor to James Manufacturing Company, Fort Atkinson, Wis., a company of Wisconsin
Application May 14, 1947, Serial No. 747,930
6 Claims. (Cl. 280—43)



1. A feed truck of the character described comprising, a feed box the rear panel of the feed box being rigidly secured to the side panels, and positioned obliquely upwardly and rearwardly near a 45 degree angle to the bottom of the box, two transversely spaced carrying wheels rotatably mounted on said box forward of the longitudinal center thereof, transversely spaced arms transversely hinged at their upper ends to the rear bottom corners of the box, relatively small carrying wheels transversely rotatably mounted on the lower ends of said arms, a controlling element hinged to said arms a distance from the hinges thereof and extending forwardly a distance, means on the forward end of said controlling element for locking the arms in a vertical position, means for manually unlocking said locking means to permit said relatively small wheels to swing upwardly on the arm pivots as an axes and thereby lower the rear end of the box for shoveling or forking material from the box.

2,470,638
APPARATUS FOR WORKING PLASTIC MATERIAL
Clifford H. Parmelee and Arthur J. Briggs, Syracuse, N. Y., assignors to Onondaga Pottery Company, Syracuse, N. Y., a corporation of New York
Application December 14, 1945, Serial No. 634,926
10 Claims. (Cl. 25—24)



1. Apparatus of the type described including mechanism for spreading blanks of clay to bat form on a succession of transfer members, mechanism for successively moving said members through an arc to invert the same and deposit the bats on a succession of molds, mechanism operable to jigger the bats on said molds successively, and motion transmitting means for operating said mechanisms in timed relation.

2,470,639
EDUCTION HEAD FOR AIR LIFTS
John A. Piersol, Indianapolis, Ind.
Application March 20, 1946, Serial No. 655,734
9 Claims. (Cl. 183—103)

1. In an air lift system eduction head structure, having chamber forming means with substantially aligned opposite air and liquid mixture inlet and air outlet openings and a laterally discharging liquid discharge opening, the combination therewith of a dividing fin between the aligned openings and in the chamber opposite the lateral opening and directed toward the same, and drip lip forming means having its inner edge directed downwardly and defining the upper and air outlet opening.

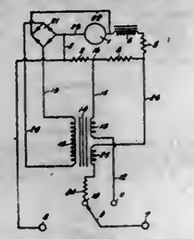
2,470,640
WHEEL WITH RESILIENT SPOKES
Emil H. Piron, New York, N. Y., assignor to Transit Research Corporation, New York, N. Y., a corporation of New York
Substituted for application Serial No. 491,214, June 17, 1943. This application February 14, 1947, Serial No. 728,392
3 Claims. (Cl. 295—14)

2. A spoke for a wheel having the general shape of a U, the legs being individual metallic bars parallel with each other, and a coupling joining said bars, said coupling having two parallel openings through which said bars extend, said bars each extending entirely through said openings and being fixedly secured to said coupling only at their outer ends, said coupling having cylindrical tapered collars integral therewith and encompassing each of said spokes for a distance along their length at the side away from that to which said bars are secured.

2,470,641
DISINTEGRATED NEWSPRINT-BORIC ACID INSULATION COMPOSITION
Frederick G. Portz, Waukesha, Wis.
No Drawing. Application May 12, 1945, Serial No. 593,528
2 Claims. (Cl. 252—62)

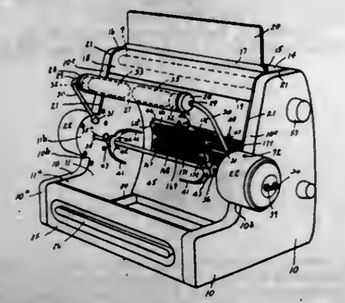
2. An insulation composition consisting of approximately twenty-five pounds of dry powdered boric acid mixed with seventy-five pounds of dry disintegrated newsprint.

2,470,642
LOOPER
Roy H. Randall, Manchester, Mich.
Application January 13, 1947, Serial No. 721,841
2 Claims. (Cl. 112—201)



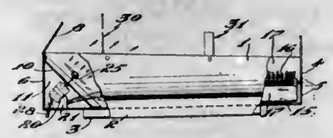
1. A looper comprising a shank, a narrow cross arm on the end of the shank having a flat face on its rear side, a head extending across one end of the arm lying in a plane forward of the rear side of the arm, the forward extremity of the head forming a loop picking point, the other extremity forming a cast off point, the forward side of the arm being bowed outwardly from the head and meeting the rear side of the arm at the opposite side of the shank to form a wedge shaped loop divider, said head in rear of the loop picking point being provided with a needle passage, the latter extending along the side of the arm and across the axis of the shank.

2,470,643
LIGHT SWITCH
Herman P. Rath, North Bergen, N. J.
Application August 10, 1945, Serial No. 610,139
7 Claims. (Cl. 200—155)



1. A switch device comprising a pair of tubular members through the axis of one of which an electric cord is adapted to pass, one member being fixed on the cord and including an enlarged casing forming a chamber around one end thereof, the other member being rotatable on the first member and in said chamber, a cover detachable with said casing and having an aperture registering with the bore of the fixed tubular member, said fixed tubular member having spaced electric contacts extending into said chamber, the ends of one conductor of the cord being adapted to extend radially into said chamber for engagement with said electric contacts, the spaced contacts normally breaking the circuit through said conductor, and said rotatable member having in said chamber a spring contact adapted to bridge said spaced contacts in placing the same in electric communication in one position of said rotatable member.

2,470,644
ELECTRICAL MEASURING INSTRUMENT
John Cecil Redman, Harrow Weald, England
Application November 19, 1946, Serial No. 710,782
In Great Britain November 19, 1945
7 Claims. (Cl. 171—95)

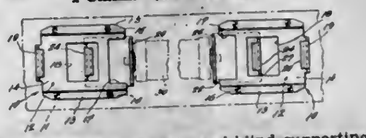


1. A permanent magnet, moving coil, electrical measuring instrument including in combination a rectifier having alternating current terminals, electrical connections connecting the direct current terminals of said rectifier to the instrument movement, an instrument movement circuit including a resistance shunt, an inductance in series with said shunt, a transformer having its secondary winding connected across the alternating current terminals of the rectifier, and an input lead connected to the resistance shunt through a primary winding of the transformer.

2,470,645
PORTABLE ELECTRIC BARBECUE
James H. Reichart, Muncie, Ind.
Application August 2, 1943, Serial No. 496,987
10 Claims. (Cl. 99—421)

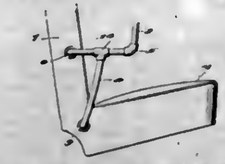
1. A barbecue and like device including in combination an open face housing, a rotatable spit in the open face thereof and above the base of the housing, heating means in the housing rearwardly of the spit position, an open top drawer type tray conforming to and closing the lower front portion of the housing and positioned forwardly of as well as beneath the spit and extending into the housing an appreciable distance behind the spit, and a generally vertically directed and apertured deflector positioned rearwardly of the spit position and through the aperture of which said heating means is exposed, the lower end of the deflector terminating forwardly of the back of the drawer type tray and above the top of the sides thereof.

2,470,646
CLOTHES DRIER
Charles L. Richardson, Belmont, Mass.
Application March 24, 1948, Serial No. 16,703
5 Claims. (Cl. 34—239)



1. A portable clothes drier comprising an elongate crib-like body having a closed end and a partition extending diagonally from the bottom wall portion to the outer edge of said closed end so as to define an enclosed chamber, heating elements extending along the bottom wall portion of said body between the inner end of said partition and the other end of said body, a screen extending above said heating elements so as to divide the interior of said body into longitudinally extending inner and outer flow channels, a motor within said chamber having its shaft extending through said partition, a fan carried by the projecting end of said shaft, the parts being so constructed and arranged that said fan induces a flow of air through the inner channel about said heating elements toward said fan and against said partition and a counterflow of heated air toward said opposite end, and a rack for supporting articles to be dried so that they are suspended in said outer flow channel where they are subjected both to radiation from said heating elements and the counterflow of heated air.

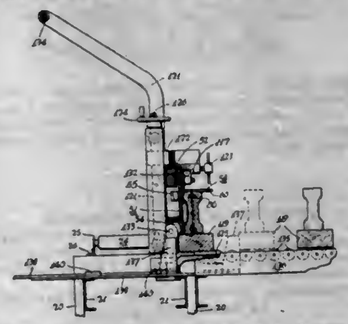
2,470,647
ARMATURE CONSTRUCTION FOR DYNAMO-ELECTRIC MACHINES
Leslie Roberts, Bradford, England, assignor to The English Electric Company, Limited, London, England, a British company
Application August 21, 1947, Serial No. 769,932
In Great Britain September 10, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires September 10, 1961
4 Claims. (Cl. 171—321)



1. In an armature for a dynamo-electric machine, a cylindrical commutator having a plurality of segments, each of said segments having a lug at one end thereof which is thinner than the segment, an armature conductor brazed to each of said lugs, the combined thickness of the conductor and lug being less than the thickness of the segment, insulating means substantially filling the spaces between adjacent lugs, and a ring element disposed between said lugs and the cylindrical surface of the commutator, said ring element extending radially substantially the same distance as the lugs.

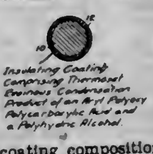
2,470,648
COMBINED ADJUSTABLE CURTAIN AND BLIND BRACKET
John J. Rohleder, Baltimore, Md.
Application August 21, 1947, Serial No. 769,935
1 Claim. (Cl. 248—263)

In an adjustable curtain and blind-supporting bracket, the combination with a body plate provided with a longitudinally-extending out-pressed portion, a side strip arranged on each side of said out-pressed portion, there being a plurality of spaced apertures arranged in said side strips for receiving fastening elements for securing said body plate to a supporting surface, said body plate being provided with an opening therein intermediate its ends, a prong arranged at right angles with respect to said body plate and having one end secured thereto for supporting a curtain rod, of an adjustable plate interposed between said supporting surface and said body plate and frictionally engaged by the out-pressed portion of the latter, a transversely-extending prong having one end secured to said adjustable plate and projecting through the opening in said body plate for supporting a curtain rod, a shoulder arranged on each side of said last-named prong for preventing binding of said prong in said opening, and a transversely-disposed apertured arm projecting from said adjustable plate for supporting an end of a shade roller.



2,470,649
ARMREST AND STANCHION
William T. Rossell, New York, N. Y., assignor to Transit Research Corporation, New York, N. Y., a corporation of New York
Application January 22, 1945, Serial No. 573,831
6 Claims. (Cl. 155—16)

2. The combination of a vehicle seat, a stanchion secured to and extending from the ceiling of the vehicle downwardly to a point alongside the end of said seat and terminating substantially above said seat, and an arm rest secured to and extending from the back of said seat substantially horizontally and fixedly secured to the bottom of said stanchion, said arm rest and said stanchion by their construction leaving a clear space immediately opposite and above the end of said seat.

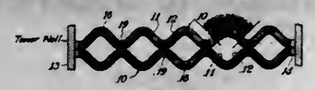


2,470,650
MACHINE FOR MAKING REINFORCED CONCRETE BEAMS
William N. Russell, Philadelphia, Pa.
Application January 16, 1948, Serial No. 2,607
21 Claims. (Cl. 25—41)

1. In a molding machine the combination with an elongated conveyor of a relatively fixed upright wall member substantially parallel to and adjoining one side of the conveyor, a carriage mounted for movement on the conveyor and having one edge thereof contiguous to the surface of said upright wall member, said carriage forming the bottom wall of a mold of which the said

upright wall member forms one side, and opposite side and end wall mold members supported on said carriage, said conveyor extending beyond an end of the side wall member so as to permit movement of the bottom, the other side and the end walls of said mold to a position clear of the relatively fixed side wall.

2,470,651
POLYMERS OF CONDENSATION PRODUCT OF ARYL DIETHER DICARBOXYLIC ACID AND DIHYDRIC ALCOHOL
Gerson S. Schaffel, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 23, 1944, Serial No. 536,878
12 Claims. (Cl. 260—75)



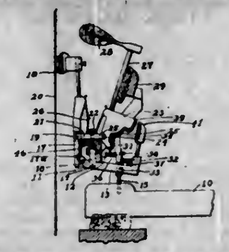
1. A liquid coating composition comprising a volatile solvent having dissolved therein a thermosettable polyester derived by heating a dihydric alcohol having no reactive groups other than the hydroxyl groups and resorcinol-O, O-diacetic acid in the presence of a catalyst selected from the group consisting of zinc chloride, sulfuric acid, aluminum chloride, antimony fluoride, antimony chloride, and boron trifluoride until condensation therebetween and cross-linking of the condensation product has occurred, the proportions of said alcohol and acid being stoichiometrically equal.

2,470,652
INDUSTRIAL CONTACTING MATERIAL
Raymond C. Seofield, Hitchcock, Tex., assignor to Pan American Refining Corporation, Texas City, Tex., a corporation of Delaware
Application November 30, 1946, Serial No. 713,333
14 Claims. (Cl. 261—95)

1. An apparatus for countercurrent contacting of vapor and liquid comprising a plurality of

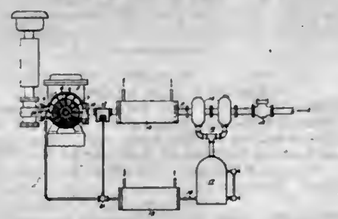
superposed porous mats of undulating shape, the ridges of each mat contacting the troughs of the mat above it to provide for downward flow of liquid through said apparatus, each mat comprising a plurality of undulating foraminous

metal sheets in capillary contact, the openings in said sheets being larger than capillary size and in nonregistering relation, thereby forming tortuous vapor passages through said mats unsealed by said liquid.



2,470,653
RESISTANCE THERMOMETER
Earl L. Schulman and Adam C. Beller, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 10, 1946, Serial No. 1,655
5 Claims. (Cl. 201—63)

1. A resistance thermometer comprising a resistance element disposed in a casing comprising an insulating thermoset resin to insulate the resistance element and to provide a member of predetermined shape, the resistance element being formed of an alloy of iron with from 26% to 31% nickel, 17.5% to 19.5% cobalt, 0.2% to 0.5% manganese, 0.05% to 0.2% silicon, and 0.01% to 0.05% carbon, the alloy having been formed into wire and annealed for about one hour at a temperature of between 800° C. and 1100° C. in a reducing, non-carburizing atmosphere, the resistance element having after annealing a specific resistance at least 25 times that of copper, and an average temperature coefficient of resistance between 0° C. and 100° C. substantially equal to that of copper between 0° C. and 100° C.



2,470,654
PIANO ACTION
Wallace H. Schults, Perkasie, Pa.
Application July 15, 1946, Serial No. 683,635
5 Claims. (Cl. 84—240)

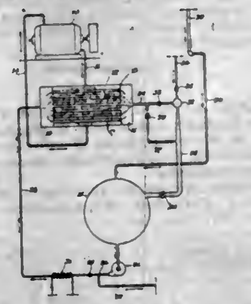
1. In a piano action having the usual fixed frame rail and keyboard, a bridge secured across said rail, a damper lever pivoted on the front end of said bridge, a tone damper on said lever, a hammer carrying butt pivoted on the rear end of said bridge, a single resilient member secured on the bridge between and engaging both the hammer and the damper and tending to swing the same apart, said butt having a rearwardly projecting back-check and a downwardly projecting heel, a wippen across and pivoted to the underside of said rail, an upstanding jack hinged directly on the wippen, a spring interposed between

the jack and a part of the wippen tending to hold said jack in contact with said butt, and means carried on the jack for engagement with the butt heel for determining the relative positions of the parts for obtaining desired touch.

2,470,655
COOLING AND LUBRICATION OF COMPRESSORS
Melvin C. Shaw, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application June 12, 1944, Serial No. 539,807
8 Claims. (Cl. 230—207)

1. The method of cooling and lubricating an air compressor having air inlet and discharge ports communicating with a compression chamber, which comprises, preparing a composite liquid comprising a solution of water-soluble oil in water, so compounding said liquid that the proportion of water and water-soluble oil is such that if said liquid is injected into said chamber there is at least such an excess of water that the oil will remain in solution in water during the compression process, and such solution will be discharged with the air from said discharge port, and injecting said liquid into said chamber while said compressor is in operation to cool and lubricate said compressor.

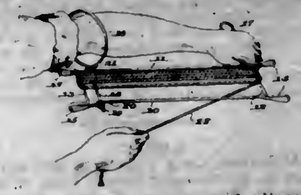
2,470,656
SLIDING VANE ROTARY COMPRESSOR
Christopher Sherrock, Preston, England
Application July 16, 1946, Serial No. 684,525
In Great Britain July 27, 1945
2 Claims. (Cl. 230—157)



1. A rotary compressor including a soft light alloy rotor, trunnions and flat hard metal vanes, wherein said vanes are caused to slide through said trunnions which have an oscillatory motion in the rotor, each trunnion consisting of at least

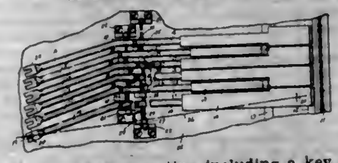
two materials interposed between the vanes and the light alloy of the rotor one of such materials being arranged to give a combination of surfaces selected for its suitability where the sliding mo-

tion of said vanes occurs and the other arranged to give a combination of surfaces selected for its suitability where the oscillatory motion of the trunnion occurs.



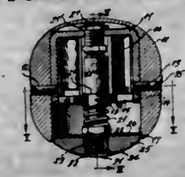
2,470,657
APPARATUS FOR COOLING AIR BY THE EVAPORATION OF LIQUIDS
Frank C. Simonds, Moylan, Pa.
Application March 21, 1947, Serial No. 736,247
6 Claims. (Cl. 62—152)

1. In apparatus for cooling a fluid, a heat exchanger having primary and secondary cooling fluid passages therein in fluid sealed and heat exchange relationship with respect to each other, a primary cooling fluid conduit system connected to said primary cooling fluid passages of the heat exchanger, an exhaust steam line, a condenser operating under vacuum and connected to said exhaust steam line to receive steam therefrom and condense the same, a pipe system for introducing at least a portion of said condensate from said condenser into one end of the secondary cooling fluid passages of said heat exchanger, and a second pipe system connecting the vacuum side of said condenser to the other end of said secondary fluid passages of the heat exchanger to reduce the pressure therein and vaporize the condensate thereby cooling the primary cooling fluid passing through said heat exchanger.



2,470,658
REEL ASSEMBLY
Walter M. Simpson, Evansville, Ind.
Application November 14, 1945, Serial No. 628,448
3 Claims. (Cl. 242—96)

1. A reel assembly comprising an elongated body formed of a single piece of wire providing a skeleton frame having spaced substantially parallel end portions about which material is adapted to be wound, said end portions being provided with ears at their extremities for limiting the lateral disposition of the material wound on the reel, an integrally formed elongated handle having a twisted connection with the reel body adjacent one end of the same, a circular arm guide rotatably journalled on the same side



of the reel body as the handle and adjacent the opposite end of the reel body for receiving the forearm of an individual with the handle gripped in the hand, said arm-guide being rotatable to a position to bring it into substantially the plane of the handle of the body and the reel.

2,470,659
PIANO KEY MOUNTING
Edward C. Sloan, Madison, Wis., assignor to The Rudolph Wurlitzer Company, Chicago, Ill., a corporation
Application April 19, 1946, Serial No. 663,259
10 Claims. (Cl. 84—435)

1. A piano key mounting including a key bed support for a plurality of piano keys, each of said keys including an extension thereof terminating in a point of lift, a transversely extending balance rail supported on said key bed support, and a hinge bearing element for each of said keys hingedly supported on said balance rail having one point of bearing directly under the key supported thereby and a lateral offset point of bearing to one side of said key and beyond the bearing support of the adjacent key.

2,470,660
ELECTRIC VIBRATOR
Leland H. Snyder, Chicago, Ill., assignor, by mesne assignments, to Knapp-Monarch Company, St. Louis, Mo., a corporation of Delaware
Application April 7, 1945, Serial No. 587,179
2 Claims. (Cl. 128—52)

1. An electric vibrator comprising a hollow casing having a rounded exterior contour suitable for gripping with the palm and fingers of

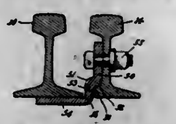
the user, said casing being open at one end, a solenoid coil insertable through said open end and secured within said casing, a plunger extending axially of said casing and coil toward the open end of said casing; a resilient seal member mounted on said plunger and movable therewith and engageable with the interior walls of said casing to seal said open end of the casing, said resilient seal member having an exterior surface protruding out of said casing to constitute a massaging tool, and means carried by said seal member for attachment thereto of other massaging devices.

2,470,661

PHASE-SEQUENCE VOLTAGE NETWORK

William K. Sonnemann, Roselle Park, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application March 27, 1947, Serial No. 737,663
3 Claims. (Cl. 171—119)



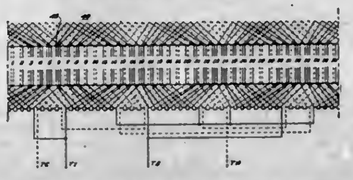
1. A network for segregating a phase-sequence component of a system of delta voltages, comprising a single-phase impedance-device including an element having mutual inductance, the impedance-angle of the impedance-device at the system-frequency, and the magnitude of the mutual inductance, being conjointly such that the mutual inductance will produce a voltage substantially at the apex of an equilateral triangle built upon the voltage across the terminals of the impedance-device as a base, in the vector-diagram, said network having four terminals, two terminals being adapted to connect the respective terminals of the impedance-device to two of the delta-points of the delta input-voltages, one terminal being for the other delta-point of the delta input-voltages, and the remaining terminal being for the mutual-inductance voltage, the latter two terminals being the output-terminals of the network, characterized by said impedance-device including a resistor and a mutual-inductance element, said mutual-inductance element being a tapped reactor having said resistor connected to the tapped point.

2,470,662

GUARDRAIL ASSEMBLY FOR RAILROAD TRACK EQUIPMENT

Lee Spencer, Phoenix, Ariz., assignor to American Brake Shoe Company, New York, N. Y., a corporation of Delaware

Application June 7, 1944, Serial No. 539,074
3 Claims. (Cl. 238—19)



1. In a structure for stiffening a guard rail of standard rolled rail section, said structure comprising a running rail, the said guard rail of standard rolled rail section having a cut-off base flange with its cut-off edge adjacent but spaced from the base flange of the running rail, a plurality of stiffening angles, each stiffening angle comprising a vertical web plate and a flat horizontal foot, said stiffening angles having their web plates disposed against the guard rail web at locations spaced along the length of the guard rail, each said web plate having an opening, said guard rail web having openings in register with the web plate openings of the several stiffening angles, clamping bolts in the respective registered openings, said web plates extending downwardly between said cut-off edge and the edge of the base flange of the running rail, said angle stiffeners having their feet engaging the under surface of said running rail base flange and terminating short of the remote edge of said running rail base flange, all said stiffening angles having the same section regardless of position along the length of the guard rail to permit the same angle to be used at any point regardless of guard rail flare, and a plurality of tie plates under said rails at locations between said stiffening angles, said tie plates having abutments on the side of the guard rail remote from the running rail, whereby the tie plate abutments take the horizontal thrust of the guard rail caused by car wheels, and whereby said stiffening angles are free to stiffen the guard rail web and to prevent tilting or rolling of the guard rail without otherwise interfering with relative movement between said guard rail and running rail.

2,470,663

THREE-LAYER SINGLE-PHASE WINDING

Joseph M. Stein and Robert W. Eggiestone, Buffalo, N. Y., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application August 26, 1947, Serial No. 771,044
12 Claims. (Cl. 318—221)

1. A single-phase induction-motor having a stationary primary member and a rotor-member, said stationary primary member having a slotted stator-core and main and starting windings having coil-sides disposed in the slots of the stator-core; said main winding having coils which are all identical with each other, all having the same pitch and the same number of turns per coil, said main winding being also a three-layer winding having one, two or three main-winding coil-sides in the various slots in such manner as to approximate a sinusoidal ampere-turn distribution; and said starting winding being a similar winding of less copper, with a smaller number of coils, and different turns per coil, disposed in slots which do not have three main-winding coil-sides in them.

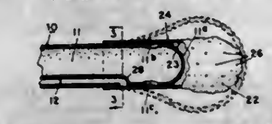
3. A single-phase self-starting squirrel-cage motor, as defined in claim 1, characterized by said rotor-member being a squirrel-cage member, and said starting winding being in a circuit which serially includes a phase-shifting means and a starting-switch which opens before the motor attains its full speed during starting; the number of stator-core slots being nine per pole, the main-winding pitch being two-thirds of full pitch, the number of main-winding coils being eight per pole, and the numbers of main-winding coil sides in successive slots, for any pole, being 1, 2, 2, 3, 3, 2, 2 and 1, respectively.

2,470,664

SEALING MEANS

Charles C. Sterrett, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application January 25, 1945, Serial No. 574,547
8 Claims. (Cl. 286—9)



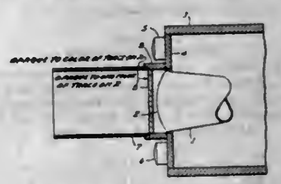
1. In an enclosed, gas-filled machine having a rotatable shaft, liquid gland seal means for preventing escape of gas along the shaft, means for removing from the shaft sealing liquid flowing from the gland seal, labyrinth seal means encircling the shaft adjacent the gland seal for preventing the entrance of sealing liquid into the machine, and a closed annular equalizing chamber extending around the shaft closely adjacent to the labyrinth seal on the side thereof away from the gland seal, said equalizing chamber having a restricted annular opening therein around the shaft, said annular opening being relatively large as compared to the clearance between the labyrinth seal and the shaft.

2,470,665

SUCTION APPARATUS

Charles William Stiehl, South Milwaukee, Wis.

Application July 8, 1947, Serial No. 759,657
7 Claims. (Cl. 128—276)



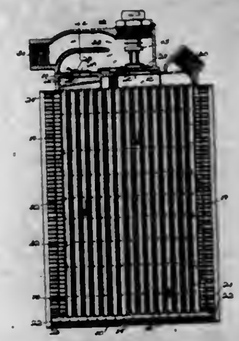
1. In gastro-intestinal suction tube apparatus, a tubular suction member having a suction opening in an end thereof, a perforated protective hood carried by the tubular member adjacent said end for maintaining the suction opening spaced from the gastro-intestinal walls, said hood comprising inner and outer sacs of soft, tissue-like rubber connected in such manner as to provide a plurality of openings extending from exterior to interior thereof and a sealed space between the sacs, and means for supplying pressure medium to the space between the sacs whereby to inflate the same to the form of a protective hood disposed about said suction openings.

2,470,666

TUBE

Frederick G. Suffield, Baltimore, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application August 25, 1944, Serial No. 551,124
5 Claims. (Cl. 250—164)



1. In combination with a cathode-ray tube, having a fluorescent screen on which a cathode-ray beam produces a trace of predetermined color, an optical path over which an observer can view said screen, enclosing walls about said path consisting at least in part of a material, having substantially higher opacity to said color than it has to other colors.

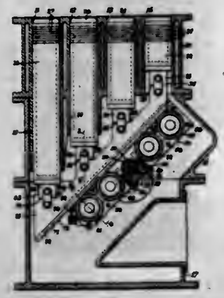
2,470,667

OIL COOLER

Edward C. Warrick, Cincinnati, Ohio, and Harold Cruzan, Los Angeles, Calif., assignors to United Aircraft Products, Inc., Dayton, Ohio, a corporation of Ohio

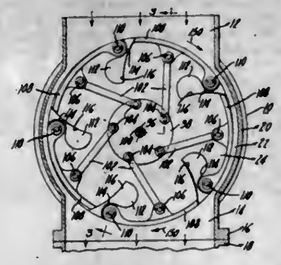
Application January 10, 1944, Serial No. 517,720
9 Claims. (Cl. 257—2)

1. A liquid cooling unit for use in a liquid circulating system, said unit comprising a casing, a series of conduits extending transversely across said casing for supplying liquid thereto adjacent to one side thereof, said conduits being spaced longitudinally of the casing and in series extending throughout a major portion of the length of said casing and further being spaced apart for the flow of liquid therebetween exteriorly, means for the supply of liquid to said conduits, means for the outlet of liquid from said casing at a point remote from said side thereof, means for causing liquid flowing through said casing between said conduits and said outlet means to flow substantially throughout that portion of the length of the casing which is occupied by said series of conduits, means for cooling the liquid



during its flow through said casing, and means requiring the liquid normally to flow through said conduits and the casing and to effect flow of the liquid between said inlet and said outlet means in by-passing relationship to said conduits and said casing in response to obstruction to flow of the liquid through said conduits and said casing.

2,470,668
WELDING SYSTEM
Alfred B. White, Murrysville, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 7, 1946, Serial No. 667,762
11 Claims. (Cl. 315—271)

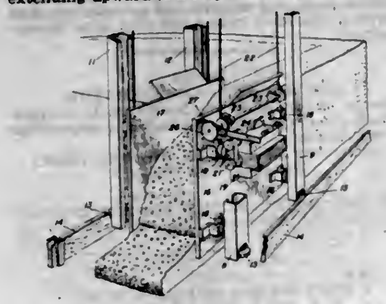


1. For use with an arc welding circuit including a reactance device and having a high-frequency arc stabilizing source connected thereto, an arc stabilizing circuit including a condenser and a resistor connected in a series circuit path in shunt relation with the arc intermediate the reactance device and the arc.

2,470,669
DRIVING GEAR OF MULTICYLINDER RECIPROCATING-PISTON ENGINES
William Arthur Williams, London, England
Application February 20, 1946, Serial No. 648,938
In Great Britain September 5, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires September 5, 1964
10 Claims. (Cl. 121—117)

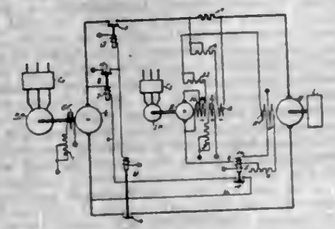
1. A multi-cylinder engine comprising a plurality of cylinders disposed side by side, a plurality of pistons slidable in said cylinders, a single crosshead member connected to said pistons and arranged to reciprocate as one therewith, a straight cam track formed on the crosshead member and extending at a substantial inclination to the cylinder axes, a single crankshaft, a crankpin on said crankshaft disposed adjacent the cam track, and a carriage device operatively connecting the crankpin with the crosshead member and which includes a body pivotally mounted on the crankpin and a plurality of rollers, pivoted upon the body to roll along the cam track as the pistons reciprocate.

2,470,670
ROTARY EXPANSIBLE CHAMBER PUMP
Albert H. Winkler and Emil O. Wirth, South Bend, Ind., assignors to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application July 26, 1944, Serial No. 547,056
4 Claims. (Cl. 230—154)



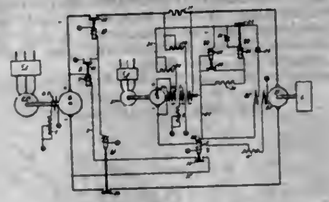
1. In a fluid pumping device: a casing including a cylindrical chamber; oppositely disposed fluid inlet and outlet passages for said chamber; a rotor within the casing, said rotor having a central opening therein; means for mounting said rotor for rotation within the casing; a gear secured to the rotor and having a common axis therewith; inwardly extending circumferentially spaced partitions on the rotor; pumping members disposed between the partitions; means pivoting the respective pumping members adjacent one end thereof, the pivoted ends of said members being disposed adjacent respective partitions and the free ends of said members being adapted to swing on their respective axes through an arc substantially parallel with one face of the respective partitions, the pumping members and partitions being adapted to define pumping chambers; a shaft extending into the casing through the opening in the rotor; a member in the casing secured to said shaft; means connecting the member with the respective pumping members; a gear secured to said shaft; means for rotating the gears at the same speed; and infinitely variable adjusting means for varying the position of the shaft from coaxial association relative to the rotor to an offset position relative to the axis of said rotor; the mechanism being so constructed and arranged that the pumping members may be moved inwardly in respect to the center of the rotor when adjacent the inlet and outwardly when adjacent the outlet.

2,470,671
MONOLITHIC WALL MOLDING MACHINE
Floyd E. Withrow, Concord, Calif.
Application April 16, 1947, Serial No. 741,732
7 Claims. (Cl. 25—131)



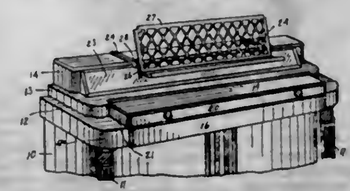
6. In a monolithic wall machine, a pair of spaced parallel overhead rails, opposed pairs of spaced parallel vertical rails having roller connection at their upper ends with said overhead rails, said vertical rails having channel shaped cross-section with the flanges of the channel having inturned lips spaced to provide a slot, vertically spaced guide rollers in each vertical guide, cushioning means carried by said guide rollers, a pair of mold plates each supported from a respective overhead rail by a pair of the vertical rails and the guide rollers carried therein said cushioning means being interposed between the vertical supports and the plates, a winch mounted

on each plate, cables wound on each winch and extending upward to a respective overhead guide,



and an electric vibrator for each plate located on the outer side thereof.

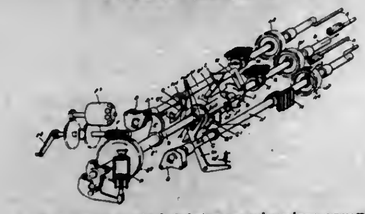
2,470,672
ROTOTROL SCHEME
John R. Wrathall, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 30, 1946, Serial No. 713,321
6 Claims. (Cl. 318—465)



1. In a system of control, in combination, a direct current motor having an armature circuit in which the current may vary from a relatively high value in one direction, the normal direction, to a relatively high value in the opposite, or abnormal, direction, a field winding for the motor normally energized to provide a safe maximum speed for the motor when no other excitation effect than this one field is present, a second field winding, a regulating generator connected to said second field winding, said regulating generator producing a voltage that is a function of the current in the armature winding of the motor and being so connected to the second field winding that the second field winding is energized cumulatively to the first field winding so long as the current in the motor armature winding is in the normal direction, an electromagnetic device having two actuating coils, one connected in series with the first field winding and one connected in series with the second field winding, both of said coils acting cumulative when the currents in both the field windings are in the desired direction, and acting differentially to cause the electromagnetic device to become deenergized in the event of a reversal of the polarity of the regulating generator, and means responsive to the deenergization of said electromagnetic device for effecting the deenergization of the motor armature circuit.

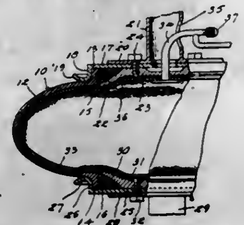
2,470,673
MOTOR CONTROL SYSTEM
John R. Wrathall, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 13, 1946, Serial No. 716,117
4 Claims. (Cl. 318—474)

1. In a system of control, in combination, a direct-current motor having an armature circuit in which the current may vary from a relatively high value in one direction, the normal direction, to a relatively high value in the opposite, or abnormal, direction, a field winding for the motor normally energized to provide a safe maximum speed for the motor when no other excitation effect than this one field is present, a second field winding for the motor, a regulating generator connected to said second field winding, a field winding for the regulating generator interconnected with said armature circuit whereby said regulating generator produces a voltage that is a function of the current in the armature winding of the motor, said regulating generator being so connected as to polarity to the second field winding of the motor that this said second field winding is energized cumulatively to the first field winding so long as the current in the armature winding of the regulating generator is in the normal direction, a rectifier in the circuit of the second field winding to prevent reversal of the current in the second field winding in the event the polarity of the regulating generator reverses, and means responsive to a reversal of the polarity of the regulating generator for effecting the opening of the circuit of the second field winding.



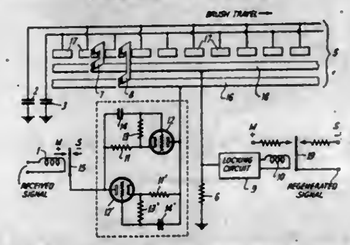
2,470,674
PIANO CASING
William Zaiser, Rockville Centre, N. Y., assignor to The Rudolph Wurlitzer Company, Chicago, Ill., a corporation
Application November 4, 1944, Serial No. 561,677
1 Claim. (Cl. 84—177)

In a casing for upright pianos a lower table portion, a cavity type portion of substantial depth comprising rim arms at each end thereof having a key bed therebetween substantially within the level of said cavity type portion, an elevated deck portion above said table portion and stepped inwardly therefrom, a rear portion stepped inward-



ly and upwardly from said deck portion, and a keyboard supported by said key bed in a plane above the level of said table portion substantially within the level of the deck portion.

2,470,675
SPRING-OPERATED DRIVING MECHANISM
Archibald Allan, Whitley Bay, and Joseph Small, Gateshead, England, assignors to A. Reyrolle & Company Limited, Hebburn-on-Tyne, England, a company of Great Britain
Application January 23, 1945, Serial No. 574,131
In Great Britain February 1, 1944
9 Claims. (Cl. 185—37)



1. Spring operated driving mechanism comprising a single driven member, at least two driving springs, retaining means for holding each of the springs in the charged condition, a driving connection from each spring to the driven member permitting the latter to be driven through a working operation by each spring in succession while other springs remain inoperative, means for limiting the movement of the driven member on the completion of a working operation and retaining it until the initiation of the next working operation, externally initiated release means to release the driven member limiting means at each actuation and to release different driving springs in successive actuations and independent means for charging the driving springs.

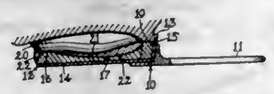
2,470,676
PNEUMATIC VEHICLE SUSPENSION
Application May 29, 1944, Serial No. 537,792
Earl B. Aldous, Gansevoort, N. Y.
2 Claims. (Cl. 267—65)

1. A vehicle suspension comprising an inflated circular member including an outer casing, an inner casing, upper and lower attaching means for securing said outer casing to said vehicle, said attaching means including a tubular central support, an annular flange on the end of said support, an outer clamping plate abutting the flange of said support, an annular bead on the peripheral edges of said outer casing, an inner clamping plate adjacent said outer clamping plate, peripheral flanges on said clamping plates for clamping the bead of said outer casing therebetween, means securing said clamping plates to the flange of said support, and a reinforcing disc between said inner casing and said inner clamping plate.

2,470,677
SYNCHRONOUS REGENERATOR
Warren August Anderson, Nutley, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 18, 1947, Serial No. 755,447
6 Claims. (Cl. 178—70)

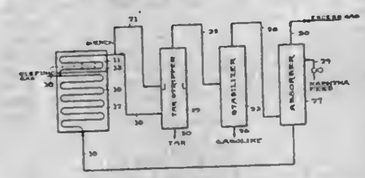
4. Electrical apparatus comprising, in combination, a source of signal intelligence composed of mark and space elements generated at a constant unit interval frequency, a first relay actuated by said signal intelligence, a local source of direct current potential, contacts on said first relay arranged to switch to positive potential during mark elements and negative potential during space elements, a constant current impedance device energized by said potentials, a commutator, a plurality of segments on said commutator, a first condenser connected to alternate ones of said segments, the other side of said first condenser being grounded, a second condenser connected to the others of said segments, the other side of said second condenser being grounded, a first commutator bar connected to the output of said constant current device, a second commutator bar connected to a resistance, the other side of said resistance being grounded, a first brush arranged to sweep said segments at unit interval frequency and to complete a circuit between said segments and said first commutator bar, a second brush arranged to sweep said segments one unit interval later than said first brush and to complete a circuit between said segments and said second commutator bar, said brushes contacting said segments during substantially the entire unit interval, a locking circuit energized by potentials produced across said resistance, a second relay actuated by said locking circuit and a second source of direct current potential, a tongue on said second relay arranged to complete a circuit to the positive or negative terminal of said second source of potential in accordance with the energization of said locking circuit.

2,470,678
MATERNITY GARMENT
Pearl Auslender, Chicago, Ill.
Application June 8, 1944, Serial No. 539,281
1 Claim. (Cl. 2—105)



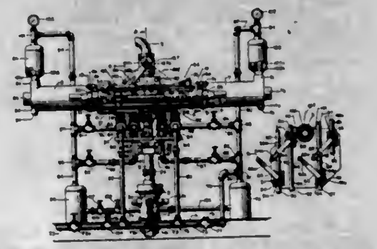
A maternity garment comprising a blouse having a longitudinal slit at each side thereby providing front and rear flaps, a pair of horizontally disposed bands, said bands being attached to both said front and rear flaps adjacent said slits and

substantially concealed by said flaps, means adjustably securing said bands together at the front of the blouse and beneath said front flap, and tie



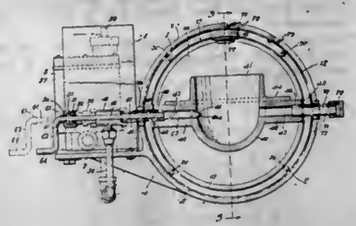
members secured to each side of the front flap for closing said blouse at the sides and tying in the back.

2,470,679
DENTAL MEANS AND METHOD
Edward E. Beers, Brooklyn, N. Y.
Application October 19, 1945, Serial No. 623,205
5 Claims. (Cl. 32—17)



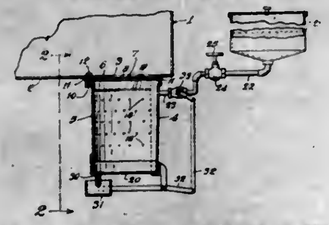
1. The method of making an impression form or cast in plastic material by using a tray, preparatory to making a denture, which consists in contacting the front central portion of the upper gum in the tray and simultaneously contacting the rear portions of both sides of the gum in said tray and at the same time avoiding contact in said tray with the intermediate portions of the sides of said gum, and thereby relieving the gum groove within the margin of the impression form or cast between the front central portion and the two rear side extremities thereof while producing said impression form or cast in plastic condition thereof.

2,470,680
PROCESS FOR CRACKING HYDROCARBON OILS
Harold Beuther, Oakmont, Pa., assignor to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application October 19, 1945, Serial No. 623,281
11 Claims. (Cl. 196—9)



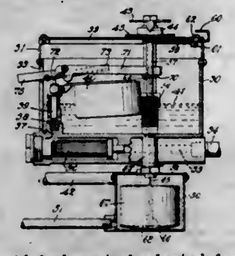
1. A process for cracking hydrocarbon oils to obtain gasoline wherein a stream of light hydrocarbon oil containing normally gaseous hydrocarbons largely paraffinic in character is subjected to relatively drastic cracking conditions and normally gaseous hydrocarbons of more highly olefinic character are added to the stream and the combined stream subjected to further cracking under relatively less drastic conditions.

2,470,681
FLOW INTERMITTER FOR CASED WELLS
Alexander Boynton, San Antonio, Tex.; Sida S. Martin executrix of said Alexander Boynton, deceased
Application August 23, 1943, Serial No. 499,670
10 Claims. (Cl. 121—124)



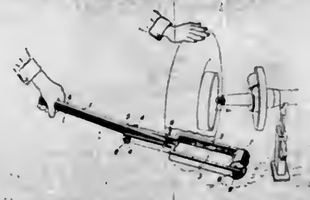
9. In a flow intermitter for a well; a cylinder having a piston therein; first and second pairs of feeder and bleeder valves in spaced relation to said piston; first and second conduits, the first connected to one end of said cylinder and the second to the other end; and means upon said piston to alternately open one valve of both said pairs and simultaneously close the other two so as to increase the pressure within one of said conduits and simultaneously decrease the pressure within the other to successively force said piston in opposite directions for purposes described.

2,470,682
LIQUID FUEL BURNER WITH VAPORIZING ASSEMBLY
James L. Breese, Santa Fe, N. Mex., assignor, by mesne assignments, to Breese Burners, Inc., Santa Fe, N. Mex., a corporation of Delaware
Application June 14, 1944, Serial No. 540,249
1 Claim. (Cl. 158—91)



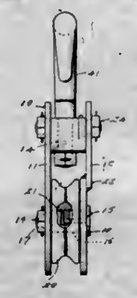
In a liquid fuel burner, a pot having an open end, a circumferential side wall and an end wall, said side wall having a plurality of air inlet apertures located at various distances from the ends of the pot, a vaporizing cup in said pot having lateral extensions engaging opposite parts of said circumferential side wall, each said extension having a passage extending therethrough into communication with the interior of the cup, and means for securing the cup in relation to the pot including a liquid fuel inlet duct extending through the pot wall and entering one of said lateral extensions and a securing element extending through the pot wall and entering the other of said lateral extensions.

2,470,683
VERTICAL SEMICYLINDRICAL BURNER
James L. Breese and Bruce Hayter, Santa Fe, N. Mex., assignors, by mesne assignments, to Breese Burners, Inc., Santa Fe, N. Mex., a corporation of Delaware
Application September 15, 1944, Serial No. 554,264
3 Claims. (Cl. 158—91)



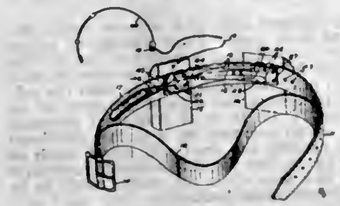
1. In a pot type liquid fuel burner, a vertical burner pot having a closed bottom and an apertured top wall, a wall structure joining them, having a generally upright, imperforate fuel-vaporizing panel, and a perforate air-admission portion having primary air inlet apertures located at various levels in, and distributed substantially from side to side of, the perforate portion, adapted to direct jets of primary air toward the vaporizing panel, said portion also having a horizontally disposed row of secondary air inlet apertures located below the top wall and above the primary air inlet apertures, means for supplying liquid fuel to the inner surface of the panel below the secondary air inlet apertures and above the primary air inlet apertures, whereby it may flow freely by gravity down the panel to and through the area within which the primary air inlet apertures direct their air jets toward the vaporizing panel.

2,470,684
TWO-LEVEL FLOAT VALVE STRUCTURE
James L. Breese and Bruce Hayter, Santa Fe, N. Mex., assignors, by mesne assignments, to Breese Burners, Inc., Santa Fe, N. Mex., a corporation of Delaware
Continuation of application Serial No. 442,936, May 14, 1942. This application January 8, 1947, Serial No. 720,758
1 Claim. (Cl. 158—38)



In a liquid fuel control adapted for use with a pot type liquid fuel burner receiving fuel at two different levels, a primary fuel chamber, a liquid fuel inlet pipe extending thereto, inlet valve means therefor, a secondary chamber located beneath said primary chamber, a fuel passage extending from said primary to said secondary chamber, a rotary valve element, concentric with said fuel passage, adapted to control the volume of flow of fuel through said passage, a liquid fuel delivery line extending from said secondary chamber, and adapted to supply fuel to the burner, a float in said secondary chamber, a connecting element extending upwardly from said float through said passage means, and means for closing said inlet valve means in response to upward movement of said float and said connecting means in response to an increase in the level of liquid fuel in said secondary chamber, said connecting means including a rod supported upon said float and extending upwardly through said fuel passage and rotary valve element, and a control arm for said inlet valve means, normally gravitationally supported upon said rod.

2,470,685
WHEEL AND TIRE APPLYING DEVICE
George F. Brown, Tulsa, Okla.
Application October 1, 1945, Serial No. 619,645
5 Claims. (Cl. 280—36)



1. A truck for use in applying or removing tires and wheels, comprising a bifurcated frame including a pair of spaced arms for receiving the tire or wheel, roller means journaled in said arms at one end thereof, an operating lever pivoted intermediate its ends, to said spaced arms at the other end thereof, and abutment means, carried by the inner end of said lever, engageable against the upper part of said arms when said operating lever is moved about its pivot, whereby a lift applied to the outer end of the operating lever serves to lift the frame and to lift the tire or wheel positioned thereon.

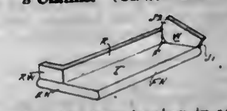
2,470,686
SNATCH BLOCK
Bert B. Bryson and Marion Alvin Coleman, Kilgore, Tex.
Application August 27, 1947, Serial No. 770,910
5 Claims. (Cl. 254—193)

5. An improved snatch block comprising a pair of parallel side members, a pulley rotatable between said members at one end thereof, means pivotally securing said members together at one end thereof, a cylindrical member rotatably carried by one of said side members at the other end thereof, said latter member formed with a channelled recess at one end thereof adjacent the other side member, said recess opening radially through one side of said rotatable member, a flanged pin on the other side member, the flange of said pin engaging in said recess for supporting the other member from said rotatable member, said flange being slidable from said recess in one rotated position of said rotatable member whereby said snatch block may be opened at one end between said side members, said rotatable member formed with a pair of oppositely disposed flat sides, a supporting hook on said rotatable member, the shank of said hook engaging through the flat sides of said rotatable member, and means securing said hook on said latter member.

2,470,687
ANTENNA BELT AND RADIO RECEIVER
Orrin G. Cafrelia and James E. Votour, Medford, Mass.
Application March 13, 1948, Serial No. 15,926
6 Claims. (Cl. 250—16)

1. Radio receiving apparatus of the character described, comprising a two-ply antenna belt having a pair of terminal plates disposed between its plies in spaced relation, each plate having terminals passing through the outer belt ply and formed exteriorly as elements of separable fasteners, an antenna disposed between the belt plies and connected to a pair of terminals on one of said plates, bridging wires also disposed between said belt plies and connected to complemental terminals on the respective plates, a radio receiver and a case enclosing the same, a set of batteries and a case enclosing the same, each of said cases having a terminal plate having terminals electrically connected to the receiver and batteries respectively, and the exposed portions of said terminals being formed as elements of separable fasteners adapted to engage the terminals of the respective terminal plates of said belt, whereby the encased receiver and the encased set of batteries may be mechanically and electrically connected to the antenna belt by engaging said fasteners.

2,470,688
ALKALI-ALKALINE EARTH HYDROXIDE-IMPREGNATED CARBON CATALYST AND ITS PREPARATION
Austin George Carter, Swansea, Wales, assignor to American Magnesium Metals Corporation, Pittsburgh, Pa.
No Drawing. Application June 15, 1946, Serial No. 677,085. In Great Britain August 28, 1945
4 Claims. (Cl. 252—425)



1. A catalyst mass comprising a coherent mixture containing as essential active constituents amorphous carbon, at least one hydroxide of the group consisting of the hydroxides of magnesium, calcium, strontium, barium and beryllium, and at least one material of the group consisting of alkali hydroxides and carbonates.

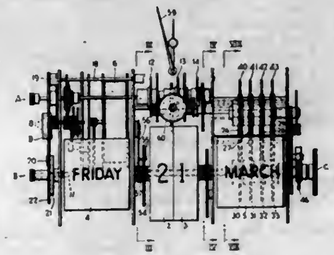
2,470,689
PROCESS FOR TIN-COATING THE INTERIORS OF COPPER TUBES
Donald K. Crampton, Marion, and Maurice L. Wood, Waterbury, Conn., assignors to Chase Brass & Copper Co. Incorporated, Waterbury, Conn., a corporation
Application February 16, 1943, Serial No. 476,046
2 Claims. (Cl. 117—97)

1. The process of coating the interior of a substantially straight copper-base metal tube, with tin-base metal, comprising: heating a substantially straight copper-base metal tube to a substantially-uniform temperature substantially throughout its length between its opposite end portions, which temperature is at least as high as the melting-point of the tin-base metal with which the interior of the tube is to be coated but not in excess of about 600° F., by means of the inherent resistance of the tube to the passage of electric current longitudinally through the tube, by applying electric current to the said opposite end portions of said tube and passing said electric current longitudinally through said tube; rotating the said heated tube about its longitudinal axis with said axis in a position inclined to the horizontal with one end of said tube higher than the other end with both of said ends open; and then introducing said tin-base metal in molten condition into the said open higher end of said rotating inclined heated tube into molten alloying coating contact with the interior surface of said tube, any excess of said molten tin-base metal draining out through said open lower end.

2,470,690
CONCRETE STEP FORM
Frederick A. Dahle, Los Angeles, Calif.
Application September 23, 1946, Serial No. 698,765
8 Claims. (Cl. 25—118)

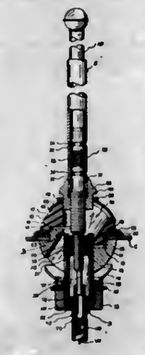
1. A concrete step form having, in combination, a block-shaped core presenting a step tread top face and a riser face along one longitudinal side, and right and left end step wing faces for molding a wing on either end of a proposed step; a forwardly facing longitudinally extending nose depth channel bodily shiftable on the said top face toward or from said riser and whose bottom edge stands on said top face and means for fixedly holding the channel to the said top face, a step end nose channel coplanar with and normal to and abutting the concave side of the longitudinal channel and bodily shiftable on said top face and means for holding the end nose channel on said top face and to the longitudinal channel; a

riser panel parallel to and spaced from the said riser face of the core, an elongate riser rim strip forming the bottom of the form space between the core and said panel; a tread wing form wall spaced from an adjacent wing face of the core and abutting the riser panel to close the riser form space and means for holding tread wing wall and said panel in adjusted position on the core, a wing rim form device forming the bottom of the space between the core and said wall; the said panel and said wing wall extending to a desired height above the plane of the said core top and below the top edge of said channels to determine the thickness of the said tread and produce a nose deeper than the tread thickness.



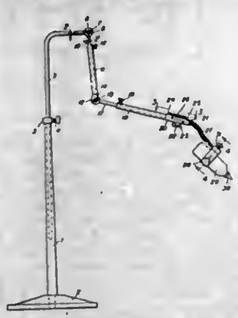
2,470,691
SCRAPER FOR FREEZING APPARATUS
Charles Erickson and Erick Spellman, New York, N. Y.
Application January 24, 1946, Serial No. 4,126
8 Claims. (Cl. 259—134)

1. A dasher or scraper assembly for a confection refrigeration machine, including a rotatable shaft having a pair of substantially parallel spaced arms projecting rigidly from the side thereof, a scraper adapted to be supported upon said arms, one of the latter arms having an aperture near the end thereof and the other arm having an open slot in the outer free end of the arm, a pivot member fixed upon the scraper adapted to be inserted into the aperture in the one arm on said shaft, said pivot member being directed toward one end of the scraper and offset with respect to the general plane of the latter, a second similarly offset pivot member spaced from but substantially alined with the first mentioned pivot member and directed toward the other end of said scraper, the open slot in the second arm on the shaft being undercut to form a bearing for the second pivot member and the latter pivot member having a flat portion upon one side thereof to reduce the cross section thereof in one direction to provide for ready introduction of said second pivot member into said open slot and cause said slot to retain said pivot member when the scraper is swung over upon said arms and the assembly introduced into the drum or cylinder of the machine, with the scraper occupying an angular position with respect to the shaft of said assembly.



2,470,692
PERPETUAL CALENDAR
Ivor A'Court Farr, Stafford, England
Application February 11, 1947, Serial No. 727,886
In Great Britain February 13, 1946
2 Claims. (Cl. 58—6)

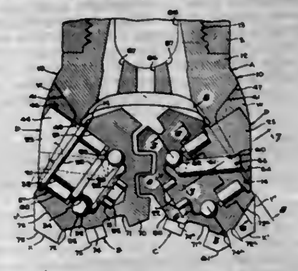
1. A perpetual calendar comprising a setting shaft, a constant speed driving element, means actuated thereby once a day to advance the setting shaft by a fraction of a revolution, a returning spring acting on the setting shaft tending to return it to an initial position, a day-number indicator, gearing connecting the setting shaft and the day-number indicator so that the fractional advance of the setting shaft changes the day-number indicator upward by one unit, a set of four toothed discs secured on the setting shaft and respectively formed with a series of 27, 28, 29 and 30 equally spaced operative teeth, all the series of teeth commencing at corresponding points on the disc peripheries, a final tooth of larger size formed on each disc at the end of the respective series of operative teeth, a detent associated with each disc and normally held in an inoperative position out of engagement with the teeth thereof, a month-name indicator, means operated by a return of the setting shaft to its initial position to advance the month-name



indicator by one step, and selector means actuated at each month-name change to render operative the detent appropriate to the month-name then indicated so that it co-operates with the teeth of its associated disc to hold the setting shaft against the returning action of its spring for 27, 28, 29 or 30 fractional advances thereof, as the case may be, a further fractional advance causing the final and larger tooth of the disc to displace the detent to its inoperative position and thus allow the setting shaft to be returned to its initial position.

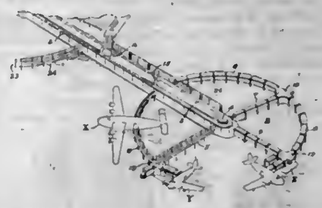
2,470,693
SWIVEL BALL ANTENNA SUPPORT
Theodore R. Finke, Euclid, and Jack L. Stewart and Lewis H. Finneburgh, Jr., Cleveland Heights, Ohio, assignors to The Gabriel Company, Cleveland, Ohio, a corporation of Ohio
Application May 14, 1947, Serial No. 748,048
7 Claims. (Cl. 248—43)

1. In an antenna support, a pair of half ball members having generally semispherical surfaces and generally chordal mating surfaces, said mating surfaces comprising a generally circular outer chordal surface and bosses and mating recesses spaced from the perimeter of said chordal surfaces, said half ball members adapted to be positioned on the panel of an automotive vehicle with said bosses extending through an opening thereof for positioning the assembled ball relative thereto, one of said ball members comprised at least in part of an electrically insulating material and the other of said ball members comprised at least in part of an electrically conducting material.



2,470,694
BABY BOTTLE HOLDER
Lee Sing Foo, Manchester, N. H.
Application August 18, 1947, Serial No. 769,213
1 Claim. (Cl. 248—1)

A baby bottle holder including a vertical hollow standard having a weighted base detachably secured thereto, an inverted L-shaped supporting rod supported in the upper end of said standard, pivotally interconnected telescoping extensions supported at the outer end of said rod, pivotally connected heads supported at the outer end of said outermost extension, a flexible connection supported by the outermost head, an adjustable band bottle encircling bracket on the outer end of said flexible connection, and a screw clamp plate supported by said bracket said clamp plate and bracket together supporting a baby bottle.



2,470,695
CONE TYPE WELL DRILLING BIT
John S. Goodwin and Charles E. Whittaker, Whittier, Calif., assignors to Globe Oil Tools Company, Los Nietos, Calif., a corporation of California
Application November 17, 1947, Serial No. 786,516
10 Claims. (Cl. 255—71)

10. A well drilling bit including a body having diametrically opposite depending legs, a notch extending upwardly into the lower end of each said leg, each said notch being enlarged at the outer side of the leg to form a recess at least partially surrounding the notch, cutter carrying pin elements each having a head extending through one of said notches and into the recess and engaging the walls of the notch, welding material occupying the recesses and bonding the heads to the legs, two cutter elements, one cutter element being in the shape of a cone and extending across the center of the bit and the other cutter element being in the shape of a frustum of a cone with the tip of the first mentioned cutter element adjacent its outer edge, the conical portions of the cutter elements being meshed together at the center of the bit, anti-friction means mounting the cutter elements on the pin elements to provide two assemblies of pin and cutter elements respectively, said anti-friction means including registering grooves on the pin

and cutter elements of each said assembly forming a ball race for each said assembly, balls in each said ball race, one of the elements of each said assembly having a ball passing bore therein extending to the ball race, a plug closing each said bore and having its inner end forming a continuation of the wall of the ball race, and welding material retaining said plugs in said bores.

2,470,696
CONVEYER SYSTEM FOR CARGO AIRPORTS
Jorge Gonzáles, Torreon, Mexico, and Yusuf Meer, Wyckoff, N. J.
Application November 16, 1944, Serial No. 563,656
14 Claims. (Cl. 198—81)

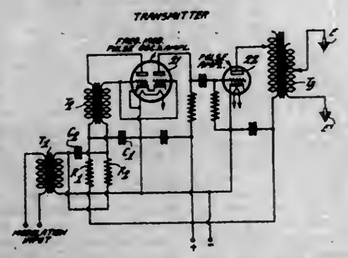
14. An airplane freight terminal comprising a main conveyor system having runs leading to and from a distribution loop in which the conveyor makes a turn around the center, a plurality of airplane loading points spaced around said center, a circumferentially disposed conveyor section connecting said loading points, and branch conveyors connecting said circumferentially disposed sections with said loop, said conveyors being constructed and arranged to transfer freight automatically from one conveyor to another.

2,470,697
INSTRUMENT FOR DRAWING CIRCULAR AND CURVILINEAR LINES
Gustave A. Haederer, Philadelphia, Pa.
Application June 30, 1944, Serial No. 542,939
12 Claims. (Cl. 33—177)

11. An instrument for use in the delineation and measurement of circular lines comprising a relatively rigid main body member, a flexible

beam having its opposite ends movably secured to corresponding ends of said main body member, said flexible beam being provided with a free drawing edge and being characterized in that at least one edge of the beam throughout its full length extending freely between the movably secured ends thereof, when in unflexed state, is of a curvature capable of causing said free drawing edge to assume varying degrees of circular curvature when the beam is flexed upon the application of a force applied to the center thereof, and beam deflecting means interposed between said main body member and the midpoint of said beam operative to apply a deflecting force to the

beam for varying the curvature of the latter, said means being so disposed and operative relatively to the secured ends of the beam as to be capable of imparting to the free drawing edge thereof a curvature coincident with the arc of a circle, and additional means interposed between said main body member and said beam for varying the curvature of the latter in the regions thereof respectively extending between its pivoted ends and said first-mentioned means, said additional means being in the form of slidable elements, each of which bears an index for registry with calibrated position-indicating scales provided upon said body member.



2,470,698

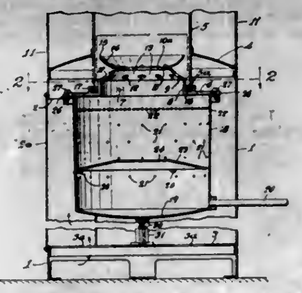
PULSE MODULATION SIGNALING SYSTEM

Clarence W. Hansell, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Application August 30, 1945, Serial No. 613,512, which is a division of application Serial No. 448,223, June 24, 1942. Divided and this application May 13, 1947, Serial No. 747,826

6 Claims. (Cl. 332—14)

1. A pulse modulation signalling system comprising a vacuum tube pulsing oscillator electrode structure, connections for causing said oscillator to periodically produce pulses of energy, said connections including a regenerative feedback transformer and a time constant circuit made up of a resistor and a capacitor, the bias potential for said oscillator being determined by the charge on said capacitor and the value of said resistor through which said charge leaks off, and a source of modulation coupled to the oscillator for varying the bias, to thereby modulate the pulse frequency.



2,470,699

COMBUSTION RING FOR POT TYPE BURNERS OF THE HYDROXYLATING TYPE

Bruce Hayter and Milton D. Huston, Santa Fe, N. Mex., assignors, by mesne assignments, to Breese Burners, Inc., Santa Fe, N. Mex., a corporation of Delaware

Application November 9, 1944, Serial No. 562,676

5 Claims. (Cl. 158—91)

1. In a combined combustion ring and flame deflector for use with burner pots of pot type burners, an outer ring portion formed and adapted to engage the upper edge of a pot, and extending radially inwardly from said pot edge, a flame passage member of generally cylindrical form, at the inner edge of said ring, a hood portion extending upwardly and inwardly from an upper portion of said flame passage member, said hood defining a central aperture coaxial with said flame passage member and of substantially smaller diameter and an upwardly and outwardly flared deflector element extending from an upper part of said hood portion.

2,470,700

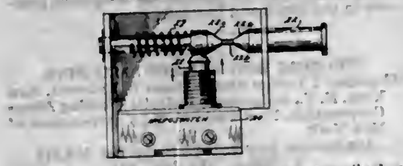
SPRING FLOATED VALVE HEAD

Guy J. Henry, Arlington Heights, Ill.

Application October 13, 1945, Serial No. 622,163

1 Claim. (Cl. 251—46)

A valve of the type described, comprising a threadedly actuable, rotatable stem, a valve member telescoped on one end of said stem and movable axially relative thereto, roller bearing means articulating and swiveling said member and stem to engage and disengage the member with a valve port upon rotative actuation of the stem, said stem moving relative to said member following initial engagement of the latter with said port, coacting means on said stem and member engageable to transmit thrust from the former to the latter to finally seat said member against said port following said relative movement, and a compression spring disposed internally of said member in thrust engagement between the same and said end of said stem, whereby to prevent chatter between the stem and member and resiliently maintain the member in predetermined, axially spaced relation to the stem prior to engagement of the member with the port, said roller bearing means limiting the axial spacing of the member relative to the stem and preventing separation thereof under the force of said spring, said stem being rotatable relative to the member when the latter is engaged with the port prior to said final seating.



2,470,701

SAFETY SWITCH

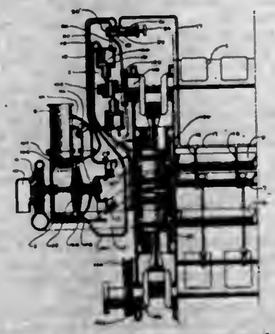
Leonard Jacobs, Philadelphia, Pa., assignor to Radio Corporation of America, a corporation of Delaware

Application August 29, 1947, Serial No. 771,321

2 Claims. (Cl. 200—54)

1. In apparatus of the character described, a switch having an actuating arm, a plunger mounted for axial movement along a line which intersects the line of movement of said arm, said plunger having an intermediate dwell-portion of reduced diameter, equal diameter end portions, and switch positions corresponding to said portions, said arm being biased into contact with said plunger, and a coil spring associated with said plunger biasing said plunger from one of said end positions to said intermediate position, said spring being inoperative when said plunger is in its other end position.

2,470,702



INTERNAL-COMBUSTION ENGINE PLANT, INCLUDING A SCAVENGING COMPRESSOR DRIVEN BY AN EXHAUST GAS TURBINE

Johan Erik Johansson, Goteborg, Sweden, assignor to Aktiebolaget Götaverken, Goteborg, Sweden, a corporation of the Kingdom of Sweden

Application April 17, 1944, Serial No. 531,523

In Sweden May 7, 1943

3 Claims. (Cl. 60—13)

1. An internal combustion engine plant comprising in combination, an internal combustion engine, a turbine adapted to be driven by exhaust gases from said engine, a scavenging air compressor mechanically connected with said turbine, a first exhaust gas conduit for supplying exhaust gases finally expanded in said engine to said turbine, a second exhaust gas conduit for supplying to said turbine high pressure exhaust gases at a pressure higher than the final pressure in said engine, a scavenging air conduit for supplying scavenging air from said scavenging compressor to said engine, a second compressor mechanically connected with said engine and constructed and arranged to produce air at a pressure higher than the pressure of said scavenging air and at a temperature lower than the temperature of said high pressure exhaust gases, means for supplying air from said second compressor to said turbine, and means responsive to an increase of the pressure of air produced by said second compressor for supplying air from said second compressor to said second exhaust gas conduit.

2,470,703

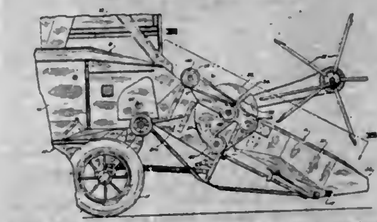
METHOD FOR OBTAINING FAT-SOLUBLE VITAMIN-CONTAINING MATERIALS IN OIL

Charles J. Kern, Long Island City, and Joseph M. Tabor, East Islip, N. Y., assignors to American Home Products Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application November 20, 1946, Serial No. 711,208

7 Claims. (Cl. 167—81)

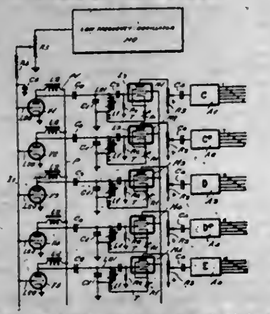
3. The process of treating a vitamin-containing oil selected from the group consisting of fish and animal oils to extract its vitamin content and to obtain a highly potent concentrate therefrom comprising saponifying the oil and extracting the vitamin content with a mixture comprising an organic solvent in which fat-soluble vitamins are soluble and an oil selected from the group consisting of vegetable and mineral oil, the oil in said mixture being present to the extent of about 0.05% to 5% by weight of said solvent.



2,470,704

CROP FEED MECHANISM FOR COMBINES

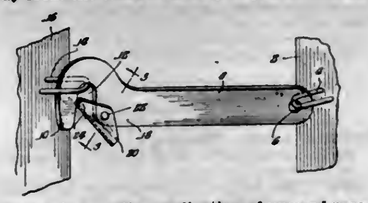
Alfred Korsmo, Hopkins, and Martin Ronning, St. Louis Park, Minn., assignors to Minneapolis-Moline Company, Hopkins, Minn., a corporation of Minnesota



Application June 24, 1946, Serial No. 678,846

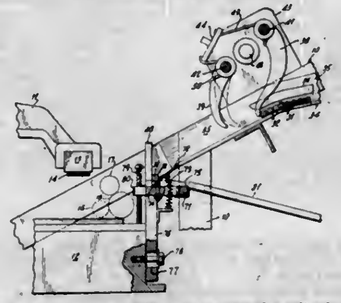
13 Claims. (Cl. 56—124)

3. In a combine having a thresher part and a harvester part located forwardly thereof, a first endless conveyor for moving grain from the harvester part in a rearward direction, a second endless conveyor for receiving grain from the first conveyor and delivering the grain rearwardly to the thresher part, the first conveyor being wider than the second and projecting at each side beyond the corresponding side of the second conveyor, and a pair of transverse conveyors positioned over the said projecting sides of the first conveyor for moving grain thereon inwardly and delivering this grain to the second conveyor.



2,470,705
VIBRATO ORGANIZATION
Merwin J. Larsen, Rochester, N. Y., assignor to Central Commercial Company, Chicago, Ill., a corporation of Illinois
Original application September 19, 1944, Serial No. 554,837. Divided and this application June 27, 1946, Serial No. 679,616
3 Claims. (Cl. 250—36)

1. In a vibrato organization for electrical musical instruments, the combination comprising twelve frequency dividing circuits, said dividing circuits each embodying a plurality of space discharge devices adapted to produce frequencies at octave separation corresponding to the vibration frequencies of notes of the same letter in the even tempered musical scale; each of said space discharge devices having an output path provided with a selectively actuable electric switch adapted to be controlled from the playing-key of a keyboard; a master oscillator for and individual to each separate dividing circuit for transmitting a controlling frequency to the highest frequency stage thereof; and means for producing a vibrato effect in the output waves of all of said dividing circuits, said means embodying a low frequency oscillator and a set of high vacuum control tubes connected in circuit with said low frequency oscillator and concurrently activated thereby, and means including tuned resonant tank circuits connected with said master oscillators of the respective dividing circuits and with said control tubes and capacitative circuits for periodically shunting said tank circuits during alternate changes in the effective resistance of said control tubes and changes of voltage on the grids thereof.

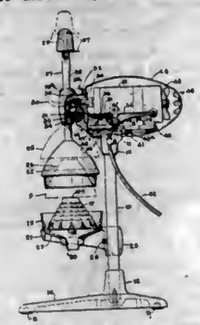


2,470,706
SAFETY HOOK
Charles O. Larson, Sterling, Ill.
Application June 11, 1945, Serial No. 598,833
2 Claims. (Cl. 292—108)

1. A livestock safety hook comprising an elongated, relatively flat bar having at one end provision for pivotal connection to a member to be locked, the opposite end of the bar being goose-necked in formation to provide a relatively long hook extending transversely of the longitudinal axis of the bar and an intervening long throat extending substantially parallel with the hook, and an elongated latch pivotally mounted to the bottom portion of the bar adjacent the bottom of the throat and adapted under the influence of gravity to assume an inclined position at an angle of substantially forty-five degrees to the longitudinal axis of the bar and with the lower end of the latch extending below the bar and lying laterally of the pivotal axis in a direction away from the throat whereby to prevent release

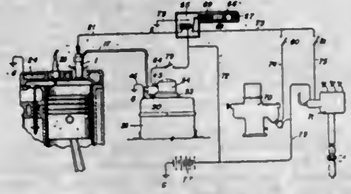
of the latch upon the application of upward pressure to the lower end thereof.

2,470,707
WELDING ROD MARKING MACHINE
Theodore I. Lewton and William B. Kriewall, New York, N. Y., assignors to Eutectic Welding Alloys Corporation, New York, N. Y., a corporation of New York
Application July 2, 1947, Serial No. 758,572
4 Claims. (Cl. 101—44)



1. In a machine of the character described, the combination of a frame, a printing head mounted for back and forth reciprocating motion on the frame, means for so reciprocating the head, a supply receptacle for holding a plurality of cylindrical rods to be printed, said receptacle including a pair of parallel inclined side members on which the ends of the rods are supported to roll downwardly by gravity, two detents, one spaced upward of the other, disposed in the path of the rods for arresting rolling movement thereof, means for successively operating the detents first to open the upper detent to release one rod from the supply into engagement with the lower detent and then to open the latter, and means to close said upper detent as said lower detent is opened to release a rod into position for surface contact with the printing head on the forward stroke of the latter.

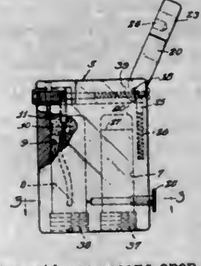
2,470,708
MOTORIZED PRESSURE JUICE EXTRACTOR
George Le Witt, New Britain, Conn.
Application March 11, 1947, Serial No. 733,737
6 Claims. (Cl. 100—42)



1. In a juice extractor, a supporting post having an upper side bracket, said bracket having a side hub, a rack mounted to move up and down within said hub, an idle pinion mounted on said bracket and engaging said rack, a shaft mounting said idle pinion and having a worm gear thereon, a gear reduction motor unit tiltably

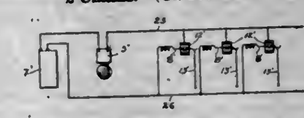
mounted on said bracket, and carrying a worm on the motor shaft, said worm being caused to engage said worm gear when said motor unit is tilted in one direction, a stop on said bracket

engaged by the base of said motor unit to support said motor unit when tilted out of use, a base cone secured to said post, and a movable hollow juice extractor head secured to the lower end of said rack.



2,470,709
ENGINE COMBUSTION CONTROLLING DEVICE
Charles W. MacMillan, Alexandria, Va.
Application May 23, 1946, Serial No. 671,858
11 Claims. (Cl. 123—117)

1. In combination with an internal combustion engine, a balanced diaphragm type of pressure-responsive unit operatively disposed in contact with combustion chamber gases, a pressure control unit pneumatically communicating with said pressure-responsive unit, electromagnetic means for regulating the operation of said engine, an electric current source connected in circuit with said pressure-responsive unit, and means responsive to the functioning of said circuit for operation of said electromagnetic means.

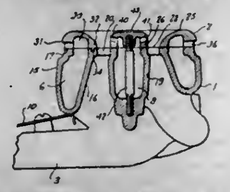


2,470,710
CIGARETTE LIGHTER
Homer A. Mason, Chicago, Ill.
Application July 27, 1946, Serial No. 686,629
4 Claims. (Cl. 67—7.1)

4. A cigarette lighter comprising, a body made of transparent material equipped with conventional spark creating means and wick means, a fuel chamber in the said body having the said wick connected thereto to feed minute quantities of fuel through capillary action to the top portion of the said wick, an auxiliary fuel chamber in the said body, valve means interconnecting the said fuel chamber and the said auxiliary fuel chamber, cap means made of transparent material articulately secured to the said body adapted to cover the exposed portion of the said wick, the said cap means being provided with dual indentations adjacent its point of articulation, resiliently urged detent means secured to the said body and adapted to engage alternately and releasably one of said dual indentations to

maintain the said cap means open and to sealably confine the exposed portion of the said wick when the said cap means is closed, and screw plug means acting as closures for independent accessibility to the openings of the said fuel chamber and the said auxiliary fuel chamber for filling the same with fuel when needed.

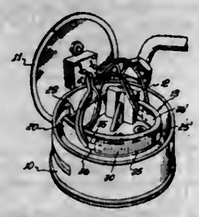
2,470,711
FIRE ALARM
Ivar O. Moberg, Lowell, Mass.
Application January 3, 1946, Serial No. 638,835
2 Claims. (Cl. 177—311)



1. An apparatus of the character described, comprising an electrically operated alarm device, an electric circuit in which said device is operatively connected, a switch in said circuit comprising a movable contact and two stationary contacts, said movable contact being located between said stationary contacts, a means connected with said movable contact and tending to move the latter into engagement with one of said stationary contacts, and a thread connected with said movable contact and holding it normally in its open position, said thread being composed essentially of a copolymer of vinyl chloride and vinyl acetate and being prestretched, whereby it operates upon overheating to shrink and thereby to close the circuit through one of said stationary contacts and upon rupture to close the circuit through the other of said stationary contacts.

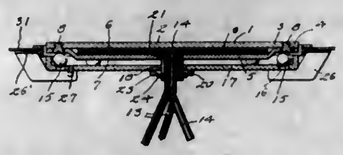
2,470,712
CATALYTIC DEALKYLATION OF ALKYLATED COMPOUNDS
Charles W. Montgomery and William A. Horne, Oakmont, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
No Drawing. Application September 18, 1946, Serial No. 697,826
4 Claims. (Cl. 260—672)

1. In a process for catalytically dealkylating a high boiling alkyl aromatic hydrocarbon into a



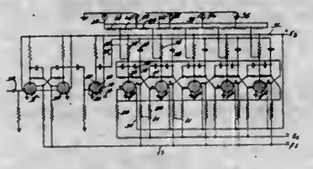
lower boiling homologue while in contact with hydrogen, a metallic catalyst of the eighth group of the periodic table, and at a temperature in the range 250° to 400° C., the step which comprises treating the catalyst in the absence of hydrogen with said high boiling alkyl aromatic hydrocarbon.

2,470,713
DOUBLE GAS BURNER WITH REMOVABLE CAP
Ervin H. Mueller, Grosse Pointe, Mich.
Application June 4, 1945, Serial No. 597,519
4 Claims. (Cl. 158—116)



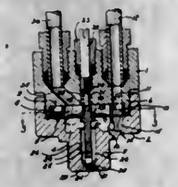
1. A double gas burner comprising a body member having outer and intermediate walls defining an outer chamber, said walls having top surfaces, an inner wall defining an upwardly opening inner chamber, said inner wall having a top surface, separate conduit means for conducting gas to the outer chamber and to the inner chamber, a cap member disposed on the body member, the underside of the cap member having alternate downwardly extending projections and recesses with the projections contacting the top surface of the outer wall to provide outwardly opening ports leading from the outer chamber for the issuance of flame supporting gas, said cap member seating on the intermediate wall to close the outer chamber, said cap member seating on the inner wall, the cap member having an aperture therein in substantial alignment with the inner chamber, upper surfaces of the cap member around said aperture having alternate upwardly extending projections and recesses, and a closure piece secured in position over the aperture and contacting with the upwardly extending projections around the aperture so that the recesses provide outwardly opening ports for the issuance of flame supporting gas.

2,470,714
ELECTRIC PRESSURE INDICATOR
Searle G. Nevius, Santa Monica, Calif.
Application February 9, 1945, Serial No. 577,090
5 Claims. (Cl. 201—63)



1. In a pressure pick-up instrument, a flexible tube adapted to be flexed by differential in fluid pressure between its interior and exterior, said tube being of curved longitudinal section and having its ends fixed against relative movement, and a strain sensitive element carried by a curved portion of the tube in position to be stressed by flexure of the tube in response to said fluid pressure differential.

2,470,715
ELECTRIC HEATING UNIT
Salvador Guillemin Olivares, Mexico City, Mexico
Application September 27, 1946, Serial No. 699,680
In Mexico September 27, 1945
1 Claim. (Cl. 219—37)



A heating unit comprising a disc-shaped upper plate formed with a non-reflecting upper surface, a disc-shaped lower plate formed with an upwardly offset rim, means securing said plates together, a heating element disposed in the space between said plates, said heating element being formed of radially disposed heating coils, heat insulated means between said element and said plates, supporting means secured to said plates and extending laterally therefrom, and a flanged reflecting rim carried by said supporting means spaced from the marginal edges of said plates, said supporting means including a flanged disc formed with spaced openings, spherical heat insulating members seating in said openings and bearing against the lower side of said lower plate for supporting the latter spaced from the flange of said flanged disc, and radially extending supporting arms carried by said flanged disc.

2,470,716
ELECTRONIC COUNTING SYSTEM
Wilcox P. Overbeck, Chicago, Ill., assignor to Research Corporation, New York, N. Y., a corporation of New York
Application June 11, 1943, Serial No. 490,505
10 Claims. (Cl. 235—92)

1. A counting system comprising an odd number, five or more, of trigger circuits each capable of assuming a conducting and a non-conducting condition of stability, conduction-controlling means for each circuit, connections between each circuit and the conduction-controlling means of adjacent circuits to establish different conditions of stability for alternate trigger circuits except for two adjacent circuits which are in the same condition of stability, and means responsive to an initiating pulse to affect the position of said adjacent circuits in relation to the other trigger circuits in the system.

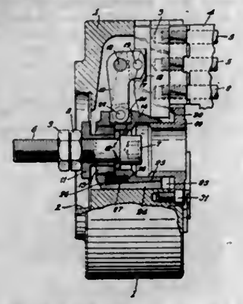
2,470,717
FUEL INJECTOR FOR INTERNAL-COMBUSTION ENGINES
Vincent Palumbo, Cleveland Heights, Ohio
Original application March 16, 1944, Serial No. 526,696. Divided and this application September 5, 1946, Serial No. 694,949
7 Claims. (Cl. 299—107.6)

1. A fuel injector for internal combustion engines comprising a diaphragm means including a peripheral holding part and a working part, a valve having operative connection with said working part of the diaphragm means, a casing member enclosing a valve opening working space and a shoulder surrounding an open side of said space and wherewith the peripheral holding part of the diaphragm means is engaged, said casing member having an outlet orifice in operative relation to which said valve is disposed, a ring-like element engaged with the peripheral holding part of the diaphragm means on the side thereof opposite said shoulder, said element having a recess that opens through the face of the element opposite that engaging said holding part, a second casing member arranged in face-to-face relation with the first casing member, means for holding the two casing members together with said holding part clamped between said shoulder and the ring-like element, the space surrounded by said ring-like element constituting a valve closing working space, the second mentioned casing member including an inlet passage that opens into said recess and a relief passage that opens into the valve closing working space, there being passageways through which communication is established between said recess and the valve opening working space, and there being also a bleeder port through which communication is established between said working spaces, the cross sectional area of which port is substantially smaller than that of said passageways.

2,470,718
SPRAY GUN
Donald J. Peeps, Toledo, Ohio, assignor to The De Vilbiss Company, Toledo, Ohio, a corporation of Ohio
Application September 8, 1947, Serial No. 772,779
1 Claim. (Cl. 299—140.1)

In a spray gun of the type described, a body having a spray material duct and an air duct, an internally threaded cylindrical nipple extending axially from the forward end of the gun with which the spray material duct communicates, the air duct having its outlet above the nipple, a spray material tip with an axial bore and a ported peripheral flange, said tip being threadedly connected to the nipple, an air cap fitted over the tip and seating against the forward side of the edge of the flange, said cap being provided with a central air port surrounding the outlet of the tip and with two opposed side air ports which have supply passages with entrances radially outside of the seating contact between the cap and the flange, an annular air dividing and baffling member fitting tightly in reenforcing engagement over the nipple and held between the rear side of the flange and the forward end of the body, there being an air chamber between the member and the body communicating with the air duct, said annular member having passages therethrough terminating on its forward face radially inside of the contacting surface between the rear side of the flange and the member, said passages directing air from the chamber forwardly through the ported tip flange to the central air

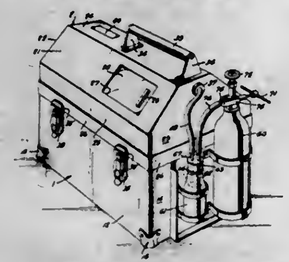
port of the cap, said member also having secondary air passage means directing air from the chamber forwardly past the outer edge of the flange to the two opposed side air ports of the cap, the said secondary air passage means having a single entering port on the rear side of the member directly in line with the outlet of the air duct, a valve seating in said entering port, and a valve shank extending rearwardly and axially within the air duct and with a manually operable part extending exteriorly from the rearward portion of the spray gun.



2,470,719
STABILIZED FOAM-FORMING COMPOSITION
Joseph M. Perri, West Chester, Pa., assignor to National Foam System, Inc., Philadelphia, Pa., a corporation of Delaware
No Drawing. Application May 26, 1945, Serial No. 596,083
4 Claims. (Cl. 252—307)

1. A foam-forming composition consisting essentially of an aqueous solution of a protein hydrolysate containing a heavy metal salt of an inorganic acid selected from the group consisting of the chlorides, nitrates and sulphates of ferric iron, aluminum, chromium, nickel and cobalt in combination with urea in an amount sufficient to render said salt soluble in said solution.

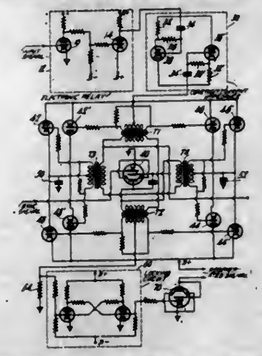
2,470,720
SELF-LOCKING CHUCK
Harry L. Proctor, Logansport, Ind., assignor to Logansport Machine Co. Inc., Logansport, Ind., a corporation of Indiana
Application May 31, 1947, Serial No. 751,515
13 Claims. (Cl. 279—119)



5. In a chuck, a housing, a draw sleeve mounted for axial movement, and chuck jaws mounted for radial movement therein, actuating means between the sleeve and the jaws whereby axial movement of the sleeve imparts

radial movement to the jaws means for displacing the sleeve axially to close the chuck jaws, means interposed between the housing and the

sleeve for automatically locking the sleeve against jaw release movement by centrifugal force.



2,470,721
PORTABLE INFANT INCUBATOR
John Louis Pragel, Baltimore, Md.
Application August 15, 1947, Serial No. 766,761
7 Claims. (Cl. 128—1)

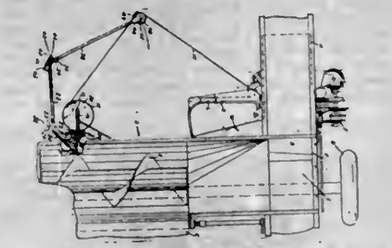
1. A portable infant-incubator comprising a casing defined by a bottom, side and end walls, a removable rack fitted within said casing having a platform spaced from the bottom and sides of said casing for supporting an infant thereon, the spaces between the platform and casing adapted to accommodate a plurality of hot water bottles to warm the interior of said casings, a hood-shaped cover for said casing coextensive with the upper boundaries thereof hingedly mounted to the top thereof along one side for covering completely said casing, fastening means on the other side thereof for effecting a close fit of said cover on said casing, said cover having an opening in at least one side thereof and a transparent movable closure for said opening to permit access to the infant, and means for admitting oxygen into said casing for utilization by the infant.

2,470,722
ELECTRONIC SYNCHRONOUS SIGNAL REGENERATOR
Sydney Rattner, Baltimore, Md., assignor to Radio Corporation of America, a corporation of Delaware
Application February 15, 1949, Serial No. 76,532
4 Claims. (Cl. 178—70)

1. Electrical apparatus comprising, in combination, a source of signal intelligence composed of mark and space elements, an electronic relay actuated under the control of said signal intelligence for producing a first reference potential during said mark elements and a second reference potential during said space elements, a plurality of charging devices, an impedance device, an electronic commutator alternately and cyclically at

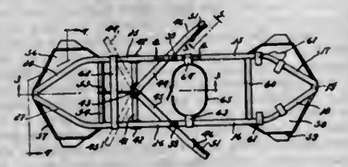
unit interval frequency charging said devices by said potentials at a constant current rate and discharging said devices through said impedance, the charging of said devices taking place over substantially the entire unit interval, and means for producing regenerated signals in accordance with potentials developed across said impedance.

2,470,723
PLASTIC FASTENING
Paul C. Roche, Erie, Pa., assignor to National Organ Supply Company, Erie, Pa., a corporation of Pennsylvania
Application May 31, 1946, Serial No. 673,393
1 Claim. (Cl. 279—89)



A part of flexible plastic having molded therein a tunnel and a passageway leading from the outside of the part and extending transverse to and intersecting the tunnel, a part of the passageway being offset to one side of the tunnel to provide a locking shoulder facing away from the tunnel entrance, and a mating part having a shank received in the tunnel and a head on the shank received in the passageway and engaging the shoulder.

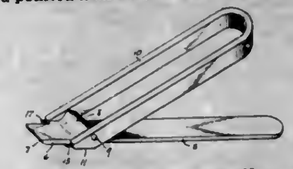
2,470,724
FEED REGULATING MEANS FOR BALER TYING MECHANISMS
Martin Ronning, St. Louis Park, and Kenneth M. Keith, Minneapolis, Minn., assignors, by mesne assignments, to Minneapolis-Moline Company, Hopkins, Minn., a corporation of Minnesota
Application April 8, 1944, Serial No. 530,090
6 Claims. (Cl. 100—20)



1. The combination with a baler having a bale tying mechanism and a rotatable spool of wire for feeding wire to said mechanism, of mechanism for regulating the feed of the wire to said

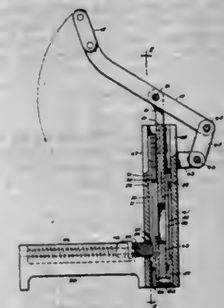
tying mechanism, comprising, a brake member, a swingable arm for actuating said brake member, spring means operative to move said arm to normally apply the brake member to the spool, a second arm pivotally connected to and swingable

on the first arm and engaging the wire to draw it away from a line between the spool and tying mechanism, and means responsive to movement of said second arm for swinging the first arm to release the brake member from the spool.



2,470,725
SWIMMER'S BOAT
Gustaf W. Rydner, Detroit, Mich.
Application July 5, 1945, Serial No. 603,389
5 Claims. (Cl. 9—18)

1. A device of the class described comprising a pair of frame sections hingedly connected together at their opposed ends, each of said sections comprising an upper frame and a lower frame positioned in alignment with each other and embodying spaced-apart rails; means for locking said sections against relative swingable movement; supporting arms on the upper rails of one of said sections and projecting below the lower rails of the corresponding section; and a supporting belt carried on the lower end of said supporting members for supporting a body at a point below the lowermost rails of said frame.

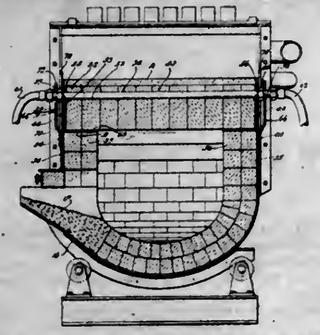


2,470,726
STAPLE REMOVER
Werner Schafroth, Brookline, and George M. Beal, Lansdowne, Pa., assignors to International Staple and Machine Company, Clifton Heights, Pa., a corporation of Pennsylvania
Application November 19, 1945, Serial No. 629,358
3 Claims. (Cl. 254—28)

1. A staple remover designed for use in removing heavy duty staples from cartons and similar packages, said staple remover comprising a flat elongated base plate, one end portion of which is formed as an anvil adapted to engage the exposed face of the back of a staple with the entire remainder of the base plate resting on the exposed surface of the carton from which the staple is to be removed, a pivot pin carried by said base plate, a lever carried by said pivot pin, and a pair of spaced pointed members carried by said lever, po-

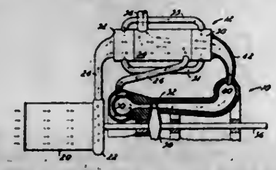
sitioned on each side of said anvil and adapted to be inserted beneath the back of said staple.

2,470,727
ANVIL CLINCHING STAPLING MACHINE
Werner Schafroth, Brookline, Pa., assignor to International Staple and Machine Company, Clifton Heights, Pa., a corporation of Pennsylvania
Application November 30, 1945, Serial No. 631,965
5 Claims. (Cl. 1—49)



1. In a stapling machine, a frame, a sliding block movably mounted on the frame, a handle by which said block may be operated, a staple driving plunger arranged on the frame and operatively connected to and movable by said block, staple clinching anvils arranged on the frame and operatively connected to and movable by said block, cam means on said block and influencing said plunger, and other cam means on the block influencing the anvils, said last-mentioned cam means being arranged below the first-mentioned cam means and operable subsequently thereto.

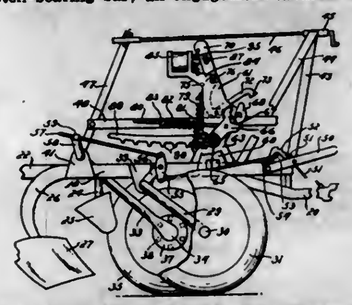
2,470,728
REVERBERATORY FURNACE
Wenzeslaw Frank Sklenar, Chicago, Ill., assignor of one-fourth to John H. Ehard, Chicago, Ill.
Application October 3, 1946, Serial No. 701,036
8 Claims. (Cl. 266—33)



1. In a reverberatory furnace for melting metals, the combination of a curved bottom shell, said shell being lined with refractory material and forming an elongated chamber with a well for metal having a burner opening at its front end and an uptake at its rear end, with a pair of side walls each comprising a metal shell member and a refractory lining, the said side walls having upper supporting surfaces, the surfaces being stepped downwardly toward the uptake, and a plurality of arch units laid side by side engaging each other on said supporting surfaces to

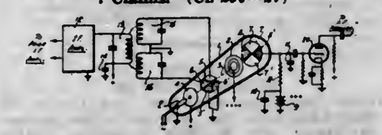
form a closed roof, the said arch units each comprising a pair of clamping plates and a cooling tube member joining said plates and placing a predetermined pressure upon a plurality of

bricks forming the arch, the said arch units each having a compressible pad between said plates and the end bricks whereby the expansion and contraction of the bricks is permitted and taken up by said pad.



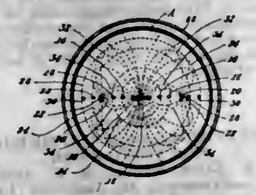
2,470,729
GAS TURBINE POWER PLANT
Edward A. Stalker, Bay City, Mich.
Application May 14, 1947, Serial No. 748,097
4 Claims. (Cl. 60—41)

1. In combination, a liquid-containing high temperature heat exchanger, a liquid-containing low temperature heat exchanger, means connecting said liquid exchangers in series for the flow of liquid from one to the other to convey heat therebetween, a gas regenerator, means to direct motive fluid through said low temperature exchanger and said regenerator in succession to heat said motive fluid, and means to direct heating gas through said high temperature exchanger and said regenerator in succession to heat said liquid and said motive fluid flowing through said regenerator.



2,470,730
FLOW CONTROL
Benjamin D. Stevenson, Flushing, Mich.
Application July 9, 1945, Serial No. 603,824
1 Claim. (Cl. 97—72)

In a device of the class described, a supporting frame adapted for supporting a ground working implement and movable to operative and inoperative position; a raising mechanism for raising said frame from operative to inoperative position; a latch mechanism for retaining said raising mechanism in inoperative position; a pair of spaced apart plates mounted on and projecting upwardly from said frame; an arm pivotally mounted on and adapted for movement between said plates; a swingably mounted latch releasing dog on said arm and adapted upon movement of said arm in one direction for releasing said latching mechanism; a bracket mounted on and projecting outwardly from the upper end of said plates; a solenoid mounted on said bracket; and a slidable plunger in said solenoid adapted upon energizing of said solenoid for moving said arm in said direction; means for preventing movement of said frame from inoperative to operative position and embodying a longitudinally, movable notch-bearing bar; an engagement member en-

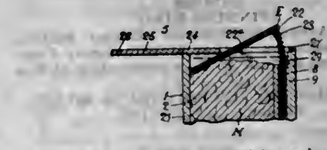


gageable in the notch in said bar for preventing longitudinal movement of the same and retaining said frame in inoperative position; a roller bearing arm mounted on said first named arm and lying between said plates; a roller on the lower end of said roller bearing arm engageable with the upper face of said bar for normally retaining said engagement member in said notch; a heel on said dog engageable with said roller and adapted upon movement of said first named arm in said direction for moving said roller bearing arm to inoperative position for permitting dis-engagement of said notch with said engagement member and retaining said roller bearing arm rocked to inoperative position for preventing binding of said roller with said bar.

2,470,731
ANGLE MODULATED CARRIER WAVE DETECTOR
George C. Szikiai, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application July 14, 1944, Serial No. 544,939
7 Claims. (Cl. 250—27)

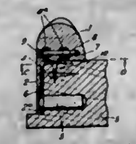
2. A detector of angle modulated carrier waves comprising a frequency discriminator network for deriving from said waves a first and a second high frequency voltage whose relative magnitudes vary in accordance with instantaneous frequency deviations of said waves relative to the center frequency thereof, a cathode ray tube including an emitter of a primary electron stream, a target arranged to be traversed by said electron stream and having at least two areas of substantially different secondary electron emission ratio, an electrode for collecting secondary electrons liberated from said target, deflectors coupled to said frequency discriminator network and constructed so as to deflect said electron stream in one direction in accordance with said first voltage and at right angles to said one direction in accordance with said second voltage, and an output circuit including an impedance element effectively connected between said target and said collector electrode for developing an output voltage representative of the modulation of said waves.

2,470,732
NEGATIVE TRANSCONDUCTANCE ELECTRICAL DISCHARGE TUBE
Juan Francisco Visscher, Buenos Aires, Argentina, assignor to Hartford National Bank and Trust Company, Hartford, Conn., trustee
Application November 5, 1943, Serial No. 509,136
4 Claims. (Cl. 250—27.5)



1. A negative transconductance tube comprising a cathode, an output electrode comprising two rod-shaped members placed at opposite sides of said cathode substantially in a plane through said cathode and plate members on said rod-shaped members, an anode, a control electrode adjacent to and surrounded by said anode and surrounding said rod-shaped and plate members and said cathode, first and second auxiliary electrodes, said first auxiliary electrode surrounding said cathode and said second auxiliary electrode surrounding said first auxiliary electrode and separating said output electrode from said cathode, a third auxiliary electrode interposed between said output electrode and said control electrode, said second auxiliary electrode having diametrically opposed shielding plates having longitudinal axes arranged substantially parallel to the longitudinal axis of the electrode system of the tube and being located in said plane, said shielding plates being placed to shield said output electrodes from the direct flow of electrons from said cathode.

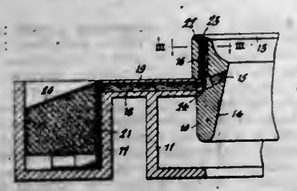
2,470,733
STABILIZED BLASTING EXPLOSIVE COMPOSITION
Edward Whitworth, West Kilbride, and James C. Hornel, Ardrossan, Scotland, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application January 20, 1946, Serial No. 644,195. In Great Britain March 14, 1945
4 Claims. (Cl. 52—11)



1. A blasting explosive composition comprising a liquid explosive nitric ester, at least one salt selected from the group consisting of ammonium nitrate and a mixture of ammonium nitrate and sodium nitrate, and from 0.25 to 2.5% by weight of a substantially equimolecular mixture of at least one dialkali hydrogen ortho-phosphate and at least one alkali metal dihydrogen ortho-phosphate.

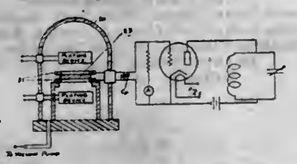
2,470,734
POCKET LIGHTER FOR CIGARS AND CIGARETTES
Raymond Welanske, North Tonawanda, N. Y., assignor to Hygrade Industries, Inc., Buffalo, N. Y., a corporation of New York
Application May 23, 1947, Serial No. 749,947
4 Claims. (Cl. 67—7.1)

1. A pocket lighter comprising a body member having a main chamber for an absorbent medium in which liquid fuel is held in suspension and a second narrow tubular chamber parallel to the main chamber, the body member having a continuous bottom opening and having front and side walls which project beyond the bottom opening and a rear wall formed to provide a recess adjoining the bottom opening, the front, side and rear walls framing the bottom opening, a plate closely fitting within the bottom opening and being freely movable angularly with respect thereto whereby at its front end it projects outward beyond the bottom opening and at its rear end projects inward beyond the bottom opening and into the chamber, a flint element loading spring confined within the second chamber and having its lower end attached to the front end portion of said plate, and a panel normally fitted and confined within the projecting portion of the side and front walls of the body member and slidably movable in either direction of its plane through said recess and between said side walls, the panel being completely removable from the body member by sufficiently continued outward sliding movement, the inner end of the panel providing a fulcrum about which the plate may progressively tilt during the sliding movement of the panel relatively to the bottom opening, the movement of the panel to fully closed position causing the plate, under the pressure of the spring, to occupy a position immediately below the panel and in a plane parallel to it in which position the plate is in normal uniform contact with the panel.



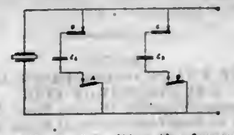
2,470,735
STAPLE FOR DOOR LOCKS
Leonard Weare Young, Moor Park, England, assignor to Ingersoll Limited, London, England
Application November 20, 1946, Serial No. 710,963
In Great Britain June 18, 1945
3 Claims. (Cl. 292—340)

1. A construction for door locks comprising a cover plate for attachment to a door jamb and having apertured lugs extending outwardly therefrom, a door lock member mounted over said cover plate and for fitting against the door jamb, recesses in said member for receiving said lugs,



bores in said member and coinciding with the apertures in said lugs, and pins in said bores and extending through said apertures to secure said member to said cover plate, said bores opening in a portion of said member that is covered when the door is closed to render said pins inaccessible.

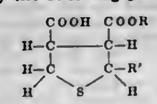
2,470,736
SPINNING RING
Hyatt B. Atwood and Charles Fillinger, Buffalo, N. Y., assignors to Herr Manufacturing Company Inc., Buffalo, N. Y., a corporation of New York
Application July 31, 1946, Serial No. 687,370
6 Claims. (Cl. 57—120)



1. A device of the character described, comprising a spinning ring for a traveler having traveler-engaging bearing faces at its inner and top sides and having intersecting transverse and upright ports opening onto such faces, respectively, a lubricant well applied to the ring in lubricant-conducting relation to said ports, a wick in lubricant-conducting relation with said well and extending through said transverse port for feeding the lubricant to the inner bearing face of the ring, and means in said upright port defining a plurality of lubricant-conducting elements in communicating relation at their lower end with the transverse port for feeding the lubricant by capillary attraction to the top bearing face of the ring.

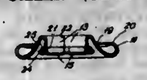
2,470,737
METHOD AND MEANS OF FINISHING PIEZOELECTRIC CRYSTALS
Henry M. Bach, Lawrence, N. Y., assignor to Premier Crystal Laboratories, Incorporated, New York, N. Y.
Application August 29, 1944, Serial No. 551,738
5 Claims. (Cl. 171—327)

1. A method of processing a piezo-electric plate comprising the steps of varying the input reactance across the plate until a value of reactance is obtained causing the plate to have an activity dip, etching the plate to remove surface material therefrom, and then loading the plate until the activity dip of the plate occurs at substantially the same value of input reactance as that at which the activity dip was originally obtained.



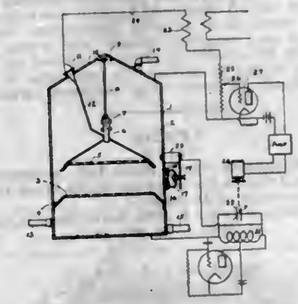
2,470,738
TEMPERATURE COMPENSATED CRYSTAL UNIT
Henry M. Bach, Lawrence, N. Y., assignor to Premier Crystal Laboratories, Incorporated, New York, N. Y.
Application January 30, 1945, Serial No. 575,236
15 Claims. (Cl. 171—327)

1. The method of limiting the frequency variation with temperature of a piezo-electric vibratory plate comprising the steps of decreasing the input impedance of the plate when the frequency rises above a first upper limit value as a result of temperature changes, and increasing the input impedance when the frequency drops below a second lower limit value as a result of other temperature changes.



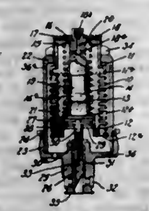
2,470,739
CARBOXYTHIOPHANES AND METHOD OF PREPARING SAME
Bernard R. Baker, Nanuet, N. Y., assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application July 16, 1945, Serial No. 605,468
6 Claims. (Cl. 260—329)

1. Compounds of the group consisting of those represented by the following general formula:



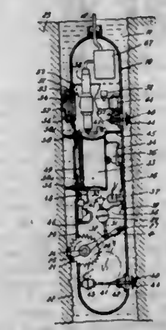
wherein R is an alkyl radical and R' is a carbalkoxyalkyl radical.

2,470,740
REINFORCED SOCKET FOR SNAP FASTENERS
Paul E. Fenton, Middlebury, and Otto J. Hueister, Waterbury, Conn., assignors to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application September 28, 1944, Serial No. 556,236
17 Claims. (Cl. 24—216)



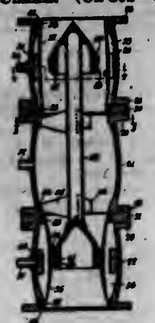
1. In snap fasteners, a socket part having a tubular stud receiving portion defined by circumferentially arranged yieldable members, an imperforated wall extending integrally from one end of said members and circumferentially enveloping said members, the other end of said members terminating in inwardly directed stud engaging projections, a spring ring arranged upon outer surfaces of said members adjacent the second named end thereof, and means on said members retaining said ring against accidental displacement therefrom.

2,470,741
AUTOMATIC AGITATOR FOR APPARATUS SUBJECTING LIQUID TO ELECTRICAL POTENTIAL BETWEEN ELECTRODES
Herman L. Gordon, Silver Spring, Md., assignor to Premier Crystal Laboratories, Incorporated, New York, N. Y.
Application May 26, 1945, Serial No. 595,933
6 Claims. (Cl. 204—273)



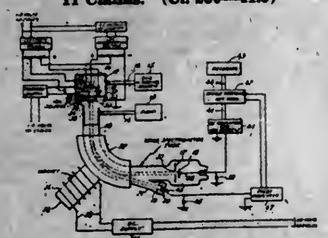
1. An automatic agitator for an apparatus wherein liquid is subjected to an electrical potential between electrodes, comprising a container for the liquid, said container having a vibratory wall portion, electrical means for driving said vibratory wall portion, and a control circuit connected to said electrical means and connected in series with the electrodes, said control circuit including means for energizing said electrical means in accordance with the resistance across the electrodes.

2,470,742
DENSITY RESPONSIVE DEVICE
Elmer A. Haase and Jay A. Bolt, South Bend, Ind., assignors to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application March 6, 1944, Serial No. 525,278
2 Claims. (Cl. 236—92)



1. A density-responsive control unit for actuating a regulating element such as a needle valve in accordance with changes in pressure and temperature over a certain altitude range including a corrugated bellows having a movable end, means connected to said latter end mounting said element, a cap at the opposite end of the bellows, supporting means to which said cap is secured, a hollow cylinder located centrally of the bellows and fixed to said movable end, a piston member projecting from said cap into said cylinder, said bellows being partly evacuated to an internal pressure corresponding to a pressure existing at an altitude well above normal ground level, a spring in said bellows encircling said cylinder and piston and functioning to sustain the bellows against abnormal collapse at ground level barometer due to evacuation, a damping fluid partly filling the bellows and a temperature-responsive inert gas filling the space above the damping fluid, said cylinder being ported to the interior of the bellows to provide a dash-pot action during extension and contraction of the bellows.

2,470,743
METHOD AND APPARATUS FOR GEOPHYSICAL PROSPECTING
Frank P. Hochgesang, Woodbury, and Carleton H. Schlesman, Camden, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application September 16, 1944, Serial No. 554,380
1 Claim. (Cl. 250—53)



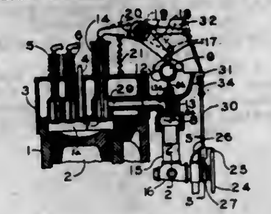
An apparatus for geophysical prospecting comprising in combination an elongated sealed housing adapted to be lowered and raised in a drill hole, means including a cable for lowering and raising said housing in the drill hole, milling cutters carried by said housing for removing the mud sheath from at least a portion of the wall of said drill hole, squeegees also carried by said housing for scraping that portion of the wall from which the mud sheath has been removed, means defining a chamber in said housing, a window in the means defining the chamber adapted to contact the cleaned wall of the drill hole, means including a bellows for extending and retracting said window with respect to the housing, guide means for said housing, pneumatic means for extending said guide means into contact with the wall of the drill hole, separate pneumatic means for operating the milling cutters, the squeegees, the guide extending means, and the means for extending and retracting the window, a multifrequency source of power, electrical means responsive to different frequencies of power for selectively energizing said pneumatic means, an X-ray tube in said chamber for generating X-rays, means for directing the X-rays through said window against the cleaned wall of the drill hole, and a photosensitive element in said chamber for recording the X-rays that have been dispersed by diffraction produced by the crystalline substance or substances in the wall and which have been back-reflected into the chamber.

2,470,744
AIR LOCK AND VALVE FOR PNEUMATIC CONVEYING SYSTEMS
Arthur H. Kern, New York, N. Y., assignor to Airborne Conveyors Corporation, New York, N. Y., a corporation of New York
Application October 22, 1945, Serial No. 623,750
7 Claims. (Cl. 302—62)

1. In a pneumatic system including regions of different pressure, an air-lock interposed between said regions and comprising inlet and outlet chambers and an intermediate chamber, the inlet and outlet chambers communicating respectively with said regions of different pressure, means for varying the pressure in said intermediate chamber to make it alternately equal to said different pressures, a pair of valves positioned between the intermediate chamber and the inlet and outlet chambers respectively, each valve comprising a centrally disposed valve seat and a deflectable tubular sleeve surrounding said valve seat and adapted to deflect into and out of a valve-closing position in contact with said valve seat, the deflections of said sleeve being responsive to the pressures on its opposite sides, and means for subjecting the opposite sides of each sleeve to said different pressures in a predetermined timed sequence to establish communication between the chambers whose pressures have been equalized and to seal off communication between the chambers whose pressures are different.

2,470,745
MASS SPECTROMETER
Carleton H. Schlesman, Camden, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application May 15, 1945, Serial No. 593,952
11 Claims. (Cl. 250—41.9)

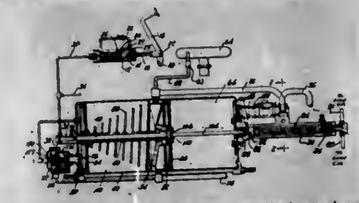
1. A mass spectrometer of the scanning type comprising in combination a source of an ion stream, means for dispersing said ion stream in accordance with the mass of the ions to form a mass spectrum, a main target therefor, means to sweep the spectrum across said target, an auxiliary target disposed within the path of said sweeping spectrum but between the original position of said spectrum and said main target, whereby a portion of said spectrum undergoing deflection will strike said auxiliary target before striking said main target, means to amplify the electrical signals produced by said main target as said spectrum is directed thereacross, means to record said amplified signals, and means actuated by the electrical signals produced by the auxiliary target to control the recording of the electrical signals produced by the main target.



2,470,746
VALVE
Harold B. Schultz, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application October 8, 1945, Serial No. 621,095
5 Claims. (Cl. 303—54)

1. A valve for use in a fluid pressure system comprising a valve body, inlet, working and return ports in the body, means communicating the ports with one another, a poppet valve in the body subjected to inlet port pressure, means in the body having an opening therein to slidably receive one end of the poppet valve to provide a guide therefor, said one end of the poppet valve constituted to be sealed from the inlet port pressure, means normally urging the poppet valve toward its seat to cut off communication between the inlet port and the other two ports, valve means in the body including a valve head carried by the other end of the poppet valve and a valve seat movable with respect to the valve head for controlling communication between the working and return ports and normally arranged to establish communication between the working and return ports, a longitudinal passage extending through the poppet valve and valve head, and means for operating the valve means and the poppet valve to urge the latter in a direction away from its seat to establish communication between the inlet and the working port and to urge the former in a direction to cut off communication between the working and return ports, said poppet valve seat, opening, and valve head, having equal diameters so constituted as to provide equal effective areas subject to inlet, return and working port pressures, whereby a hydraulically balanced poppet valve is obtained irrespective of the position of said poppet valve.

2,470,747
DUAL FUEL COMBUSTION SYSTEM FOR INTERNAL-COMBUSTION ENGINES
Harold F. Shepherd, Springfield, Ohio, assignor to The National Supply Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application September 12, 1945, Serial No. 615,762
9 Claims. (Cl. 60—16)

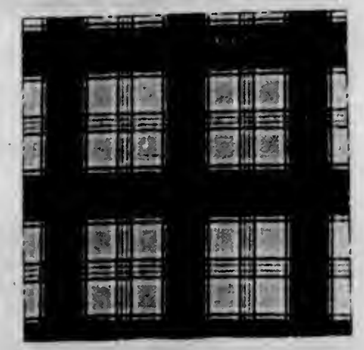


1. In a multi-cylinder compression ignition engine adapted for the burning of dual fuels, including a high pressure starting air regulating valve adapted to control the introduction of high pressure starting air to start said engine, a check valve in the cylinder head in communication with said starting air regulating valve through which high pressure starting air passes enroute to said

cylinder, means to hold said starting air regulating valve open after the engine has been started and means to operate said check valve to control the admission of low pressure gaseous fuel passing through said open starting air regulating valve into said cylinder for engine operation.

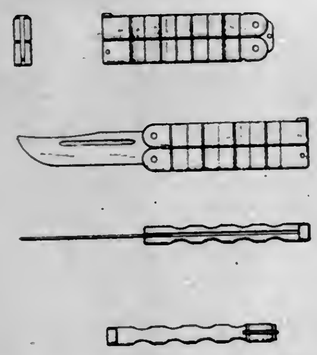
2,470,748
BOOSTER UNIT FOR HYDRAULIC PRESSURE SYSTEMS
Thomas H. Thomas and Earl R. Price, South Bend, Ind., assignors to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application October 4, 1943, Serial No. 504,854
4 Claims. (Cl. 60—54.5)

4. For use in a hydraulic pressure system, a booster unit comprising a power cylinder casing, a partition dividing said casing into two sections except for an opening through the center thereof, two power pistons arranged in tandem each in one of the sections of the power cylinder, a tubular member extending through the opening in the partition to interconnect the two power pistons and combine them into a unitary power element, a hydraulic master cylinder having an outlet port adapted to be connected to a hydraulically operated motor, a piston reciprocable in the master cylinder, force transmitting means arranged to transmit force from the unitary power element to the master cylinder piston, a hydraulic follow-up cylinder located at the rear end of the power cylinder casing and including a sleeve extending into the interior of the aforementioned tubular member, said hydraulic follow-up piston having an inlet port adapted to



be connected to an operator operated master cylinder, a piston in said hydraulic follow-up cylinder extending through said sleeve and acting against the unitary power element to add its force to that developed by the power cylinder pistons, said follow-up piston having a cross-sectional area appreciably less than the cross-sectional area of the piston in the power operated master cylinder, and hydraulically operated valve means acted on by the pressure developed in the operator operated master cylinder and arranged to control operation of the power cylinder pistons.

DESIGNS



MAY 17, 1949

153,745
DESIGN FOR A TEXTILE FABRIC
John H. Abt, New York, N. Y.
Application April 26, 1948, Serial No. 145,966
Term of patent 3½ years
(Cl. D92—1)

The ornamental design for a textile fabric, substantially as shown.

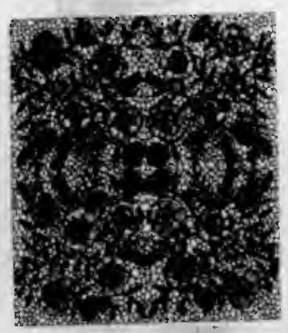
153,746
DESIGN FOR A KNIFE OR SIMILAR ARTICLE
Cecil H. Alexander, Grand Junction, Colo., assignor to Zip Clip Knife Corporation, Grand Junction, Colo., a corporation of Colorado
Application July 28, 1947, Serial No. 140,567
Term of patent 3½ years
(Cl. D22—3)

The ornamental design for a knife or similar article, as shown.

153,747
DESIGN FOR A SHELL FOR A BRACELET OR SIMILAR ARTICLE
Eric G. O. Anderson, Cranston, R. I., assignor to Everfine Jewelry Manufacturing Company, Providence, R. I., a corporation of Rhode Island
Application July 28, 1947, Serial No. 140,556
Term of patent 7 years
(Cl. D45—4)

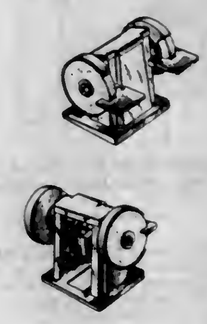
The ornamental design for a shell for a bracelet or similar article, as shown.

153,748
DESIGN FOR A TOP SHELL FOR AN EXPANSIBLE BRACELET OR SIMILAR ARTICLE
Eric G. O. Anderson, Cranston, R. I., assignor to Everfine Jewelry Manufacturing Company, Providence, R. I., a corporation of Rhode Island
Application September 25, 1947, Serial No. 141,580
Term of patent 3½ years
(Cl. D45—4)



The ornamental design for a top shell for an expansible bracelet or similar article, as shown.

153,749
DESIGN FOR A TOP SHELL FOR AN EXPANSIBLE BRACELET OR SIMILAR ARTICLE
Eric G. O. Anderson, Cranston, R. I., assignor to Everfine Jewelry Manufacturing Company, Providence, R. I., a corporation of Rhode Island
Application September 25, 1947, Serial No. 141,581
Term of patent 3½ years
(Cl. D45—4)

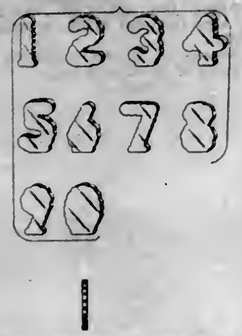


The ornamental design for a top shell for an expansible bracelet or similar article, as shown.

153,750
DESIGN FOR A LACE
Ralph L. Anderson, New York, N. Y.
Application September 12, 1947, Serial No. 141,359
Term of patent 3½ years
(Cl. D47—6)

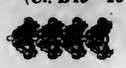
The ornamental design for a lace, as shown and described.

153,751
DESIGN FOR A GRINDER
Merrill K. Apple, Oakland, Calif., assignor to McCaldry, Inc., Oakland, Calif., a corporation of California
Application September 10, 1946, Serial No. 133,223
Term of patent 3½ years
(Cl. D37—1)



The ornamental design for a grinder, substantially as shown.

153,752
DESIGN FOR A FONT OF SIGN LETTERS OR SIMILAR ARTICLE
Joseph E. Baker, Newark, Ohio
Application March 6, 1947, Serial No. 137,393
Term of patent 3½ years
(Cl. D64—12)



153,752—Continued

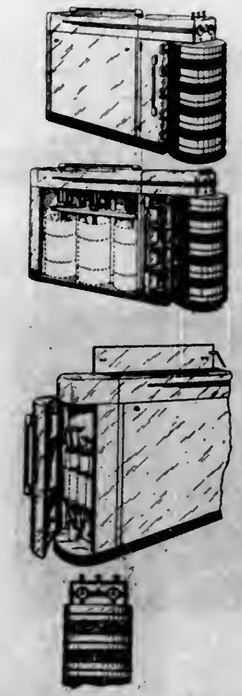
The ornamental design for a font of sign letters or similar article, substantially as shown and described.

153,753
DESIGN FOR A JEWELRY CHAIN
Paul Bardach, Providence, R. I.
Application October 9, 1948, Serial No. 149,055
Term of patent 3½ years
(Cl. D45—16)

The ornamental design for a jewelry chain, substantially as shown.

153,754
DESIGN FOR A JEWELRY CHAIN
Paul Bardach, Providence, R. I.
Application October 9, 1948, Serial No. 149,058
Term of patent 3½ years
(Cl. D45—16)

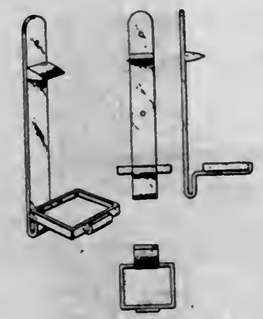
The ornamental design for a jewelry chain, substantially as shown.



153,755
DESIGN FOR A JEWELRY CHAIN
Paul Bardach, Providence, R. I.
Application October 9, 1948, Serial No. 149,060
Term of patent 3½ years
(Cl. D45—16)

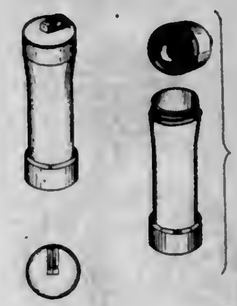
The ornamental design for a jewelry chain, substantially as shown.

153,756
DESIGN FOR AN AUTOMOBILE SERVICING UNIT
Basil A. Beaver, Minneapolis, Minn.
Application February 4, 1948, Serial No. 144,276
Term of patent 14 years
(Cl. D52—2)



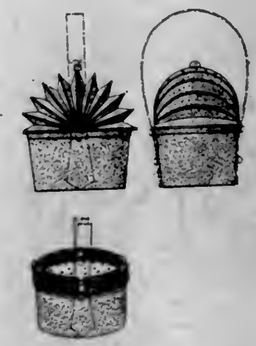
The ornamental design for an automobile servicing unit, as shown and described.

153,757
DESIGN FOR A LIQUID WAX APPLICATOR
Emile Bélanger and Gérard Mercier, Ahuntsic, Montreal, Quebec, Canada
Application June 16, 1947, Serial No. 139,720
Term of patent 3½ years
(Cl. D9—2)



The ornamental design for a liquid wax applicator, as shown and described.

153,758
DESIGN FOR A COMBINED HAIRPIN HOLDER AND OPENING FIXTURE
John A. Bennett, Tulsa, Okla.
Application September 29, 1947, Serial No. 141,653
Term of patent 14 years
(Cl. D86—10)



The ornamental design for a combined hairpin holder and opening fixture, as shown.

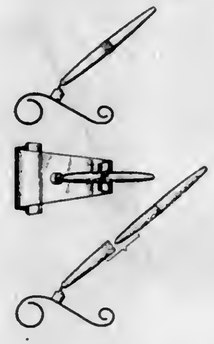
153,759
DESIGN FOR AN ATOMIZER
Armand Blatt, New York, N. Y.
Application February 25, 1948, Serial No. 144,721
Term of patent 7 years
(Cl. D82—1)

The ornamental design for an atomizer, substantially as shown.

153,760
DESIGN FOR A HANDBAG
Eli Bogan, New York, N. Y.
Application July 24, 1948, Serial No. 147,745
Term of patent 7 years
(Cl. D87—3)

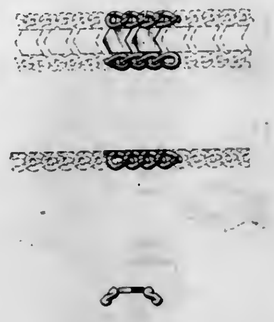
The ornamental design for a handbag, as shown and described.

153,761
DESIGN FOR A DOLL HEAD
Calvin Harris Boughman, New York, N. Y.
Application January 3, 1948, Serial No. 143,531
Term of patent 3½ years
(Cl. D34—4)



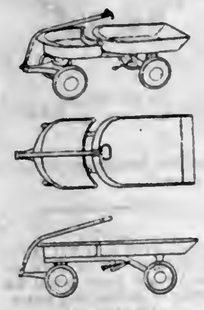
The ornamental design for a doll head, as shown.

153,762
DESIGN FOR A NURSERY LAMP
Edward Brenner, Hollywood, Calif.
Application June 25, 1947, Serial No. 139,899
Term of patent 7 years
(Cl. D48—20)



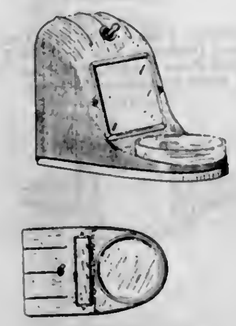
The ornamental design for a nursery lamp, as shown.

153,763
DESIGN FOR A DESK WRITING UNIT
Laurie J. Campbell, Erie, Pa., assignor to Louis Marx & Company, Inc., New York, N. Y., a corporation of New York
Application August 12, 1947, Serial No. 140,835
Term of patent 3½ years
(Cl. D74—1)



The ornamental design for a desk writing unit, as shown.

153,764
DESIGN FOR A CHAIN FOR A BRACELET OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application February 11, 1948, Serial No. 144,414
Term of patent 14 years
(Cl. D45—4)

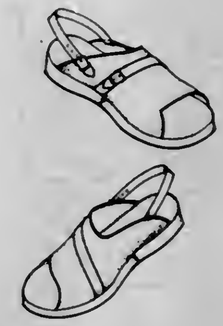


The ornamental design for a chain for a bracelet or similar article, substantially as shown and described.

153,765
DESIGN FOR A CHILD'S WAGON WITH DUMP BODY
Andrew J. Chroninger, Jackson, Mich.
Application June 26, 1947, Serial No. 139,937
Term of patent 7 years
(Cl. D34—15)

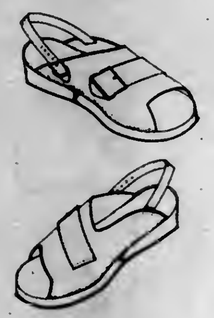
The ornamental design for a child's wagon with dump body, substantially as shown.

153,766
DESIGN FOR A COMBINED SIGNAL LIGHT AND ASH RECEIVER
Arthur C. Conner, Salt Lake City, Utah
Application October 13, 1947, Serial No. 141,882
Term of patent 3½ years
(Cl. D72—1)



The ornamental design for a combined signal light and ash receiver, as shown.

153,767
DESIGN FOR A COMBINED PERFUME BOTTLE AND CONTAINER
René Denis, Paris, France, assignor to Societe a Responsabilite Limitee: Franco Continentale des Parfums, Paris, France, a corporation of France
Application October 6, 1947, Serial No. 141,765
In France June 27, 1947
Term of patent 3½ years
(Cl. D58—9)

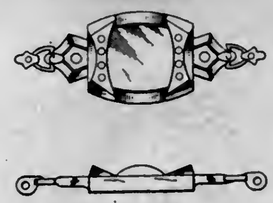


The design for a combined perfume bottle and container, as shown.

153,768
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Herman Diamant, New York, N. Y.
Application January 8, 1949, Serial No. 146
Term of patent 3½ years
(Cl. D7—7)

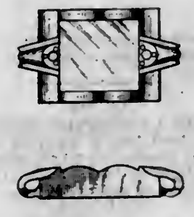
The ornamental design for a shoe or similar article, substantially as shown.

153,769
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Herman Diamant, New York, N. Y.
Application January 8, 1949, Serial No. 147
Term of patent 3½ years
(Cl. D7—7)



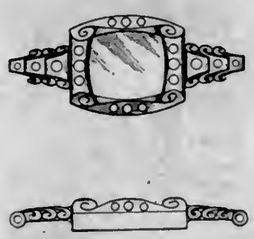
The ornamental design for a shoe or similar article, substantially as shown.

153,770
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Herman Diamant, New York, N. Y.
Application January 8, 1949, Serial No. 148
Term of patent 3½ years
(Cl. D7—7)



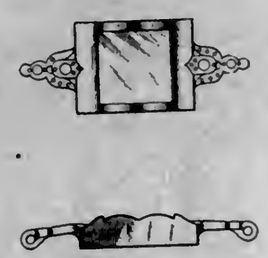
The ornamental design for a shoe or similar article, substantially as shown.

153,771
DESIGN FOR A WATCHCASE
Harry Dinhofer, New York, N. Y.
Application June 4, 1948, Serial No. 146,756
Term of patent 3½ years
(Cl. D42—8)



The ornamental design for a watchcase, substantially as shown.

153,772
DESIGN FOR A WATCHCASE
Harry Dinhofer, New York, N. Y.
Application June 4, 1948, Serial No. 146,757
Term of patent 3½ years
(Cl. D42—8)



The ornamental design for a watchcase, substantially as shown.

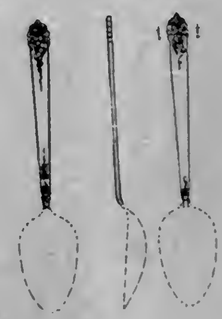
153,773
DESIGN FOR A WATCHCASE
Harry Dinhofer, New York, N. Y.
Application June 4, 1948, Serial No. 146,759
Term of patent 3½ years
(Cl. D42—8)

The ornamental design for a watchcase, substantially as shown.

153,774
DESIGN FOR A WATCHCASE
Harry Dinhofer, New York, N. Y.
Application June 4, 1948, Serial No. 146,760
Term of patent 3½ years
(Cl. D42—8)

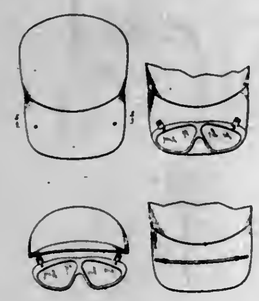
The ornamental design for a watchcase, substantially as shown.

153,775
DESIGN FOR A PIG BANK
Samuel Dubiner, Toronto, Ontario, Canada
Application December 11, 1947, Serial No. 143,102
Term of patent 14 years
(Cl. D34—11)



The ornamental design for a pig bank, as shown.

153,776
DESIGN FOR A SALVAGE HOOK
Harry J. Zimmerman, New Haven, Conn.
Application May 11, 1948, Serial No. 146,261
Term of patent 14 years
(Cl. D54—13)

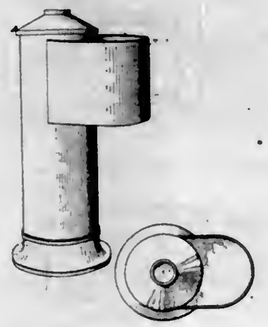


The ornamental design for a salvage hook, substantially as shown.

153,777
DESIGN FOR A SPOON OR SIMILAR ARTICLE OF FLATWARE
Arthur A. Eisenberg, New York, N. Y., assignor to National Silver Company, New York, N. Y., a corporation of New York
Application December 7, 1948, Serial No. 150,025
Term of patent 14 years
(Cl. D54—12)

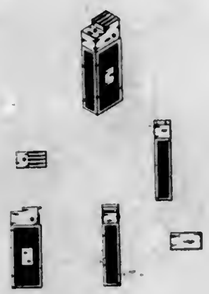
The ornamental design for a spoon or similar article of flatware, as shown and described.

153,778
DESIGN FOR A COMBINATION CAP AND EYE SHIELD
Samuel Feldman, Brooklyn, N. Y.
Application November 20, 1947, Serial No. 142,684
Term of patent 14 years
(Cl. D57—1)



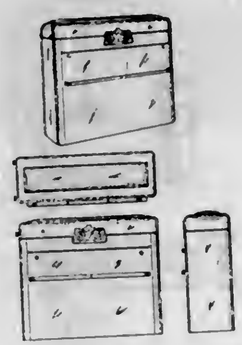
The ornamental design for a combination cap and eye shield, substantially as shown and described.

153,779
DESIGN FOR A HANDBAG FRAME
Angelo J. Fieres, Hollis, Long Island, N. Y.
Application March 20, 1948, Serial No. 145,256
Term of patent 7 years
(Cl. D87—1)



The ornamental design for a handbag frame, substantially as shown.

153,780
DESIGN FOR A STEAM CLEANER FOR AUTOMOBILES OR THE LIKE
Albert C. Fletcher, Oklahoma City, Okla.
Application July 29, 1946, Serial No. 132,092
Term of patent 14 years
(Cl. D49—1)



The ornamental design for a steam cleaner for automobiles or the like, substantially as shown and described.

153,781
DESIGN FOR A CIGARETTE LIGHTER
Irving Florman, New York, N. Y.
Application September 15, 1947, Serial No. 141,392
Term of patent 14 years
(Cl. D48—27)

The ornamental design for a cigarette lighter, substantially as shown.

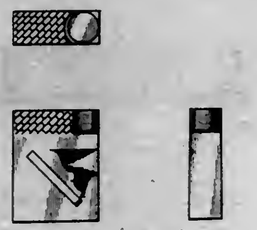
153,782
DESIGN FOR A CABINET FOR LUBRICATING EQUIPMENT
Alexander P. Fox, University City, and August D. Reisert, St. Louis, Mo., assignors to Lincoln Engineering Company, St. Louis, Mo., a corporation of Missouri
Application March 5, 1948, Serial No. 144,914
Term of patent 3½ years
(Cl. D52—2)

The ornamental design for a cabinet for lubricating equipment, substantially as shown and described.

153,783
DESIGN FOR A SCOOP SPOON
Clifford D. George, Florence, S. C.
Application January 14, 1947, Serial No. 136,135
Term of patent 14 years
(Cl. D44—29)

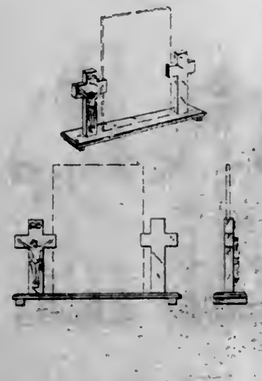
The ornamental design for a scoop spoon, as shown.

153,784
DESIGN FOR A DISPLAY SIGN
Gilbert C. Gettelman, Hartford, Wis., assignor, by mesne assignments, to Hamilton Watch Company, Lancaster, Pa., a corporation of Pennsylvania
Application August 12, 1947, Serial No. 140,827
Term of patent 3½ years
(Cl. D1—12)



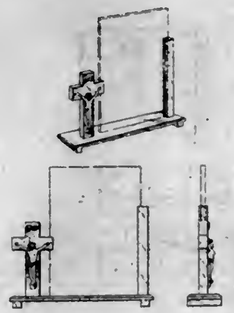
The ornamental design for a display sign, as shown and described.

153,785
DESIGN FOR A NEGLIGEE
Violet Giovagnoni, New York, N. Y.
Substituted for design application 134,913, November 20, 1946. This application June 14, 1948, Serial No. 146,952
Term of patent 7 years
(Cl. D3—26)



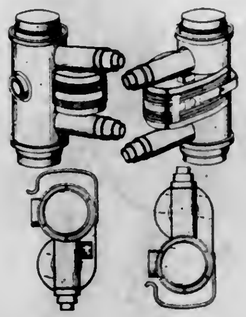
The ornamental design for a negligee, substantially as shown.

153,786
DESIGN FOR A FLASK
Clay A. Gladstone, Los Angeles, Calif.
Application October 31, 1947, Serial No. 142,245
Term of patent 3½ years
(Cl. D58—6)



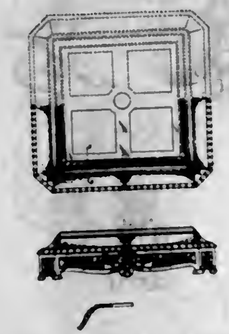
The ornamental design for a flask, as shown and described.

153,787
DESIGN FOR A PICTURE FRAME OR THE LIKE
Marvin Y. Goldberg, Brooklyn, N. Y. assignor to Alphabest Products Corporation, New York, N. Y., a corporation of New York
Application January 29, 1947, Serial No. 136,486
Term of patent 3½ years
(Cl. D29—20)



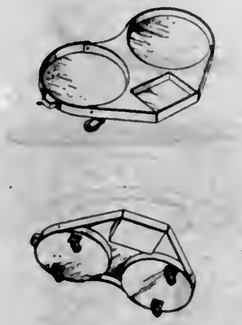
The ornamental design for a picture frame or the like, as shown and described.

153,788
DESIGN FOR A PICTURE FRAME OR THE LIKE
Marvin Y. Goldberg, Brooklyn, N. Y., assignor to Alphabest Products Corporation, New York, N. Y., a corporation of New York
Application January 29, 1947, Serial No. 136,487
Term of patent 3½ years
(Cl. D29—20)



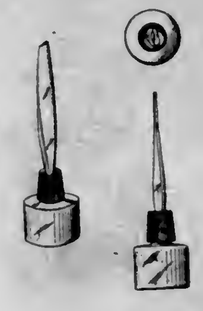
The ornamental design for a picture frame or the like, as shown and described.

153,789
DESIGN FOR A HOUSING FOR X-RAY TUBE AND BLOWER
Edwin R. Goldfield and Ralph C. Schiring, University Heights, Ohio, assignors to Picker X-Ray Corporation, Waite Manufacturing Division, Inc., Cleveland, Ohio, a corporation of Ohio
Application May 25, 1948, Serial No. 146,595
Term of patent 14 years
(Cl. D26—5)



The ornamental design for a housing for X-ray tube and blower, as shown.

153,790
DESIGN FOR A FLOOR LAMP BASE
Irving I. Gotliffe, New York, N. Y., assignor to Remsen Lamp Manufacturing Co., Brooklyn, N. Y., a partnership composed of Joseph Zweig and Benjamin Zweig
Application November 10, 1947, Serial No. 142,446
Term of patent 3½ years
(Cl. D48—20)

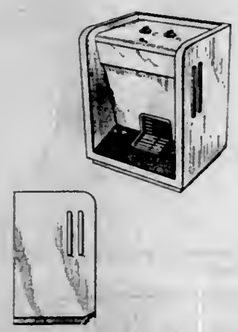


The ornamental design for a floor lamp base, as shown and described.

153,791
DESIGN FOR A SCRUB BUCKET DOLLY
Frank H. Gruettner, Buffalo, N. Y.
Application October 1, 1947, Serial No. 141,701
Term of patent 14 years
(Cl. D49—1)

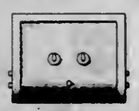
The ornamental design for a scrub bucket dolly, as shown.

153,792
DESIGN FOR A BOTTLE
Ralph G. Gulley, New York, N. Y., assignor to Revlon Products Corporation, New York, N. Y., a corporation of New York
Application June 11, 1947, Serial No. 139,595
Term of patent 7 years
(Cl. D58—8)



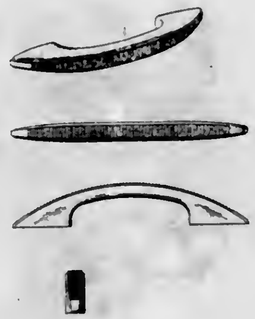
The ornamental design for a bottle, substantially as shown.

153,793
DESIGN FOR A COMBINATION CONTAINER FOR COSMETICS AND CLOSURE THEREFOR
Frank P. Hageman, Vincent I. Mora, and Herbert C. Richardson, Minneapolis, Minn., assignors to Duncan Storm Ltd., Inc., Minneapolis, Minn., a corporation of Delaware
Application November 2, 1946, Serial No. 134,483
Term of patent 3½ years
(Cl. D58—8)



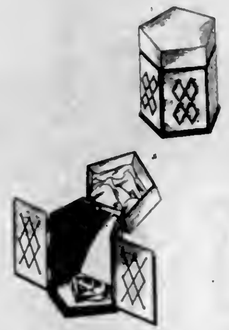
The ornamental design for a combination container for cosmetics and closure therefor, substantially as shown.

153,794
DESIGN FOR A THERAPEUTIC CABINET
George H. Hansen, Mission, Kans., Gerhard J. Schroer, Kansas City, Mo., and Conrad J. Curtis, Overland Park, Kans., assignors to C. Earl Hovey, Kansas City, Mo., trustee
Application March 1, 1948, Serial No. 144,844
Term of patent 14 years
(Cl. D83—1)



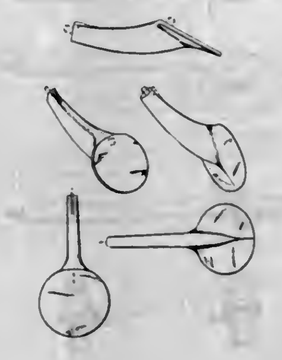
The ornamental design for a therapeutic cabinet, as shown.

153,795
DESIGN FOR A CHARM OR SIMILAR ARTICLE
King Arthur Harrington, San Francisco, Calif.
Application May 17, 1948, Serial No. 146,469
Term of patent 3½ years
(Cl. D45—17)



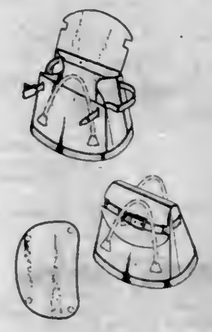
The ornamental design for a charm or similar article, as shown.

153,796
DESIGN FOR A STOVE HANDLE
Robert F. Hefferan, Grand Rapids, Mich., assignor to Winters & Crampton Corporation, Grand Rapids, Mich., a corporation of Michigan
Application September 14, 1946, Serial No. 133,368
Term of patent 7 years
(Cl. D81—25)



The ornamental design for a stove handle, as shown and described.

153,797
DESIGN FOR A DISPLAY BOX
Jacques Heim, Paris, France
Application February 26, 1947, Serial No. 137,188
Term of patent 3½ years
(Cl. D80—5)



The ornamental design for a display box, substantially as shown and described.

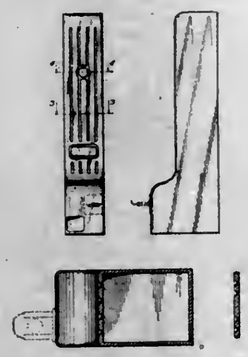
153,798
DESIGN FOR A FISHING LINE SINKER OR THE LIKE
Clair L. Hinkson, Seattle, Wash., assignor to Hinkson Mfg. Co., Seattle, Wash., a partnership
Application October 10, 1947, Serial No. 141,843
Term of patent 14 years
(Cl. D31—4)

The ornamental design for a fishing line sinker or the like, as shown.

153,799
DESIGN FOR A BAG OR LIKE RECEPTACLE
Alex Hochner, New York, N. Y.
Application April 24, 1948, Serial No. 145,939
Term of patent 3½ years
(Cl. D87—3)

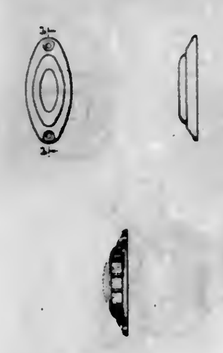
The ornamental design for a bag or like receptacle, substantially as shown and described.

153,800
DESIGN FOR AN EAR CLIP FINDING
Karl F. Hoeckele, Newark, N. J., assignor to Eastern Jewelry Finding Works, Inc., a corporation of New Jersey
Application February 18, 1948, Serial No. 144,567
Term of patent 14 years
(Cl. D45—9)



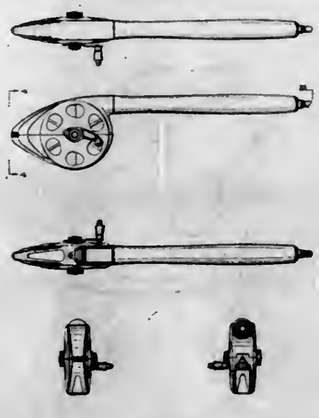
The ornamental design for an ear clip finding, substantially as shown.

153,801
DESIGN FOR A GLOW LAMP
Aaron H. Hoffedits, Sacramento, Calif.
Application August 28, 1948, Serial No. 148,301
Term of patent 3½ years
(Cl. D48—20)



The ornamental design for a glow lamp, as shown.

153,802
DESIGN FOR A VENDING MACHINE HOUSING
Clarence A. Hokinson, Chicago, Ill.
Application December 18, 1947, Serial No. 143,206
Term of patent 3½ years
(Cl. D52—3)

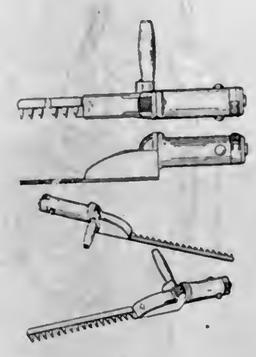


The ornamental design for a vending machine housing, as shown and described.

153,803
DESIGN FOR AN ELECTRICAL PUSH-BUTTON COVER PLATE
William Huppert, New York, N. Y.
Application October 30, 1946, Serial No. 134,391
Term of patent 14 years
(Cl. D26—13)

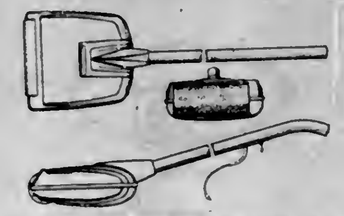
The ornamental design for an electrical push-button cover plate, substantially as shown and described.

153,804
DESIGN FOR A COMBINED FISHING REEL AND ROD SEAT
Edwin P. Hurd, Detroit, Mich., assignor to Hurd Lock and Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application October 11, 1947, Serial No. 141,873
Term of patent 14 years
(Cl. D31—4)



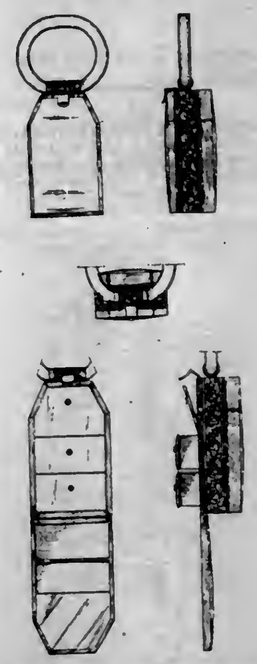
The ornamental design for a combined fishing reel and rod seat, as shown and described.

153,805
DESIGN FOR A PORTABLE SIGNAL LIGHT FOR MOTOR VEHICLE OR SIMILAR ARTICLE
Frederick K. Hussey, New York, N. Y.
Application May 18, 1948, Serial No. 146,433
Term of patent 14 years
(Cl. D72—1)



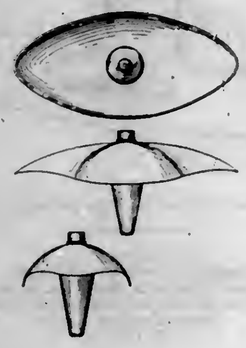
The ornamental design for a portable signal light for motor vehicle, or similar article, substantially as shown and described.

153,806
DESIGN FOR A HEDGE TRIMMER
Ivar Jepson, Oak Park, Ill., assignor to Sunbeam Corporation, Chicago, Ill., a corporation of Illinois
Application February 16, 1948, Serial No. 144,522
Term of patent 14 years
(Cl. D22—4)



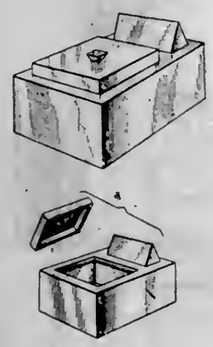
The ornamental design for a hedge trimmer, substantially as shown.

153,807
DESIGN FOR A POLISHER
Clarence Karstadt, Glen Ellyn, Ill., assignor to Birtman Electric Company, a corporation of Illinois
Application June 1, 1948, Serial No. 146,707
Term of patent 14 years
(Cl. D9—2)



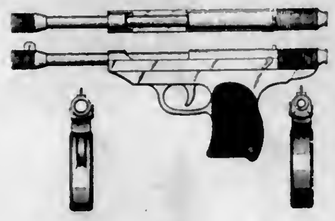
The ornamental design for a polisher, as shown.

153,808
DESIGN FOR A HANDBAG
Louis Kaufman, New York, N. Y.
Application August 14, 1948, Serial No. 148,117
Term of patent 7 years
(Cl. D87—3)



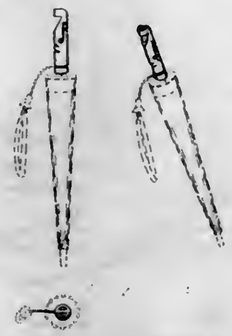
The ornamental design for a handbag, substantially as shown and described.

153,809
DESIGN FOR A LIGHTING FIXTURE
Edward B. Kirk, New York, N. Y., assignor to Donald Deskey Associates, New York, N. Y., a partnership
Application February 21, 1948, Serial No. 144,652
Term of patent 14 years
(Cl. D48—23)



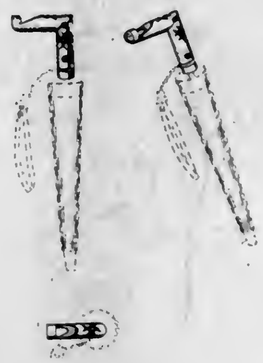
The ornamental design for a lighting fixture, as shown.

153,810
DESIGN FOR A COMBINED HAIRPIN RECEPTACLE AND OPENER
John Joseph Koslap, Garfield, N. J.
Application April 9, 1947, Serial No. 138,263
Term of patent 7 years
(Cl. D86—10)



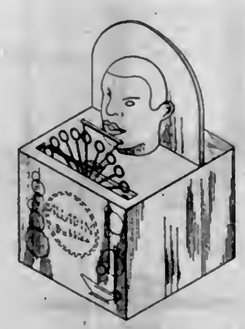
The ornamental design for a combined hairpin receptacle and opener, as shown.

153,811
DESIGN FOR A TOY PISTOL
Peter Lim, Los Angeles, Calif., assignor of one-half to Young H. Kim, Los Angeles, Calif.
Application May 19, 1947, Serial No. 139,136
Term of patent 3½ years
(Cl. D34—15)



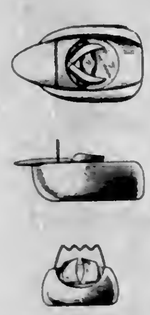
The ornamental design for a toy pistol, as shown and described.

153,812
DESIGN FOR AN UMBRELLA
Isidor Lusterman, New York, N. Y.
Application March 4, 1947, Serial No. 137,308
Term of patent 7 years
(Cl. D88—3)



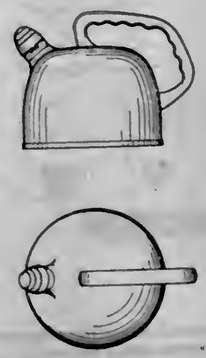
The ornamental design for an umbrella, substantially as shown and described.

153,813
DESIGN FOR AN UMBRELLA
Isidor Lusterman, New York, N. Y.
Application March 4, 1947, Serial No. 137,309
Term of patent 7 years
(Cl. D88—3)



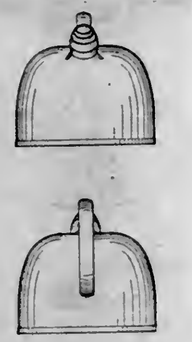
The ornamental design for an umbrella, substantially as shown and described.

153,814
DESIGN FOR A BUBBLE BLOWING DISPLAY DEVICE
Harry Margolis, Brooklyn, N. Y.
Application February 11, 1948, Serial No. 144,416
Term of patent 7 years
(Cl. D1—2)



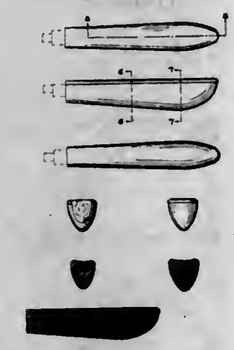
The ornamental design for a bubble blowing display device, substantially as shown and described.

153,815
DESIGN FOR A FINGER SUPPORT FOR MANICURING OPERATIONS
Raymond J. McKee, Brooklyn, N. Y.
Application November 6, 1946, Serial No. 134,557
Term of patent 3½ years
(Cl. D86—10)



The ornamental design for a finger support for manicuring operations, as shown.

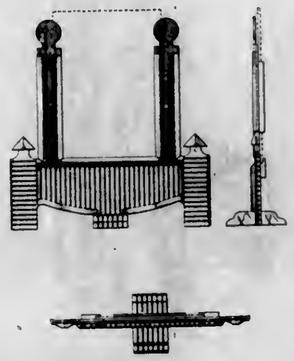
153,816
DESIGN FOR A TEAKETTLE
Albert D. Mortrude, Detroit, Mich., assignor to Kromex Corporation, Cleveland, Ohio, a corporation of Ohio
Application June 12, 1947, Serial No. 139,612
Term of patent 14 years
(Cl. D44—25)



153,816—Continued

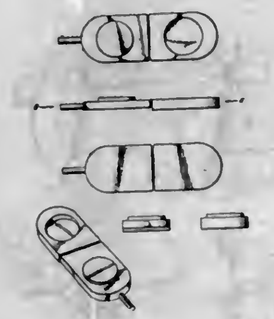
The ornamental design for a teakettle, substantially as shown.

153,817
DESIGN FOR A HANDLE FOR COOKING UTENSILS
Albert D. Mortrude, Detroit, Mich., assignor to Kromex Corporation, Cleveland, Ohio, a corporation of Ohio
Application June 12, 1947, Serial No. 139,618
Term of patent 14 years
(Cl. D44—29)



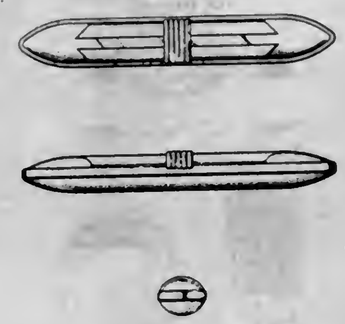
The ornamental design for a handle for cooking utensils, substantially as shown.

153,818
DESIGN FOR A CRUTCH
Charles B. Neptune, Los Angeles, Calif.
Application June 14, 1946, Serial No. 130,725
Term of patent 14 years
(Cl. D83—1)



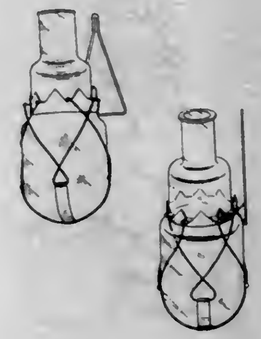
The ornamental design for a crutch, substantially as shown.

153,819
DESIGN FOR A PICTURE FRAME
Edward Olszewski, Detroit, Mich.
Application March 11, 1948, Serial No. 145,021
Term of patent 14 years
(Cl. D28—20)



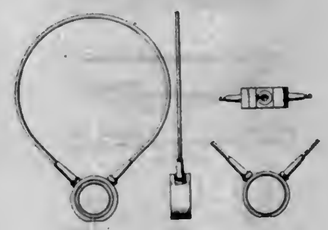
The ornamental design for a picture frame, as shown and described.

153,820
DESIGN FOR A MOLD FOR FOOD PATTIES
John H. Osgood and Wallace A. Goodwin, Sierra Madre, Calif.
Application April 9, 1946, Serial No. 129,707
Term of patent 14 years
(Cl. D44—1)



The ornamental design for a mold for food patties, as shown.

153,821
DESIGN FOR A DIRECTIONAL SIGNAL FOR MOTOR VEHICLES OR THE LIKE
Svend Pedersen and Fred W. Neumeyer, Chicago, and Leo P. Helmey, Clarendon Hills, Ill.
Application January 24, 1947, Serial No. 136,366
Term of patent 3½ years
(Cl. D72—1)

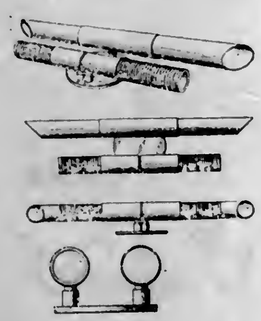


The ornamental design for a directional signal for motor vehicles or the like, substantially as shown.

153,822
DESIGN FOR A COMBINED VINE HOLDER AND WALL BRACKET THEREFOR
Howard J. Pruehnow, Summit, N. J.
Application October 30, 1947, Serial No. 142,232
Term of patent 14 years
(Cl. D35—3)

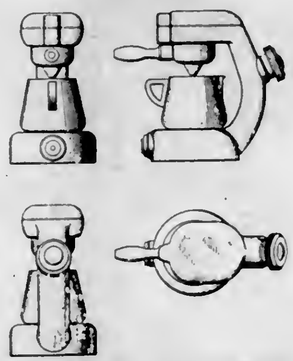
The ornamental design for a combined vine holder and wall bracket therefor, as shown.

153,823
DESIGN FOR A FLEXIBLE CABLE LOCK
Edward G. Reese, Landisville, and Gerald B. Fenstermaker, Lancaster, Pa., assignors to Reese Padlock Company, Lancaster, Pa., a copartnership
Application December 8, 1947, Serial No. 143,048
Term of patent 14 years
(Cl. D50—7)



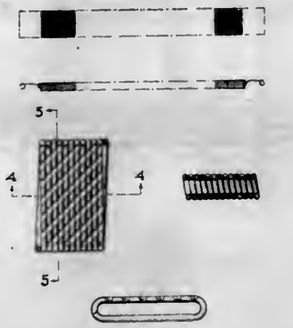
The ornamental design for a flexible cable lock, substantially as shown and described.

153,824
DESIGN FOR AN ASH TRAY
Louis A. Revell, Los Angeles, Calif.
Application July 31, 1948, Serial No. 147,859
Term of patent 14 years
(Cl. D85—2)



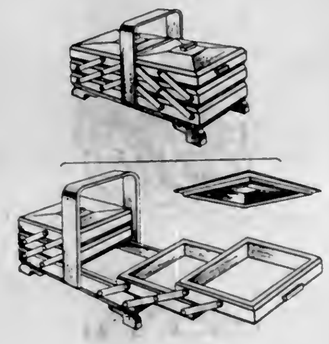
The ornamental design for an ash tray, substantially as shown.

153,825
DESIGN FOR A TELEVISION ANTENNA
Rudolph Riderman, Chicago, Ill., assignor to Precision Plastic Products, Inc., Chicago, Ill., a corporation of Illinois
Application October 11, 1948, Serial No. 149,071
Term of patent 3½ years
(Cl. D26—14)



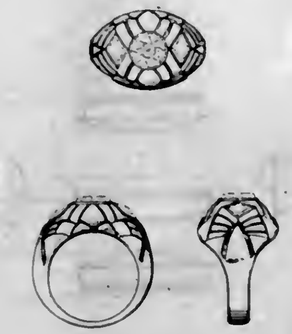
The ornamental design for a television antenna, substantially as shown.

153,826
DESIGN FOR A COFFEE MAKER OR SIMILAR ARTICLE
Giordano Robbiati, Milan, Italy, assignor to Oscar Colcaire, Detroit, Mich., and Arthur R. Wilson, Washington, D. C.
Application June 26, 1947, Serial No. 139,948
In Italy September 14, 1946
Term of patent 14 years
(Cl. D44—26)



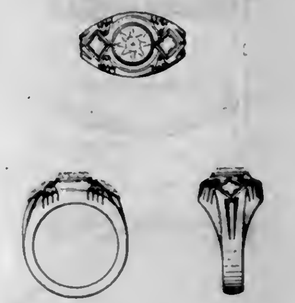
The ornamental design for a coffee maker or similar article, as shown.

153,827
DESIGN FOR AN EXTENSIBLE WATCH BRACELET
Charles Schaeffer, Cleveland, Ohio, assignor, by mesne assignments, to John Major, Chicago, Ill., and Hans J. Duester, Norwood Park Station, Chicago, Ill.
Application September 18, 1947, Serial No. 141,464
Term of patent 14 years
(Cl. D45—4)



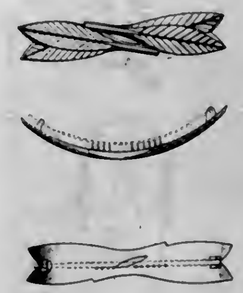
The ornamental design for an extensible watch bracelet, substantially as shown and described.

153,828
DESIGN FOR A FOLDING JEWEL CHEST
Charles C. Settle, Columbus, Ind.
Application October 13, 1947, Serial No. 141,886
Term of patent 3½ years
(Cl. D86—9)



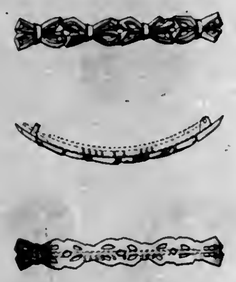
The ornamental design for a folding jewel chest, as shown.

153,829
DESIGN FOR A FINGER RING
Herbert J. A. Skipp, East Providence, R. I., assignor to James Perry Mfg. Co., Providence, R. I., a corporation of Rhode Island
Application October 1, 1948, Serial No. 148,930
Term of patent 7 years
(Cl. D45—10)



The ornamental design for a finger ring, substantially as shown.

153,830
DESIGN FOR A FINGER RING
Herbert J. A. Skipp, East Providence, R. I., assignor to James Perry Mfg. Co., Providence, R. I., a corporation of Rhode Island
Application October 1, 1948, Serial No. 148,931
Term of patent 7 years
(Cl. D45—10)



The ornamental design for a finger ring, substantially as shown.

153,831
DESIGN FOR A BARRETTE
Nathan L. Solomon, Englewood, N. J.
Application November 20, 1947, Serial No. 142,671
Term of patent 14 years
(Cl. D86—10)

The ornamental design for a barrette, as shown.

153,832
DESIGN FOR A BARRETTE
Nathan L. Solomon, Englewood, N. J.
Application November 20, 1947, Serial No. 142,672
Term of patent 14 years
(Cl. D86—10)

The ornamental design for a barrette, as shown.

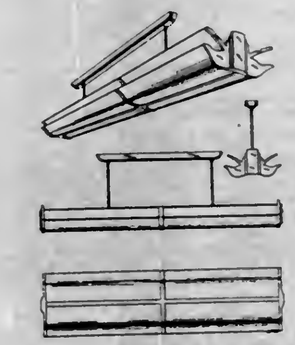
153,833
DESIGN FOR A LAMP STAND
Eunice M. St. John, Los Angeles, Calif.
Application August 14, 1948, Serial No. 148,127
Term of patent 7 years
(Cl. D48—20)

The ornamental design for a lamp stand, as shown.

153,834
DESIGN FOR A WALL PLAQUE
David D. Stockdale, Ravenna, Ohio
Application May 2, 1947, Serial No. 138,759
Term of patent 3½ years
(Cl. D29—23)

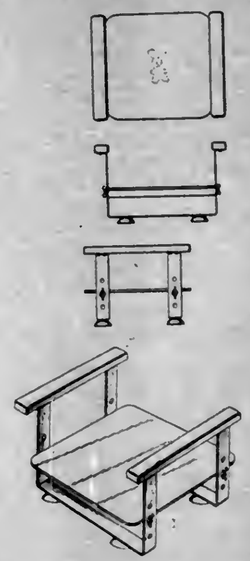
The ornamental design for a wall plaque, as shown.

153,835
DESIGN FOR A DRAWER PULL
Carl W. Sundberg and Montgomery Ferar, Detroit, Mich., assignors to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application September 19, 1947, Serial No. 141,480
Term of patent 14 years
(Cl. D10—8)



The ornamental design for a drawer pull, substantially as shown.

153,836
DESIGN FOR A BELT BUCKLE OR SIMILAR ARTICLE
George A. Thoresen, Providence, R. I., assignor to The Robbins Company, Attleboro, Mass., a corporation of Massachusetts
Application March 19, 1948, Serial No. 145,217
Term of patent 7 years
(Cl. D17—1)



The ornamental design for a belt buckle or similar article, substantially as shown.

153,837
DESIGN FOR A LIGHTING FIXTURE
John S. Walsh, San Francisco, Calif.
Application July 26, 1948, Serial No. 147,780
Term of patent 14 years
(Cl. D48—23)

The ornamental design for a lighting fixture, substantially as shown.

153,838
DESIGN FOR A CHILD'S CHAIR
Emerson A. Ward, Detroit, Mich.
Application November 9, 1946, Serial No. 134,674
Term of patent 3½ years
(Cl. D15—8)

The ornamental design for a child's chair as shown.

153,839
DESIGN FOR A KEY CHAIN
Paul Stephen Zahora, Bloomington, Ind.
Application October 22, 1947, Serial No. 142,086
Term of patent 3½ years
(Cl. D17—14)

The ornamental design for a key chain, as shown and described.

Sundberg, Carl W., and Ferar.
Settle, Charles C., Columbus, Ind. Folding jewel chest. 153,828, May 17.
Skipp, Herbert J. A., East Providence, assignor to James Perry Mfg. Co., Providence, R. I. Finger ring. 153,829, May 17.
Skipp, Herbert J. A., East Providence, assignor to James Perry Mfg. Co., Providence, R. I. Finger ring. 153,830, May 17.
Societe a Responsabilite Limitee: Franco Continentale des Parfums, assignee: *See*—
Denis, René.
Solomon, Nathan L., Englewood, N. J. Barrette. 153,831, May 17.
Solomon, Nathan L., Englewood, N. J. Barrette. 153,832, May 17.
Stockdale, David D., Ravenna, Ohio. Wall plaque. 153,834, May 17.
Sunbeam Corporation, assignee: *See*—
Jepson, Ivar.
Sundberg, Carl W., and M. Ferar, Detroit, Mich., assignors to Sears, Roebuck and Co., Chicago, Ill. Drawer pull. 153,835, May 17.
Theoresen, George A., Providence, R. I., assignors to The Robbins Company, Attleboro, Mass. Belt buckle or similar article. 153,836, May 17.
Walsh, John S., San Francisco, Calif. Lighting fixture. 153,837, May 17.
Ward, Emerson A., Detroit, Mich. Child's chair. 153,838, May 17.
Wilson, Arthur R., assignee: *See*—
Robbiati, Giordano.
Winters & Crampton Corporation, assignee: *See*—
Hefferan, Robert F.
Zahora, Paul S., Bloomington, Ind. Key chain. 153,839, May 17.
Zip Clip Knife Corporation, assignee: *See*—
Alexander, Cecil H.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 17TH DAY OF MAY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abbott Laboratories, assignee: *See*—
Fields, Mack R.
Abbrecht, Hermann R., Shaker Heights, Ohio. Lubricating device. 2,470,386, May 17.
Ackerman, Ernest A., Shaker Heights, Ohio. Socket for miniature bulbs and the like and mounting therefor. 2,470,280, May 17.
Ackley, Robert A., assignor to Republic Flow Meters Company, Chicago, Ill. Ratio control device. 2,470,452, May 17.
Adams, Cecil E., assignor to The Denison Engineering Company, Columbus, Ohio. Hydraulic apparatus. 2,470,086, May 17.
Adams, Cecil E., assignor to The Denison Engineering Company, Columbus, Ohio. Expansible chamber hydraulic motor with distributing valve in piston. 2,470,087, May 17.
Adel Precision Products Corp., assignee: *See*—
Paxton, Donald D.
Advance Solvents & Chemical Corporation, assignee: *See*—
Mack, Gerry P.
Agriculture, United States of America as represented by the Secretary of, assignee: *See*—
Gertler, Samuel I.
Airborne Conveyors Corporation, assignee: *See*—
Korn, Arthur H.
Aksomitas, William E., assignor to Hartford-Empire Company, Hartford, Conn. Apparatus for cooling hollow glassware. 2,470,228, May 17.
Aktiebolaget Götaverken, assignee: *See*—
Johannson, Johan E.
Aktiengesellschaft Brown, Boveri & Cie. assignee: *See*—
Pfenninger, Hans.
Aktieselskabet Esab, assignee: *See*—
Madsen, Karl K.
Aldous, Earl B., Gansevoort, N. Y. Pneumatic vehicle suspension. 2,470,676, May 17.
Alexander, Peter, assignor to Wolsey Limited, Leicester, England. Treatment of materials composed partly or wholly of wool or similar fibers. 2,470,453, May 17.
Alexanderson, Ernst F. W., Schenectady, N. Y., assignor to General Electric Company. Stabilizer for alternating current power transmission systems. 2,470,454, May 17.
Alford, William H., Winston-Salem, N. C. Electrical splicer. 2,470,423 May 17.
Allan, Archibald, Whitley Bay, and J. Small, Gateshead, assignors to A. Reyrolle & Company Limited, Hebburn-on-Tyne, England. Spring-operated driving mechanism. 2,470,675, May 17.
Alldredge, Marshall H., Detroit, Mich., assignor to Thompson Products, Inc. Socket assembly. 2,470,205, May 17.
Allingham, Wilber J., Denver, Colo. Preservative coatings for foods. 2,470,281, May 17.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Altorfer, Hans A.
Shaw, Melvin C.
Allmänna Svenska Elektriska Aktiebolaget, assignee: *See*—
Gudmundsson, Erik.
Hedstrom, Sven-Relc, and Lamm.
Alnico, Incorporated, assignee: *See*—
Cook, Ernest E., and Sadler.
Alton Box Board Company, assignee: *See*—
Hollis, Robert F.
Altorfer, Hans A., Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Turbine construction. 2,470,126, May 17.
Alvos, Dell, Guadalupe, Calif. Preservation of fruits and vegetables. 2,470,424, May 17.
American Brake Shoe Company, assignee: *See*—
Lerner, Earl A.
Spencer, Lee.
American Cyanamid Company, assignee: *See*—
Baker, Bernard R.
Hutchings, Brian L.
Sperry, Russell L.
American Home Products Corporation, assignee: *See*—
Kern, Charles J., and Tabor.
American Laundry Machinery Company, The, assignee: *See*—
Neckel, Edmund N.
American Magnesium Metals Corporation, assignee: *See*—
Carter, Austin G.
American Pulley Company, The, assignee: *See*—
McCloskey, Joseph E.
American Steel Foundries, assignee: *See*—
Clasen, Claus J. W.
Sedgwick, Robert K.
American Telephone and Telegraph Company, assignee: *See*—
Clos, Charles.
American Viscose Corporation, assignee: *See*—
Furness, William H.
Anderson, Charles H., J.: *See*—
Hergmann, Jan, Lamberts, and Anderson.
Anderson, John R.: *See*—
Swietoslawski, Wojciech, and Anderson.
Anderson, Victor E., Pacific, Wash. Patch cutting machine. 2,470,220, May 17.
Anderson, Warren A., Nutley, N. J., assignor to Radio Corporation of America. Synchronous regenerator. 2,470,677, May 17.
Andreasen, Arthur A., and G. M. Rust, Louisville, assignors to Joseph E. Seagram & Sons, Inc., Shively, Ky. Distillation vapor loss detector. 2,470,230, May 17.
Anemostat Corporation of America, assignee: *See*—
Honerkamp, Friederich, and Kurth.
Peterson, Arthur S., and Johnson.
Archer-Daniels-Midland Company, assignee: *See*—
Vanderbilt, Byron M., and Hetcheler.
Archibald, Francis M., Elizabeth, N. J., assignor, by mesne assignments, to Standard Oil Development Company. Distillation of alcohols from aqueous mixtures of alkyl sulfates and sulfuric acid. 2,470,206, May 17.
Armstrong Cork Company, assignee: *See*—
Billmeyer, Bruce R.
Associated Development & Research Corporation, assignee: *See*—
Torkelson, Torkel E.
Wallach, Irving D.
Atlas Toy Company, assignee: *See*—
Gold, Ira.
Atwood, Hyatt B., and C. Fillinger, assignors to Herr Manufacturing Company Inc., Buffalo, N. Y. Spinning ring. 2,470,736, May 17.
Auslender, Pearl, Chicago, Ill. Maternity garment. 2,470,678, May 17.
Autophon Aktiengesellschaft, assignee: *See*—
Tschumi, Otto.
Avila, Charles F., Milton, Mass., assignor to the United States of America as represented by the Secretary of War. Automatic altitude and pressure compensator for aerial camera lenses. 2,470,455, May 17.
Avila, Frank W., Columbia City, Ind., assignor to International Harvester Company. Synchroniser. 2,470,208, May 17.
Asbe Corporation, assignee: *See*—
Asbe, Victor J.
Asbe, Victor J., Webster Groves, assignor to Asbe Corporation, University City, Mo. Calcining apparatus. 2,470,543, May 17.
Bach, Henry M., Lawrence, assignor to Premier Crystal Laboratories, Incorporated, New York, N. Y. Finishing piezoelectric crystals. 2,470,737, May 17.
Bach, Henry M., Lawrence, assignor to Premier Crystal Laboratories, Incorporated, New York, N. Y. Temperature compensated crystal unit. 2,470,738, May 17.
Baggett, Lee R., Benton, Ark. Pencil sharpener. 2,470,387, May 17.
Ballar, Charles O., and T. L. Spalding, Menasha, assignors to Marathon Corporation, Rothschild, Wis. Tray. 2,470,456, May 17.
Bakelite Corporation, assignee: *See*—
Bender, Howard L., and Farnham.
Baker, Benjamin P.: *See*—
Ludwig, Leon R., Webb, and Baker.
Baker, Bernard R., Nanuet, assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y. Carboxythiophanee and preparing same. 2,470,739, May 17.
Baker, Corwin W., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Rough rounding machine. 2,470,127, May 17.
Baker, David B.: *See*—
Beckman, William O., and Baker.
Baker, Frederick C., and E. O. Spencer, Portland, Oreg. Mounting for shafts and the like. 2,470,282, May 17.
Ball, Charles O., Toledo, Ohio, assignor to Owens-Illinois Glass Company. Dispensing container having closure locking means. 2,470,388, May 17.
Bancora, Mario E., Rosario, Argentina, assignor to the United States of America as represented by the Secretary of War. Parachute release mechanism. 2,470,457, May 17.
Barber, Edmund A., Jr.: *See*—
Malmros, Gustav V. A., and Barber.
Barger, Fred H., San Fernando, Calif. Door closing device. 2,470,283, May 17.

Barkhuff, Raymond A., Jr., Hazardville, Conn., assignor to Monsanto Chemical Company, St. Louis, Mo. Asphalt molding compositions. 2,470,329, May 17.

Barnes Drill Co., assignee: *See*—
Seberg, Earnest Y.

Barnes, William A.: *See*—
Bauer, Charles A., and Barnes.

Barr, Francis A., Lanreiton, Long Island, N. Y. Protractor. 2,470,458, May 17.

Barrick, Ray E., Baltimore, and A. Morison, Brooklandville, assignors to The Glenn L. Martin Company, Middle River, Md. Airplane wing leading edge construction. 2,470,128, May 17.

Barry, L. N., Company, The, assignee: *See*—
Pleis, Erwin.

Barry, Lawrence N., assignee: *See*—
Pleis, Erwin.

Bauer, Charles A., Newburg, Ind., and W. A. Barnes, Utica, N. Y., assignors to Hoosier Cardinal Corporation, Evansville, Ind. Making grilles for radio sets. 2,470,389, May 17.

Bausch & Lomb Optical Company, assignee: *See*—
Lindgren, Nils, and Roos.

Beal, George M.: *See*—
Schafroth, Werner, and Beal.

Beale, Evelyn S. L., Staines, assignor to Alan Muntz & Company Limited, Hounslow, England. Internal-combustion operated free-piston machine. 2,470,231, May 17.

Bechman, William C., Chicago, and D. B. Baker, Riverside, Ill., assignors to International Harvester Company. Fluid controlled vehicle change-speed steering apparatus. 2,470,209, May 17.

Beech Aircraft Corporation, assignee: *See*—
Harmon, Ralph M.

Beers, Edward E., Brooklyn, N. Y. Dental means and method. 2,470,879, May 17.

Beller, Adam C.: *See*—
Schulman, Earl L., and Beller.

Belser, Arthur L.: *See*—
Miller, Isador, and Belser.

Belsfield, Elsie: *See*—
Belfield, Virgil D. and E.

Belsfield, Virgil D. and E., Elkhorn, Wis. Piano bench. 2,470,330, May 17.

Bell, Harry G., assignor to Gay and Bell, Paris, Ky. Tobacco hogshead. 2,470,459, May 17.

Bell, John F., Chicago, Ill., assignor to Zenith Radio Corporation. Low-frequency drift oscillator. 2,470,425, May 17.

Bell, Joseph D., San Francisco, Calif. Exercising device. 2,470,544, May 17.

Bell Telephone Laboratories, Incorporated, assignee. *See*—
Buchanan, Russell B.

Bellucci, Anthony J.: *See*—
Seymour, George W., White, and Bellucci.

Beloit Iron Works, assignee: *See*—
Hornbostel, Lloyd.

Bemis, Robert E., and J. C. McMillan, Houston, Tex. Screen. 2,470,129, May 17.

Bender, Howard L., and A. G. Farnham, Bloomfield, N. J., assignors to Bakelite Corporation. Caustic resistant etherified phenolformaldehyde resins. 2,470,130, May 17.

Bendix Aviation Corporation, assignee: *See*—
Childs, Robert S.
Daniel, Robert L.
Haase, Elmer A., and Bolt.
Mock, Frank C.
Murphy, Norman B.
Schultz, Harold B.
Thomas, Thomas H., and Price.
Winkler, Albert H., and Wirth.

Benin, Zolmon, Glen Ellyn, Ill., assignor to Zenith Radio Corporation. Spread band tuning circuit. 2,470,426, May 17.

Bennett, Maxwell K., New Westminster, British Columbia, Canada. Priming device. 2,470,232, May 17.

Benning, Anthony F., and R. C. McHarness, Woodstown, N. J., and W. S. Murray, assignors to Kinetic Chemicals, Inc., Wilmington, Del. Purification of crude monofluorodichloromethane. 2,470,088, May 17.

Berger, Emil J., and H. K. West, assignors to Dexdale Hosiery Mills, Lansdale, Pa. Loop regulating mechanism for straight knitting machines. 2,470,131, May 17.

Bergman, William E., Bartlesville, Okla., assignor to Phillips Petroleum Company. Well washing fluid and using the same. 2,470,132, May 17.

Bergmans, Jan, C. A. Lamberts, and C. H. J. Anderson, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Bar system and lamp fitting comprising such a bar system. 2,470,284, May 17.

Berk, F. W., & Company, Inc., assignee: *See*—
Meighan, Meri H., and Brown.

Beuther, Harold, Oakmont, assignor to Gulf Research & Development Company, Pittsburgh, Pa. Cracking hydrocarbon oils. 2,470,660, May 17.

Bieberich, Paul, Fort Wayne, Ind. Machine for lapping wire drawing dies. 2,470,331, May 17.

Biebesheimer, William B., Toledo, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Transformer windings. 2,470,598, May 17.

Bierwirth, Rudolph A.: *See*—
Hoyler, Cyril N., and Bierwirth.

Bierwirth, Rudolph A., Kingston, N. J., assignor to Radio Corporation of America. Radio frequency apparatus for heating metallic articles of large surface area to volume ratio. 2,470,285, May 17.

Bilhuber, E., Inc., assignee: *See*—
Harvill, Edward K., and Herbst.

Billmeyer, Bruce R., assignor to Armstrong Cork Company, Lancaster, Pa. Long draft apron. 2,470,599, May 17.

Bird, Lester F., assignor to Hanovia Chemical and Mfg. Company, Newark, N. J. Wattage controlling system. 2,470,460, May 17.

Birginal, Sylvester J., Chicago, Ill. Blind stitching means. 2,470,286, May 17.

Bitner, Robert J., assignor to Gasket Engineering Co., Inc., Kansas City, Mo. Multiple crystal holder. 2,470,133, May 17.

Bitner, Robert J., assignor to Gasket Engineering Co., Inc., Kansas City, Mo. Temperature controlled oven for dual quartz crystals. 2,470,134, May 17.

Black, Lloyd V., Tarentum, assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Manufacturing glass. 2,470,461, May 17.

Blackburn Aircraft Limited, assignee: *See*—
Campbell, Thomas C., and Hall.

Blackwell, Preston J., Emerson, N. J., assignor, by mesne assignments, to Robert Gair Company, Inc., New York, N. Y. Egg candling booth. 2,470,462, May 17.

Blake, Edward S., Nitro, W. Va., assignor to Monsanto Chemical Company, St. Louis, Mo. Vulcanizing rubber. 2,470,545, May 17.

Blech, Henry, assignee: *See*—
Skala, Ljubomir W.

Bogart, Marcel J. P.: *See*—
Brunjes, Austin S., and Bogart.

Bollaert, Armand It., Palos Verdes Estates, and G. G. Halvorsen, Manhattan Beach, Calif., assignors to Great Lakes Carbon Corporation. Decolorization and clarification of sugar liquors. 2,470,332, May 17.

Bolt, Jay A.: *See*—
Haase, Elmer A., and Bolt.

Bonine, Ralph O.: *See*—
Easley, Gilbert J., and Bonine.

Booth, Jack J., Dallas, Tex. Molding plastic shoes. 2,470,089, May 17.

Booth, James H., Detroit, Mich., assignor to Thompson Products, Inc., Cleveland, Ohio. High-angle joint assembly. 2,470,210, May 17.

Borg-Warner Corporation, assignee: *See*—
Lauck, John A.
Roth, Jay M.

Bossard, Gisbert L., Cleveland, Ohio. Electric chime device. 2,470,600, May 17.

Bostock, Godfrey S., Thrall, and T. G. Sharples, Stafford, England. Adjustable cutting and marking die. 2,470,135, May 17.

Botten, John B., Chagrin Falls, Ohio. Magazine feedbox. 2,470,463, May 17.

Bowditch, Hoel L., Sharon, assignor to The Foxboro Company, Foxboro, Mass. Zero adjustment means. 2,470,333, May 17.

Bowie, Robert M., Emporium, Pa., assignor to Sylvania Electric Products Inc. Timing and phase control circuits. 2,470,464, May 17.

Boye, James H., assignor to James H. Boye Manufacturing Company, Chicago, Ill. Festoon bracket. 2,470,283, May 17.

Boye, James H., Manufacturing Company, assignee: *See*—
Boye, James H.

Boye Needle Company, The, assignee: *See*—
Carlson, Gustav A.

Boynton, Alexander, deceased, San Antonio, Tex.; S. S. Martin, executrix. Flow intermitter for cased wells. 2,470,681, May 17.

Bozeman, Virgil F., Sr., Moline, C. W. Walz and R. D. Griff, Rock Island, and H. F. Clausen, assignors to Deer & Company, Moline, Ill. Beet harvester. 2,470,211, May 17.

Bramberry, Harry M., New Castle, Ind. Composition for treating metallic wear surfaces. 2,470,136, May 17.

Breese Burners, Inc., assignee: *See*—
Breese, James L.
Breese, James L., and Hayter.
Hayter, Bruce, and Hnston.

Breese, James L., assignor, by mesne assignments, to Breese Burners, Inc., Santa Fe, N. Mex. Liquid fuel burner with vaporizing assembly. 2,470,682, May 17.

Breese, James L., and B. Hayter, assignors, by mesne assignments, to Breese Burners, Inc., Santa Fe, N. Mex. Vertical semicylindrical burner. 2,470,683, May 17.

Breese, James L., and B. Hayter, assignors, by mesne assignments, to Breese Burners, Inc., Santa Fe, N. Mex. Two-level float valve structure. 2,470,684, May 17.

Brewer, Nathaniel, Newtown, assignor to Fischer & Porter Company, Hatboro, Pa. Apparatus for forming precision-bore tubing or the like. 2,470,234, May 17.

Briggs, Arthur J.: *See*—
Parmelee, Clifford H., and Briggs.

Briggs, Rufus L., Melrose, assignor to Raytheon Manufacturing Company, Newton, Mass. Alternating current load indicator. 2,470,334, May 17.

Bristol Aeroplane Company, Limited, The, assignee: *See*—
Diaper, Cecil T.

Brodie, Damon D., Los Angeles, Calif. Electrical scale. 2,470,427, May 17.

Broersen, Frank L., G. E. Wauda, and R. Kuehl, Neenah, assignors to Marathon Corporation, Rothschild, Wis. Frozen food package. 2,470,465, May 17.

Bromert, Leo J., Hutchinson, Kans. Lawn mower sharpener. 2,470,335, May 17.

Bronson, Edward A.: *See*—
Crowder, Harry Q. E., and Bronson.

Broughton, Douglas J., assignor to Buxton, Incorporated, Springfield, Mass. Key case. 2,470,466, May 17.

Brown, George F., Tulsa, Okla. Wheel and tire applying device. 2,470,685, May 17.

Brown, Kenneth N.: *See*—
Meighan, Meri H., and Brown.

Brown, Morris R., McMinnville, Oreg. Steering means for power-driven surf-boards. 2,470,137, May 17.

Browning, Charles B., Vallejo, Calif. Tamperproof mailbox. 2,470,138, May 17.

Brownlee, Allen L., assignor to Wico Electric Company, West Springfield, Mass. Stator unit for flywheel magneton. 2,470,467, May 17.

Brunjes, Austin S., Plandome, N. Y., and M. J. P. Bogart, Teaneck, N. J., assignors to The Lummus Company, New York, N. Y. Halogenation of aromatic hydrocarbons. 2,470,336, May 17.

Bryson, Bert B., and M. A. Coleman, Kilgore, Tex. Snatch block. 2,470,686, May 17.

Buchanan, Russell B., Lynbrook, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Ground trainer for aircraft. 2,470,468, May 17.

Bucky, Peter A., Flushing, and P. Sarason, assignors to Tell-A-Turn Corporation, New York, N. Y. Sequence indication apparatus. 2,470,469, May 17.

Burke, John R., Pawtucket, R. I. Dust collecting apparatus. 2,470,601, May 17.

Burrell, Benjamin S., East Chicago, Ind. Coiling machine for strip material. 2,470,235, May 17.

Buxton, Incorporated, assignee: *See*—
Broughton, Douglas J.

Cafrella, Orazio O., and J. E. Velour, Medford, Mass. Antenna belt and radio receiver. 2,470,587, May 17.

California Hacienda Machinery and Supply Company, Ltd., assignee: *See*—
Ostling, William.

California Research Corporation, assignee: *See*—
Clausesen, William H., and Shiffer.

California Spray-Chemical Corporation, assignee: *See*—
Hansen, James W., and Cassil.

Camp, Elsa Q., Goose Creek, Tex., assignor to Standard Oil Development Company. Suppression of corrosive action of carbonic acid. 2,470,428, May 17.

Campbell, Arthur W., Wheaton, Ill., assignor to the United States of America as represented by the Secretary of War. Camera shutter. 2,470,139, May 17.

Campbell, Richard L., Carterville, Mo. Extensible canopy. 2,470,337, May 17.

Campbell, Thomas C., Hessle, and E. V. Hall, Hull, assignors to Blackburn Aircraft Limited, Brough, England. Tandem wing aircraft. 2,470,602, May 17.

Canadian Industries Limited, assignee: *See*—
Hornibrook, Walter J.

Carbon, Harry B., assignor to The Parker Appliance Company, Cleveland, Ohio. Valve operating mechanism. 2,470,470, May 17.

Carleton, Granville E., Beverly Farms, Mass., assignor to General Electric Company. Dual check valve. 2,470,471, May 17.

Carlson, Bert G., Games Mills, Ohio. Tube securing means. 2,470,546, May 17.

Carlson, Gustav A., assignor to The Boye Needle Company, Chicago, Ill. Winder bobbin. 2,470,212, May 17.

Carlson, Walter A., Sioux City, Iowa. Rotary turret type workholding fixture. 2,470,429, May 17.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Lankford, Howard Y.

Carrigan, Tracy, H. G. Holmes, and C. A. Shoemaker, Lansing, Mich., assignors to Food Machinery and Chemical Corporation. Device for optically checking dirigible wheels. 2,470,090, May 17.

Carter, Austin G., Swansea, Wales, assignor to American Magnesium Metals Corporation, Pittsburgh, Pa. Alkali-alkaline earth hydroxide-impregnated carbon catalyst and its preparation. 2,470,088, May 17.

Carter, Clarence E., San Francisco, Calif. Hair clipper. 2,470,287, May 17.

Carter, Randolph H., Warrenton, Va. Fireplace air feeder construction. 2,470,430, May 17.

Cashman, Aloysius F.: *See*—
Lieber, Eugene, and Cashman.

Cassil, Carroll C.: *See*—
Hansen, James W., and Cassil.

Castner, George P., Webster City, Iowa, assignor to Solar Corporation, Milwaukee, Wis. Washing machine having rotatable tub with upper and lower discharge means. 2,470,140, May 17.

Caves, Lawrence C., Tulsa, Okla. Adhesive waterproof plastic composition. 2,470,141, May 17.

Celanese Corporation of America, assignee: *See*—
Seymour, George W., White, and Bellocci.

Central Commercial Company, assignee: *See*—
Larsen, Merwin J.

Century Electric Company, assignee: *See*—
O'Daniel, Clarence.

Chapman, Charles C., near Oklahoma City, Okla., and H. V. Hendrix, Borger, Tex., assignors to Phillips Petroleum Company. Production of catalysts of the silica-alumina type. 2,470,142, May 17.

Charlop, Elliot, New York, N. Y. Package opener. 2,470,236, May 17.

Chase Brass & Copper Co., Incorporated, assignee: *See*—
Crampton, Donald K., and Wood.

Childers, Harry S., assignor to Vendorlator Manufacturing Company, Fresno, Calif. Refrigerator having condensate disposal means. 2,470,547, May 17.

Childs, Robert S., Englewood, assignor to Bendix Aviation Corporation, Teterboro, N. J. Excess pressure protected pressure responsive device. 2,470,288, May 17.

Chilton, Ernest G., Berkeley, assignor to Shell Development Company, San Francisco, Calif. Probe pressure gun. 2,470,338, May 17.

Christiansen, Andrew L., Willowbrook, Calif. Fish backbone removing machine. 2,470,289, May 17.

Christie, John R., New City, N. Y. Pocket flight position indicator. 2,470,143, May 17.

Christopher, Frank E., Morgantown, W. Va. Automatic coal dumping appliance. 2,470,472, May 17.

Chryst, John R., Tacoma, Wash. Saw grinder. 2,470,290, May 17.

Cities Service Oil Company, assignee: *See*—
Morgan, John D., Merley, and Smith.

Clark, Robert K., United States Army, St. Paul, Minn. Generator brush tool. 2,470,091, May 17.

Clarke, Louis A., Fishkill, assignor to The Texas Company, New York, N. Y. Isomerization and alkylation of normal paraffins. 2,470,144, May 17.

Clasen, Clans J. W., assignor to American Steel Foundries, Chicago, Ill. Side frame and brake support strncture. 2,470,237, May 17.

Clausen, Howard F.: *See*—
Boseman, Virgil F., Sr., Walz, Griff, and Clausen.

Clausesen, William H., Berkeley, and W. H. Shiffer, assignors to California Research Corporation, San Francisco, Calif. Continuous adeorption process. 2,470,339, May 17.

Clemmons, Herbert D., assignor to Scovill Manufacturing Company, Sturgis, Mich. Valve mechanism. 2,470,213.

Cleveland Graphite Bronze Company, The, assignee: *See*—
Schaefer, Ralph.

Clos, Charles, Middle Village, N. Y., assignor to American Telephone and Telegraph Company. Multifrequency signaling system. 2,470,145, May 17.

Coate, C. F., assignee: *See*—
McNamara, Charles J.

Coleman Company, Inc., The, assignee: *See*—
Kice, Jack W.

Coleman, Marion A.: *See*—
Bryson, Bert B., and Coleman.

Collins, Milford E., Los Angeles, Calif., assignor to Radio Corporation of America. Film identifying and punching device. 2,470,291, May 17.

Collins Radio Company, assignee: *See*—
May, Richard W.

Consier, Edward J., Detroit, Mich. Automatic variable-speed transmission device. 2,470,390, May 17.

Continental Machines, Incorporated, assignee: *See*—
Harrington, John A.

Control Instrument Company, Inc., assignee: *See*—
Feller, Anton M.

Conveyor & Machinery Manufacturers, Inc., assignee: *See*—
Herrmann, John G.

Cook, Ernest E., and H. J. Sadler, assignors to Almco, Incorporated, Minneapolis, Minn. Deburring and polishing apparatus. 2,470,340, May 17.

Cooke, Maurice D.: *See*—
Staudinger, Hanns P., Faulkner, and Cooke.

Coppinger, Erskine H.: *See*—
Pollock, John A., and Coppinger.

Corner, Eugene S., Roselle, N. J., assignor to Standard Oil Development Company. Preparing a silica-magnesia gel catalyst. 2,470,411, May 17.

Corning Glass Works, assignee: *See*—
Hyde, James F.
Shaw, Morton R., Jr.

Correale, Ernest and J., Jersey City, N. J. Shuffleboard-billiard table with replaceable top. 2,470,238, May 17.

Correale, Ernest and J., Jersey City, N. J. Pool table with adjustable cue rack. 2,470,239, May 17.

Correale, Joseph: *See*—
Correale, Ernest and J.

Corson, Ben B., and G. A. Webb, assignors, by mesne assignments, to Koppers Company, Incorporated, Pittsburgh, Pa. Dehydrogenation process. 2,470,092, May 17.

Coulter, John H., and A. F. Wood, assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind. Collet type electrode. 2,470,603, May 17.

Coyne, David, New York, N. Y. Clip for fountain pens and other articles. 2,470,431, May 17.

Crafts, Curtis S., Oak Park, assignor to The Goss Printing Press Company, Chicago, Ill. Apparatus for casting stereotype plates. 2,470,146, May 17.

Cramer, Marvin H., George, Iowa. Excavating machine. 2,470,147, May 17.

Crampton, Donald K., Marion, and M. L. Wood, assignors to Chase Brass & Copper Co. Incorporated, Waterbury, Conn. Tin-coating the interiors of copper tubes. 2,470,689, May 17.

Crane Packing Company, assignee: *See*—
Voytech, Charles F.

Crise Manufacturing Company, assignee: *See*—
Korsgren, Theodore Y.

Crosby, Murray G., Upper Montclair, N. J., assignor to Radio Corporation of America. Limiting detector circuits. 2,470,240, May 17.

Crowder, Harry Q. R., Altadena, and E. A. Bronson, Pasadena, Calif. Apparatus for applying wax to thin sheets. 2,470,093, May 17.

Crusan, Harold: *See*—
Warrick, Edward C., and Crusan.

Cumming, James M., Turtle Creek, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit breaker. 2,470,604, May 17.

Cummings, Harold R., Schenectady, N. Y., assignor to General Electric Company. Electric discharge device with internal capacitor. 2,470,605, May 17.

Cusick, Arthur, Youngstown, Ohio. Twin pails. 2,470,432, May 17.

Cuttino, William H.: *See*—
Geiselman, Ralph A., and Cuttino.

Daellenbach, Raymond E., Ellwood City, assignor of one-half to C. Humphrey, Grove City, Pa. Rocking toy. 2,470,473, May 17.

Dahle, Frederick A., Los Angeles, Calif. Concrete step form. 2,470,690, May 17.

D'Angelo, Joseph B., Tiffin, Ohio. Nozzle. 2,470,293, May 17.

Daniel, Robert L., Baltimore, assignor to Bendix Aviation Corporation, Towson, Md. Switching system. 2,470,292, May 17.

Daniello, Hilbert B., Allentown, Pa. Tatting shuttle. 2,470,391, May 17.

Dan River Mills, Incorporated, assignee: *See*—
Norton, Oscar J.

Darrah, William C., Medford, assignor to Raytheon Manufacturing Company, Newton, Mass. Method of flaw detection. 2,470,341, May 17.

Davis, Edgar G., Detroit, Mich. Sash ventilator. 2,470,433, May 17.

Davis, Maurice F., Syracuse, N. Y., assignor to General Electric Company. Vending machine. 2,470,474, May 17.

Deere & Company, assignee: *See*—
Boseman, Virgil F., Sr., Wals, Griff, and Clausen.

Deere Manufacturing Co., assignee: *See*—
West, James R., Hill, and McClellan.

Deichert, Hans C.: *See*—
Morse, Clarence W., and Deichert.

Delsasso, Leo P.: *See*—
Sherwood, Robert M., Urick, and Delsasso.

De Luisi, Vincent L., and C. F. Murtaugh, Columbus, Ohio. Dispenser for adhesive tapes. 2,470,342, May 17.

Demuth, Galen W., Moorestown, N. J., assignor to Radio Corporation of America. Keyboard for musical instruments. 2,470,148, May 17.

Denison Engineering Company, The, assignee: *See*—
Adams, Cecil E.

Dennison, Robert C., Manchester, Conn. Combined belt buckle and bottle cap remover. 2,470,606, May 17.

Derby, John H., Scarsdale, N. Y. Pile. 2,470,149, May 17.

Desjardins, Norbert, Montreal, Quebec, Canada. Automatic egg boiler. 2,470,548, May 17.

De Vaney, Fred D., assignor to Erie Mining Company, Hibbing, Minn. Froth flotation of oxide iron ore. 2,470,150, May 17.

De Vilbiss Company, The, assignee: *See*—
Feeps, Donald J.

Dewey and Almy Chemical Company, assignee: *See*—
Egan, Charles H.

Dexdale Hosiery Mills, assignee: *See*—
Berger, Emil J., and West.

Diaper, Cecil T., assignor to The Bristol Aeroplane Company Limited, Bristol, England. Ammunition box. 2,470,476, May 17.

Diard, Ray, Newport, Wash. Rotary hydraulic fluid transmission mechanism. 2,470,241, May 17.

Dickey, Joseph B., Rochester, N. Y., and J. G. McNally, Oak Ridge, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y. Monoazo dye. 2,470,094, May 17.

Dickey, Joseph B., Rochester, N. Y., and J. G. McNally, Oak Ridge, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y. Diphenylamine compounds. 2,470,095, May 17.

Diemer, Gesinus: *See*—
Jonker, Johan L. H., and Diemer.

Digby, Emmett B., Atlanta, Ga. Machine for picking feathers from fowls. 2,470,151, May 17.

Dillon, Orel E.: *See*—
Marks, Ben D., and Dillon.

Dinger, Fred K., Chisholm, Minn. Wall table structure. 2,470,343, May 17.

Distillers Company Limited, The, assignee: *See*—
Standinger, Hanns P., Faulkner, and Cooke.

Doehler-Jarvis Corporation, assignee: *See*—
Maier, Herbert N., and Pickering.

Douglas Aircraft Company, Inc., assignee: *See*—
McCrumm, John D.

Dozier, Daniel C., Norfolk, Va. Toy. 2,470,476, May 17.

Dozier, Robertha, Irvine, Ky. Inside flue stop. 2,470,152, May 17.

Dresser, Willis R.: *See*—
Waller, Fred, Dresser, Swain, and Wengel.

Dritz, Theodore D., Mount Vernon, N. Y. Traction device. 2,470,607, May 17.

Dunlap, Charles K., Hartsville, S. C., assignor to Sonoco Products Company. Textile thread carrier. 2,470,540, May 17.

Dunn, William, West Islip, N. Y. Fastener. 2,470,344, May 17.

Easley, Gilbert J., Forest Hills, and R. O. Bonine, Edgewood, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit breaker. 2,470,608, May 17.

Eastman Kodak Company, assignee: *See*—
Dickey, Joseph B., and McNally.

Eberman, Augustus H., Geneva, assignor to The Rudolph Wurlitzer Company, Chicago, Ill. Aircraft release device. 2,470,294, May 17.

Eck, Myron Y., Dayton, Ohio. Commutator. 2,470,096, May 17.

Eckman, Albert H., Ponca City, Okla. Space scope. 2,470,295, May 17.

Eckman, Donald P., Philadelphia, and W. H. Wannamaker, Jr., Flourtown, Pa., assignors, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Analyzing method and apparatus. 2,470,434, May 17.

Egan, Charles H., Belmont, assignor to Dewey and Almy Chemical Company, North Cambridge, Mass. Soda lime. 2,470,214, May 17.

Egglestone, Robert W.: *See*—
Stein, Joseph M., and Egglestone.

Ehardt, John H., assignee: *See*—
Skienar, Wenceslaw F.

Electric Storage Battery Co., The, assignee: *See*—
Gray, Robin.

Ellithrope, Frank E., Glendale, Calif., assignor to The Fulton Company, West Allis, Wis. Windshield visor mounting bracket. 2,470,477, May 17.

Elmore, William C., Swarthmore, and J. F. Marshall, Primos, Pa., assignors to the United States of America as represented by the Secretary of War. Piezoelectric crystal. 2,470,609, May 17.

Elsemore, Loring L., Bangor, Maine. Ice fishing jack. 2,470,610, May 17.

Emery Industries, Inc., assignee: *See*—
Myers, Latimer D., and Fitzpatrick.

English Electric Company, Limited, The, assignee: *See*—
Roberts, Lesalle.

Erickson, Charles, and E. Spellman, New York, N. Y. Scraper for freezing apparatus. 2,470,091, May 17.

Erie Mining Company, assignee: *See*—
De Vaney, Fred D.

Escher Wyss Maschinenfabriken Aktiengesellschaft, assignee: *See*—
Obrist, Heinrich.

Eutectic Welding Alloys Corporation, assignee: *See*—
Leaton, Theodore L., and Kriewall.

Evans, John, Hightstown, N. J., assignor to Radio Corporation of America. Pulse producing apparatus. 2,470,550, May 17.

Evans, John R., & Company, assignee: *See*—
Windus, Wallace.

Ewing, Samuel C., Scotia, N. Y., assignor to General Electric Company. Synchronous motor control system. 2,470,478, May 17.

Fairey Aviation Company Limited, The, assignee: *See*—
Forsyth, Archibald G.

Farnham, Alford G.: *See*—
Bender, Howard L., and Farnham.

Farr, Ivor A., Stafford, England. Perpetual calendar. 2,470,692, May 17.

Faulkner, Donald: *See*—
Staudinger, Hanns P., Faulkner, and Cooke.

Fell, Raymond E.: *See*—
Miller, John W., and Fell.

Feller, Anton M., Elizabeth, N. J., assignor to Control Instrument Company, Inc., Brooklyn, N. Y. Resistor and making same. 2,470,153, May 17.

Felsing, Urban S., Chosen, Fla. Lift attachment for tractor drawbars. 2,470,242, May 17.

Fenn, Orrin E., assignor to Peters-Dalton, Inc., Detroit, Mich. Air washer. 2,470,345, May 17.

Fenton, Paul E., Middlebury, and O. J. Huelster, assignors to Scovill Manufacturing Company, Waterbury, Conn. Reinforced socket for snap fasteners. 2,470,740, May 17.

Ferguson, Charles S., Troy, and C. E. Welsh, Schenectady, N. Y., assignors to General Electric Company. Making polysiloxane resins. 2,470,479, May 17.

Fields, Mack R., Libertyville, assignor to Abbott Laboratories, North Chicago, Ill. Inhalator. 2,470,296, May 17.

Fields, Mack R., Libertyville, assignor to Abbott Laboratories, North Chicago, Ill. Inhalator. 2,470,297, May 17.

Fields, Mack R., Libertyville, assignor to Abbott Laboratories, North Chicago, Ill. Powdered medicine dispenser. 2,470,298, May 17.

Fillinger, Charles: *See*—
Atwood, Hyatt B., and Fillinger.

Finke, Theodore R., Euclid, J. L. Stewart and L. H. Finneburgh, Jr., Cleveland Heights, assignors to The Gabriel Company, Cleveland, Ohio. Swivel ball antenna support. 2,470,693, May 17.

Finneburgh, Lewis H., Jr.: *See*—
Finke, Theodore R., Stewart, and Finneburgh.

Fischer & Porter Company, assignee: *See*—
Brewer, Nathaniel.

Fish, Mortimer W., assignor to General Motors Corporation, Dayton, Ohio. Liquid cooler, including agitator motor and heat removing device therefor. 2,470,561, May 17.

Fitzgerald, Mae H., Mineral Wells, Tex. Bottle rack. 2,470,154, May 17.

Fitzpatrick, J. D.: *See*—
Myers, Latimer D., and Fitzpatrick.

Flaws, David B.: *See*—
Gadwa, Truman A., and Flaws.

Fogg, Stanley R., Terre Haute, Ind. Artificial foot. 2,470,480, May 17.

Foo, Lee S., Manchester, N. H. Baby bottle holder. 2,470,604, May 17.

Food Machinery and Chemical Corporation, assignee: *See*—
Carrigan, Tracy, Holmes, and Shoemaker.

Forsyth, Archibald G., Cheam, assignor to The Fairey Aviation Company Limited, Hayes, England. Power plant assembly. 2,470,155, May 17.

Foss, George W., assignee: *See*—
Pietz, Ervin.

Foxboro Company, The, assignee: *See*—
Bowditch, Hoel L.

Frankenhoff, Charles A., Scarsdale, N. Y., assignor to Great Lakes Carbon Corporation. Calcined diatomaceous earth product. 2,470,346, May 17.

Freeman, Ethelyn, Muskogee, Okla. Fluid heater. 2,470,481, May 17.

Friedrich, Robert E., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,470,611, May 17.

Frostad, George G., Milwaukee, Wis. Printing apparatus. 2,470,243, May 17.

Fry, Glenn A., Columbus, Ohio, assignor to the United States of America as represented by the Secretary of War. Contrast measuring apparatus having relatively rotatable polarising elements for optical sighting instruments. 2,470,156, May 17.

Fryklund, Robert A., Somerville, assignor to Submarine Signal Company, Boston, Mass. Electrical reproducing stylus. 2,470,244, May 17.

Fulton Company, The, assignee: *See*—
Ellithorpe, Frank E.

Furness, William H., Haddonfield, N. J., assignor to American Viscose Corporation, Wilmington, Del. Method of and apparatus for liquid treatment of yarns. 2,470,299, May 17.

Gabriel Company, The, assignee: *See*—
Finke, Theodore R., Stewart, and Finneburgh.

Gabrielson, Samuel, South Lynnfield, Mass., assignor to General Electric Company. Direction indicator. 2,470,482, May 17.

Gadwa, Truman A., Mount Vernon, and D. B. Flaws, assignors to The Lummus Company, New York, N. Y. Apparatus for contacting a liquid and a vapor. 2,470,483, May 17.

Gair, Robert, Company, Inc., assignee: *See*—
Blackwell, Preston J.

Gall, James, Jeannette, Pa. Oil stick wiper. 2,470,484, May 17.

Gallagher, Richard L., Erie, Pa. Letter tray. 2,470,847, May 17.

Galter, Oscar, Chicago, Ill. Illuminated rattle for babies' cribs. 2,470,612, May 17.

Gambino, Nate, Modesto, Calif. Hair comb device. 2,470,157, May 17.

Gang, Herman, Livingston, assignor to Monroe Calculating Machine Company, Orange, N. J. Nonrepeat means for calculating machines. 2,470,300, May 17.

Garrett, Bowman S., Brooklyn, N. Y., assignor to Standard Oil Development Company. Isobutylene extraction. 2,470,207, May 17.

Garlet Engineering Co., Inc., assignee: *See*—
Bitner, Robert J.

Gassmann, Raymond M., Wilmette, assignor of one-fourth to B. M. Follath, R. Maier, and A. P. Stein, Chicago, Ill. Tube chamfering tool. 2,470,392, May 17.

Gay and Bell, assignee: *See*—
Bell, Harry G.

Gaynor, Arthur C., Stratford, assignor to J. F. Gaynor, Milford, Conn. Electric cam snap switch. 2,467,613, May 17.

Gaynor, Joseph F., assignee: *See*—
Gaynor, Arthur C.

Gazda, Antoine, Providence, R. I. Firing rate control mechanism for automatic firearms. 2,470,158, May 17.

Geary, Frederick L., Springfield, Mass. Game apparatus. 2,470,159, May 17.

Geiselman, Ralph A., and W. H. Cuttino, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Relay. 2,470,614, May 17.

Gem Participations, Inc., assignee: *See*—
Miller, Leador, and Beiser.

General Electric Company, assignee: *See*—
Alexanderson, Ernst F. W.
Carleton, Granville E.
Cummings, Harold R.
Davis, Maurice F.
Ewing, Samuel C.
Ferguson, Charles S., and Welsh.
Gabrielson, Samuel.
Lamoreaux, Harry F.
Levine, Samuel J.
Rankin, Andrew W.

General Motors Corporation, assignee: *See*—
Fish, Mortimer W.

Gertler, Samuel I., Washington, D. C., assignor to the United States of America as represented by the Secretary of Agriculture. Phenylsemioxamazide insecticidal compositions. 2,470,160, May 17.

Glasin, John A., Galveston, Tex. Table cushion adjusting mechanism. 2,470,161, May 17.

Globe Oil Tools Company, assignee: *See*—
Goodwin, John S., and Whittaker.

Globe-Wernicke Company, The, assignee: *See*—
Srofe, Jesse.

Glycofrides, Eustace, Toledo, Ohio, assignor to Owens-Illinois Glass Company. Urea formaldehyde type of molding compounds and producing same. 2,470,393, May 17.

Glycofrides, Eustace, Toledo, Ohio, assignor to Owens-Illinois Glass Company. Furfuryl alcohol compounds. 2,470,394, May 17.

Gochmann, Maurice H., Dearborn, Mich., assignor, by mesne assignments, to the United States of America. Rocket-propelled device. 2,470,162, May 17.

Gohr, Edwin J., and C. W. Tyson, Summit, N. J., assignors to Standard Oil Development Company. Apparatus for carrying out catalytic reactions. 2,470,395, May 17.

Gold, Ira, assignor to Atlas Toy Company, Chicago, Ill. Miniature toy phonograph. 2,470,435 May 17.

Gonsáles, Jorge, Torreon, Mexico, and Y. Meer, Wyckoff, N. J. Conveyer system for cargo airports. 2,470,696, May 17.

Goodrich, B. F., Company, The, assignee: *See*—
Stewart, William D.

Goodwin, John S., and C. E. Whittaker, Whittier, assignors to Globe Oil Tools Company, Los Nietos, Calif. Cone type well drilling bit. 2,470,605, May 17.

Gordon, Herman L., Silver Spring, Md., assignor to Premier Crystal Laboratories, Incorporated, New York. Automatic agitator for apparatus subjecting liquid to electrical potential between electrodes. 2,470,741, May 17.

Goss Printing Press Company, The, assignee: *See*—
Crafts, Curtis S.

Gottschalk, Lionel J., New Orleans, La. Electric welding machine. 2,470,552, May 17.

Goulette, Joseph G., Newmarket, N. H. Radius forming device. 2,470,097, May 17.

Grady, Stephen S., New York, N. Y. Combination electric switch and circuit breaker. 2,470,301, May 17.

Graham, Matthew P., Detroit, Mich., assignor to Thompson Products, Inc., Cleveland, Ohio. Swivel joint. 2,470,215, May 17.

Grassfield, Norman A., assignee: *See*—
Boesener, William L.

Gray, Edward J., New York, N. Y. Razor blade stropper. 2,470,436, May 17.

Gray, Robin, Clifton Junction, near Manchester, England, assignor to The Electric Storage Battery Co. Plate support for electric accumulators. 2,470,163, May 17.

Great Lakes Carbon Corporation, assignee: *See*—
Bollaert, Armand R., and Halvorsen.
Frankenhoff, Charles A.

Green, Frederick E., Spokane, Wash. Game board and apparatus. 2,470,302, May 17.

Green, Thomas D., West Hartford, assignor to Hartford-Empire Company, Hartford, Conn. Cooling the internal surface of a bottle, jar, or other hollow glass article. 2,470,245, May 17.

Greening, Arnold, assignee: *See*—
Sayers, John L.

Greenough, Maurice L., Princeton, N. J., assignor to Radio Corporation of America. Computer. 2,470,303, May 17.

Griff, Robert D.: *See*—
Boseman, Virgil F., Sr., Wals, Griff, and Clausen.

Groene, William F., H. J. Siekmann, and W. R. Meyer, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio. Crankshaft lathe. 2,470,304, May 17.

Gross, Philipp, assignor to International Alloys Limited, Slough, England. Production and refining of aluminum. 2,470,305 May 17.

Gross, Philipp, Slough, assignor to International Alloys Limited, Aylesbury, England. Production and refining of metals. 2,470,306, May 17.

Grover, Lyndon V., Los Angeles, Calif. Sander. 2,470,615, May 17.
Guanella, Gustav, Zurich, Switzerland, assignor to Radio Patents Corporation, New York, N. Y. High-frequency matching transformer. 2,470,307, May 17.
Gudmundsson, Erik, Ludvika, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden. Protecting relay for liquid-filled electrical apparatus. 2,470,553, May 17.
Guerette, Joseph D., Brunswick, Maine. Spur shore. 2,470,396, May 17.
Gulf Research & Development Company, assignee: *See*—
Montgomery, Charles W., and Horne.
Benther, Harold.
H-P-M Development Corporation, assignee: *See*—
MacMillin, Howard F.
Hasse, Elmer A., and J. A. Bolt, assignors to Bendix Aviation Corporation, South Bend, Ind. Density responsive device. 2,470,742, May 17.
Haddison, George F., Delano, Calif. Fitting for fiber pipes. 2,470,308, May 17.
Haederer, Gustave A., Philadelphia, Pa. Instrument for drawing circular and curvilinear lines. 2,470,897, May 17.
Haight, John T., Jr., Fort Worth, Tex. Jet-propelled aircraft. 2,470,348, May 17.
Hall, Albert C., Boston, Mass., assignor, by mesne assignments, to Research Corporation, New York, N. Y. Servomechanism. 2,470,099, May 17.
Hall, Eric V.: *See*—
Campbell, Thomas C., and Hall.
Hallmark, Aubrey C., Naval Base, S. C. Automatic air gauge. 2,470,164, May 17.
Halvorsen, Gordon G.: *See*—
Bollaert, Armand R., and Halvorsen.
Hamilton Watch Company, assignee: *See*—
Weaver, Harry D.
Hammond, Homer S., Madison, Wis. Portable motor mounting. 2,470,554, May 17.
Hanovia Chemical and Mfg. Company, assignee: *See*—
Bird, Lester F.
Hansell, Clarence W., Port Jefferson, N. Y., assignor to Radio Corporation of America. Pulse modulation signaling system. 2,470,698, May 17.
Hansen, James W., and C. C. Cassil, Berkeley, assignors to California Spray-Chemical Corporation, Richmond, Calif. Cyclopropyl furyl propenone. 2,470,349, May 17.
Hansen Manufacturing Company, Inc., assignee: *See*—
Richardson, Lloyd D.
Harman, Marion W., Nitro, W. Va., assignor to Monsanto Chemical Company, St. Louis, Mo. Formaldehyde condensation products of mercaptans and making same. 2,470,555, May 17.
Harmon, Ralph M., assignor to Beech Aircraft Corporation, Wichita, Kans. Shock absorber. 2,470,616, May 17.
Harrington, John A., Minneapolis, assignor to Continental Machines, Incorporated, Savage, Minn. Water-cooled grinding wheel. 2,470,350, May 17.
Harrington, Paul J.: *See*—
Jackson, Robert M., and Harrington.
Harter Corporation, assignee: *See*—
Harter, Evan S.
Harter, Evan S., assignor to Harter Corporation, Sturgis, Mich. Swivel chair base. 2,470,397, May 17.
Hartford-Empire Company, assignee: *See*—
Aksomitas, William E.
Green, Thomas D.
Honiss, William T.
MacConnell, Hugh C., Jr.
Hartford National Bank and Trust Company, assignee, as trustee: *See*—
Bergmans, Jan, Lamberts, and Anderson.
Holmes, Thomas.
Jonker, Johan L. H., and Diemer.
Visscher, Juan F.
Hartridge, Leslie, Buckingham, England. Testing phase angle and injection periods of fuel injection pumps. 2,470,351, May 17.
Hartung, Walter H., Baltimore, Md. Ethers of oximino acid chlorides. 2,470,083, May 17.
Hartzler, Boyd C., Sharonville, Ohio. Revolving attachment for dining tables. 2,470,165, May 17.
Harvill, Edward K., Orange, and R. M. Herbst, Short Hills, assignors to E. Bilhuber, Inc., Orange, N. J. Substituted alpha-halogen alkyl tetrasoles and obtaining the same. 2,470,084, May 17.
Harvill, Edward K., Orange, and R. M. Herbst, Short Hills, assignors to E. Bilhuber, Inc., Orange, N. J. Substituted amino alkyl tetrazoles. 2,470,085, May 17.
Haugland, Earl, Hampden, N. Dak. Electric circulatory water heater attachment for conventional internal-combustion engines. 2,470,485, May 17.
Hawes, Russell J., Cranford, assignor to Tide Water Associated Oil Company, Bayonne, N. J. Regenerating magnesium silicate adsorbents. 2,470,486, May 17.
Hayes, Frederick, Los Angeles, Calif. Therapeutic matting. 2,470,398, May 17.
Hayter, Bruce: *See*—
Breese, James L., and Hayter.
Hayter, Bruce, and M. D. Huston, assignors, by mesne assignments, to Breese Burners, Inc., Santa Fe, N. Mex. Combustion ring for pot type burners of the hydroxylating type. 2,470,099, May 17.
Hedrick, Albert E., assignee: *See*—
Matson, Nathan R., and Milewski.
Hedström, Sven-Eric, Ludvika, and U. Lamm, Kopparberg, assignors to Allmanna Svenska Elektriska Aktiebolaget, Vasteras, Sweden. Rectifier with a voltage regulating reactor saturable by direct current. 2,470,556, May 17.
Heine, Ferdinand H., assignor to Koehring Company, Milwaukee, Wis. Door operating mechanism for mixers. 2,470,100, May 17.
Heisman, Robert, Los Angeles, Calif. Mechanical movement. 2,470,246, May 17.
Hellatrom, Carl R.: *See*—
Norman, Joseph W., and Hellatrom.
Hendrix, Hurshel V.: *See*—
Chapman, Charles C., and Hendrix.
Henry, Guy J., Arlington Heights, Ill. Spring floated valve head. 2,470,700, May 17.
Hepp, Peter P., Aberdeen, Md. Clip retaining tool. 2,470,309, May 17.
Herbst, Robert M.: *See*—
Harvill, Edward K., and Herbst.
Herr Manufacturing Company Inc., assignee: *See*—
Atwood, Hyatt B., and Fillinger.
Herrmann, John G., Baldwin, assignor to Conveyor & Machinery Manufacturers, Inc., New York, N. Y. Gathering machine. 2,470,557, May 17.
Hetchler, John D.: *See*—
Vanderbilt, Byron M., and Hetchler.
Hetzel, Stanford J.: *See*—
Kennedy, Robert M., and Hetzel.
Hetzel, Stanford J., Cheltenham, and R. M. Kennedy, Drexel Hill, assignors to Sun Oil Company, Philadelphia, Pa. Polymerization of ethylene. 2,470,166, May 17.
Heymann, Herman, Brooklyn, N. Y. Indicator card for bingo or lotto games. 2,470,310, May 17.
Hill, George B.: *See*—
West, James R., Hill, and McClellan.
Hobbs, James C., Painesville, Ohio, and J. C. Hobbs, II, Oil City, Pa. Expansion flange. 2,470,167, May 17.
Hobbs, James C., II: *See*—
Hobbs, James C. and J. C., II.
Hochgesang, Frank P., Woodbury, and C. H. Schleesman, Camden, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Method and apparatus for geophysical prospecting. 2,470,743, May 17.
Hoddinott, William M., assignor to Van Norman Company, Springfield, Mass. Control for variable displacement pumps. 2,470,617, May 17.
Hoerth, Albert J., Des Plaines, Ill. Printing form aligning apparatus. 2,470,437, May 17.
Hoffmann-La Roche Inc., assignee: *See*—
Platt, John T., and Wenner.
Holben, Frank, Middletown, R. I. Ejector type socket wrench. 2,470,399, May 17.
Holden, Lawrence T., Boston, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Electrical apparatus. 2,470,618, May 17.
Hollis, Robert F., assignor to Alton Box Board Company, Alton, Ill. Adjustable anvil. 2,470,487, May 17.
Holmes, Herbert G.: *See*—
Carrigan, Tracy, Holmes, and Shoemaker.
Holmes, Thomas, London, England, assignor to The Hartford National Bank & Trust Company, Hartford, Conn., as trustee. Electrical resistor. 2,470,352, May 17.
Honerkamp, Friedrich, and F. J. Kurth, assignors to Anemostat Corporation of America, New York, N. Y. Air flow control means. 2,470,488, May 17.
Honiss, William T., West Hartford, assignor to Hartford-Empire Company, Hartford, Conn. Apparatus for and method of feeding molten glass. 2,470,558, May 17.
Hoosier Cardinal Corporation, assignee: *See*—
Baner, Charles A., and Barnes.
Hoover, Walter S., Montreal, Quebec, Canada. Oppositely rotating propellers. 2,470,560, May 17.
Hopkins, Nevil M., deceased; R. B. Hopkins, executrix, assignor to R. B. Hopkins, New York, N. Y. Rifle rocket missile. 2,470,489, May 17.
Hopkins, Raymonde B., assignee, executrix: *See*—
Hopkins, Nevil M.
Horn, Harry J., assignor to Motor Wheel Corporation, Lansing, Mich. Vehicle wheel. 2,470,559, May 17.
Hornbostel, Lloyd, assignor to Beloit Iron Works, Beloit, Wis. Doctor blade mounting. 2,470,400, May 17.
Horne, William A.: *See*—
Montgomery, Charles W., and Horne.
Hornel, James C.: *See*—
Whitworth, Edward, and Hornel.
Hornibrook, Walter J., McMasterville, Quebec, assignor to Canadian Industries Limited, Montreal, Quebec, Canada. Polymeric 4-vinylcyclohexene dioxide compositions. 2,470,168, May 17.
Horvitz, Leo, assignor to E. E. Rosaire, Houston, Tex. Exploration by soil analysis. 2,470,401, May 17.
Howse, Cyril G., Farmoor, Botley, England. Mechanical milking apparatus. 2,470,160, May 17.
Hoyler, Cyril N., Princeton, and R. A. Bierwirth, Kingston, N. J., assignors to Radio Corporation of America. Rotary conveyer. 2,470,311, May 17.
Hubbard, Arthur R., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Machine for turning the platform covers of platform shoes. 2,470,170, May 17.

Hueleter, Otto J.: *See*—
Fenton, Paul E., and Hueleter.
Hughes, Clifford J.: *See*—
Schaelder, Gerhard G., and Hughes.
Humphrey, Carl, assignee: *See*—
Daellenbach, Raymond E.
Hunter, Hasen F., Washingtonville, Ohio. Press. 2,470,561, May 17.
Huston, Milton D.: *See*—
Hayter, Bruce, and Huston.
Hutchings, Brian L., Pearl River, assignor to American Cyanamid Company, New York, N. Y. Purifying pteroylglutamic acid and related compounds. 2,470,490, May 17.
Hutchings, Brian L., Pearl River, assignor to American Cyanamid Company, New York, N. Y. Purification of pteroylglutamic acid. 2,470,491, May 17.
Hyde, James F., assignor to Corning Glass Works, Corning, N. Y. Organosiloxanes and making them. 2,470,562, May 17.
Hydrocarbon Research, Inc., assignee: *See*—
Keith, Percival C.
Hygrade Industries, Inc., assignee: *See*—
Wolanske, Raymond.
Hyland, William A., Horicon, Wis., assignor to John Deere Van Brunt Company. Soil pulverizer. 2,470,619, May 17.
Ibiach, Franz O., U. S. Navy, Columbus, Wis. Actuating means for simulated radio compass on aviation trainers. 2,470,101, May 17.
Imperial Chemical Industries Limited, assignee: *See*—
Whitworth, Edward, and Hornel.
Ingersoll Limited, assignee: *See*—
Young, Leonard W.
Ingersoll-Rand Company, assignee: *See*—
Loss, Isidor R.
International Alloys Limited, assignee: *See*—
Gross, Philipp.
International Business Machines Corporation, assignee: *See*—
Malmroe, Gustav V. A., and Barber.
International Harvester Company, assignee: *See*—
Avila, Frank W.
Bechman, William O., and Baker.
Mott, Carl W.
International Staple and Machine Company, assignee: *See*—
Schafroth, Werner.
Schafroth, Werner, and Beal.
Jackson, Donald, assignor to Pye Limited, Cambridge, England. Unitary closure and mask for cathode-ray tubes. 2,470,620, May 17.
Jackson, Robert M., Baton Rouge, La., and P. J. Harrington, Mountainside, N. J., assignors to Standard Oil Development Company. Absorption process. 2,470,438, May 17.
Jacobs, Leonard, Philadelphia, Pa., assignor to Radio Corporation of America. Safety switch. 2,470,701, May 17.
Jacobsen, Arne, Accord, N. Y. Fishing net. 2,470,621, May 17.
James Manufacturing Company, assignee: *See*—
Olson, John B.
Jarvis & Jarvis, Inc., assignee: *See*—
Scudder, Eliot R.
Jenkins, Albert W., New York, N. Y. Picnic set. 2,470,492, May 17.
Jennings, Irving C., South Norwalk, Conn. Pump. 2,470,563, May 17.
Jobst, Conrad, assignor, by mesne assignments, to Owens-Illinois Glass Company, Toledo, Ohio. Injection molding machine. 2,470,402, May 17.
Johansson, Johan E., assignor to Aktiebolaget Götaverken, Goteborg, Sweden. Internal-combustion engine plant, including a scavenging compressor driven by an exhaust gas turbine. 2,470,702, May 17.
Johnson, Carl K.: *See*—
Peterson, Arthur S., and Johnson.
Johnson, James S., Pasadena, Calif. Fluid fuel burning floor furnace. 2,470,247, May 17.
Johnson & Johnson, assignee: *See*—
Kennison, Adrian B.
Johnson, Karl M.: *See*—
Linton, Dempsey A., and Johnson.
Jonker, Johan L. H., and G. Diemer, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Electron discharge tube with metal foil electrode. 2,470,248, May 17.
Jordan, Anthony G., Battle Creek, Mich. Analytical apparatus. 2,470,353, May 17.
Karasick, Mary K., executrix: *See*—
Karasick, Samuel.
Karasick, Samuel, deceased, Great Barrington, Mass.; M. K. Karasick, executrix. Permanent magnet field coupling. 2,470,249, May 17.
Karnol, Edward, Great Neck, and W. A. Rochm, Rockville Centre, assignors, by mesne assignments, to Virtu, Inc., Brooklyn, N. Y. Making shelf edging. 2,470,493, May 17.
Kearney, James R.: *See*—
Tallman, Oscar F., Kearney, and Runde.
Keith, Kenneth M.: *See*—
Honning, Martin, and Keith.
Keith, Percival C., Peapack, N. J., assignor to Hydrocarbon Research, Inc., New York, N. Y. Synthesizing motor fuels of high antiknock values. 2,470,216, May 17.
Kennedy, Robert M.: *See*—
Hetzel, Stanford J., and Kennedy.
Kennedy, Robert M., Drexel Hill, and S. J. Hetzel, Cheltenham, assignors to Sun Oil Company, Philadelphia, Pa. Polymerization of olefins. 2,470,171, May 17.
Kennison, Adrian B., Plainfield, N. J., assignor to Johnson & Johnson. Shipping package of suture tubes or the like. 2,470,494, May 17.
Kern, Charles J., Long Island City, and J. M. Tabor, East Islip, assignors to American Home Products Corporation, New York, N. Y. Obtaining fat-soluble vitamin-containing materials in oil. 2,470,703, May 17.
Keuper, William J., assignor to The National Marking Machine Company, Cincinnati, Ohio. Laundry marking machine. 2,470,622, May 17.
Kice, Jack W., assignor to The Coleman Company, Inc., Wichita, Kans. Ventilator cap. 2,470,623, May 17.
Kienle, David, New York, N. Y. Belt carried tape holder for electrical workers. 2,470,250, May 17.
Kinetic Chemicals, Inc., assignee: *See*—
Benning, Anthony F., McIlarness, and Murray.
Klemparens, Roy, Roselyn, Va. Corner construction. 2,470,403, May 17.
Kleos, Arnold, Sharon, Pa. Shaft trueness tester. 2,470,404, May 17.
Knapp-Monarch Company, assignee: *See*—
Snyder, Leland H.
Koehring Company, assignee: *See*—
Heine, Ferdinand H.
Kohler, Frederick E., Berkeley, Calif. Safety plate. 2,470,439, May 17.
Kohn, Harold B., Bronx, and M. Schnelderman, Brooklyn, N. Y. Calculator. 2,470,495, May 17.
Kolbert, Oswald, Flushing, and A. S. Messer, Ozone Park, assignors to Waldes Kohinoor, Inc., Long Island City, N. Y. Slide fastener. 2,470,251, May 17.
Kollath, Bernard M., assignee: *See*—
Gussmann, Raymond M.
Koppers Company, Inc., assignee: *See*—
Corson, Ben B., and Webb.
Rueckel, Walter C.
Swietoslawski, Wojciech, and Anderson.
Korn, Arthur H., assignor to Airborne Conveyors Corporation, New York, N. Y. Air lock and valve for pneumatic conveying systems. 2,470,744, May 17.
Korsgren, Theodore Y., Reynoldsburg, assignor to Crise Manufacturing Company, Columbus, Ohio. Self-aligning bearing construction. 2,470,354, May 17.
Korsmo, Alfred, Hopkins, and M. Ronning, St. Louis Park, assignors to Minneapolis-Moline Company, Hopkins, Minn. Crop feed mechanism for combines. 2,470,704, May 17.
Koster, John R.: *See*—
Webb, Paul S., and Koster.
Kriewall, William B.: *See*—
Leston, Theodore L., and Kriewall.
Krilanovich, Stephen, North Hollywood, Calif. Wheel steering mechanism. 2,470,496, May 17.
Krings, Bernard J., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Dynamic braking control system. 2,470,624, May 17.
Krnee, William P., San Francisco, and J. W. Steel, Alameda, Calif. Conversion unit for coining presses. 2,470,102, May 17.
Knehl, Robert: *See*—
Broeren, Frank L., Wanda, and Knehl.
Kuhn, Edmund W., Cortland, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. No-load tap changer. 2,470,625, May 17.
Kurth, Franz J.: *See*—
Honerkamp, Friedrich, and Kurth.
Kuzmick, Joseph N., Clifton, assignor to Raybestos-Manhattan, Inc., Passaic, N. J. Manufacture of diamond abrasive articles. 2,470,440, May 17.
Kyle, Samuel C., Berkeley, assignor to The Pelton Water Wheel Company, San Francisco, Calif. Hydraulic pumping jack with control responsive to abnormal conditions. 2,470,252, May 17.
Lamberts, Calmor A.: *See*—
Bergmans, Jan, Lamberts, and Anderson.
Lamm, Uno: *See*—
Hedstrom, Sven-Eric, and Lamm.
Lamoreaux, Harry F., Ballston Lake, N. Y., assignor to General Electric Company. Preparation of polysiloxane resins. 2,470,497, May 17.
Langer, Bernard F., and K. L. Wommack, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electromagnetic torque responsive device. 2,470,626, May 17.
Lankford, Howard Y., Gary, Ind., assignor to Carnegie-Illinois Steel Corporation. Device for measuring the thickness of walls or the like, subject to erosion. 2,470,498, May 17.
Lapp, Chester A., Cleveland, Ohio. Pipe fitting. 2,470,499, May 17.
Larsen, Merwin J., Rochester, N. Y., assignor to Central Commercial Company, Chicago, Ill. Vibrato organization. 2,470,705, May 17.
Larson, Charles O., Sterling, Ill. Safety hook. 2,470,706, May 17.

Lauck, John A., Shaker Heights, Ohio, assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill. Pressure loaded gear pump. 2,470,355, May 17.

Lawrence, Franklin I. L., Bradford, Pa., assignor to The Permutit Company, New York, N. Y. Demineralizing. 2,470,500, May 17.

Lawrence, Lovell, Jr., Pines Lake, Paterson, and J. H. Wyld, Pompton Lakes, assignors to Reaction Motors, Inc., Pompton Plains, N. J. Reaction motor control system. 2,470,564, May 17.

Leaman, James, New York, N. Y. Ash tray. 2,470,501, May 17.

Le Blond, R. K., Machine Tool Company, The, assignee: *See*—
Groene, William F., Siekmann, and Meyer.

Lee, John D., Redondo Beach, Calif. Inside thread caliper. 2,470,254, May 17.

Leeds and Northrup Company, assignee: *See*—
Seasongood, Albert A.

Leese, Charles P., assignor to Standard Car Truck Company, Chicago, Ill. Friction bolster spring. 2,470,172, May 17.

Lehane, Timothy J.: *See*—
Rhodes, Lewis B., and Lehane.

Leland, Hollis L., Cranford, N. J., assignor to Standard Oil Development Company. Cutting fluid. 2,470,405, May 17.

Lerner, Earl A., Chicago Heights, Ill., assignor to American Brake Shoe Company, New York, N. Y. Conveyer carrier blades with equaliser tops. 2,470,253, May 17.

Leston, Theodora I., and W. B. Kriewall, assignors to Eutectic Welding Alloys Corporation, New York, N. Y. Welding rod marking machine. 2,470,707, May 17.

Leverens, Humboldt W., Princeton, N. J., assignor to Radio Corporation of America. Phosphor materials. 2,470,173, May 17.

Leverens, Humboldt W., Princeton, N. J., assignor to Radio Corporation of America. Phosphor. 2,470,627, May 17.

Le Vesconte, Harold J., Glendale, Calif., and O. Quist, assignors to Union Special Machine Company, Chicago, Ill. Sewing machine. 2,470,502, May 17.

Levin, Abraham J., Franklin, Mich. Reciprocal buoyancy lift. 2,470,312, May 17.

Levin, Abraham J., Franklin, Mich. Accelerated variable buoyancy lift. 2,470,313, May 17.

Levine, Samuel J., West Orange, N. J., assignor to General Electric Company. Automatic inverse modulation valve. 2,470,503, May 17.

Lewis, Albert M., and P. B. Weller, Detroit, Mich. Collapsible box. 2,470,174, May 17.

Le Witt, George, New Britain, Conn. Motorized pressure juice extractor. 2,470,708, May 17.

Libbey-Owens-Ford Glass Company, assignee: *See*—
Sharp, Donald E.

Lieber, Eugene, New York, N. Y., and A. F. Cashman, Bayonne, N. J., assignors to Standard Oil Development Company. Condensing fatty acid halides with aromatic acid halides. 2,470,504, May 17.

Lily-Tulip Cup Corporation, assignee: *See*—
Sims, Clark D.

Lim, Peter, Los Angeles, Calif. Storage attachment for automobile bodies. 2,470,314, May 17.

Lindgren, Nils, Irondequoit, and P. A. Roos, Greece, assignors to Bausch & Lomb Optical Company, Rochester, N. Y. Surface comparison microscope having light conducting members providing grazing and diffuse illumination. 2,470,176, May 17.

Linn, Carl B., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Liquid hydrogen fluoride composition. 2,470,175, May 17.

Lochman, Emil R., Milwaukee, Wis. Power-operated driving and braking mechanism. 2,470,103, May 17.

Logansport Machine Co. Inc., assignee: *See*—
Proctor, Harry L.

Loss, Isidor R., Rowayton, Conn., assignor to Ingersoll-Rand Company, New York, N. Y. Surge preventing device for centrifugal compressors. 2,470,566, May 17.

Ludwig, Leon R., Wilkinsburg, H. J. Webb, Forest Hills, and B. F. Baker, Turtle Creek, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,470,628, May 17.

Ludwig, Norman C., Chicago, Ill., assignor to Universal Atlas Cement Company. Slow setting cement and making the same. 2,470,505, May 17.

Lummus Company, The, assignee: *See*—
Brunjes, Austin S., and Bogart.
Gadwa, Truman A., and Flawa.

Lundstrom, Carl B., Little Falls, N. Y. Picker stick. 2,470,506, May 17.

Luton, Dempsey A., and K. M. Johnson, Jackson, Wyo. Electric fishing reel. 2,470,507, May 17.

MacConnell, Hugh C., Jr., West Hartford, assignor to Hartford-Empire Company, Hartford, Conn. Fluid control valve mechanism. 2,470,566, May 17.

MacDonald, Joseph R., Winchester, assignor to Macmor Corporation, Boston, Mass. Lobster trap. 2,470,177, May 17.

Mack, Gerry P., Jackson Heights, assignor to Advance Solvents & Chemical Corporation, New York, N. Y. Emulsion polymerizing butadienes. 2,470,629, May 17.

MacKenzie, Kenneth W., Newton Highlands, assignor to Raytheon Manufacturing Company, Newton, Mass. Electrical precipitator. 2,470,356, May 17.

MacMillan, Charles W., Alexandria, Va. Engine combustion controlling device. 2,470,709, May 17.

MacMillin, Howard F., Mount Gilead, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del. Control system for hydraulic pumps supplying hydraulic fluid to double-acting rams of hydraulic presses. 2,470,357, May 17.

Macmor Corporation, assignee: *See*—
MacDonald, Joseph R.

Madsen, Karl K., L. de Zamora, Argentina, assignor to Aktieselskabet Esab, Copenhagen, Denmark. Semiautomatic arc welding apparatus and method. 2,470,178, May 17.

Maier, Herbert N., Pottstown, Pa., and T. H. Pickering, New Rochelle, assignors to Doehler-Jarvis Corporation, New York, N. Y. Bicycle frame. 2,470,441, May 17.

Maier, Roy, assignee: *See*—
Gassmann, Raymond M.

Maky, Walter, assignor to The Parker Appliance Company, Cleveland, Ohio. Coupling for tubes. 2,470,508, May 17.

Mallory, P. R., & Co., Inc., assignee: *See*—
Coulter, John H., and Wood.

Malmros, Gustav V. A., Binghamton, and E. A. Barber, Jr., Johnson City, assignors to International Business Machines Corporation, New York, N. Y. Adjustable throat mechanism for sorting machines. 2,470,442, May 17.

Marathon Corporation, assignee: *See*—
Ballar, Charles O., and Spalding.
Broeren, Frank L., Wauda, and Kuehl.
Murphy, Merrill M.

Marcou, Rene J., Newton, Mass. Liquid level alarm particularly for storage battery electrolytes. 2,470,630, May 17.

Marini, Herman R., New Kensington, assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Making heated window glass. 2,470,509, May 17.

Market Forge Co., assignee: *See*—
Warshaw, Nathaniel.

Marks, Ben D., and O. E. Dillon, Corpus Christi, Tex. Pipe-line recovery device. 2,470,255, May 17.

Marshall, John F.: *See*—
Elmore, William C., and Marshall.

Martin, Glenn L., Company, The, assignee: *See*—
Barrick, Ray E., and Morison.

Martin, Harry R., Des Moines, Iowa. Battery post clamp. 2,470,104, May 17.

Martin, Sida S., executrix: *See*—
Boynton, Alexander.

Marxmiller, Elmer C.: *See*—
Suhl, Richard W., and Marxmiller.

Mason, Homer A., Chicago, Ill. Cigarette lighter. 2,470,710, May 17.

Master Technique Board Co., assignee: *See*—
Silver, Stan.

Matson, Nathan R., and L. A. Milewski, assignors of thirty-three and one-third per cent to A. E. Hedrick, Glendale, Calif. Liquid level gauge. 2,470,510, May 17.

Matthews, W. N., Corporation, assignee: *See*—
Pollock, John A., and Copplinger.

Matzie, Frederick W., Los Angeles, Calif. Impact producing implement. 2,470,406, May 17.

May, Richard W., assignor to Collins Radio Company, Cedar Rapids, Iowa. Selective control apparatus for radio systems and the like. 2,470,567, May 17.

McClellan, Cyril E., Catonsville, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Sliding joint for transmission lines. 2,470,631, May 17.

McClellan, Marcus E.: *See*—
West, James R., Hill, and McClellan.

McCloskey, Joseph E., assignor to The American Pulley Company, Philadelphia, Pa. Holding element for hub collars. 2,470,179, May 17.

McCrumm, John D., Inglewood, assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif. Spark plug. 2,470,568, May 17.

McDill, Rex D., Cleveland Heights, assignor to J. B. Shaver, University Heights, Ohio. Detection of impurities. 2,470,511, May 17.

McGehee, Wallace L., Kansas City, Mo. Multiple stage pulverizing and dehydrating tube mill. 2,470,315, May 17.

McHarness, Robert C.: *See*—
Benning, Anthony F., McHarness, and Murray.

McHatton, Rex L., South Bend, Ind. Carbonaceous deodorizer and making same. 2,470,180, May 17.

McIlroy, Harold G., Burbank, Calif. Quick-action coupling. 2,470,256, May 17.

McIntyre, Angus W., Victoria, British Columbia, Canada. Heating device adapted to electric ranges. 2,470,181, May 17.

McKown, Glen D., Cedar Lake, Ind. Fusee lighter. 2,470,358, May 17.

McLean, Paul C., Hollywood, Calif. Hose coupling. 2,470,359, May 17.

McLeod, Norman, Cleveland, Ohio. Chance controlled game board. 2,470,632, May 17.

McLoughlin, Arthur J., Elmhurst, N. Y. Snow shovel. 2,470,217, May 17.

McMillan, James: *See*—
Remis, Robert E., and McMillan.

McNally, James G.: *See*—
Dickey, Joseph B., and McNally.

McNamara, Charles J., Crafton, assignor to N. R. McNamara and C. F. Coate, doing business as Precision Instrument & Manufacturing Company, Pittsburgh, Pa. Toolholder. 2,470,218, May 17.

McNamara, N. R., assignee: *See*—
McNamara, Charles J.

McNaughton, Roy A., assignor to Sylvania Electric Products Inc., Emporium, Pa. Linear response vacuum tube voltmeter. 2,470,219, May 17.

Meer, Yusuf: *See*—
Gonsales, Jorge, and Meer.

Meighan, Merl H., River Edge, and K. N. Brown, Teaneck, N. J., assignors to F. W. Berk & Company, Inc., New York, N. Y. Apparatus for comminution of molten metals. 2,470,569, May 17.

Merley, Sylvan R.: *See*—
Morgan, John D., Merley, and Smith.

Merrick, J. W., assignee: *See*—
Wenger, Russell J.

Mershon, Clarence L., Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Temperature control system. 2,470,633, May 17.

Messer, Albert S.: *See*—
Kolbert, Oswald, and Messer.

Messick, Kirwan Y., Arlington, Va. Lumber loading truck. 2,470,360, May 17.

Meyer, Walter R.: *See*—
Groene, William F., Siekmann, and Meyer.

Milewski, Leo A.: *See*—
Matson, Nathan R., and Milewski.

Miller, Isador, New York, and A. L. Beiser, Jackson Heights, assignors to Gem Participations, Inc., New York, N. Y. Reclaiming plastic scrap. 2,470,361, May 17.

Miller, John W., assignor to Motor Wheel Corporation, Lansing, Mich. Forced air and gravity circulating heating apparatus. 2,470,571, May 17.

Miller, John W., and W. G. Smith, assignors to Motor Wheel Corporation, Lansing, Mich. Vaporizing type oil burner. 2,470,570, May 17.

Miller, John W., and R. E. Fell, assignors to Motor Wheel Corporation, Lansing, Mich. Fuel feed control. 2,470,572, May 17.

Miller, John Z., Hagerstown, Md. Rope holder. 2,470,316, May 17.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Eckman, Donald P., and Wannamaker.

Minneapolis-Moline Company, assignee: *See*—
Korsmo, Alfred, and Ronning.
Ronning, Martin, and Keith.

Mission Manufacturing Company, assignee: *See*—
Young, Henry B.

Mittelmann, Eugene, Chicago, Ill. Continuously matching and controlling power for high-frequency heating of reactive loads. 2,470,443, May 17.

Moberg, Ivar O., Lowell, Mass. Fire alarm. 2,470,711, May 17.

Mock, Frank C., assignor to Bendix Aviation Corporation, South Bend, Ind. Charge forming device. 2,470,098, May 17.

Mohrman, Harold W., Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Melamine-formaldehyde casting resin. 2,470,363, May 17.

Monroe Calculating Machine Company, assignee: *See*—
Gang, Herman.

Monsanto Chemical Company, assignee: *See*—
Barkhuff, Raymond A., Jr.
Blake, Edward S.
Harman, Marion W.
Mohrman, Harold W.

Montgomery, Charles W., and W. A. Horne, Oakmont, assignors to Gulf Research & Development Company, Pittsburgh, Pa. Catalytic dealkylation of alkylated compounds. 2,470,712, May 17.

Moody, Dwight L., and H. Renek, Santa Monica, Calif. Currency container. 2,470,362, May 17.

Moore, George C., Company, assignee: *See*—
Siciliano, Samuel F.

Moore, Milton K., Corpus Christi, Tex. Electrical protective system. 2,470,257, May 17.

Moore, Robert C., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Oscillator modulating system. 2,470,573, May 17.

Moore, Sidney A., Phoenix, Ariz. Electrical outlet box attaching tool. 2,470,512, May 17.

Morgan, John D., South Orange, S. R. Merley, Riverton, and W. E. Smith, Haddonfield, N. J., assignors to Cities Service Oil Company, New York, N. Y. Apparatus for deleading gasoline. 2,470,634, May 17.

Morison, Ayers: *See*—
Barrick, Ray E., and Morison.

Morse, Clarence W., Santa Monica, Calif., and H. C. Deichert, Youngstown, Ohio, said Deichert assignor to said Morse. Film gauge. 2,470,513, May 17.

Moss, Earl C., Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Gauge for checking the positions of parts mounted on the inner peripheries of cylindrical articles. 2,470,635, May 17.

Moss, Earl C., Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Gauging apparatus. 2,470,636, May 17.

Motor Wheel Corporation, assignee: *See*—
Horn, Harry J.
Miller, John W.
Miller, John W., and Fell.
Miller, John W., and Smith.

Mott, Carl W., La Grange, Ill., assignor to International Harvester Company. Pump. 2,470,220, May 17.

Mott, Carl W., La Grange, Ill., assignor to International Harvester Company. Apparatus for and method of dressing cylindrical surfaces. 2,470,221, May 17.

Mueller, Ervin H., Grosse Pointe, Mich. Double gas burner with removable cap. 2,470,713, May 17.

Muller, George W., Miami, Fla. Antisplitting means for articles of timber. 2,470,514, May 17.

Muntz, Alan, & Company Limited, assignee: *See*—
Beale, Evelyn S. L.

Murphy, Frank L., Dorchester, Mass. Airplane toy. 2,470,407, May 17.

Murphy, Merrill M., assignor to The Marathon Manufacturing Co., Marathon, N. Y. Portable lifting jack. 2,470,105, May 17.

Murphy, Norman B., West Englewood, assignor to Bendix Aviation Corporation, Teterboro, N. J. Disconnectible coupling device. 2,470,317, May 17.

Murray, D. J. Manufacturing Co., assignee: *See*—
Payser, Stanley D.
Rosmait, John A.

Murray, William S.: *See*—
Benning, Anthony F., McHarness, and Murray.

Murtaugh, Charles F.: *See*—
De Lelsi, Vincent L., and Murtaugh.

Mustafa, Ferhad, Highland Park, Mich. Collapsible wheel chair. 2,470,258, May 17.

Myers, Latimer D., and J. D. Fitzpatrick, assignors to Emery Industries, Inc., Cincinnati, Ohio. Plasticised prolamines. 2,470,515, May 17.

Nadelson, Samuel, New York, N. Y. Support for table tennis nets. 2,470,318, May 17.

Nader Engineering Company, assignee: *See*—
Nader, Joseph.

Nader, Joseph, Glen Ellyn, assignor to Nader Engineering Company, Chicago, Ill. Frame for dynamoelectric machines. 2,470,408, May 17.

Napier, D., & Son Limited, assignee: *See*—
Ramsay, Frank R. F.

Nash-Kelvinator Corporation, assignee: *See*—
Wahlberg, Nils E.

Nassivera, Charles, Glen Falls, N. Y. Poultry immerser. 2,470,409, May 17.

National Foam System, Inc., assignee: *See*—
Perri, Joseph M.

National Marking Machine Company, The, assignee: *See*—
Keuper, William J.

National Grain Supply Company, assignee: *See*—
Roche, Paul C.

National Supply Company, The, assignee: *See*—
Shepherd, Harold F.

National Union Radio Corporation, assignee: *See*—
Schneider, Gerhard G., and Hughes.

Neckel, Edmund N., assignor to The American Laundry Machinery Company, Cincinnati, Ohio. Automatic release collar clamp. 2,470,515, May 17.

Nelson, Earl J., Jackson Heights, N. Y. Golf ball tee. 2,470,574, May 17.

Nelson, Karl J., Cranford, N. J., assignor to Standard Oil Development Company. Preparation of silica magnesia catalysts. 2,470,410, May 17.

Nevins, Searle O., Santa Monica, Calif. Electric pressure indicator. 2,470,714, May 17.

Niederhauser, Homer, Berne, Ind. Reclining chair. 2,470,364, May 17.

Nordberg Manufacturing Company, assignee: *See*—
Turnwald, Wolfgang.

Norman, Joseph W., Springfield, and C. R. Hellstrom, Wellesley, assignors to Smith and Wesson, Inc., Springfield, Mass. Safety device for revolvers. 2,470,259, May 17.

Norris, Edward O., Westport, Conn. Pump. 2,470,319, May 17.

Norton, Oscar J., Danville, Va., assignor to Dan River Mills, Incorporated. Cloth inspection and handling system. 2,470,575, May 17.

Nnproducts Corporation, assignee: *See*—
Smith, Roland L.

Obriet, Heinrich, assignor to Escher Wyss Maschinenfabriken Aktiengesellschaft. Zurich, Switzerland. Variable-pitch propeller. 2,470,517, May 17.

O'Daniel, Clarence, Richmond Heights, Mo., assignor to Century Electric Company. Oil pump for dynamoelectric machines. 2,470,365, May 17.

Olivares, Salvador G., Mexico City, Mexico. Electric heating unit. 2,470,715, May 17.

Oliver, Walter E., Quincy, Mass. Autographic register. 2,470,260, May 17.

Olson, John B., assignor to James Manufacturing Company, Fort Atkinson, Wis. Feed truck and removing feed therefrom. 2,470,637, May 17.

Onondaga Pottery Company, assignee: *See*—
Parmelee, Clifford H., and Briggs.

Orr, Mark J., Emporium, Pa., assignor to Sylvania Electric Products, Inc. Basing of radio tubes and the like. 2,470,518, May 17.

Ostling, William, assignor to California Machinary and Supply Company, Ltd., Los Angeles, Calif. Automatic spark advance mechanism. 2,470,366, May 17.

Overbeck, Wilcox P., Chicago, Ill., assignor to Research Corporation, New York, N. Y. Electronic counting system. 2,470,716, May 17.

Owens-Illinois Glass Company, assignee: *See*—
Ball, Charles O.
Glycofelides, Eustace.
Jobst, Conrad.

Packard, Shirley W.: *See*—
Wolfram, John N., and Packard.

Page, Herbert E., Alhambra, Calif. Electrical connection device. 2,470,320, May 17.

Palma, Harold G., New York, N. Y. Handbag purse. 2,470,367, May 17.

Palumbo, Vincent, Cleveland Heights, Ohio. Fuel injector for internal-combustion engines. 2,470,717, May 17.

Pan American Refining Corporation, assignee: *See*—
Scofield, Raymond C.

Paramount Textile Machinery Co., assignee: *See*—
Richter, Henry.

Parker Appliance Company, The, assignee: *See*—
Carbon, Harry B.
Maky, Walter.
Wolfram, John N., and Packard.

Parmelee, Clifford H., and A. J. Briggs, assignors to Onondaga Pottery Company, Syracuse, N. Y. Apparatus for working plastic material. 2,470,638, May 17.

Parry, Vernon F., Golden, Colo. Reducing iron ores. 2,470,106, May 17.

Patterson, John A., Westfield, N. J., assignor, by mesne assignments, to Standard Oil Development Company. Distillation of alcohols containing impurities less soluble in water. 2,470,222, May 17.

Paxton, Donald D., Burbank, Calif., assignor to Adel Precision Products Corp. Valve mechanism. 2,470,368, May 17.

Payzer, Stanley D., assignor to D. J. Murray Manufacturing Co., Wausau, Wis. Apparatus for handling chipper knives. 2,470,261, May 17.

Payzer, Stanley D., assignor to D. J. Murray Manufacturing Co., Wausau, Wis. Handling chipper knives. 2,470,262, May 17.

Peck, Ernest L., Erie, Pa. Loader for revolvers. 2,470,182, May 17.

Peeps, Donald J., assignor to The De Vilbiss Company, Toledo, Ohio. Spray gun. 2,470,718, May 17.

Peery, Norman F., assignor to Shell Development Company, San Francisco, Calif. Hydrocarbon conversion process. 2,470,263, May 17.

Pelton Water Wheel Company, The, assignee: *See*—
Kyle, Samuel C.

Permutit Company, The, assignee: *See*—
Lawrence, Franklin I. L.

Perri, Joseph M., West Chester, assignor to National Foam System, Inc., Philadelphia, Pa. Stabilized foam-forming composition. 2,470,719, May 17.

Peters-Dalton, Inc., assignee: *See*—
Fenn, Orrin E.

Peters, Henry P., Lester, Iowa. Gauge for laying asphalt shingles. 2,470,183, May 17.

Peterson, Arthur S., and C. K. Johnson, Elwood, Conn., assignors to Abemostat Corporation of America, New York, N. Y. Nozzle. 2,470,519, May 17.

Pfenninger, Hans, assignor to Aktiengesellschaft Brown, Boveri & Cie, Baden, Switzerland. Arrangement for cooling combustion chambers. 2,470,184, May 17.

Pfetcher, Theophil J., Norwalk, Wis. Refrigerated milker pail. 2,470,520, May 17.

Philco Corporation, assignee: *See*—
Moore, Robert C.
Traub, Ernest H.

Philippe, George A., Fort Smith, Ark. Glass cutter. 2,470,444, May 17.

Phillips Petroleum Company, assignee: *See*—
Bergman, William E.
Chapman, Charles C., and Hendrix.
Piety, Raymond G.

Piacenti, Frank, New York, N. Y. Collapsible tire remover. 2,470,107, May 17.

Pickering, Theodore H.: *See*—
Maier, Herbert N., and Pickering.

Piersol, John A., Indianapolis, Ind. Eduction head for air lifts. 2,470,830, May 17.

Piety, Raymond G., Bartlesville, Okla., assignor to Phillips Petroleum Company. Alternating current impedance meter. 2,470,412, May 17.

Pieta, Ervin, assignee: *See*—
Pieta, Ervin.

Pieta, Ervin, assignor to L. N. Barry, G. W. Foss, and E. Pieta, doing business as The L. N. Barry Company, Cambridge, Mass. Vibration isolator. 2,470,185, May 17.

Piron, Emil H., assignor to Transit Research Corporation, New York, N. Y. Wheel with resilient spokes. 2,470,640, May 17.

Pittsburgh Plate Glass Company, assignee: *See*—
Black, Lloyd V.
Marini, Herman R.

Platt, John T., Passaic, and W. Wenner, Montclair, assignors to Hoffmann-La Roche Inc., Nutley, N. J. Heterocyclic amines. 2,470,108, May 17.

Platt, John T., Passaic, and W. Wenner, Montclair, assignors to Hoffmann-La Roche Inc., Nutley, N. J. Heterocyclic amines. 2,470,109, May 17.

Pollock, John A., and E. H. Coppinger, Bainbridge, Ga., assignors to W. S. Matthews Corporation, St. Louis, Mo. Gang operated switch. 2,470,576, May 17.

Portable Industries, Inc., assignee: *See*—
Temple, Stanley A.

Portz, Frederick G., Waukesha, Wis. Disintegrated newsprint-boric acid insulation composition. 2,470,641, May 17.

Powell, John, New York, N. Y. Combination animal carrier and display pen. 2,470,223, May 17.

Pregel, John L., Baltimore, Md. Portable infant incubator. 2,470,721, May 17.

Preble, Everett W., Anson, Maine. Current conveyer. 2,470,521, May 17.

Precision Instrument & Manufacturing Company, assignee: *See*—
McNamara, Charles J.

Premier Crystal Laboratories, Incorporated, assignee: *See*—
Bach, Henry M.
Gordon, Hermao L.

Price, Earl R.: *See*—
Thomas, Thomas H., and Price.

Price, Laurence L., Los Angeles, Calif. Control means for towel cabinets. 2,470,186, May 17.

Price, Laurence L., Los Angeles, Calif. Towel dispenser. 2,470,187, May 17.

Processed Surfaces, Inc., assignee: *See*—
Webb, Paul S., and Koster.

Proctor, Harry L., assignor to Logansport Machine Co. Inc., Logansport, Ind. Self-locking chuck. 2,470,720, May 17.

Purdy, Kenneth M., Baton Rouge, La., assignor to Standard Oil Development Company. Production of high octane number aviation gasoline. 2,470,445, May 17.

Pye Limited, assignee: *See*—
Jackson, Donald.

Quist, Oscar: *See*—
Le Vesconte, Harold J., and Quist.

Radeke, Sidney J., Ann Arbor, Mich. Furring clip. 2,470,369, May 17.

Radio Corporation of America, assignee: *See*—
Anderson, Warren A.
Bierwirth, Rudolph A.
Collins, Milford E.
Crosby, Murray G.
Demuth, Galan W.
Evans, John.
Greenough, Maurice L.
Hansell, Clarence W.
Hoyler, Cyril N., and Bierwirth.
Jacobs, Leonard.
Lererena, Humboldt W.
Rattner, Sydney.
Saikhi, George C.
Torsch, Charles E.
Williams, Ferd E.
Wood, Elton J.
Woodward, J. Guy.

Radio Patents Corporation, assignee: *See*—
Guanella, Gustav.

Ramsay, Frank R. F., assignor to D. Napier & Son Limited, London, England. Electrical ignition system. 2,470,413, May 17.

Randall, Roy H., Manchester, Mich. Looper. 2,470,642, May 17.

Rankin, Andrew W., Schenectady, N. Y., assignor to General Electric Company. Damper winding for dynamoelectric machines. 2,470,522, May 17.

Rankin, Thomas B., Brantford, Ontario, Canada. Heating and cooking apparatus. 2,470,446, May 17.

Rath, Herman P., North Bergen, N. J. Light switch. 2,470,643, May 17.

Rattner, Sydney, Baltimore, Md., assignor to Radio Corporation of America. Electronic synchronous signal regenerator. 2,470,722, May 17.

Raybestos-Manhattan, Inc., assignee: *See*—
Kaznick, Joseph N.

Raytheon Manufacturing Company, assignee: *See*—
Briggs, Rufus L.
Darrah, William C.
MacKenzie, Kenneth W.

Reaction Motors, Inc., assignee: *See*—
Lawrence, Lovell, Jr., and Wyld.

Redman, John C., Harrow Weald, England. Electrical measuring instrument. 2,470,644, May 17.

Reese, Earl R., and A. Upton, Newton, Ill. Body positioner attachment for caskets. 2,470,321, May 17.

Reichart, James H., Muncie, Ind. Portable electric barbecue. 2,470,645, May 17.

Renek, Henry: *See*—
Moody, Dwight L., and Renek.

Republic Flow Meters Company, assignee: *See*—
Ackley, Robert A.

Republic Steel Corporation, assignee: *See*—
Schulthels, Frank J.

Research Corporation, assignee: *See*—
Hall, Albert C.
Overbeck, Wilcox P.

Reyrolle, A., & Company Limited, assignee: *See*—
Allan, Archibald, and Small.

Rhodes, Charles J., Wakefield, England. Press for cutting sheet metal. 2,470,110, May 17.

Rhodes, Lewis R., Washington, D. C., and T. J. Lehane, Chicago, Ill., assignors, by mesne assignments, to Vapor Heating Corporation. Sensible heat control system. 2,470,188, May 17.

Richardson, Charles L., Belmont, Mass. Clothes drier. 2,470,646, May 17.

Richardson, Lloyd D., Dayton, Ohio, assignor to Hansen Manufacturing Company, Inc., Princeton, Ind. Electric motor bearing. 2,470,264, May 17.

Richter, Henry, assignor to Paramount Textile Machinery Co., Kankakee, Ill. Setting apparatus for textile fabrics. 2,470,265, May 17.

Richter, Henry, assignor to Paramount Textile Machinery Co., Kankakee, Ill. Ejector mechanism for retorts. 2,470,266, May 17.

Rippenbein, Albert P., New York, N. Y. Folding pedal wrench. 2,470,414, May 17.

Ritter, Saul, New York, N. Y. Watch band display package. 2,470,370, May 17.

Roberts, Leslie, Bradford, assignor to The English Electric Company, Limited, London, England. Armature construction for dynamoelectric machines. 2,470,647, May 17.

Roche, Paul C., assignor to National Organ Supply Company, Erie, Pa. Plastic fastening. 2,470,723, May 17.

Roderick, Howard F., Grosse Ile, and F. M. Zorn, assignors to Wyandotte Chemicals Corporation, Wyandotte, Mich. Complex calcium carbonate-silicate pigment product and making same. 2,470,577, May 17.

Roehm, William A.: *See*—
Karbol, Edward, and Roehm.

Roessner, William L., assignor to N. A. Grassfield, Cherry Hills Village, Colo. Automatically operable fire extinguisher. 2,470,371, May 17.

Rohleder, John J., Baltimore, Md. Combined adjustable curtain and blind bracket. 2,470,648, May 17.

Ronning, Martin: *See*—
Korsmo, Alfred, and Ronning.

Ronning, Martin, St. Louis Park, and K. M. Keith, Minneapolis, assignors, by mesne assignments, to Minneapolis-Moline Company, Hopkins, Minn. Feed regulating means for baler tying mechanisms. 2,470,724, May 17.

Roos, Paul A.: *See*—
Lindgren, Nils, and Roos.

Rosaire, Esme E., assignee: *See*—
Horvitz, Leo.

Rosental, Frits, Gloucester City, N. J., assignor to The University of Tennessee Research Corporation, Knoxville, Tenn. Thermosetting phenolic molding compositions. 2,470,322, May 17.

Rosmait, John A., Appleton, assignor to D. J. Murray Manufacturing Co., Wausau, Wis. Paper pulp agitator. 2,470,267, May 17.

Rossell, William T., assignor to Transit Research Corporation, New York, N. Y. Armrest and stanchion. 2,470,649, May 17.

Roth, Jay M., Euclid, Ohio, assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill. Ball type pressure relief valve. 2,470,372, May 17.

Rowan, Maurice, Richmond Hill, N. Y. Safety thermostatic control for gaseous burners. 2,470,268, May 17.

Royster, Percy H., Bethesda, Md. Thermal molecular alteration of carbon compounds. 2,470,578, May 17.

Rubissow, George A., New York, N. Y. Bettering pelts and hides. 2,470,111, May 17.

Rubissow, George A., New York, N. Y. Manufacturing molds. 2,470,180, May 17.

Rueckel, Walter C., Pittsburgh, Pa., assignor, by mesne assignments, to Koppers Company, Inc. Ceramic nozzle for regenerative underjet coke ovens. 2,470,112, May 17.

Rueckert, Dean E., Mokena, assignor to Swift & Company, Chicago, Ill. Packaging food products. 2,470,570, May 17.

Runde, Kenneth R.: *See*—
Tallman, Oscar F., Runde, and Kearney.

Russell, William N., Philadelphia, Pa. Machine for making reinforced concrete beams. 2,470,650, May 17.

Russo, Giuseppe, New York, N. Y. Match book. 2,470,523, May 17.

Rust, George M.: *See*—
Andreasen, Arthur A., and Rust.

Rydner, Gustaf W., Detroit, Mich. Swimmer's boat. 2,470,725, May 17.

Sarason, Paul: *See*—
Bucky, Peter A., and Sarason.

Sadler, Harry J.: *See*—
Cook, Ernest E., and Sadler.

Sayers, John L., Watford, assignor to A. Greening, Sparrows Herne, Bushey, England. Jointing of flexible pipes. 2,470,373, May 17.

Schaefer, Ralph, assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio. Friction material. 2,470,269, May 17.

Schaffel, Gerson S., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Polymers of condensation product of aryl diether dicarboxylic acid and dihydric alcohol. 2,470,651, May 17.

Schafroth, Werner, Brookline, assignor to International Staple and Machine Company, Clifton Heights, Pa. Anvil clinching stapling machine. 2,470,727, May 17.

Schafroth, Werner, Brookline, and G. M. Beal, Lansdowne, assignors to International Staple and Machine Company, Clifton Heights, Pa. Staple remover. 2,470,726, May 17.

Schaul, Martin C., London, England. Production of food preparations from potatoes and similar farinaceous tubers. 2,470,374, May 17.

Scherbatskoy, Serge A., assignor to Well Surveys, Incorporated, Tulsa, Okla. Ionization chamber. 2,470,224, May 17.

Schlesman, Carleton H.: *See*—
Hochgesang, Frank P., and Schlesman.

Schlesman, Carleton H., Camden, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Mass spectrometer. 2,470,745, May 17.

Schmerling, Louis, Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Production of olefin polymers. 2,470,190, May 17.

Schneider, Gerhard G., Maplewood, and C. J. Hughes, East Orange, assignors to National Union Radio Corporation, Newark, N. J. Spray coating mechanism. 2,470,580, May 17.

Schnelderman, Morris: *See*—
Kohn, Harold B., and Schneiderman.

Schulman, Earl L., and A. C. Beller, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Resistance thermometer. 2,470,653, May 17.

Schultheis, Frank J., Lakewood, assignor to Republic Steel Corporation, Cleveland, Ohio. Couch frame. 2,470,525, May 17.

Scholtz, Harold B., assignor to Bendix Aviation Corporation, South Bend, Ind. Valve. 2,470,746, May 17.

Schultz, Wallace H., Perkasie, Pa. Piano action. 2,470,654, May 17.

Schwartzberg, Alter L., Shreveport, La. Ventilator. 2,470,375, May 17.

Scofield, Raymond C., Hitchcock, assignor to Pan American Refining Corporation, Texas City, Tex. Industrial contacting material. 2,470,652, May 17.

Scovill Manufacturing Company, assignee: *See*—
Clemmons, Herbert D.
Fenton, Paul E., and Hinelster.

Scudder, Eliot R., assignor to Jarvis & Jarvis, Inc., Palmer, Mass. Intravenous stand attachment for wheel stretchers. 2,470,524, May 17.

Seagram, Joseph E., & Sons, Inc., assignee: *See*—
Andreasen, Arthur A., and Rust.

Seaman, Francis E., Columbus, Ohio. Locking system. 2,470,581, May 17.

Seasongood, Albert A., Melrose Park, assignor to Leeds and Northrup Company, Philadelphia, Pa. Indicating control knob. 2,470,582, May 17.

Seisel, Harry, London, England. Furniture. 2,470,113, May 17.

Selberg, Earnest T., assignor to Barnes Drill Co., Rockford, Ill. Drive mechanism. 2,470,415, May 17.

Sedgwick, Robert K., assignor to American Steel Foundries, Chicago, Ill. Relief valve control system. 2,470,583, May 17.

Seymour, George W., B. B. White, and A. J. Bellucci, Cumberland, Md., assignors to Celanese Corporation of America. Rapid ripening of cellulose esters. 2,470,191, May 17.

Seymour, George W., Maplewood, B. B. White, Summit, and A. J. Bellucci, East Orange, N. J., assignors to Celanese Corporation of America. Rapid ripening of cellulose esters. 2,470,192, May 17.

Sharp, Donald E., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Apparatus for drawing sheet glass. 2,470,526, May 17.

Sharples, Thomas G.: *See*—
Bostock, Godfrey S., and Sharples.

Shaver, James B., assignee: *See*—
McDill, Rex D.

Shaw, Melvin C., Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Cooling and lubrication of compressors. 2,470,655, May 17.

Shaw, Morton R., Jr., assignor to Corning Glass Works, Corning, N. Y. Welding glass. 2,470,876, May 17.

Shell Development Company, assignee: *See*—
Chilton, Ernest G.
Peery, Norman F.

Shepeck, Albert C., Menominee, Mich. Vibrating block molding machine. 2,470,377, May 17.

Shepherd, Harold F., Springfield, Ohio, assignor to The National Supply Company, Pittsburgh, Pa. Dual fuel combustion system for internal-combustion engines. 2,470,747, May 17.

Sherwood, Robert M., and R. J. Urick, San Diego, and L. P. Delsasso, Los Angeles, Calif. Optical sound bearing system. 2,470,114, May 17.

Shiffer, William H.: *See*—
Clausen, William H., and Shiffer.

Shoemaker, Clyde A.: *See*—
Carrigan, Tracy, Holmes, and Shoemaker.

Sherrock, Christopher, Preston, England. Sliding vane rotary compressor. 2,470,656, May 17.

Siciliano, Samuel F., assignor to George C. Moore Company, Westerly, R. I. Weft detector. 2,470,527, May 17.

Siekmann, Harold J.: *See*—
Groene, William F., Siekmann, and Meyer.

Silver, Stan, assignor to Master Technique Board Co., New York, N. Y. Canvas panel for artists. 2,470,416, May 17.

Silverman, Abraham, Pittsburgh, Pa. Plumber's sewer snake apparatus. 2,470,225, May 17.

Simmon, Alfred, Jackson Heights, assignor to Simmon Brothers, Inc., Long Island City, N. Y. Illuminating system and control device for photographic enlargers. 2,470,584, May 17.

Simmon Brothers, Inc., assignee: *See*—
Simmon, Alfred.

Simonds, Frank C., Moylan, Pa. Apparatus for cooling air by the evaporation of liquids. 2,470,657, May 17.

Simpson, Walter M., Evansville, Ind. Reel assembly. 2,470,658, May 17.

Sims, Clark D., Elmhurst, Ill., assignor to Lily-Tulip Cup Corporation. Mounting bracket assembly for cup dispensers. 2470,528, May 17.

Sinclair Refining Company, assignee: *See*—
Watkins, Franklin M.

Skala, Ljubomir W., assignor of sixty per cent to M. M. Warner and ten per cent to H. Blech, Chicago, Ill. Production of chromium ammonium chloride complexes. 2,470,378, May 17.

Skiemar, Wenceslaw F., assignor of one-fourth to J. H. Ehardt, Chicago, Ill. Reverberatory furnace. 2,470,728, May 17.

Sloan, Edward C., Madison, Wis., assignor to The Rudolph Wurlitzer Company, Chicago, Ill. Piano key mounting. 2,470,650, May 17.

Small, Joseph: *See*—
Allan, Archibald, and Small.

Smith, Howard, Paper Mills Limited, assignee: *See*—
Winterburn, Fred.

Smith, Roland L., Belmont, assignor to Nuproducts Corporation, Cambridge, Mass. Coffee maker. 2,470,323, May 17.

Smith, Waldo G.: *See*—
Miller, John W., and Smith.

Smith, Wayne E.: *See*—
Morgan, John D., Merley, and Smith.

Smith and Weeson, Inc., assignee: *See*—
Norman, Joseph W., and Hellstrom.

Snyder, Leland H., Chicago, Ill., assignor, by mesne assignments, to Knapp-Monarch Company, St. Louis, Mo. Electric vibrator. 2,470,660, May 17.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Hochgesang, Frank P., and Schleeman.
Schlesman, Carleton H.

Solar Corporation, assignee: *See*—
Castner, George P.

Sonnemann, William K., Roselle Park, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Phase-sequence voltage network. 2,470,601, May 17.

Sonoco Products Company, assignee: *See*—
Dunlap, Charles K.

Spalding, Thomas L.: *See*—
Ballar, Charles O., and Spalding.

Spellman, Erick: *See*—
Erickson, Charles, and Spellman.

Spencer, Elbert G.: *See*—
Baker, Frederick C., and Spencer.

Spencer, Lee, Phoenix, Ariz., assignor to American Brake Shoe Company, New York, N. Y. Guardrail assembly for railroad track equipment. 2,470,662, May 17.

Sperry, Russell L., Glendora, Calif., assignor to American Cyanamid Company, New York, N. Y. Preparation of 2-thioureido-4-methyl thiazole hydrochloride. 2,470,585, May 17.

Srofe, Jesse, assignor to The Globe-Wernicke Company, Cincinnati, Ohio. Folding box. 2,470,270, May 17.

Stalker, Edward A., Bay City, Mich. Gas turbine power plant. 2,470,729, May 17.

Standard Car Truck Company, assignee: *See*—
Leese, Charles P.

Standard Oil Development Company, assignee: *See*—
Archibald, Francis M.
Camp, Elsa Q.
Corner, Eugene S.
Garrett, Bowman S.
Gohr, Edwin J., and Tyson.
Jackson, Robert M., and Harrington.
Leland, Hollis L.
Lieber, Eugene, and Cashman.
Nelson, Karl J.
Patterson, John A.
Purdy, Kenneth M.
Vanderbilt, Byron M., and Hetchler.
Van Gilder, Carl F.
Verner, Jules.

Staudinger, Hanns P., Ewell, D. Faulkner, Cambridge, and M. D. Cooke, Banstead, England, assignors to The Distillers Company Limited, Edinburgh, Scotland. Glycidyl ester copolymers. 2,470,324, May 17.

Steel, Joseph W.: *See*—
Kruse, William P., and Steel.

Stein, Albert P., assignee: *See*—
Gassman, Raymond M.

Stein, Joseph M., and R. W. Eggiestone, Buffalo, N. Y., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Three-layer single-phase winding. 2,470,663, May 17.

Steinbacher, Le Roy S., Battle Creek, Mich. Receptacle support. 2,470,271, May 17.

Sterrett, Charles C., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Sealing means. 2,470,664, May 17.

Stevenson, Benjamin D., Flushing, Mich. Plow control. 2,470,730, May 17.

Stewart, Jack L.: *See*—
Fink, Theodore R., Stewart, and Finneburgh.

Stewart, William D., Yonkers, assignor to The B. F. Goodrich Company, New York, N. Y. Organic polysulfides. 2,470,115, May 17.

Stewart, William D., Yonkers, assignor to The B. F. Goodrich Company, New York, N. Y. Pesticidal composition of polyethylene polysulfide and nicotine sulfate. 2,470,529, May 17.

Stiebl, Charles W., South Milwaukee, Wis. Suction apparatus. 2,470,665, May 17.

Stillman, Theodore B., Brooklyn, N. Y. Pocketed ball game. 2,470,325, May 17.

Stratford, William M., assignor, by mesne assignments, to The Texas Company, New York, N. Y. Treatment of hydrocarbons. 2,470,193, May 17.

Stryhal, Joseph M., Miami, Fla. Grinding block arrangement. 2,470,530, May 17.

Submarine Signal Company, assignee: *See*—
Pryklund, Robert A.

Sufield, Frederick G., Baltimore, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Tube. 2,470,666, May 17.

Suhi, Richard W., Sullivan, and E. C. Marxmiller, Arthur, Ill. Wagon tongue hitch. 2,470,531, May 17.

Sun Chemical Corporation, assignee: *See*—
Wekeman, Stephen N.

Sun Oil Company, assignee: *See*—
Hetzel, Stanford J., and Kennedy.
Kennedy, Robert M., and Hetzel.

Swain, Jay S., Los Angeles, Calif. Baby's bottle holder. 2,470,379, May 17.

Swain, Robert R.: *See*—
Waller, Fred, Dresser, Swain, and Wengel.

Swietoslawski, Wojciech, and J. R. Anderson, assignors to Koppers Company, Inc., Pittsburgh, Pa. Separation of compounds by crystallization. 2,470,116, May 17.

Swift & Company, assignee: *See*—
Rueckert, Dean E.

Sylvania Electric Products Inc., assignee: *See*—
Bowie, Robert M.
McNaughton, Roy A.
Orr, Mark J.

Salkind, George C., Princeton, N. J., assignor to Radio Corporation of America. Angle modulated carrier wave detector. 2,470,731, May 17.

Tabor, Joseph M.: *See*—
Kern, Charles J., and Tabor.

Tallman, Oscar F., St. Louis, and K. R. Runde, Lemay, assignors to James R. Kearney Corporation, St. Louis, Mo. Earth anchor. 2,470,326, May 17.

Tathwell, Joseph H., Charlotte, N. C. Maintaining multiple records. 2,470,586, May 17.

Taylor, Thaddeus A., Lufkin, Tex. Oxygen administering equipment. 2,470,587, May 17.

Tell-A-Turn Corporation, assignee: *See*—
Bucky, Peter A., and Sarason.

Temple, Stanley A., assignor, by mesne assignments, to Portable Industries, Inc., Cleveland, Ohio. Gun and projectile therefor. 2,470,117, May 17.

Tener, Wallis M., Lancaster, Pa. Clock hand removing tool. 2,470,327, May 17.

Terry, Charlee R., Tulsa, Okla. Burn-in tool. 2,470,194, May 17.

Texas Company, The, assignee: *See*—
Clarke, Louis A.
Stratford, William M.

Thomas, Albert G., Alexandria, Va. Automatic stove. 2,470,533, May 17.

Thomas, Albert G., Alexandria, Va. Circumferentially traveling type power-operated tire mounting and removing device. 2,470,534, May 17.

Thomas, Albert G., Lynchburg, Va. Electric iron with thermokinetic switch. 2,470,532, May 17.

Thomas, Albert G., Lynchburg, Va. Calculating machine. 2,470,535, May 17.

Thomas, Albert G., Lynchburg, Va. Electronic switch. 2,470,536, May 17.

Thomas, Thomas H., and E. R. Price, assignors to Bendix Aviation Corporation, South Bend, Ind. Booster unit for hydraulic pressure systems. 2,470,748, May 17.

Thompson, James G., Winston-Salem, N. C. Quarter boot. 2,470,195, May 17.

Thompson Products, Inc., assignee: *See*—
Alldredge, Marshall H.
Booth, James H.
Graham, Matthew P.

Thornefield, Geoffrey, London, England. Safety razor combined with blade conditioning means. 2,470,588, May 17.

Thrasher, William H., Birmingham, Ala. Electrical connector. 2,470,196, May 17.

Tide Water Associated Oil Company, assignee: *See*—
Hawes, Russell J.
Waugh, Stanley P.

Torkelson, Torkel E., Baldwin, N. Y., assignor to Associated Development & Research Corporation. Torque converter. 2,470,589, May 17.

Torsch, Charles E., Lancaster Township, Lancaster County, Pa., assignor to Radio Corporation of America. Electron beam deflection control system. 2,470,197, May 17.

Towle, Robert G., San Francisco, Calif. Drafting instrument for drawing ellipses. 2,470,328, May 17.

Transit Research Corporation, assignee: *See*—
Piron, Emil H.
Rossell, William T.

Traub, Ernest H., assignor to Philco Corporation, Philadelphia, Pa. Image forming projection with Schmidt-type optical system. 2,470,198, May 17.

Trevor, John B., Jr., Clinton, Md. Voltage multiplier. 2,470,118, May 17.

Trimmer, Russell S., Compton, Calif. Retractable golf bag cart. 2,470,272, May 17.

Tschumi, Otto, assignor to Autophon Aktiengesellschaft, Soleure, Switzerland. Remote-controlled automatic telephone for loud trafic. 2,470,590, May 17.

Turawald, Wolfgang, assignor to Nordberg Manufacturing Company, Milwaukee, Wis. Variable-capacity controller for compressors. 2,470,380, May 17.

Tyson, Charles W.: *See*—
Gohr, Edwin J., and Tyson.

Undy, Gustav E., assignor to Weltronic Company, Detroit, Mich. Electrical control system. 2,470,119, May 17.

Union Special Machine Company, assignee: *See*—
Le Vasconte, Harold J., and Quist.

United Aircraft Products, Inc., assignee: *See*—
Warrick, Edward C., and Crusan.

United Shoe Machinery Corporation, assignee: *See*—
Baker, Corwin W.
Hubbard, Arthur R.

United States of America, assignee: *See*—
Goehmann, Maurice H.

Universal Atlas Cement Company, assignee: *See*—
Ludwig, Norman C.

Universal Oil Products Company, assignee: *See*—
Linn, Carl B.
Schmerling, Louis.

University of Tennessee Research Corporation, The, assignee: *See*—
Rosenthal, Fritz.

Upton, Albertus: *See*—
Reese, Earl R., and Upton.

Urick, Robert J.: *See*—
Sherwood, Robert M., Urick, and Delassso.

Valentino, Peter, Brooklyn, N. Y. Umbrella rib tip protector. 2,470,381, May 17.

Van Brunt, John Deere, Company, assignee: *See*—
Hyland, William A.

Vanderbilt, Byron M., Westfield, and J. D. Hetchler, Rutherford, N. J.; said Vanderbilt assignor to Standard Oil Development Company, and said Hetchler assignor to Archer-Daniels-Midland Company, Minneapolis, Minn. Emulsion polymerization in the presence of selectively hydrogenated tallow soaps. 2,470,417, May 17.

Van Gilder, Carll F., Roselle, N. J., assignor to Standard Oil Development Company. Stabilization of low unsaturation isoolefinic polymers. 2,470,447, May 17.

Vanity Fair Mills, Inc., assignee: *See*—
Young, George O.

Vanni, Pierre G., Neuchatel, Switzerland. Regulating and feed apparatus for internal-combustion engines. 2,470,382, May 17.

Van Norman Company, assignee: *See*—
Hoddinott, William M.

Vapor Heating Corporation, assignee: *See*—
Rhodes, Lewis B., and Lehane.

Vendorlator Manufacturing Company, assignee: *See*—
Childers, Harry S.

Verner, Jules, Linden, N. J., assignor to Standard Oil Development Company. Oil skimming device. 2,470,418, May 17.

Viola, Paul A. and V., Bridgeport, Conn. Window control device. 2,470,591, May 17.

Viola, Vincent: *See*—
Viola, Paul A. and V.

Virtu, Inc., assignee: *See*—
Karfiol, Edward, and Roehm.

Visscher, Joan F., Buenos Aires, Argentina, assignor to Hartford National Bank and Trust Company, Hartford, Conn., trustee. Negative transconductance electrical discharge tube. 2,470,732, May 17.

Vitarama Corporation, The, assignee: *See*—
Waller, Fred, Dresser, Swain, and Wengel.

Vivian, George S., Surbiton, England. Carton and secondary closure therefor. 2,470,199, May 17.

Von Uffel, Murray G., West Los Angeles, Calif. Combined steering wheel and braking mechanism. 2,470,273, May 17.

Votour, James E.: *See*—
Cafrella, Orrin G., and Votour.

Voytech, Charles F., assignor to Crane Packing Company, Chicago, Ill. Balanced, cooled, and lubricated rotary seal. 2,470,419, May 17.

Wahlberg, Nils E., Chicago, Ill., assignor to Nash-Kelvinator Corporation, Kenosha, Wis. Automotive transmission. 2,470,274, May 17.

Wakeman, Clifford M., Flint, Mich. Device for stabilizing trailers. 2,470,383, May 17.

Waldes Kohinoor, Inc., assignee: *See*—
Kolbert, Oswald, and Messer.

Waldron, Walter J., Pomona, Calif. Doll or toy figure with encased radio apparatus. 2,470,384, May 17.

Walker, Ass W., Buffalo, N. Y. Automatically controlled marker to record movement and means to provide relative values. 2,470,121, May 17.

Walker, Brooks, Piedmont, Calif. Bombing from fast moving planes. 2,470,120, May 17.

Wallach, Irving D., Port Washington, assignor to Associated Development & Research Corporation, New York, N. Y. Shoe sole. 2,470,200, May 17.

Waller, Fred, Huntington, N. Y., W. R. Dresser, Long Hill, Conn., R. R. Swain, Huntington, and R. W. Wengel, Rochester, assignors to The Vitarama Corporation, Long Island City, N. Y. Control band for gunnery training apparatus. 2,470,592, May 17.

Wals, Claude W.: *See*—
Boseman, Virgil F., Sr., Wals, Griff, and Clausen.

Wannamaker, William H., Jr.: *See*—
Eckman, Donald P., and Wannamaker.

War, the United States of America as represented by the Secretary of, assignee: *See*—
Avila, Charles F.
Bancora, Mario E.
Campbell, Arthur W.
Elmore, William C., and Marshall.
Fry, Glenn A.
Holden, Lawrence T.

Warner, M. M., assignee: *See*—
Skala, Ljubomir W.

Warrender, Ralph, Sharon, Pa. Bobsled. 2,470,448, May 17.

Warrick, Edward C., Cincinnati, Ohio, and H. Crusan, Los Angeles, Calif., assignors to United Aircraft Products, Inc., Dayton, Ohio. Oil cooler. 2,470,667, May 17.

Warshaw, Nathaniel, Brookline, assignor to Market Forge Co., Everett, Mass. Rollerway conveyer. 2,470,275, May 17.

Watkins, Franklin M., Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y. Oil addend. 2,470,276, May 17.

Wauda, George E.: *See*—
Broeren, Frank L., Wauda, and Kuehl.

Waugh, Stanley P., Westfield, assignor to Tide Water Associated Oil Company, Bayonne, N. J. Mineral oil compositions. 2,470,537, May 17.

Weaver, Harry D., assignor to Hamilton Watch Company, Lancaster, Pa. Cap-securing means. 2,470,226, May 17.

Webb, George A.: *See*—
Corson, Ben B., and Webb.

Webb, Herbert J.: *See*—
Ludwig, Leon R., Webb, and Baker.

Webb, Paul S., and J. R. Koster, Boulder City, Nev., assignors to Processed Surfaces, Inc., New York, N. Y. Hardened silicone surfaced cooking implement. 2,470,593, May 17.

Weller, Peter B.: *See*—
Lewis, Albert M., and Weller.

Wels, Arthur, Chicago, Ill. Garment clasp. 2,470,122, May 17.

Wekeman, Stephen N., Saddle River Township, Bergen County, N. J., assignor to Sun Chemical Corporation, New York, N. Y. Optical lens unit with image reversing means. 2,470,277, May 17.

Well Surveys, Incorporated, assignee: *See*—
Scherbatskoy, Serge A.

Welch, Charles E.: *See*—
Ferguson, Charles S., and Welsh.

Weltronic Company, assignee: *See*—
Undy, Gustav E.

Wengel, Raymond W.: *See*—
Waller, Fred, Dresser, Swain, and Wengel.

Wenger, Russell J., North Hollywood, assignor, by mesne assignments, to J. W. Merrick, Los Angeles, Calif. Air hammer with ball-type tool retaining chuck. 2,470,385, May 17.

Wenner, Wilhelm: *See*—
Platt, John T., and Wenner.

Werner, John F., Tracy, Minn. Roof ventilator. 2,470,201, May 17.

West, Howard K.: *See*—
Berger, Emil J., and West.

West, James R., G. B. Hill, and M. E. McClellan, Ottumwa, Iowa, assignors to Deere Manufacturing Co. Baling press. 2,470,278, May 17.

Western Electric Company, Incorporated, assignee: *See*—
Moss, Earl C.
Zimmerman, Walter W.

Westinghouse Electric Corporation, assignee: *See*—
Biebesheimer, William B.
Cumming, James M.
Easley, Gilbert J., and Bonine.
Friedrich, Robert E.
Geiselman, Ralph A., and Cuttino.
Krings, Bernard J.
Kuhn, Edmund W.
Langer, Bernard F., and Wommack.
Ludwig, Leon R., Webb, and Baker.
McClellan, Cyril E.
Mershon, Clarence L.
Schaffel, Gerson S.
Schulman, Earl L., and Beller.
Sonnemann, William K.
Stein, Joseph M., and Eggleston.
Sterrett, Charles C.
Suffield, Frederick G.
White, Alfred B.
Wrathall, John R.

Wheeler, Carl L., Albuquerque, N. Mex. Ski. 2,470,227, May 17.

White, Alfred B., Murrysville, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Welding system. 2,470,668, May 17.

White, Blanche B.: *See*—
Seymour, George W., White, and Bellucci.

Whited, John E., Shawnee, Okla. Pipe racking apparatus. 2,470,279, May 17.

Whitney, Roy, Decatur, Ill. Tapering clip for hair clippers. 2,470,504, May 17.

Whittaker, Charles E.: *See*—
Goodwin, John S., and Whittaker.

Whitworth, Edward, West Kilbride, and J. C. Hornel, Ardrossan, Scotland, assignors to Imperial Chemical Industries Limited. Stabilized blasting explosive composition. 2,470,733, May 17.

Wickenden, Leonard, Westport, Conn. Filtering process. 2,470,202, May 17.

Wickenden, Leonard, Westport, Conn. Filter. 2,470,203, May 17.

Wico Electric Company, assignee: *See*—
Brownlee, Allen L.

Williams, Ferd E., Princeton, N. J., assignor to Radio Corporation of America. Phosphor materials. 2,470,449, May 17.

Williams, William A., London, England. Driving gear of multicylinder reciprocating-piston engines. 2,470,600, May 17.

Wilson, Fred E., assignor of one-half to G. O. Wray, Milwaukee, Wis. Pot type oil burner air heating furnace. 2,470,420, May 17.

Windus, Wallace, Bristol, Pa., assignor to John R. Evans & Company, Camden, N. J. Tanning with free formaldehyde and melamine simultaneously. 2,470,450, May 17.

Winkler, Albert H., and E. O. Wirth, assignors to Bendix Aviation Corporation, South Bend, Ind. Rotary expansible chamber pump. 2,470,670, May 17.

Winterburn, Fred, Cornwall, Ontario, assignor to Howard Smith Paper Mills Limited, Montreal, Quebec, Canada. Apparatus for controlling the speed of electric motors. 2,470,505, May 17.

Winther, Anthony: *See*—
Winther, Martin P. and A.

Winther, Martin P., Waukegan, Ill., and A. Winther, Kenosha, Wis., assignors to M. P. Winther, as trustee. Toroidal magnet field for dynamoelectric machines. 2,470,506, May 17.

Wirth, Emil O.: *See*—
Winkler, Albert H., and Wirth.

Wishon, Dewey W., Oak Ridge, Tenn. Radiator testing device. 2,470,204, May 17.

Withrow, Floyd E., Concord, Calif. Monolithic wall molding machine. 2,470,671, May 17.

Wolanske, Raymond, North Tonawanda, assignor to Hygrade Industries, Inc., Buffalo, N. Y. Pocket lighter for cigars and cigarettes. 2,470,734, May 17.

Wolfram, John N., and S. W. Packard, assignors to The Parker Appliance Company, Cleveland, Ohio. Four-piece hose coupling. 2,470,538, May 17.

Wolsey Limited, assignee: *See*—
Alexander, Peter.

Wommack, Kenneth L.: *See*—
Langer, Bernard F., and Wommack.

Wood, Arthur F.: *See*—
Coulter, John H., and Wood.

Wood, Elton J., Hopewell, N. J., assignor to Radio Corporation of America. Phosphors. 2,470,451, May 17.

Wood, Maurice L.: *See*—
Crampton, Donald K., and Wood.

Woodward, J. Guy, Princeton, N. J., assignor to Radio Corporation of America. Acoustic attenuator. 2,470,507, May 17.

Woody, Joseph R., Navy Yard, Charleston, S. C. Clip for pens and pencils. 2,470,421, May 17.

Wrathall, John R., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Rototrol scheme. 2,470,672, May 17.

Wrathall, John R., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Motor control system. 2,470,673, May 17.

Wray, George O., assignee: *See*—
Wilson, Fred E.

Wright, Mildred B., Berwyn, Ill. Drapery fixture. 2,470,422, May 17.

Wurlitzer, Rudolph, Company, The, assignee: *See*—
Eberman, Augustus H.
Sloan, Edward C.
Zaiser, William.

Wyandotte Chemicals Corporation, assignee: *See*—
Roderick, Howard F., and Zorn.

Wyld, James H.: *See*—
Lawrence, Lovell, Jr., and Wyld.

Wyss, Raymond C., Tillamook, Oreg. Lock for irrigation pipe joints. 2,470,539, May 17.

Young, George O., Robesonia, assignor to Vanity Fair Mills, Inc., Reading, Pa. Thread tension mechanism. 2,470,123, May 17.

Young, George O., Robesonia, assignor to Vanity Fair Mills, Inc., Reading, Pa. Thread letoff feeding mechanism. 2,470,124, May 17.

Young, George O., Robesonia, assignor to Vanity Fair Mills, Inc., Reading, Pa. Automatic beam letoff. 2,470,125, May 17.

Young, Henry B., assignor to Mission Manufacturing Company, Houston, Tex. Protective sleeve for pump rods. 2,470,540, May 17.

Young, Henry B., Houston, Tex. Slush pump piston. 2,470,541, May 17.

Young, Leonard W., Moor Park, assignor to Ingersoll Limited, London, England. Staple for door locks. 2,470,735, May 17.

Zaiser, William, Rockville Center, N. Y., assignor to The Rudolph Wurlitzer Company, Chicago, Ill. Piano casing. 2,470,674, May 17.

Zenith Radio Corporation, assignee: *See*—
Bell, John F.
Bennin, Zolmon.

Zimmerman, Walter W., assignor to Western Electric Company, Incorporated, New York, N. Y. Electrical power supply. 2,470,542, May 17.

Zorn, Fritz M.: *See*—
Roderick, Howard F., and Zorn.

LIST OF PLANT INVENTIONS

Honey locust tree. J. D. Siebenthaler. 836, May 17.
Lilac plant. W. H. Clarke. 837, May 17.

LIST OF DESIGN INVENTIONS

Applicator, Liquid wax. E. Belanger and G. Mercier. 153,757, May 17.
Ash tray. L. A. Revell. 153,824, May 17.
Atomizer. A. Platt. 153,759, May 17.
Bag or like receptacle. A. Hochner. 153,799, May 17.
Bank, Pig. S. Dubiner. 153,775, May 17.
Barrette. N. L. Solomon. 153,831–2, May 17.
Base, Floor lamp. I. I. Gotliffe. 153,790, May 17.
Bottle. R. G. Gulley. 153,792, May 17.
Bracelet, Extensible watch. C. Schaeffer. 153,827, May 17.
Buckle or similar article, Belt. O. A. Thoresen. 153,836, May 17.
Cabinet for lubricating equipment. A. P. Fox and A. D. Reisert. 153,782, May 17.
Cabinet, Therapeutic. G. H. Hansen, G. J. Schroer, and C. J. Curtis. 153,794, May 17.
Cap and eye shield, Combination. S. Feldman. 153,778, May 17.
Case, Watch. H. Dinhofer. 153,771–4, May 17.
Chain for a bracelet or similar article. M. Chernow. 153,764, May 17.
Chain, Jewelry. P. Hardach. 153,753–5, May 17.
Chain, Key. P. S. Zahora. 153,839, May 17.
Chair, Child's. E. A. Ward. 153,838, May 17.
Charm or similar article. K. A. Harrington, 153,795, May 17.
Chest, Folding jewel. C. C. Settle. 153,828, May 17.
Cleaner for automobiles or the like, Steam. A. C. Fletcher. 153,780, May 17.
Clip finding, Ear. K. F. Hoeckele. 153,800, May 17.
Coffee maker or similar article. G. Robbiati. 153,826, May 17.
Container for cosmetics and closure therefor, Combination. H. F. P. Hageman, V. I. Mora, and H. C. Richardson. 153,703, May 17.
Cover plate, Electrical push-button. W. Huppert. 153,803, May 17.
Crutch. C. B. Neptune. 153,818, May 17.
Desk writing unit. L. J. Campbell. 153,763, May 17.
Display box. J. Heim. 153,797, May 17.
Display device, Bubble blowing. H. Margolis. 153,814, May 17.
Display sign. G. C. Gettelman. 153,784, May 17.
Doll head. C. H. Boughman. 153,761, May 17.
Dolly, Scrub bucket. F. H. Gruettner. 153,791, May 17.
Fixture, Lighting. E. B. Kirk. 153,809, May 17.
Fixture, Lighting. J. S. Walsh. 153,837, May 17.
Flask. C. A. Gladstone. 153,786, May 17.
Font of sign letters or similar article. J. E. Baker. 153,752, May 17.
Frame, Handbag. A. J. Fieres. 153,779, May 17.
Frame or the like, Picture. M. Y. Goldberg. 153,787–8, May 17.
Frame, Picture. E. Olszewski. 153,819, May 17.
Grinder. M. K. Apple. 153,751, May 17.
Hairpin holder and opening fixture, Combined. J. A. Bennett. 153,758, May 17.
Hairpin receptacle and opener, Combined. J. J. Koslap. 153,810, May 17.
Handbag. E. Hogan. 153,760, May 17.
Handbag. L. Kaufman. 153,808, May 17.
Handle for cooking utensils. A. D. Mortrude. 153,817, May 17.
Handle, Stove. R. F. Heffernan. 153,706, May 17.
Hook, Salvage. H. J. Elmmerman. 153,776, May 17.
Housing for X-ray tube and blower. E. R. Goldfield and H. C. Schiring. 153,789, May 17.
Housing, Vending machine. C. A. Hokinson. 153,802, May 17.
Knife or similar article. C. H. Alexander. 153,740, May 17.
Lace. R. L. Anderson. 153,750, May 17.
Lamp, Glow. A. H. Hoffeditz. 153,801, May 17.
Lamp, Nursery. E. Brenner. 153,762, May 17.
Lighter, Cigarette. L. Florman. 153,781, May 17.
Lock, Flexible cable. E. G. Reese and G. B. Fenstermaker. 153,823, May 17.
Mold for food patties. J. H. Osgood and W. A. Goodwin. 153,820, May 17.
Negligee. V. Giovagnoni. 153,785, May 17.
Perfume bottle and container, Combined. R. Denis. 153,767, May 17.
Plaque, Wall. D. D. Stockdale. 153,834, May 17.
Polisher. C. Karstadt. 153,807, May 17.
Pull, Drawer. C. W. Sundberg and M. Ferar. 153,835, May 17.
Ring, Finger. H. J. A. Skipp. 153,829–30, May 17.
Seat, Combined fishing reel and rod. E. P. Hurd. 153,804, May 17.
Servicing unit, Automobile. B. A. Beaver. 153,756, May 17.
Shell for a bracelet or similar article. E. G. O. Anderson. 153,747, May 17.
Shell for an expansible bracelet or similar article, Top. E. G. O. Anderson. 153,748–9, May 17.
Shoe or similar article. H. Diamant. 153,708–70, May 17.
Signal for motor vehicles or the like, Directional. S. Pedersen, F. W. Neumeyer, and L. P. Helmey. 153,821, May 17.
Signal light and ash receiver, Combined. A. C. Conner. 153,766, May 17.
Signal light for motor vehicle or similar article, Portable. F. K. Hussey. 153,805, May 17.
Sinker or the like, Fishing line. C. L. Hinkson. 153,798, May 17.
Spoon or similar article of flatware. A. A. Eisenberg. 153,777, May 17.
Spoon, Scoop. C. D. George. 153,783, May 17.
Stand, Lamp. E. M. St. John. 153,833, May 17.
Support for manicuring operations, Finger. R. J. McKee. 153,815, May 17.
Teakettle. A. D. Mortrude. 153,816, May 17.
Television antenna. R. Hiderman. 153,825, May 17.
Textile fabric. J. H. Abt. 153,745, May 17.
Toy pistol. P. Lim. 153,811, May 17.
Trimmer, Hedge. I. Jepson. 153,806, May 17.
Umbrella. I. Lusterman. 153,812–13, May 17.
Vine holder and wall bracket therefor, Combined. H. J. Pruchnow. 153,822, May 17.
Wagon with dump body, Child's. A. J. Chroninger. 153,765, May 17.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 17TH DAY OF MAY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Absorption process. R. M. Jackson and P. J. Harrington. 2,470,438, May 17.
Actuating means for simulated radio compass on aviation trainers. F. O. Ibiach. 2,470,101, May 17.
Adjustable cutting and marking die. G. S. Bostock and T. G. Sharples. 2,470,135, May 17.
Adsorption process, Continuous. W. H. Claussen and W. H. Shiffer. 2,470,339, May 17.
Agitator for apparatus subjecting liquid to electrical potential between electrodes, Automatic. H. L. Gordon. 2,470,741, May 17.
Aircraft, Jet-propelled. J. L. Haight, Jr. 2,470,348, May 17.
Aircraft, Tandem wing. T. C. Campbell and E. V. Hall. 2,470,602, May 17.
Aircraft release device. A. H. Eberman. 2,470,294, May 17.
Air feeder construction, Fireplace. R. H. Carter. 2,470,430, May 17.
Air flow control means. F. Honerkamp and F. J. Kurth. 2,470,488, May 17.
Airplane wing leading edge construction. R. E. Barrick and A. Morison. 2,470,128, May 17.
Air washer. G. E. Fenn. 2,470,345, May 17.
Alarm particularly for storage battery electrolytes, Liquid level. E. J. Marcou. 2,470,630, May 17.
Aligning apparatus, Printing form. A. J. Hoerth. 2,470,437, May 17.
Alkali-alkaline earth hydroxide-impregnated carbon catalyst and its preparation. A. G. Carter. 2,470,688, May 17.
Alpha-halogen alkyl tetrasoles and obtaining the same, Substituted. E. K. Harvill and R. M. Herbst. 2,470,084, May 17.
Alternating current impedance meter. R. G. Piety. 2,470,412, May 17.
Alternating current load indicator. R. L. Briggs. 2,470,334, May 17.
Aluminium, Production and refining of. P. Gross, 2,470,306, May 17.
Amino alkyl tetrasoles, Substituted. E. K. Harvill and E. M. Herbst. 2,470,085, May 17.
Ammunition box. C. T. Diaper. 2,470,476, May 17.
Analytical apparatus. A. G. Jordan. 2,470,353, May 17.
Analysing method and apparatus. D. P. Eckman and W. H. Wannamaker, Jr. 2,470,434, May 17.
Anchor, Earth. O. F. Tallman and K. R. Bunde. 2,470,326, May 17.
Antisplitting means for articles of timber. G. W. Muller. 2,470,514, May 17.
Anvil, Adjustable. R. F. Hollis. 2,470,487, May 17.
Apparatus for and method of dressing cylindrical surfaces. C. W. Mott. 2,470,221, May 17.
Apparatus for and method of feeding molten glass. W. T. Honiss. 2,470,558, May 17.
Apparatus for applying wax to thin sheets. H. Q. R. Crowder and E. A. Bronson. 2,470,093, May 17.
Apparatus for carrying out catalytic reactions. E. J. Gohr and C. W. Tyson. 2,470,395, May 17.
Apparatus for casting stereotype plates. C. S. Crafts. 2,470,146, May 17.
Apparatus for comminution of molten metals. M. H. Meighan and K. N. Brown. 2,470,589, May 17.
Apparatus for contacting a liquid and a vapor. T. A. Gadwa and D. B. Flaws. 2,470,483, May 17.
Apparatus for controlling the speed of electric motors. F. Winterburn. 2,470,595, May 17.
Apparatus for cooling air by the evaporation of liquids. F. C. Simonds. 2,470,657, May 17.
Apparatus for cooling hollow glassware. W. E. Aksomitas. 2,470,226, May 17.
Apparatus for deleading gasoline. J. D. Morgan, S. R. Merley, and W. E. Smith. 2,470,634, May 17.
Apparatus for drawing sheet glass. D. E. Sharp. 2,470,526, May 17.
Apparatus for forming precision-bore tubing or the like. N. Brewer. 2,470,234, May 17.
Apparatus for handling chipper knives. S. D. Payser. 2,470,261, May 17.
Apparatus for heating metallic articles of large surface area to volume ratio, Radio frequency. R. A. Bierwirth. 2,470,285, May 17.
Apparatus for working plastic material. C. H. Parmelee and A. J. Briggs. 2,470,638, May 17.
Appliance, Automatic coal dumping. F. E. Christopher. 2,470,472, May 17.
Apron, Long draft. B. R. Billmeyer. 2,470,599, May 17.
Arc welding apparatus and method, Semiautomatic. K. K. Madsen. 2,470,178, May 17.
Armrest and stanchion. W. T. Rossell. 2,470,649, May 17.
Armature construction for dynamoelectric machines. L. Roberts. 2,470,647, May 17.
Arrangement for cooling combustion chambers. H. Pfenninger. 2,470,184, May 17.
Artificial foot. S. E. Fogg. 2,470,480, May 17.
Ash tray. J. Leaman. 2,470,501, May 17.
Assembly for railroad track equipment, Guardrail. L. Spencer. 2,470,662, May 17.
Attachment for caskets, Body positioner. E. R. Reese and A. Upton. 2,470,321, May 17.
Attachment for conventional internal-combustion engines, Electric circulatory water heater. E. Haugland. 2,470,495, May 17.
Attachment for dining tables, Revolving. B. C. Hartzler. 2,470,165, May 17.
Attachment for tractor drawbars, Lift. U. S. Felsing. 2,470,242, May 17.
Attachment for wheel stretchers, Intravenous stand. E. B. Scudder. 2,470,524, May 17.
Attenuator, Acoustic. J. G. Woodward. 2,470,597, May 17.
Automatic air gauge. A. C. Hallmark. 2,470,164, May 17.
Automatic egg boiler. N. Desjardins. 2,470,548, May 17.
Automatic inverse modulation valve. S. J. Levine. 2,470,503, May 17.
Automatic release collar clamp. E. N. Neckel. 2,470,516, May 17.
Baby bottle holder. L. S. Foo. 2,470,694, May 17.
Baby's bottle holder. J. S. Swaim. 2,470,379, May 17.
Baling press. J. E. West, G. B. Hill, and M. E. McClellan. 2,470,278, May 17.
Ball type pressure relief valve. J. M. Roth. 2,470,372, May 17.
Bar system and lamp fitting comprising such a bar system. J. Bergmans, C. A. Lamberts, and C. H. J. Anderson. 2,470,284, May 17.
Barbecue, Portable electric. J. H. Reichart. 2,470,645, May 17.
Base, Swivel chair. E. S. Harter. 2,470,397, May 17.
Battery post clamp. H. R. Martin. 2,470,104, May 17.
Beam letoff, Automatic. G. O. Young. 2,470,125, May 17.
Bearing: *See*—
Electric motor bearing.
Bearing construction, Self-aligning. T. Y. Korsgren. 2,470,354, May 17.
Belt and radio receiver, Antenna. O. G. Cafrella and J. E. Votour. 2,470,687, May 17.
Bench, Planer. V. D. and E. Belfield. 2,470,330, May 17.
Bettering pelts and hides. G. A. Rubissow. 2,470,111, May 17.
Bicycle frame. H. N. Maier and T. H. Pickering. 2,470,441, May 17.
Bit: *See*—
Cone type well drilling bit.
Blind stitching means. S. J. Birginal. 2,470,286, May 17.
Block: *See*—
Snatch block.
Block arrangement, Grinding. J. M. Stryhal. 2,470,530, May 17.
Board: *See*—
Chance controlled game board.
Boat, Swimmer's. G. W. Rydner. 2,470,725, May 17.
Bobsled. R. Warrender. 2,470,448, May 17.
Boiler: *See*—
Automatic egg boiler.
Bombing from fast moving planes. B. Walker. 2,470,120, May 17.
Book, Match. G. Russo. 2,470,523, May 17.
Booster unit for hydraulic pressure systems. T. H. Thomas and E. R. Price. 2,470,748, May 17.
Boot, Quarter. J. G. Thompson. 2,470,195, May 17.
Booth, Egg candling. P. J. Blackwell. 2,470,462, May 17.
Bottle rack. M. H. Fitzgerald. 2,470,154, May 17.
Box: *See*—
Ammunition box. Folding box.
Collapsible box.
Bracket: *See*—
Combined adjustable curtain and blind bracket. Windshield visor mounting bracket.
Festoon bracket.
Bracket assembly for cup dispensers, Mounting. C. D. Sims. 2,470,528, May 17.
Buckle and bottle cap remover, Combined belt. R. C. Dennison. 2,470,606, May 17.
Burn-in tool. C. R. Terry. 2,470,194, May 17.
Burner: *See*—
Vaporising type oil burner. Vertical semicylindrical burner.

Burner with removable cap, Double gas. E. H. Mueller. 2,470,713, May 17.
Burner with vaporising assembly, Liquid fuel. J. L. Breese. 2,470,682, May 17.
Butadienes, Emulsion polymerising. G. P. Mack. 2,470,629, May 17.
Calcined diatomaceous earth product. C. A. Frankenhoff. 2,470,346, May 17.
Calcining apparatus. V. J. Asbe. 2,470,543, May 17.
Calcium carbonate-silicate pigment product and making same, Complex. H. F. Roderick and F. M. Zorn. 2,470,577, May 17.
Calculating machine. A. G. Thomas. 2,470,535, May 17.
Calculator. H. B. Kohn and M. Schneiderman. 2,470,495, May 17.
Calendar, Perpetual. I. A. Farr. 2,470,692, May 17.
Caliper, Inside thread. J. D. Lee. 2,470,254, May 17.
Camera shutter. A. W. Campbell. 2,470,139, May 17.
Canopy, Extensible. R. L. Campbell. 2,470,337, May 17.
Cap: *See*—
Ventilator cap.
Cap-securing means. H. D. Weaver. 2,470,226, May 17.
Carboxythiophanes and preparing same. B. R. Baker. 2,470,739, May 17.
Card for bingo or lotto games, Indicator. H. Heyman. 2,470,310, May 17.
Carrier: *See*—
Textile thread carrier.
Carrier and display pen, Combination animal. J. Powels. 2,470,223, May 17.
Cart, Retractable golf bag. R. S. Trimmer. 2,470,272, May 17.
Carton and secondary closure therefor. G. S. Vivian. 2,470,199, May 17.
Case: *See*—
Key case.
Catalysts of the silica-alumina type, Production of. C. C. Chapman and H. V. Hendrix. 2,470,142, May 17.
Catalytic dealkylation of alkylated compounds. C. W. Montgomery and W. A. Horne. 2,470,712, May 17.
Caustic resistant etherified phenolformaldehyde resins. H. L. Bender and A. G. Farnham. 2,470,130, May 17.
Cellulose esters, Rapid ripening of. G. W. Seymour, B. B. White, and A. J. Bellucci. 2,470,191–2, May 17.
Cement and making the same, Slow setting. N. C. Ludwig. 2,470,505, May 17.
Chair: *See*—
Collapsible wheel chair. Reclining chair.
Chance controlled game board. N. McLeod. 2,470,632, May 17.
Charge forming device. F. C. Mock. 2,470,098, May 17.
Chime device, Electric. G. L. Bossard. 2,470,600, May 17.
Chromium ammonium chloride complexes, Production of. L. W. Skala. 2,470,378, May 17.
Chuck, Self-locking. H. L. Proctor. 2,470,720, May 17.
Circuit: *See*—
Spread band tuning circuit.
Circuit breaker. J. M. Cumming. 2,470,604, May 17.
Circuit breaker. G. J. Easley and R. O. Bonine. 2,470,608, May 17.
Circuit interrupter. R. E. Friedrich. 2,470,611, May 17.
Circuit interrupter. L. R. Ludwig, H. J. Webb, and B. P. Baker. 2,470,628, May 17.
Clamp: *See*—
Automatic release collar Battery post clamp.
clamp.
Clasp, Garment. A. Weis. 2,470,122, May 17.
Clip: *See*—
Furring clip.
Clip for fountain pens and other articles. D. Coyne. 2,470,431, May 17.
Clip for hair clippers, Tapering. R. Whitney. 2,470,594, May 17.
Clip for pens and pencils. J. R. Woody. 2,470,421, May 17.
Clip retaining tool. P. P. Hepp. 2,470,309, May 17.
Clipper, Hair. C. E. Carter. 2,470,287, May 17.
Clock hand removing tool. W. M. Tender. 2,470,327, May 17.
Closure and mask for cathode-ray tubes, Unitary. D. Jackson. 2,470,620, May 17.
Cloth inspection and banding system. O. J. Norton. 2,470,575, May 17.
Clothes drier. C. L. Richardson. 2,470,646, May 17.
Coating mechanism, Spray. G. G. Schneider and C. J. Hughes. 2,470,580, May 17.
Coatings for foods, Preservative. W. J. Allingham. 2,470,281, May 17.
Coffee maker. R. L. Smith. 2,470,323, May 17.
Coiling machine for strip material. B. S. Burrell. 2,470,235, May 17.
Collapsible box. A. M. Lewis and P. B. Weller. 2,470,174, May 17.
Collapsible wheel chair. F. Mustafa. 2,470,258, May 17.
Comb device, Hair. N. Gambino. 2,470,157, May 17.
Combined adjustable curtain and blind bracket. J. J. Rohleder. 2,470,648, May 17.
Combustion system for internal-combustion engines, Dual fuel. H. F. Shepherd. 2,470,747, May 17.
Commutator. M. Y. Eck. 2,470,096, May 17.
Compensator for aerial camera lenses, Automatic altitude and pressure. C. F. Avila. 2,470,455, May 17.
Composition for treating metallic wear surfaces. H. M. Bramberry. 2,470,136, May 17.
Compounds by crystallisation, Separation of. W. Swietoslawski and J. R. Anderson. 2,470,116, May 17.
Compressor, Sliding vane rotary. C. Shorrock. 2,470,656, May 17.
Compressors, Cooling and lubrication of. M. C. Shaw. 2,470,655, May 17.
Computer. M. L. Greenough. 2,470,303, May 17.
Condensing fatty acid halides with aromatic acid halides. E. Lieber and A. F. Cashman. 2,470,504, May 17.
Cone type well drilling bit. J. S. Goodwin and C. E. Whittaker. 2,470,695, May 17.
Connection device, Electrical. H. E. Page. 2,470,320, May 17.
Connector: *See*—
Electrical connector.
Contacting material, Industrial. R. C. Scofield. 2,470,652, May 17.
Container: *See*—
Currency container.
Container having closure locking means, Dispensing. C. O. Ball. 2,470,386, May 17.
Contrast measuring apparatus having relatively rotatable polarising elements for optical sighting instruments. G. A. Fry. 2,470,186, May 17.
Control apparatus for radio systems and the like, Selective. R. W. May. 2,470,587, May 17.
Control band for gunnery training apparatus. F. Waller, W. R. Dresser, R. R. Swain, and R. W. Wengel. 2,470,592, May 17.
Control for gaseous burners, Safety thermostatic. M. Rowan. 2,470,268, May 17.
Control for variable displacement pumps. W. M. Hoddinott. 2,470,617, May 17.
Control means for towel cabinets. L. L. Price. 2,470,186, May 17.
Control mechanism for automatic firearms, Firing rate. A. Gasda. 2,470,158, May 17.
Control system, Dynamic braking. B. J. Krings. 2,470,624, May 17.
Control system, Electrical. G. E. Undy. 2,470,119, May 17.
Control system, Electron beam deflection. C. E. Torsch. 2,470,197, May 17.
Control system for hydraulic pumps supplying hydraulic fluid to double-acting rams of hydraulic presses. H. F. MacMillin. 2,470,357, May 17.
Control system, Relief valve. R. K. Sedgwick. 2,470,588, May 17.
Control system, Temperature. C. L. Mershon. 2,470,633, May 17.
Controller for compressors, Variable-capacity. W. Turnwald. 2,470,380, May 17.
Controlling system, Wattage. L. F. Bird. 2,470,480, May 17.
Converter, Torque. T. E. Torkelson. 2,470,589, May 17.
Conveyer carrier blades with equalizer tops. E. A. Lerner. 2,470,253, May 17.
Conveyer, Current. E. W. Preble. 2,470,521, May 17.
Conveyer, Rollerway. N. Warshaw. 2,470,275, May 17.
Conveyer, Rotary. C. N. Hoyler and R. A. Bierwirth. 2,470,311, May 17.
Conveyer system for cargo airports. J. González and Y. Meer. 2,470,096, May 17.
Cooler: *See*—
Oil cooler.
Cooler, including agitator motor and heat removing device therefor, Liquid. M. W. Fish. 2,470,551, May 17.
Cooling the internal surface of a bottle, jar or other hollow glass article, T. D. Green. 2,470,245, May 17.
Corner construction. R. Klomparens. 2,470,403, May 17.
Couch frame. F. J. Schulthels. 2,470,525, May 17.
Counting system, Electronic. W. P. Overbeck. 2,470,716, May 17.
Coupling: *See*—
Four-piece hose coupling. Quick-action coupling.
Hose coupling.
Permanent magnet field coupling.
Coupling device, Disconnectible. N. B. Murphy. 2,470,317, May 17.
Coupling for tubes. W. Maky. 2,470,508, May 17.
Crankshaft lathe. W. F. Groene, H. J. Siekmann, and W. R. Meyer. 2,470,304, May 17.
Crystal, Piezoelectric. W. C. Elmore and J. F. Marshall. 2,470,609, May 17.
Crystal unit, Temperature compensated. H. M. Bach. 2,470,738, May 17.
Crystals, Finishing piezoelectric. H. M. Bach. 2,470,737, May 17.
Currency container. D. L. Moody and H. Renek. 2,470,362, May 17.
Cutter: *See*—
Glass cutter.
Cutting machine, Patch. V. E. Anderson. 2,470,229, May 17.
Cyclopropyl furyl propenone. J. W. Hansen and C. C. Cassil. 2,470,346, May 17.
Damper winding for dynamoelectric machines. A. W. Rankin. 2,470,522, May 17.

Deburring and polishing apparatus. E. E. Cook and H. J. Sadler. 2,470,340, May 17.
Decolorization and clarification of sugar liquors. A. R. Bolkcrt and G. G. Halvorsen. 2,470,332, May 17.
Dehydrogenation process. B. B. Corson and G. A. Webb. 2,470,092, May 17.
Demineralizing. F. I. L. Lawrence. 2,470,500, May 17.
Density responsive device. E. A. Haase and J. A. Bolt. 2,470,742, May 17.
Dental means and method. E. E. Beers. 2,470,679, May 17.
Deodorizer and making same, Carbonaceous. R. L. McHatton. 2,470,180, May 17.
Detection of impurities. R. D. McDill. 2,470,511, May 17.
Detector, Angle modulated carrier wave. G. C. Szikiai. 2,470,731, May 17.
Detector circuits, Limiting. M. G. Crosby. 2,470,240, May 17.
Detector, Distillation vapor loss. A. A. Andreasen and G. M. Rust. 2,470,230, May 17.
Detector, Weft. S. F. Siciliano. 2,470,527, May 17.
Device for measuring the thickness of walls or the like subject to erosion. H. Y. Lankford. 2,470,408, May 17.
Device for optically checking dirigible wheels. T. Carrigan, H. G. Holmes, and C. A. Shoemaker. 2,470,090, May 17.
Device for stabilizing trailers. C. M. Wakeman. 2,470,383, May 17.
Diamond abrasive articles, Manufacture of. J. N. Kuzmick. 2,470,440, May 17.
Die: *See*—
Adjustable cutting and marking die.
Diphenylamino compounds. J. H. Dickey and J. G. McNally. 2,470,095, May 17.
Direction indicator. S. Gabrielson. 2,470,482, May 17.
Discharge device with internal capacitor, Electric. H. R. Cummings. 2,470,605, May 17.
Dispenser: *See*—
Powdered medicine dispenser.
Towel dispenser.
Dispenser for adhesive tapes. V. L. De Luisi and C. F. Murtaugh. 2,470,342, May 17.
Distillation of alcohols containing impurities less soluble in water. J. A. Patterson. 2,470,222, May 17.
Distillation of alcohols from aqueous mixtures of alkyl sulfates and sulfuric acid. F. M. Archibald. 2,470,206, May 17.
Doctor blade mounting. L. Hornbostel. 2,470,400, May 17.
Doll or toy figure with encased radio apparatus. W. J. Waldron. 2,470,384, May 17.
Door closing device. F. H. Barger. 2,470,283, May 17.
Drier: *See*—
Clothes drier.
Drive mechanism. E. Y. Seborg. 2,470,415, May 17.
Driving and braking mechanism, Power-operated. E. R. Lochman. 2,470,103, May 17.
Driving mechanism, Spring-operated. A. Allan and J. Small. 2,470,675, May 17.
Dual check valve. G. E. Carleton. 2,470,471, May 17.
Dust collecting apparatus. J. H. Burke. 2,470,601, May 17.
Dye, Monoazo. J. H. Dickey and J. G. McNally. 2,470,094, May 17.
Ejector mechanism for retorts. H. Richter. 2,470,266, May 17.
Ejector type socket wrench. F. Holben. 2,470,309, May 17.
Electric cam snap switch. A. C. Gaynor. 2,470,613, May 17.
Electric fishing reel. D. A. Luton and K. M. Johnson. 2,470,507, May 17.
Electric motor bearing. L. B. Richardson. 2,470,264, May 17.
Electric pressure indicator. S. G. Nevius. 2,470,714, May 17.
Electrical apparatus. L. T. Holden. 2,470,618, May 17.
Electrical connector. W. H. Thrasher. 2,470,196, May 17.
Electrical outlet box attaching tool. S. A. Moore. 2,470,512, May 17.
Electrode, Collet type. J. H. Coulter and A. F. Wood. 2,470,603, May 17.
Electronic switch. A. G. Thomas. 2,370,536, May 17.
Emulsion polymerization in the presence of selectively hydrogenated tallow soaps. B. M. Vanderbilt and J. D. Hetchler. 2,470,417, May 17.
Engine combustion controlling device. C. W. MacMillan. 2,470,709, May 17.
Engine plant, Including a scavenging compressor driven by an exhaust gas turbine, Internal-combustion. J. E. Johansson. 2,470,702, May 17.
Ethers of oximino acid chlorides. W. H. Hartung. 2,470,083, May 17.
Excavating machine. M. H. Cramer. 2,470,147, May 17.
Exercising device. J. D. Bell. 2,470,544, May 17.
Expansion flange. J. C. and J. C. Hobbs, H. 2,470,107, May 17.
Exploration by soil analysis. L. Horvitz. 2,470,401, May 17.
Explosive composition, Stabilized blasting. E. Whitworth and J. C. Hornel. 2,470,733, May 17.
Extractor: *See*—
Motorized pressure juice extractor.
Fastener: *See*—
Slide fastener.
Fastener. W. Dana. 2,470,344, May 17.
Fastening, Plastic. P. C. Roche. 2,470,723, May 17.
Feedbox, Magazine. J. R. Botten. 2,470,463, May 17.
Fentoon bracket. J. H. Boye. 2,470,233, May 17.
Film gauge. C. W. Morse and H. C. Delchert. 2,470,513, May 17.
Film identifying and punching device. M. E. Collins. 2,470,291, May 17.
Filter. L. Wickenden. 2,470,203, May 17.
Filtering process. L. Wickenden. 2,470,202, May 17.
Fire alarm. I. O. Moberg. 2,470,711, May 17.
Fire extinguisher, Automatically operable. W. L. Roessner. 2,470,371, May 17.
Fish backbone removing machine. A. L. Christiansen, 2,470,289, May 17.
Fitting for fiber pipes. G. F. Haddican. 2,470,308, May 17.
Fixture, Drapery. M. R. Wright. 2,470,422, May 17.
Fixture, Rotary turret type workholding. W. A. Carlson. 2,470,429, May 17.
Flaw detection. W. C. Darrah. 2,470,341, May 17.
Flue stop, Inside. R. Dozier. 2,470,152, May 17.
Fluid and using the same, Well washing. W. E. Bergman. 2,470,132, May 17.
Fluid, Cutting. H. L. Leland. 2,470,405, May 17.
Fluid fuel burning floor furnace. J. S. Johnson. 2,470,247, May 17.
Fluid beater. E. Freeman. 2,470,481, May 17.
Foam-forming composition, Stabilized. J. M. Perri. 2,470,719, May 17.
Folding box. J. Srofe. 2,470,270, May 17.
Folding pedal wrench. A. P. Rippenbein. 2,470,414, May 17.
Food preparations from potatoes and similar farinaceous tubers, Production of. M. C. Schaul. 2,470,374, May 17.
Formaldehyde condensation products of mercaptans and making same. M. W. Harman. 2,470,555, May 17.
Four-piece hose coupling. J. N. Wolfram and S. W. Packard. 2,470,538, May 17.
Frame: *See*—
Bicycle frame.
Couch frame.
Frame and brake support structure, Side. C. J. Clasen. 2,470,237, May 17.
Frame for dynamoelectric machines. J. Nader. 2,470,408, May 17.
Friction bolster spring. C. P. Leese. 2,470,172, May 17.
Friction material. R. Schaefer. 2,470,209, May 17.
Froth flotation of oxide iron ore. F. D. DeVaney. 2,470,150, May 17.
Fuel feed control. J. W. Miller and R. E. Fell. 2,470,572, May 17.
Furfuryl alcohol compounds. E. Glycofrides. 2,470,394, May 17.
Furnace: *See*—
Fluid fuel burning floor furnace.
Reverberatory furnace.
Pot type oil burner air heating furnace.
Furniture. H. Sebel. 2,470,113, May 17.
Furring clip. S. J. Radeke. 2,470 369, May 17.
Game apparatus. F. L. Geary. 2,470,159, May 17.
Game board and apparatus. F. E. Green. 2,470,302, May 17.
Game, Pocketed ball. T. B. Stillman. 2 470,325, May 17.
Gang operated switch. J. A. Pollock and E. H. Coppinger. 2,470,576, May 17.
Garment, Maternity. P. Anslender. 2,470,678, May 17.
Gasoline, Production of high octane number aviation. K. M. Purdy. 2,470,445, May 17.
Gathering machine. J. G. Herrmann. 2,470,557, May 17.
Gauge: *See*—
Automatic air gauge.
Liquid level gauge.
Film gauge.
Gauge for checking the positions of parts mounted on the inner peripheries of cylindrical articles. E. C. Moss. 2,470,635, May 17.
Gauge for laying asphalt shingles. H. P. Peters. 2,470,183, May 17.
Gauging Epparatus. E. C. Moss. 2,470,636, May 17.
Gear of multicylinder reciprocating-piston engines, Driving. W. A. Williams. 2,470,669, May 17.
Generator brush tool. R. K. Clark. 2,470,091, May 17.
Geophysical prospecting, Method and apparatus for. F. P. Hochgesang and C. H. Schlesman. 2,470,743, May 17.
Glass cutter. G. A. Philippe. 2,470,444, May 17.
Glass, Making heated window. H. R. Marini. 2,470,509, May 17.
Glass, Manufacturing. L. V. Black. 2,470,461, May 17.
Glass, Welding. M. R. Shaw, Jr. 2,470,376, May 17.
Glycidyl ester copolymers. H. P. Staudinger, D. Faulkner, and M. D. Cooke. 2,470,324, May 17.
Golf ball tee. E. J. Nelson. 2,470,574, May 17.
Grilles for radio sets, Making. C. A. Bauer and W. A. Barnes. 2,470,380, May 17.
Grinder, Saw. J. R. Chrysl. 2,470,290, May 17.
Gun and projectile therefor. S. A. Temple. 2,470,117, May 17.

Gun, Probe pressure. E. G. Chilton. 2,470,338, May 17.
Gun, Spray. D. J. Peeps. 2,470,718, May 17.
Halogenation of aromatic hydrocarbons. A. S. Bronjes and M. J. P. Bogart. 2,470,336, May 17.
Hammer with ball-type tool retaining chuck, Air. R. J. Wenger. 2,470,385, May 17.
Harvester, Beet. V. F. Boseman, Sr., C. W. Walz, R. D. Griff, and H. F. Clausen. 2,470,211, May 17.
Head for air lifts, Eduction. J. A. Hersol. 2,470,639, May 17.
Heat control system, Sensible. L. B. Rhodes and T. J. Lehane. 2,470,188, May 17.
Heater: *See*—
Fluid heater.
Heating and cooking apparatus. T. H. Rankin. 2,470,446, May 17.
Heating apparatus, Forced air and gravity circulating. J. W. Miller. 2,470,571, May 17.
Heating device adapted to electric ranges. A. W. McIntyre. 2,470,181, May 17.
Heating unit, Electric. S. G. Olivares. 2,470,715, May 17.
Heterocyclic amines. J. T. Platt and W. Wenner. 2,470,108, May 17.
Heterocyclic amines. J. T. Platt and W. Wenner. 2,470,109, May 17.
Hitch, Wagon tongue. R. W. Suhl and E. C. Marxmiller. 2,470,531, May 17.
Hogshead, Tobacco. H. G. Bell. 2,470,459, May 17.
Holder: *See*—
Baby bottle holder.
Multiple crystal holder.
Baby's bottle holder.
Rope holder.
Holding element for hub collars. J. E. McCloskey. 2,470,170, May 17.
Hook: *See*—
Safety hook.
Hose coupling. P. C. McLean. 2,470,350, May 17.
Hydraulic apparatus. C. E. Adams. 2,470,086, May 17.
Hydrocarbon conversion process. N. E. Peery. 2,470,263, May 17.
Hydrocarbon oils, Cracking. H. Beuther. 2,470,080, May 17.
Hydrocarbons, Treatment of. W. M. Stratford. 2,470,193, May 17.
Hydrogen fluoride composition, Liquid. C. B. Linn. 2,470,175, May 17.
Ice-baiting jack. L. L. Elsemore. 2,470,610, May 17.
Ignition system, Electrical. F. R. F. Ramsay. 2,470,413, May 17.
Illuminating system and control device for photographic enlargers, A. Simmon. 2,470,584, May 17.
Image forming projection with Schmidt-type optical system, E. H. Traub. 2,470,198, May 17.
Implement, Hardened silicone surfaced cooking. P. S. Webb and J. R. Koster. 2,470,593, May 17.
Implement, Impact producing. F. W. Matzle. 2,470,406, May 17.
Incubator, Portable infant. J. L. Pragel. 2,470,721, May 17.
Indicator: *See*—
Alternating current load indicator.
Pocket flight position indicator.
Direction indicator.
Electric pressure indicator.
Inhalator. M. R. Fields. 2,470,296–7, May 17.
Injector for internal-combustion engines, Fuel. V. Pajumbo. 2,470,717, May 17.
Instrument, Electrical measuring. J. C. Redman. 2,470,644, May 17.
Instrument for drawing circular and curvilinear lines. G. A. Haederer. 2,470,697, May 17.
Instrument for drawing ellipses, Drafting. R. G. Towle. 2,470,328, May 17.
Insulation composition, Disintegrated newsprint-boric acid. F. G. Portz. 2,470,641, May 17.
Intermitter for cased wells, Flow. A. Boynton. 2,470,681, May 17.
Internal-combustion operated free-piston machine. E. S. L. Beale. 2,470,231, May 17.
Ionization chamber. S. A. Scherbatskoy. 2,470,224, May 17.
Iron ores, Reducing. V. F. Parry. 2,470,106, May 17.
Iron with thermokinetic switch, Electric. A. G. Thomas. 2,470,532, May 17.
Isobutylene extraction. B. S. Garrett. 2,470,207, May 17.
Isolator, Vibration. E. Pletz. 2,470,185, May 17.
Isomerization and alkylation of normal paraffins. L. A. Clarke. 2,470,144, May 17.
Iso-olefinic polymers, Stabilization of low unsaturation. C. F. Van Gilder. 2,470,447, May 17.
Jack: *See*—
Ice fishing jack.
Portable lifting jack.
Jack with control responsive to abnormal conditions, Hydraulic pumping. S. C. Kyle. 2,470,252, May 17.
Joint: *See*—
Swivel joint.
Joint assembly, High-angle. J. H. Booth. 2,470,210, May 17.
Joint for transmission lines, Sliding. C. E. McClellan. 2,470,631, May 17.
Keyboard for musical instruments. G. W. Demuth. 2,470,148, May 17.
Key case. D. J. Broughton. 2,470,466, May 17.
Knives, Handling chipper. S. D. Payzer. 2,470,262, May 17.
Knob, Indicating control. A. A. Seesongood. 2,470,582, May 17.
Lens unit with image reversing means, Optical. S. N. Wekeman. 2,470,277, May 17.
Lift, Accelerated variable buoyancy. A. J. Levin. 2,470,313, May 17.
Lift, Reciprocal buoyancy. A. J. Levin. 2,470,312, May 17.
Light switch. H. P. Rath. 2,470,643, May 17.
Lighter, Cigarette. H. A. Mason. 2,470,710, May 17.
Lighter for cigars and cigarettes, Pocket. R. Wolanske. 2,470,734, May 17.
Lighter, Fuses. G. D. McKown. 2,470,358, May 17.
Liquid level gauge. N. R. Matson and L. A. Millewski. 2,470,510, May 17.
Liquid treatment of yarns, Method of and apparatus for. W. H. Furness. 2,470,209, May 17.
Loader for revolvers. E. L. Peck. 2,470,182, May 17.
Lobster trap. J. R. MacDonald. 2,470,177, May 17.
Lock and valve for pneumatic conveying systems, Air. A. H. Korn. 2,470,744, May 17.
Lock for irrigation pipe joints. R. C. Wyss. 2,470,539, May 17.
Locking system. F. E. Seaman. 2,470,581, May 17.
Loop regulating mechanism for straight knitting machines. E. J. Berger and H. K. West. 2,470,131, May 17.
Looper. R. H. Randall. 2,470,642, May 17.
Lubricating device. H. R. Abbrecht. 2,470,366, May 17.
Machine for lapping wire drawing dies. P. Bieberich. 2,470,331, May 17.
Machine for making reinforced concrete beams. W. N. Russell. 2,470,650, May 17.
Machine for picking feathers from fowls. E. B. Digby. 2,470,151, May 17.
Machine for turning the platform covers of platform shoes. A. R. Hubbard. 2,470,170, May 17.
Magnesium silicate adsorbents, Regenerating. R. J. Hawes. 2,470,486, May 17.
Magnet field for dynamoelectric machines, Toroidal. M. P. and A. Winther. 2,470,596, May 17.
Mailbox, Tamperproof. C. B. Browning. 2,470,138, May 17.
Maintaining multiple records. J. H. Tathwell. 2,470,586, May 17.
Marker to record movement and means to provide relative values, Automatically controlled. A. W. Walker. 2,470,121, May 17.
Marking machine, Laundry. W. J. Kenper. 2,470,622, May 17.
Marking machine, Welding rod. T. I. Leston and W. B. Kriewall. 2,470,707, May 17.
Matching and controlling power for high-frequency heating of reactive loads, Continuously. E. Mittelmann. 2,470,443, May 17.
Materials composed partly or wholly of wool or similar fibers, Treatment of. P. Alexander. 2,470,463, May 17.
Mattress, Therapeutic. F. Hayes. 2,470,398, May 17.
Mechanical movement. R. Helsman. 2,470,246, May 17.
Mechanism for combines, Crop feed. A. Korsmo and M. Honning. 2,470,704, May 17.
Mechanism for mixers, Door operating. F. H. Heine. 2,470,100, May 17.
Mechanism for sorting machines, Adjustable throat. G. V. A. Malmros and E. A. Barber, Jr. 2,470,442, May 17.
Melamine-formaldehyde casting resin. H. W. Mohrman. 2,470,363, May 17.
Metals, Production and refining of. P. Gross. 2,470,306, May 17.
Meter: *See*—
Alternating current impedance meter.
Microscope having light conducting members providing grazing and diffuse illumination, Surface comparison. N. Lindgren and P. A. Roos. 2,470,176, May 17.
Milking apparatus, Mechanical. C. G. Howse. 2,470,160, May 17.
Mill: *See*—
Multiple stage pulverizing and dehydrating tube mill.
Mineral oil compositions. S. P. Waugh. 2,470,537, May 17.
Molding compositions, Asphalt. R. A. Barkuff, Jr. 2,470,329, May 17.
Molding compositions, Thermosetting phenolic. F. Rosenthal. 2,470,322, May 17.
Molding machine, Injection. C. Jobet. 2,470,402, May 17.
Molding machine, Monolithic wall. F. E. Withrow. 2,470,671, May 17.
Molding machine, Vibrating block. A. C. Shepeck. 2,470,377, May 17.
Molds, Manufacturing. G. A. Rubissow. 2,470,189, May 17.
Monofluoro-dichloromethane, Purification of crude. A. F. Benning, R. C. McHarness, and W. S. Murray. 2,470,088, May 17.
Motor control system. J. R. Wrathall. 2,470,673, May 17.

Motor control system, Reaction. L. Lawrence, Jr., and J. H. Wyld. 2,470,564, May 17.
Motor control system, Synchronous. S. C. Ewing. 2,470,478, May 17.
Motor fuels of high antiknock values, Synthesizing. P. C. Keith. 2,470,216, May 17.
Motor with distributing valve in piston, Expansible chamber hydraulic. C. H. Adams. 2,470,087, May 17.
Motorized pressure juice extractor. G. Le Witt. 2,470,708, May 17.
Mounting: *See*—
Doctor blade mounting. Portable motor mounting. Plane key mounting.
Mounting for shafts and the like. F. C. Baker and E. G. Spencer. 2,470,282, May 17.
Multiple crystal holder. B. J. Bitner. 2,470,133, May 17.
Multiple stage pulverizing and dehydrating tube mill. W. L. McGehee. 2,470,315, May 17.
Negative transconductance electrical discharge tube. J. F. Visscher. 2,470,732, May 17.
Net, Fishing. A. Jacobsen. 2,470,621, May 17.
Network, Phase-sequence voltage. W. K. Sonnemann. 2,470,461, May 17.
Nonrepeat means for calculating machines. H. Gang. 2,470,300, May 17.
Nozzle. J. B. D'Angelo. 2,470,293, May 17.
Nozzle. A. S. Peterson and C. K. Johnson. 2,470,519, May 17.
Nozzle for regenerative underjet coke ovens, Ceramic. W. C. Raeckel. 2,470,112, May 17.
Obtaining fat-soluble vitamin-containing materials in oil. C. J. Kern and J. M. Tabor. 2,470,703, May 17.
Oil addend. F. M. Watkins. 2,470,270, May 17.
Oil cooler. E. C. Warrick and H. Cruzan. 2,470,667, May 17.
Oil skimming device. J. Verner. 2,470,418, May 17.
Olefin polymers, Production of. L. Schmerling. 2,470,190, May 17.
Opener, Package. E. Chariop. 2,470,236, May 17.
Organosiloxanes and making them. J. F. Hyde. 2,470,562, May 17.
Oscillator, Low-frequency drift. J. F. Bell. 2,470,425, May 17.
Oscillator modulating system. R. C. Moore. 2,470,573, May 17.
Oven for dual quartz crystals, Temperature controlled. E. J. Bitner. 2,470,134, May 17.
Oxygen administering equipment. T. A. Taylor. 2,470,587, May 17.
Package, Frozen food. F. L. Broeren, G. E. Wanda, and R. Kuehl. 2,470,465, May 17.
Package of suture tubes or the like, Shipping. A. B. Kennison. 2,470,494, May 17.
Package, Watch band display. S. Ritter. 2,470,370, May 17.
Packaging food products. D. E. Rueckert. 2,470,579, May 17.
Pail, Refrigerated milker. T. J. Pfetcher. 2,470,520, May 17.
Pails, Twin. A. Cusick. 2,470,432, May 17.
Panel for artists, Canvas. S. Silver. 2,470,416, May 17.
Paper pulp agitator. J. A. Roemait. 2,470,267, May 17.
Permanent magnet field coupling. S. Karasick. 2,470,249, May 17.
Pesticidal composition of polyethylene polysulfide and nicotine sulfate. W. D. Stewart. 2,470,529, May 17.
Phenylsemioxamazide insecticidal compositions. S. I. Gertler. 2,470,160, May 17.
Phosphor. H. W. Leverens. 2,470,627, May 17.
Phosphor materials. H. W. Leverans. 2,470,173, May 17.
Phosphor materials. F. E. Williams. 2,470,449, May 17.
Phosphors. E. J. Wood. 2,470,451, May 17.
Piano action. W. H. Schultz. 2,470,654, May 17.
Piano casing. W. Zeiser. 2,470,614, May 17.
Piano key mounting. E. C. Sloan. 2,470,659, May 17.
Picker stick. C. B. Lundstrom. 2,470,506, May 17.
Picnic set. A. W. Jenkins. 2,470,492, May 17.
Pile. J. H. Derby. 2,470,149, May 17.
Pipe fitting. C. A. Lapp. 2,470,499, May 17.
Pipe-line recovery device. B. D. Marks and O. E. Dillon. 2,470,255, May 17.
Pipe racking apparatus. J. E. Whited. 2,470,279, May 17.
Pipes, Jointing of flexible. J. L. Sayers. 2,470,373, May 17.
Piston, Slush pump. H. B. Young. 2,470,541, May 17.
Plastic composition, Adhesive waterproof. L. C. Caves. 2,470,141, May 17.
Plastic scrap, Reclaiming. I. Miller and A. L. Beiser. 2,470,361, May 17.
Plate, Safety. F. E. Kobler. 2,470,439, May 17.
Plow control. B. D. Stevenson. 2,470,730, May 17.
Plug: *See*—
Spark plug.
Pocket flight position indicator. J. K. Christie. 2,470,143, May 17.
Polymeric 4-vinylcyclohexene dioxide compositions. W. J. Hornibrook. 2,470,168, May 17.
Polymerisation of ethylene. S. J. Hetsel and R. M. Kennedy. 2,470,166, May 17.
Polymerisation of olefins. R. M. Kennedy and S. J. Hetsel. 2,470,171, May 17.
Polymers of condensation product of aryl diether dicarboxylic acid and dihydric alcohol. O. S. Schaffel. 2,470,551, May 17.
Polysiloxane resins, Making. C. S. Ferguson and C. E. Welsh. 2,470,479, May 17.
Polysiloxane resins, Preparation of. H. F. Lamoreaux. 2,470,497, May 17.
Polysulfides, Organic. W. D. Stewart. 2,470,115, May 17.
Portable lifting jack. M. M. Murphy. 2,470,105, May 17.
Portable motor mounting. H. S. Hammond. 2,470,554, May 17.
Pot type oil burner air heating furnace. F. E. Wilson. 2,470,420, May 17.
Poultry immerser. C. Nassivera. 2,470,409, May 17.
Powdered medicine dispenser. M. R. Fields. 2,470,298, May 17.
Power plant assembly. A. G. Forsyth. 2,470,155, May 17.
Power plant, Gas turbine. E. A. Stalker. 2,470,729, May 17.
Power supply, Electrical. W. W. Zimmerman. 2,470,542, May 17.
Precipitator, Electrical. K. W. MacKenzie. 2,470,356, May 17.
Preservation of fruits and vegetables. D. Alvos. 2,470,424, May 17.
Press: *See*—
Baling press.
Press. H. P. Hunter. 2,470,561, May 17.
Press for cutting sheet metal. C. J. Rhodes. 2,470,110, May 17.
Pressure loaded gear pump. J. A. Lauck. 2,470,355, May 17.
Pressure responsive device, Excess pressure protected. E. S. Childs. 2,470,288, May 17.
Priming device. M. K. Bennett. 2,470,232, May 17.
Printing apparatus. G. O. Frostad. 2,470,243, May 17.
Prolamines, Plasticised. L. D. Myers and J. D. Fitzpatrick. 2,470,515, May 17.
Propeller, Variable-pitch. H. Obrist. 2,470,517, May 17.
Propellers, Oppositely rotating. W. S. Hoover. 2,470,560, May 17.
Protective system, Electrical. M. K. Moore. 2,470,257, May 17.
Protector: *See*—
Umbrella rib tip protector.
Protractor. F. A. Barr. 2,470,458, May 17.
Pteroylglutamic acid, Purification of. B. L. Hutchings. 2,470,491, May 17.
Pteroylglutamic acid and related compounds, Purifying. B. L. Hutchings. 2,470,490, May 17.
Pulse producing apparatus. J. Evans. 2,470,550, May 17.
Pulveriser, Soil. W. A. Hyland. 2,470,619, May 17.
Pump: *See*—
Pressure loaded gear pump. Rotary expansible chamber pump.
Pump.
Pump. I. C. Jennings. 2,470,563, May 17.
Pump. C. W. Mott. 2,470,220, May 17.
Pump. E. G. Norris. 2,470,319, May 17.
Pump for dynamoelectric machines, Oil. C. O'Daniel. 2,470,365, May 17.
Purse, Handbag. H. G. Palma. 2,470,367, May 17.
Quick-action coupling. H. G. McIlroy. 2,470,256, May 17.
Rack: *See*—
Bottle rack.
Radiator testing device. D. W. Wishon. 2,470,204, May 17.
Radio tubes and the like, Basing of. M. J. Orr. 2,470,518, May 17.
Radius forming device. J. G. Gouiette. 2,470,097, May 17.
Ratio control device. R. A. Ackley. 2,470,452, May 17.
Rattle for babies' cribs, Illuminated. O. Galter. 2,470,612, May 17.
Razor combined with blade conditioning means, Safety. G. Thornfield. 2,470,588, May 17.
Receptacle support. L. S. Steinbacher. 2,470,271, May 17.
Reclining chair. H. Niederhauser. 2,470,364, May 17.
Rectifier with a voltage regulating reactor saturable by direct current. S. Hedstrom and U. Lamm. 2,470,556, May 17.
Reel: *See*—
Electric fishing reel.
Reel assembly. W. M. Simpson. 2,470,658, May 17.
Refrigerator having condensate disposal means. H. S. Childers. 2,470,547, May 17.
Regenerator, Electronic synchronous signal. S. Rattner. 2,470,722, May 17.
Regenerator, Synchronous. W. A. Anderson. 2,470,677, May 17.
Register, Autographic. W. E. Oliver. 2,470,260, May 17.
Regulating and feed apparatus for internal-combustion engines. P. G. Vanni. 2,470,382, May 17.
Regulating means for baler tying mechanisms, Feed. M. Ronning and K. M. Keith. 2,470,724, May 17.
Relay. R. A. Geiselman and W. H. Cuttino. 2,470,614, May 17.
Relay for liquid-filled electrical apparatus, Protecting. E. Gudmundsson. 2,470,553, May 17.

Release mechanism, Parachute. M. E. Bancora. 2,470,457, May 17.
Remover, Staple. W. Schafroth and O. M. Beal. 2,470,726, May 17.
Reproducing stylus, Electrical. R. A. Fryklund. 2,470,244, May 17.
Resistor and making same. A. M. Feller. 2,470,153, May 17.
Resistor, Electrical. T. Holmes. 2,470,352, May 17.
Reverberatory furnace. W. F. Sklenar. 2,470,728, May 17.
Rifle rocket missile. N. M. Hopkins. 2,470,489, May 17.
Ring: *See*—
Spinning ring.
Ring for pot type burners of the hydroxylating type, Combustion. B. Hayter and M. D. Huston. 2,470,699, May 17.
Rocket-propelled device. M. H. Goehmann. 2,470,162, May 17.
Rope holder. J. Z. Miller. 2,470,316, May 17.
Rotary expansible chamber pump. A. H. Winkler and E. O. Wirth. 2,470,670, May 17.
Rototrol scheme. J. R. Wrathall. 2,470,672, May 17.
Rough rounding machine. C. W. Baker. 2,470,127, May 17.
Robber, Vulcanizing. E. S. Blake. 2,470,545, May 17.
Safety device for revolvers. J. W. Norman and C. R. Hellstrom. 2,470,259, May 17.
Safety hook. C. O. Larson. 2,470,706, May 17.
Safety switch. L. Jacobs. 2,470,701, May 17.
Sander. L. V. Grover. 2,470,615, May 17.
Scale, Electrical. D. D. Brodie. 2,470,427, May 17.
Scraper for freeing apparatus. C. Erickson and E. Spellman. 2,470,691, May 17.
Screen. R. E. Bemis and J. C. McMillan. 2,470,129, May 17.
Seal, Balanced, cooled, and lubricated rotary. C. F. Voytech. 2,470,419, May 17.
Sealing means. C. C. Sterrett. 2,470,664, May 17.
Sequence indication apparatus. F. A. Bucky and P. Sarason. 2,470,469, May 17.
Servomechanism. A. C. Hall. 2,470,099, May 17.
Setting apparatus for textile fabrics. H. Richter. 2,470,265, May 17.
Sewer snake apparatus, Plumber's. A. Silverman. 2,470,225, May 17.
Sewing machine. H. J. Le Vesconte and O. Quist. 2,470,502, May 17.
Sharpener, Lawn mower. L. J. Bromert. 2,470,335, May 17.
Sharpener, Pencil. L. R. Baggett. 2,470,387, May 17.
Shelf edging, Making. E. Karfiol and W. A. Roehm. 2,470,493, May 17.
Shock absorber. R. M. Harmon. 2,470,616, May 17.
Shoe sole. I. D. Wallach. 2,470,200, May 17.
Shoes, Molding plastic. J. J. Booth. 2,470,689, May 17.
Shovel, Snow. A. J. McLoughlin. 2,470,217, May 17.
Shuttle, Tatting. H. B. Daniello. 2,470,391, May 17.
Signaling system, Multifrequency. C. Clos. 2,470,145, May 17.
Signaling system, Pulse modulation. C. W. Hansell. 2,470,698, May 17.
Silica magnesia catalysis, Preparation of. K. J. Nelson. 2,470,410, May 17.
Silica-magnesia gel catalyst, Preparing a. E. S. Corner. 2,470,411, May 17.
Ski. C. L. Wheeler. 2,470,227, May 17.
Sleeve for pump rods, Protective. H. B. Young. 2,470,540, May 17.
Slide fastener. O. Kolbert and A. S. Messer. 2,470,251, May 17.
Snatch block. B. B. Bryson and M. A. Coleman. 2,470,686, May 17.
Socket assembly. M. H. Alldredge. 2,470,205, May 17.
Socket for miniature bulbs and the like and mounting therefor. E. A. Ackerman. 2,470,280, May 17.
Socket for snap fasteners, Reinforced. P. E. Fenton and O. J. Huelster. 2,470,740, May 17.
Soda lime. C. H. Egan. 2,470,214, May 17.
Sound bearing system, Optical. R. M. Sherwood, R. J. Urick, and L. P. Delsasso. 2,470,114, May 17.
Space scope. A. H. Eckman. 2,470,295, May 17.
Spark advance mechanism, Automatic. W. Ostling. 2,470,366, May 17.
Spark plug. J. D. McCrumm. 2,470,568, May 17.
Spectrometer, Mass. C. H. Schlesman. 2,470,745, May 17.
Spinning ring. H. B. Atwood and C. Fillinger. 2,470,736, May 17.
Splicer, Electrical. W. H. Alford. 2,470,423, May 17.
Spread band tuning circuit. Z. Benin. 2,470,426, May 17.
Spring: *See*—
Friction bolster spring.
Spur shore. J. D. Guerette. 2,470,390, May 17.
Stabilizer for alternating current power transmission systems. E. F. W. Alexanderson. 2,470,454, May 17.
Staple for door locks. L. W. Young. 2,470,735, May 17.
Stapling machine, Anvil clinching. W. Schafroth. 2,470,727, May 17.
Steering apparatus, Fluid controlled vehicle change-speed. W. O. Beckman and D. B. Baker. 2,470,209, May 17.
Steering means for power-driven surfboards. M. R. Brown. 2,470,137, May 17.
Steering mechanism, Wheel. S. Krilanovich. 2,470,496, May 17.
Steering wheel and braking mechanism, Combined. M. O. von Offel. 2,470,273, May 17.
Step form, Concrete. F. A. Dahle. 2,470,690, May 17.
Storage attachment for automobile bodies. P. Lim. 2,470,314, May 17.
Stove, Automatic. A. G. Thomas. 2,470,533, May 17.
Stropper, Razor blade. E. J. Gray. 2,470,436, May 17.
Suction apparatus. C. W. Stiehl. 2,470,665, May 17.
Support: *See*—
Receptacle support.
Swivel ball antenna support.
Support for electric accumulators, Plate. R. Gray. 2,470,163, May 17.
Support for table tennis nets. S. Nadelson. 2,470,318, May 17.
Suppression of corrosive action of carbonic acid. E. Q. Camp. 2,470,428, May 17.
Surge preventing device for centrifugal compressors. I. R. Loss. 2,470,565, May 17.
Switch: *See*—
Electric cam snap switch. Light switch.
Electronic switch. Safety switch.
Gang operated switch.
Switch and circuit breaker, Combination electric. S. S. Grady. 2,470,301, May 17.
Switching system. R. L. Daniel. 2,470,292, May 17.
Swivel ball antenna support. T. R. Finke, J. L. Stewart, and L. H. Finneburgh, Jr. 2,470,693, May 17.
Swivel joint. M. P. Graham. 2,470,215, May 17.
Synchronizer. F. W. Avila. 2,470,208, May 17.
Table cushion adjusting mechanism. J. A. Glasin. 2,470,161, May 17.
Table structure, Wall. F. K. Dinger. 2,470,343, May 17.
Table with adjustable cue rack, Pool. E. and J. Correale. 2,470,239, May 17.
Table with replaceable top, Shuffleboard-billiard. E. and J. Correale. 2,470,238, May 17.
Tanning with free formaldehyde and melamine simultaneously. W. Windos. 2,470,450, May 17.
Tap changer, No-load. E. W. Kuhn. 2,470,625, May 17.
Tape holder for electrical workers, Belt carried. D. Kienle. 2,470,250, May 17.
Telephone for loud traffic, Remote-controlled automatic. O. Tschumi. 2,470,590, May 17.
Tester, Shaft trueness. A. Kloos. 2,470,404, May 17.
Testing phase angle and injection periods of fuel injection pumps. L. Hartridge. 2,470,351, May 17.
Textile thread carrier. C. K. Dunlap. 2,470,549, May 17.
Thermal molecular alteration of carbon compounds. P. H. Royster. 2,470,578, May 17.
Thermometer, Resistance. E. L. Schulman and A. C. Beller. 2,470,653, May 17.
Thread letoff feeding mechanism. G. O. Young. 2,470,124, May 17.
Thread tension mechanism. G. O. Young. 2,470,123, May 17.
Three-layer single-phase winding. J. M. Stein and R. W. Eggiestone. 2,470,663, May 17.
Timing and phase control circuits. R. M. Bowie. 2,470,464, May 17.
Tin-coating the interiors of copper tubes. D. K. Crampton and M. L. Wood. 2,470,689, May 17.
Tire mounting and removing device, Circumferentially traveling type power-operated. A. G. Thomas. 2,470,534, May 17.
Tire remover, Collapsible. F. Piacenti. 2,470,107, May 17.
Tool: *See*—
Burn-in tool. Generator brush tool.
Clip retaining tool. Tube chamfering tool.
Clock hand removing tool.
Electrical outlet box attaching tool.
Toolholder. C. J. McNamara. 2,470,218, May 17.
Torque responsive device, Electromagnetic. B. F. Langer and K. L. Wommack. 2,470,626, May 17.
Towel dispenser. L. L. Price. 2,470,187, May 17.
Toy. D. C. Dozier. 2,470,476, May 17.
Toy, Airplane. F. L. Murphy. 2,470,407, May 17.
Toy phonograph, Miniature. I. Gold. 2,470,435, May 17.
Toy, Rocking. R. E. Daellenbach. 2,470,473, May 17.
Traction device. T. D. Dritz. 2,470,607, May 17.
Trainer for aircraft, Ground. R. B. Buchanan. 2,470,468, May 17.
Transformer, High-frequency matching. G. Guanella. 2,470,307, May 17.
Transformer windings. W. B. Biebesheimer. 2,470,598, May 17.
Transmission, Automotive. N. E. Wahlberg. 2,470,274, May 17.
Transmission device, Automatic variable-speed. E. J. Consler. 2,470,390, May 17.
Transmission mechanism, Rotary hydraulic fluid. R. Diard. 2,470,241, May 17.
Trap: *See*—
Lobster trap.
Tray. C. O. Ballar and T. L. Spalding. 2,470,456, May 17.
Tray, Letter. R. L. Gallagher. 2,470,347, May 17.
Truck, Lumber loading. K. Y. Messick. 2,470,360, May 17.

Truck and removing feed therefrom, Feed. J. B. Olson. 2,470,637, May 17.
Tube: *See*—
Negative transconductance electrical discharge tube.
Tube. F. G. Suffield. 2,470,666, May 17.
Tube chamfering tool. R. M. Gassmann. 2,470,392, May 17.
Tube securing means. B. G. Carlson. 2,470,546, May 17.
Tube with metal foil electrode, Electron discharge. J. L. H. Jonker and G. Diemer. 2,470,248, May 17.
Turbine construction. H. A. Altorfer. 2,470,126, May 17.
2-thioureido-4-methyl thiazole hydrochloride, Preparation of. R. L. Sperry. 2,470,585, May 17.
Umbrella rib tip protector. P. Valentino. 2,470,381, May 17.
Unit for coining presses, Conversion. W. P. Kruse and J. W. Steel. 2,470,102, May 17.
Unit for flywheel magnetos, Stator. A. L. Brownlee. 2,470,407, May 17.
Urea formaldehyde type of molding compounds and producing same. E. Glycofrides. 2,470,303, May 17.
Valve: *See*—
Automatic inverse modulation valve.
Ball type pressure relief valve.
Valve. H. B. Schultz. 2,470,740, May 17.
Valve head, Spring floated. G. J. Henry. 2,470,700, May 17.
Valve mechanism. H. D. Clemmons. 2,470,213, May 17.
Valve mechanism. D. D. Paxton. 2,470,368, May 17.
Valve mechanism, Fluid control. H. C. MacConnell, Jr. 2,470,566, May 17.
Valve operating mechanism. H. B. Carbon. 2,470,470, May 17.
Valve structure, Two-level float. J. L. Breese and B. Hayter. 2,470,684, May 17.
Vaporizing type oil burner. J. W. Miller and W. G. Smith. 2,470,570, May 17.
Vehicle suspension, Pneumatic. E. B. Aldous. 2,470,676, May 17.
Vehicle wheel. H. J. Horn. 2,470,539, May 17.
Vending machine. M. F. Davis. 2,470,474, May 17.
Ventilator. A. L. Schwartzberg. 2,470,375, May 17.
Ventilator cap. J. W. Klee. 2,470,623, May 17.
Ventilator, Roof. J. F. Werner. 2,470,201, May 17.
Ventilator, Sash. E. G. Davis. 2,470,433, May 17.
Vertical semicylindrical burner. J. L. Breese and B. Hayter. 2,470,683, May 17.
Vibrato organization. M. J. Larsen. 2,470,705, May 17.
Vibrator, Electric. L. H. Snyder. 2,470,660, May 17.
Voltage multiplier. J. B. Trevor, Jr. 2,470,118, May 17.
Voltmeter, Linear response vacuum tube. H. A. McNaughton. 2,470,219, May 17.
Washer: *See*—
Air washer.
Washing machine having rotatable tube with upper and lower discharge means. G. P. Castner. 2,470,140, May 17.
Water-cooled grinding wheel. J. A. Harrington. 2,470,350, May 17.
Welding machine, Electric. L. J. Gottschalk. 2,470,552, May 17.
Welding system. A. B. White. 2,470,668, May 17.
Wheel: *See*—
Vehicle wheel.
Water-cooled grinding wheel.
Wheel and tire applying device. G. F. Brown. 2,470,685, May 17.
Wheel with resilient spokes. E. H. Piron. 2,470,640, May 17.
Windshield visor mounting bracket. F. E. Ellithorpe. 2,470,477, May 17.
Winder bobbin. G. A. Carlson. 2,470,212, May 17.
Window control device. P. A. and V. Viola. 2,470,391, May 17.
Wiper, Oil stick. J. Gall. 2,470,484, May 17.
Wrench: *See*—
Ejector type socket wrench.
Folding pedal wrench.
Zero adjustment means. H. L. Bowditch. 2,470,333, May 17.

CLASSIFICATION OF PATENTS

ISSUED MAY 17, 1949

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

1— 47: 2,470,512
49: 2,470,727
2— 105: 2,470,678
3— 8: 2,470,480

Patents expiring: Patent Numbers 1,859,274 to 1,860,345, inclusive, and Plant Patent Number 17, issued May 24, 1932, expire May 24, 1949

Condition of Applications Under Examination at Close of Business May 6, 1949

Total number of patent applications awaiting action, 147,246. Date of oldest new application, June 3, 1947; date of oldest amended application, Nov. 9, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action: New	Amended	Applications awaiting action
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	3-16-48	7-26-47	2906
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	1-6-48	8-1-47	2713
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	9-27-48	10-1-48	906
4. BISHOP, WALTER C., Power Driven Conveyors; Hoists; Handling Apparatus; Excavating; Fire Escapes; Ladders; Scaffolds; Mining, Quarrying, and Ice Harvesting.	11-6-47	7-5-47	3231
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	3-15-48	8-30-47	1445
6. SURLE, H., Carbon Chemistry (part)	4-26-48	5-11-48	1886
7. HANLIN, GEORGE, Optics; Photographic Apparatus	8-19-48	5-14-48	1501
8. LEWIS, R. O., Beds; Chairs, Seats; Racks, Cabinets; Miscellaneous Furniture	7-21-47	5-14-47	4534
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	1-26-48	7-3-47	2110
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	7-10-48	6-18-48	1580
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Cutlery, Leather Manufactures; Nailing and Stapling.	4-26-48	5-5-47	1939
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	8-3-48	6-23-47	1884
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	7-29-47	9-9-47	2113
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	8-6-48	4-29-48	1264
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	8-6-48	1-2-48	1734
16. LOVEWELL, N. N., Television; Telephony	8-17-48	12-19-47	1877
17. LEIGHEY, R. A., (acting), Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	11-24-47	1-4-47	2264
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	4-7-48	9-8-47	2422
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	8-23-48	10-25-47	1062
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	9-13-48	8-26-47	1989
21. MADER, R. C., Textiles	3-24-48	2-4-48	1322
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices (part)	6-7-48	8-6-47	1501
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	4-23-48	7-15-47	1106

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE MERCIER

No. 5128. Decided March 1, 1949

[— F.2d —; 81 USPQ 122]

1. PATENTABILITY — APPARATUS — FUNCTIONAL STATEMENTS.

Held that a functional statement containing no structural limitation does not render a claim patentable.

2. SAME—SAME—"MEANS CONTROLLED BY" ETC.

A claim to a conveyor which depended for patentability upon a limitation to "means controlled by movement of said movable mechanism to operate a control device whenever said movable mechanism moves rapidly in any portion of its range of movement while providing for relatively slow movement thereof in any portion of its range of movement without operating said control device" *Held* functional.

3. SAME — SAME — "CONTROL MECHANISM ASSOCIATED WITH" ETC.

A claim to a conveyor which depended for patentability upon a limitation to "control mechanism associated with said second named means constructed and arranged to function in response to any rapid change in the effective length of said chain within the predetermined expansion range thereof" *Held* functional.

4. SAME—PARTICULAR SUBJECT MATTER—CONVEYOR.

Certain claims to a conveyor *Held* properly rejected as defining over the reference only in statements of function or result.

APPEAL from the Patent Office. Serial No. 550,260.

AFFIRMED.

Harker H. Hittson for Mercier.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

GARRETT, *C. J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office, affirming the rejection by the Primary Examiner of claims numbered 5 and 12 of appellant's application for patent, Serial No. 550,260, filed August 19, 1944, entitled "Improvements in Safety Apparatus." Nine claims stand allowed. So, there is no question as to appellant having an invention, but it was the view of the tribunals of the Patent Office that the appealed claims do not clearly define matter patentable over prior art.

The claims have much the same meaning, but are couched in different phraseology. We reproduce both:

5. A conveyor including endless chain means, a drive sprocket for said chain means, movable mechanism operative to maintain said chain means under tension, and means controlled by movement of said movable mechanism to operate a control device *whenever said movable mechanism moves rapidly in any portion of its range of movement while providing for relatively slow movement thereof in any portion of its range of movement without operating said control device.*

12. In a conveyor, the combination with a driving shaft, of means including an endless chain driven thereby, means normally preventing an accumulation of slack in said chain throughout a predetermined range of expansion thereof, and control mechanism associated with said second named means *constructed and arranged to function in response to any rapid change in the effective length of said chain within the predetermined expansion range thereof.*

The italics are supplied by us. The matter thus emphasized is matter which the Board held to be functional.

The prior art cited consists of a single patent, 1,728,283, issued to Charles R. Fisher, September 17, 1929. Another patent was originally cited but it related to a point not here in dispute and appellant did not include it in the record brought before us.

Appellant's structure, taken as a whole, is somewhat complicated. Six figures of drawings are used to illustrate it and many numerals are employed in the designation of its parts. The Examiner gives an elaborate and lucid explanation of it in his statement following the appeal to the Board, which we paraphrase in part and quote in part:

The conveyor named in the claims is used in elevating material to desired heights. It is made up of a series of endless chains mounted on a head sprocket and housed in a closed casing. Associated with the conveyor is an upper drive shaft connected, apparently by a belt, to a motor, and a lower foot shaft mounted in a transverse walking beam which, in turn, is mounted on a fixed part of the frame. The foot shaft is free to move upwardly in response to a predetermined excess of tension in the working run of the conveyor. It is said by the Examiner:

> • • • Such excess of tension may occur, for instance, when the accumulation of material at the bottom of the casing • • • is such as to prevent the ready passing through the material of the conveyor buckets as the latter traverse the lower end of the casing in their operation of engaging the material and carrying it to a point of discharge.

As the "salient features of the invention" the Examiner relates, in substance, that as the walking beam, hereinbefore mentioned, pivots upwardly to a designated position a roller secured to the free end of an arm, pivoted to a fixed part of the framework, rides on the inclined surface of the walking beam, carrying upwardly a piston rod having a piston at its upper end which is movable in a designated cylinder that is movably mounted in a sleeve which is fixed to the framework. During the normal operation of the conveyor no movement of the cylinder containing the piston occurs because conditions are produced by the gradual movement of the walking beam which permit fluid to bleed out of a partially open valve at the top of the cylinder as the piston moves slowly upwardly therein. Under abnormal

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

working conditions, however, such as the accumulation of material at the bottom of the casing, the valve at the top of the cylinder is unable to relieve the excess pressure of fluid in the upper portion of the cylinder because of the rapid upward movement of the walking beam and piston. This upward movement leads to the engagement by the upper end of the cylinder of a protruding portion of a spring element fixed to a part which is rigid with the framework. This produces a lateral movement of the spring element which causes a magnet, secured to and movable with the spring element, to close the contacts of a magnetic switch and thus energize a buzzer and relay. This opens the motor circuit and the conveyor mechanism stops in response to the energization of the relay.

An analysis of claim 5 discloses four structural elements; viz., (1) endless chain means; (2) a drive sprocket for such means; (3) movable mechanism operative to maintain the chain means under tension; and (4) means controlled by movement of the movable mechanism to operate a control device. The remainder of the claim is a functional statement which tells when structural element (4) works. There are no structural features in the functional statement.

In claim 12 the structural elements are: (1) (a) means including an endless chain driven by (b) a shaft; (2) means normally preventing an accumulation of slack in the chain throughout a predetermined range of expansion thereof; and (3) control mechanism associated with the second named means. The remainder of that claim is functional. No structure is defined or described therein. It is simply stated that the control mechanism is constructed and arranged to function in response to a described condition.

Element (4) of claim 5 and element (3) of claim 12, in effect, were held by the tribunals of the Patent Office not to describe as to structure in the "full, clear, concise, and exact" manner required by Rev. Stat. 4888, 35 U. S. C. § 33.

The reference patent to Fisher is entitled "Automatic Stop for Belt Conveyers." It relates to belt conveyor systems for loading and unloading bulk materials. The material conveyed by each conveyor is deposited upon an adjoining one, so that there is continuous advancement of the load in progressive stages. The pertinent disclosures are defined by the Board substantially as follows:

The system comprises a series of similar endless belt conveyors, each of which comprises a belt for carrying material, two main pulleys—one a forward and the other a tail or take-up pulley—and a series of intermediate rollers which support the belt. The belt is driven by a motor through two drive pulleys and gearing. For taking up the slack of the belt, when the conveyor is working, the shaft of the tail pulley is slidably mounted on guideways and the pulley resiliently forced in a direction to take up the slack by a weight which is supported by a cord that extends from the slides over a shive. Some distance below the weight and in the motor circuit, a circuit breaker is located, designed to be operated by the weight upon a predetermined movement of the take-up pulley caused by slack when the belt is overloaded, or when there is a break. This stops the motor.

While the Fisher patent employs belts instead of chains, no point is made as to this on the question of patentability.

It was held by the tribunals of the Patent Office that every structural limitation of both the appealed claims reads upon the Fisher patent, and impliedly approved the statement of the Examiner that the two claims "define over the reference only in statements of function or result."

The Fisher patent made no disclosure of the subject matter held to be functional, and it is contended on behalf of appellant, in effect, that by using, as in claim 5, the clause "means controlled by movement of said movable mechanism," followed by the functional phraseology, and, as in claim 12, the phrase "control mechanism," also followed by functional phraseology, he has really defined structural limitations which distinguish from Fisher.

The authority principally relied upon by appellant appears to be the decision of the Supreme Court of the United States in the case of *Continental Paper Bag Company* v. *Eastern Paper Bag Company* (often referred to as the *Paper Bag Patent* case), 210 U. S. 405, 136 O. G. 1297. We hereinafter take further notice of this case.

The Examiner cited the case of *Halliburton Oil Well Cementing Co.* v. *Walker et al.*, 329 U. S. 1, 598 O. G. 577; and *In re Ferguson*, 23 CCPA (Patents) 1143, 83 F.2d 693, 29 USPQ 530, 472 O. G. 3. The Board held:

> It appears to us the claims differ from the Fisher disclosure only in functional statements employed to define the most crucial element (the element which stops the motor upon rapid change in the effective length of the chain within a given range) in the combination. In other words, at the exact point of novelty convenient functional language is used to define appellant's conveyor combination over that disclosed by Fisher. We find that the claims are sufficiently broad to include all means, controlled by the movement of the chain tension mechanism capable of stopping the motor when there is a rapid change in the effective length of the chain and permit the running of the motor when there is only a slow movement in the effective length of the chain. See *In re Spitzglass and Sondwerk*, 496 O. G. 856; 1938 C. D. 641 [25 CCPA (Patents) 1227, 96 F.2d 1002, 37 USPQ 791].

To the cases cited by the Examiner and the Board the Solicitor adds others, including *In re Lawson et al.*, 23 CCPA (Patents) 1235, 83 F.2d 698, 30 USPQ 13, 472 O. G. 498; *In re Smellie*, 27 CCPA (Patents) 1176, 111 F.2d 651, 45 USPQ 428, 520 O. G. 793; and *In re Horton et al.*, 33 CCPA (Patents) 704, 151 F.2d 210, 67 USPQ 105, 582 O. G. 3.

It is insisted on behalf of appellant that the appealed claims are not as broad as those which were disapproved by this court in the Ferguson and Spitzglass et al. cases, supra. The other references to decisions of this court cited in the brief of the Solicitor for the Patent Office are not discussed in the brief for appellant which, of course, was filed before that of the Solicitor for the Patent Office. We are of opinion that all those cases are apropos, but deem it unnecessary to here review any of our own decisions, except that in the case of *In re Horton et al.*, supra.

[1] In that case we held, in substance, as to two of the appealed claims that although they contained functional statements they also contained structural limitations sufficient to present patentable distinctions over the references, and reversed the decision of the Board which had affirmed the Examiner's rejection of them on functional grounds. We did not hold anywhere in that decision that a functional statement containing no structural limitation might render a claim patentable. There are epitomized in a headnote of that case statements appearing in claims there involved which we held to be functional and which we here reproduce for purposes of comparison:

> 2. *Claims—Functional.*
> Statements that locking means is "held inoperative by and during motor operation," and that it is "operable by and from the window to resist sliding" etc. are functional as are statements that lock is "operable by and during window opening movement of the unit to lock the unit," and that it is "rendered inoperative by and during movement of the unit" etc., statements that lock is "independent of the manual control" and that it is "for locking the window with increasingly greater securement in accordance with an increase in the effort applied" and statement that lock is "wholly independent of the control means and operable by a prying effort."

Passing from our own decisions to that of the Supreme Court of the United States, we do not think that appellant has succeeded in demonstrating the inapplicability here of that Court's decision in the Halliburton case, supra, although there has been presented in his behalf what would be a well reasoned brief if its premises could be accepted as correct, but, unfortunately for appellant, we cannot so accept them.

Assuming, but not holding, that, as is asserted in the brief for appellant, "great confusion as to the status of the patent law is injected by [the Supreme Court's decision in] this [the Halliburton] case," it is not a function of this court to reverse the decision. Rather we must follow it, until that Court itself reverses or modifies it.

The patent, the validity of which was involved in that case, is described, in substance, in the Court's opinion, as relating to an alleged improvement upon an apparatus designed to facilitate the pumping of oil out of wells which do not have sufficient natural pressure to force the oil to gush. Specifically the alleged improvement appears to have been devised for use in connection with measuring the depth of the well by what the Court describes as the "sound-echo-time method."

The claim set out as typical in that case read:

> In an apparatus for determining the location of an obstruction in a well having therein a string of assembled tubing sections interconnected with each other by coupling collars, means communicating with said well for creating a pressure impulse in said well, echo receiving means including a pressure responsive device exposed to said well for receiving pressure impulses from the well and for measuring the lapse of time between the creation of the impulse and the arrival at said receiving means of the echo from said obstruction, and *means associated with said pressure responsive device for tuning said receiving means to the frequency of echoes from the tubing collars of said tubing sections to clearly distinguish the echoes from said couplings from each other.* [Italics supplied.]

The Court's comment follows:

> A claim typical of all of those held valid only describes the resonator and its relation with the rest of the apparatus as "means associated with said pressure responsive device for tuning said receiving means to the frequency of echoes from the tubing collars of said tubing sections to clearly distinguish the echoes from said couplings from each other." The language of the claim thus describes this most crucial element in the "new" combination in terms of what it will do rather than in terms of its own physical characteristics or its arrangement in the new combination apparatus. We have held that a claim with such a description of a product is invalid as a violation of Rev. Stat. 4888. *Holland Furniture Co.* v. *Perkins Glue Co.*, 277 U. S. 245, 256–57; *General Electric Co.* v. *Wabash Appliance Corp.*, supra.

[2], [3] We are unable to distinguish in principle between the statement in the claim there held by the Supreme Court to be merely functional and the statements in the respective claims here involved held by the tribunals of the Patent Office to be merely functional.

Appellant points out that the Supreme Court did not, in deciding the Halliburton case, supra, overrule its prior decision in the *Paper Bag Patent* case, supra, and insists that there is such a similarity between the limitations in the claims here involved and the limitation in the typical claim quoted by the Supreme Court in the *Paper Bag Patent* case, supra, that the decision in the *Paper Bag Patent* case, supra, should be held controlling here. To this we are unable to agree, and it may be said that the Supreme Court expressly distinguished the cases. It was contended during the argument of the Halliburton case, supra, that the decision of the *Paper Bag Patent* case, supra, was applicable, but the Court held that it was not, saying:

> In that [*Paper Bag Patent*] case, however, the claims structurally described the physical and operating relationship of all the crucial parts of the novel combination.

An examination of the claim quoted in the *Paper Bag Patent* case, supra, discloses that it embraced a functional statement but it also embraced structural limitations, in which respect it was similar to the claims allowed by us in the case of *In re Horton et al.*, supra. The claims here involved, in our opinion, do not meet that condition.

[4] Therefore, the decision of the Board of Appeals of the Patent Office is affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

IN RE YOUNG ET AL.

No. 5544. Decided March 1, 1949

(— F.2d —; 81 USPQ 139)

1. DIVISION—PRODUCT AND PROCESS OF USE—SEPARATE CLASSIFICATION.
While the different alleged inventions have separate classification in the Patent Office, *Held* that that ground, standing alone, is not conclusive, and that we should hesitate to sustain a requirement of division in this case solely upon that ground, though cases may arise in which such action may be proper.
2. SAME—SAME—DISCRETION IN PATENT OFFICE.
It has been the consistent policy of the courts to recognize that a certain discretion should be and is lodged in the tribunals of the Patent Office relative to the question of division.

3. SAME — COMBINATION AND ELEMENT — ELEMENT OF GENERAL UTILITY.

This court has uniformly sustained requirements of division between claims made to an element susceptible of use in different systems or combinations, on the one hand, and claims to one such system or combination, on the other hand.

4. SAME—ACTIONS IN OTHER CASES—RELEVANCY.

Held that the rule that the allowance of claims by the Patent Office has no relevancy in the consideration of the question of patentability of claims in another case, applies equally in considering the action of the tribunals of the Patent Office in requiring or failing to require division.

5. SAME—CATALYST AND PROCESS OF USE—CATALYST OF GENERAL UTILITY.

Where the Examiner required division between claims to a catalyst and claims to a method in which the specific catalyst was used and asserted that the catalyst itself has other uses, and where appellants failed to challenge and effectively to disprove the assertions of the Examiner, *Held* that we are not convinced that it was error to require division between the claims.

APPEAL from the Patent Office. Serial No. 506,214.

AFFIRMED.

Charles C. Scheffler, Rudolph S. Nelson, and *Donald C. Harrison* (*Eugene L. Greenewald* of counsel) for Young et al.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

GARRETT, *C. J.:*

This is an appeal from the decision of the Board of Appeals of the United States Patent Office, affirming the Primary Examiner's requirement of division between a group consisting of two claims for a composition of matter (defined as a copper-chromium mixed oxides hydrogenation catalyst), on the one hand, and, on the other hand, a group of seven claims for an alleged improvement in a process for making phenyl methyl carbinol, one of the steps of which is the use of the catalyst so described.

The article claims which appellant elected to prosecute were finally allowed by the Examiner. They are numbered respectively 2 and 3; the process claims 7 to 13, inclusive. While the merits of the claims are not involved in this appeal, we think it may be conducive to clarity to reproduce one of each group, and 2 and 7 are selected for this purpose.

2. A copper-chromium mixed oxides hydrogenation catalyst in which the chromium is present in a ratio, computed on a metal basis, from about 9 to 15 parts chromium per 100 parts copper, by weight.

7. A method for the production of phenyl methyl carbinol by reduction of acetophenone which comprises introducing hydrogen into acetophenone under pressure in the presence of a catalytic amount of a copper-chromium mixed oxides hydrogenation catalyst in which chromium is present in a ratio, computed on a metal basis, from about 7 to 25 parts chromium per 100 parts copper, by weight.

Appellants' application was filed October 15, 1943. It embraced 14 claims which were divisible into three groups. Claims 1, 2, and 3 (group I) were for the catalyst; 4, 5, and 6 (group II) for the method of producing the catalyst; and 7 to 14, inclusive, (group III) for a process of producing phenyl methyl carbinol, use of the described catalyst being one of the steps defined in the process.

During the prosecution of the application before the Examiner claims 1 and 14 were cancelled and the article claims 2 and 3, after first being rejected, were finally held allowable as hereinafter detailed.

The first action in the Patent Office shown by the record before us appears in an official letter of the Examiner, under date of April 27, 1944, in which it was stated that the application had been examined and that division was required. There was no decision upon the merits of any of the claims. The following patents were listed, not as prior art references on the question of patentability, but as relating to the question of separate classification of the different inventions held by the Examiner to be covered by the claims: Montonna, 1,416,859, May 23, 1922, 260–618; Amend, 2,040,913, May 19, 1936, 260–618; Groll, 2,217,865, October 15, 1940, 252–232; Ruthruff, 2,247,820, July 1, 1941, 252–254; Engel, 2,258,111, October 7, 1941, 252–254.

In the course of the letter the Examiner said:

> • • • Catalyst of group I may be prepared by other processes than that claimed in group II and it can be employed for catalytic reduction of other substances than that claimed in group III. The process of reducing acetophenone is independent of a process for producing a hydrogenation catalyst. The independence of these three groups is well recognized by workers in the art and the consequent classification of patents obtained by them as illustrated in the above cited patents. Group I is classified in class 252, subclass 232 illustrated by Groll patent. Group II is classified in subclass 254 of the same class as illustrated by patents to Ruthruff and Engel. Group III is classified in class 260, subclass 618 as illustrated by Montonna and Amend patents.

From the foregoing, one may observe that the Examiner required a "three-way" division.

Claim 14 was rejected in that letter "as obviously nonstatutory," and was cancelled by an amendment proffered on behalf of appellants in a communication dated July 19, 1944, responding to the official action of April 27, 1944.

In that communication appellants challenged the requirement for division as being improper, alleging also that "even were it proper, it is premature." Those questions were argued at some length and certain assurances, hereinafter referred to, requested, after which it also was requested that, in the event the Examiner adhered to his requirement for division, the question be submitted to the Examiner of Classification for a ruling. It was further said:

> • • • In the event that the Classification Examiner fails to disapprove the requirement for division, but only in such event, applicant chooses for first prosecution on the merits, claims to the hydrogenation catalyst as represented by claims 1, 2 and 3 of the Examiner's classification. This election is made at this time lest the foregoing amendment be considered unresponsive and does not in any sense constitute a waiver of applicants' right to appeal from the requirement. It is to be understood, also, that in thus expediting the prosecution of the case on its merits, applicants shall have the right to retain the claims to the process of hydrogenating and to the process of making the catalyst until appeal has been had from the requirement to divide without prejudice to applicants' right to file one or more applications on the subject matter thereof.

The Examiner adhered to the requirement for a "three-way" division, and in an official letter dated April 25, 1945, stated, in substance, that the question had been submitted to the Examiner of Classification who approved the requirement as made by the Examiner. The letter then discussed claims 1, 2, and 3 on their merits and rejected them on prior art, citing three patents as references. In view of the fact that claim 1 was subsequently cancelled and the rejection of claims 2 and 3 on prior art with-

drawn, the references need not be listed nor commented upon here further than to say that one of them was a patent to —— Jones, to which we hereinafter refer. The letter also recites the rejection of claims 4 through 14 (although 14 seemingly had been cancelled already) on the ground of misjoinder.

The next Patent Office action is recited in a letter of the Examiner dated September 12, 1945, which begins "Responsive to amendment filed August 31, 1945." There is no amendment of that date in the record, and we are unable definitely to determine from the Examiner's letter what it was or what he did with it, if anything. The letter recites that claim 1 had been cancelled (and possibly that was the amendment referred to); that claims 4 through 14 were rejected on the ground of misjoinder; that claims 2 and 3 stood rejected on the prior art previously cited; and that the rejection was final.

Appellants, on December 4, 1945, filed a petition to the Commissioner of Patents, presenting four alternative requests for action argued to be their right. Inasmuch as all the pertinent questions raised in the petition are discussed hereinafter to the extent deemed necessary, we need not set them forth at this point. The petition was denied in a decision by the Supervisory Examiner dated January 16, 1946.

January 17, 1946, appellants filed a communication "In response to the official action dated, September 12, 1945," alleging that the final rejection made on that date was premature, and requesting "that it be withdrawn for further consideration of the claims on the merits." Clarification of certain of the phraseology of the Examiner also was requested.

There was filed with the communication an affidavit subscribed and sworn to by all the appellants, in which, under rule (then No. 75) of the Patent Office, they "swore back" (particularly so far as claims 2 and 3 were concerned, claim 1 having been cancelled previously) of the Jones patent, one of the references cited by the Examiner in the rejection of article claims 1, 2, and 3, as hereinbefore stated. This patent was not included in the record brought before us (it was unnecessary to include it in view of the final action taken), but the affidavit states that it was Patent 2,372,084 issued March 20, 1945, upon an application filed October 24, 1942.

In an action of March 11, 1946, the Examiner stated that the letter and affidavit of appellants filed January 17, 1946, had been considered but that they did not put the case in condition for allowance, and in "advisory remarks made without in any way withdrawing the final rejection" said, (*a*) that in view of the affidavit "claims 2 and 3 are held allowable," and (*b*) that claims 4–14 (evidently overlooking the fact that 14 previously had been cancelled and was no longer in the case) were still regarded as "properly rejected upon the grounds of misjoinder of invention."

In the meantime, on March 6, 1946, appellants had taken appeal to the Board of Appeals, filing there-

with "the specific points on which appeal is taken." This was five days prior to the action of the Examiner in which he held claims 2 and 3 allowable, and in the appeal to the Board it was assigned as error that those claims were rejected on the prior art references cited. They also were discussed in appellants' brief before the Board which was made part of the record before us.

The official statement of the Examiner, following the appeal to the Board, however, while stating that claims 2 and 3 "are involved in the appeal," also stated that they had "been indicated as allowable." So, those claims were not before the Board upon their merits, and it had no reason to consider them, and did not consider them, except for the purpose of determining the relation between the catalyst and the two respective processes involved.

As a result of its consideration, the Board reversed the Examiner's requirement for division between group I (claims 2 and 3 for the catalyst) and group II (claims 4, 5, and 6 for the method of making the catalyst), holding that the method of the claims in group II "inevitably produces the specific product" defined in group I.

Relative to the requirement for division as applied to claims 7 to 13, inclusive, the Board said:

> With regard to the claims drawn to the method of producing the carbinol by reduction of acetophenone, using the specific catalyst, we are of the opinion that the requirement for division should be sustained, for the same reasons stated by this Board in the Ruthruff case, 64 USPQ 130. It is quite obvious that the method for the production of the catalyst is distinct from the method for the production of the carbinol. As was stated in the Ruthruff case, two methods which involve distinctly different operations cannot be made into one and the same process simply because of matter that may be common to both, since the substance of any process claim is determined by the operations positively recited therein.
>
> The catalyst itself may have other uses, and the mere fact that the particular catalyst claimed in this case finds especial use in a process for the production of phenyl methyl carbinol by reduction of acetophenone does not establish that it is the only use to which the catalyst can be put. It is highly improbable that, as a reduction catalyst, that is the case. In fact, claim 2 is drawn broadly to a copper-chromium mixed oxide hydrogenation catalyst which is in no way limited to a specific use.

[1] The foregoing are the only reasons specifically given by the Board for its action. It embraces the same thought relative to claims 7 to 13, inclusive, as that expressed in different phraseology by the Examiner, who also seemingly based his action upon the additional ground that the different alleged inventions received separate classification in the Patent Office. The Board made no reference to this ground, but the presumption is that it approved it. Concededly, however, that ground, standing alone, is not conclusive, and we find it unnecessary to discuss it further than to say that we should hesitate to sustain a requirement of division in this case solely upon that ground. Cases may arise, of course, in which such action may be proper. [2] It has been the consistent policy of the courts to recognize that a certain discretion should be and is lodged in the tribunals of the Patent Office relative to the question of division. *In re Ferenci*, 28 CCPA (Patents) 1095, 83 F.2d 286, 29 USPQ 302, 499 O. G. 517; *In re Moss et al.*, 26 CCPA (Patents) 861, 101 F.2d 536, 40 USPQ 479, 503 O. G. 583.

The serious situation for appellants here, as we

view it, is their failure plainly to challenge and effectively to disprove the assertions of the tribunals of the Patent Office to the effect that the catalyst, as described in claims 2 and 3 respectively, the use of which constitutes a step in claims 7 to 13, inclusive, is limited to that specific use, or, we may add, their failure to show that the catalyst itself has no use other than that defined in the claims. The burden rested upon appellants in those respects after the Examiner had made his initial ruling.

[3] This court has uniformly sustained requirements of division between claims made to an element susceptible of use in different systems or combinations, on the one hand, and claims to one such system or combination, on the other hand. *In re Ferenci*, 21 CCPA (Patents) 856, 68 F.2d 737, 20 USPQ 242, 444 O. G. 256; *In re Goerke et al.*, 23 CCPA (Patents) 1093, 83 F.2d 294, 29 USPQ 421, 470 O. G. 946; *In re Ferenci*, 23 CCPA (Patents) 1023, 83 F.2d 279, 29 USPQ 162, 468 O. G. 1047; *In re Ferenci*, 23 CCPA (Patents) 1095, 83 F.2d 286, 29 USPQ 302, 469 O. G. 517; *In re Coulter*, 33 CCPA (Patents) 1088, 155 F.2d 271, 64 USPQ 531, 590 O. G. 519.

The last cited case, while the claims related to entirely different subject matter (alleged improvements in a signalling system) from the claims of the instant case, was somewhat analogous to the instant case in that it presented a "three-way" division requirement involving claims for a signalling system or combination and for two distinct subcombinations.

It was pointed out there that counsel for the applicant did not question that the three groups of claims were separately and independently classified in the Patent Office; also, that it was not questioned that the signalling system was a well-recognized and independent subject of invention, nor that the respective subcombinations of switch and relay could be used in other systems without being altered in structure.

The brief on behalf of appellants is quite critical, particularly of the Examiner's decisions, as is their reply brief of the brief of the Solicitor for the Patent Office. The Board is also criticized because it refused, in considering a petition for reconsideration of its original holding with respect to claims 7 to 13, inclusive, to discuss certain statements of the Examiner. Of this the Board said:

> • • • With regard to the method of using the catalyst, we held division proper because the claims to the latter method were for a separate invention and gave our reason for so holding. The appeal in this case is from the action of the Examiner requiring division, i. e., from the requirement and not from all the specific reasons which the Examiner advanced to support the same and we do not consider it necessary to discuss all the reasons advanced in the Examiner's statement.

We do not think the refusal of the Board in that respect constituted reversible error.

In connection with the appeal to the Board appellants caused to be filed (and this was repeated in the record submitted on the appeal to us) a list of thirty-five or more patents in which both article and process claims were granted. In at least three of the patents, it appears that claims were allowed for (1) a catalyst; (2) a method of making the catalyst; and (3) a method in which the catalyst was used. In the greater number of the patents the claims allowed were limited to the catalyst and the method of making it. In six instances, there are claims for only the catalyst and the method of using it, and in three instances, seemingly there are claims for only the method of making and the method of using. In behalf of appellants, it is said that the list was filed in response to the list filed by the Examiner in his first official action to which we have hereinbefore alluded, and in the reasons of appeal to us it was alleged:

> 11. The Board of Appeals erred in sustaining the Examiner's requirement for division and the rejection of claims 7 through 13 without taking notice of the thirty-five patents in the annexed list wherein joinder was allowed, and the Board of Appeals erred further in not following well-established practice as represented by said thirty-five patents in the matter of joinder.

We, of course, know nothing of what occurred in the Patent Office by way of evidence or otherwise during the prosecution of the applications upon which the thirty-five patents listed by appellants were based. If any of them were at any time before this court, appellants have failed to advise of that fact.

[4] We do not regard the patents as being relevant in the instant controversy, and we may add that we do not base our decision upon the patents which were listed by the Examiner. The rule that the allowance of claims by the Patent Office has no relevancy in the consideration of the question of patentability of claims in another case was stated by us to be elementary in our decision in the case of *In re Greider et al.*, 29 CCPA (Patents) 1079, 1083, 129 F.2d 568, 54 USPQ 139, 543 O. G. 489. The principle so announced, which was restated, in substance, in our opinion in the case of *In re Hirschhorn*, 34 CCPA (Patents) 1156, 162 F.2d 489, 74 USPQ 183, 605 O. G. 6, applies equally in considering the action of the tribunals of the Patent Office in requiring or failing to require division.

Another of appellants' reasons of appeal reads:

> 12. The Board of Appeals erred in sustaining the Examiner's requirement for division and the rejection of claims 7 through 13 in the absence of information repeatedly requested, that a divisional application would not thereafter be rejected on the ground that we should not have complied with the requirement for division.

We do not find in appellants' statement of "the specific points on which appeal [to the Board of Appeals] is taken" any assignment of error which seems to cover the matter involved in the foregoing assignment before us, and the Board made no reference to it. It does appear to have been presented in the petition to the Commissioner under date of December 4, 1945, hereinbefore referred to, and response was made in the decision of the Supervisory Examiner, who said, inter alia: "• • • nor will any commitment be made as to any future action that may be taken on any divisional application that may be filed."

As a matter of fact, the petition to the Commissioner presented four alternative prayers, each of which was discussed by the Supervisory Examiner in his decision denying them. The brief of the Solicitor for the Patent Office construed appellants' contention to mean that they insisted that "the Examiner should not have required division without making a statement that, if the requirement was complied with and a second application was filed, no rejection would be made on the ground of double patenting," and asserts, citing authorities, that "It seems obvious that no such commitment could properly be made."

In a reply brief for appellants, filed by permission of the court, it is said:

> Nowhere in the record does it appear that appellants ever requested assurance that a second application, if filed, would not be rejected for "double patenting." What appellants requested was assurance that their claims 7 through 13 would not thereafter be rejected solely for the reason that they should not have complied with the Examiner's requirement or that the claims would have been allowable had division not been required. [Italics quoted.]

Whatever may be the proper construction of appellants' petition to the Commissioner in the light of the arguments concerning its various statements, running through much of the record and in the briefs before us, the fact remains that commitments as to future action were, in effect, demanded of the tribunals of the Patent Office as a condition precedent to appellants complying with the requirement for division. The matter is suggestive of a trade or bargain which, in our opinion, the Board would have had no authority to make, even if the subject had been presented by appellants' appeal to it, and it had felt disposed to conform.

[5] We deem further discussion unnecessary. We are not convinced, upon the facts here appearing, that it was error to require division between the claims of group I and those of group III.

The decision of the Board of Appeals is affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

IN RE MCKESSON & ROBBINS, INC.

No. 5582. Decided March 1, 1949

[— F.2d —; 81 USPQ 117]

1. TRADE-MARKS—CANCELLATION—DISCLAIMER.

   Where in a cancellation proceeding this court held "Bracine" confusingly similar to "Brace," and where subsequent to that decision appellant attempted to disclaim all the articles contained in his previous registration except the trade-mark "Brace" for hair and scalp preparations, *Held* that in view of the decision in the cancellation proceeding there was nothing left for the Commissioner to do but to reject appellant's disclaimer and to cancel the registration "Brace."

2. SAME—SAME—SAME.

   Where in denying appellant's attempted disclaimer the Commissioner further held that appellant's preparation for the scalp and hair possessed the same descriptive properties as a liniment for human use and the marks of the parties confusingly similar, *Held* that the Commissioner had no authority to determine that question and that that portion of his decision was obiter dictum.

3. SAME—SAME—RES JUDICATA.

   Where the issue in the instant case was not involved in the cancellation proceeding and it was not held by this court nor by the Commissioner that hair and scalp preparations involved in the cancellation proceeding possessed the same descriptive properties as liniment for human use or that the marks of the parties as to such goods were confusingly similar, *Held* that the decision in the cancellation proceeding is not res judicata of the issue presented in the instant case.

4. SAME—GOODS OF THE SAME DESCRIPTIVE PROPERTIES—MEDICINAL AND TOILET PREPARATIONS.

   Held that appellant's preparation for the scalp and hair, being merely a toilet preparation, does not possess the same descriptive properties as a medicinal preparation.

5. SAME—CONFUSION—"BRACE" AND "BRACINE."

   Held that appellant's mark "Brace" used on a hair tonic and the registered mark "Bracine," used on liniment, are not confusingly similar.

APPEAL from the Patent Office. Trade-Mark Serial No. 456,127.

REVERSED.

H. C. Dieserud for McKesson & Robbins, Inc.

W. W. Cochran (*Walter J. Derenberg* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Commissioner of Patents (speaking through the late Honorable Leslie Frazer, First Assistant Commissioner), 73 USPQ 206, affirming the decision of the Examiner of Trade-Marks denying appellant's application for the registration of a trade-mark under the Trade-Mark Act of February 20, 1905.

The trade-mark in question is for use on "A perfumed toilet preparation for the purpose of cleansing the scalp and hair, imparting a lustre to the hair and keeping it well groomed and in place." The trade-mark comprises the word "BRACE" on a black background and enclosed in a white oblong border, together with the head of a man and the words "A toilet preparation for the scalp and hair," and the name "McKesson & Robbins, Incorporated." The words, "A toilet preparation for the scalp and hair," together with the name "McKesson & Robbins, Incorporated," is disclaimed apart from the mark as shown.

The specimen included in the record and filed with the application contains a statement that the toilet preparation is "A pleasant to use toilet preparation as an aid in the care of the scalp and hair. Massaging of the scalp with Brace helps keep the scalp clean and lubricated and dresses the hair, imparting a lustrous brilliance. As a dressing, apply sparingly to the wet or dry hair. As a scalp massage, apply liberally direct to the scalp."

It appears from the record that the involved trade-mark was passed for publication and published in the OFFICIAL GAZETTE on April 27, 1943, in which, as it is customary, the Commissioner of Patents stated that any person who believed that he would be damaged by the registration of appellant's mark might oppose the same by filing a notice of opposition. Prior thereto, the Leonard James Company, owner of the registration "BRACINE," for use on

an "Antiseptic liniment and veterinary liniment preparation," which company had been successful in the cancellation proceeding brought against appellant, *McKesson & Robbins, Inc.* v. *Leonard James Co.*, 29 CCPA (Patents) 1137, 129 F.2d 563, 54 USPQ 207, 544 O. G. 459, hereinafter more particularly referred to, filed with the Commissioner of Patents a letter in which it was stated that in its opinion there would be no confusing similarity between appellant's trade-mark "BRACE" for use on a preparation for the hair and scalp, and appellee's registered trade-mark "BRACINE"; that the goods of the parties did not possess the same descriptive properties; and that it, therefore, consented to the registration of appellant's trade-mark.

[1] In the cancellation proceeding hereinbefore referred to, the Leonard James Company claimed that its mark "BRACINE," registered March 27, 1934, Registration No. 311,576, for an "Antiseptic liniment and veterinary liniment preparation," was confusingly similar to the trade-mark "BRACE" of McKesson & Robbins, Incorporated, registered June 14, 1938, Registration No. 357,713, for use on a variety of articles; to wit, "Tooth paste, hair and scalp preparations, powders and talcs for the face and skin, lotions for the skin and face, sunburn lotions and preparations, including antiseptic oils for sunburn." We there affirmed the Commissioner of Patents, holding that "• • • in part at least, the goods named in appellant's registration are of the same descriptive properties as those to which appellee's mark is applied. That 'antiseptic oils for sunburn,' for example, one of the products named in appellant's certificate of registration, are of the same descriptive properties as a liniment for human use, • • •" and that the trade-marks of the parties were confusingly similar.

In the cancellation proceeding the First Assistant Commissioner of Patents stated that "the goods to which these marks are respectively applied, in part at least, possess the same descriptive properties within the meaning of the statute. Clearly this is true, for example, as to respondent's 'antiseptic oils for sunburn' and petitioner's 'antiseptic liniment' for human use." The First Assistant Commissioner further stated in his decision in that case that "• • • *the fact that respondent's registration may include additional items, of different descriptive properties, has no bearing on the issues here presented.*" [Italics ours.]

It is evident that neither the First Assistant Commissioner of Patents nor this court held that McKesson & Robbins' goods, "• • • Hair and scalp preparations • • •" and the Leonard James Company's "Antiseptic liniment and veterinary liniment preparation" possessed the same descriptive properties, nor was it held that the trade-marks of the parties as to such goods were confusingly similar. The First Assistant Commissioner properly held, as did this court, that one of the items included in the McKesson & Robbins' registration, that is, antiseptic oils for sunburn, possessed the same descriptive properties as the Leonard James Company's liniment for human use, and that the trade-marks of the parties, as applied to those items, were confusingly similar.

It will be observed, furthermore, that "Hair and scalp preparations," involved, among other things, in the cancellation proceeding, is much broader in its terminology and might include preparations not covered by a "Perfumed toilet preparation for the purpose of cleansing the scalp and hair, imparting a lustre to the hair and keeping it well groomed and in place," involved in the instant case.

Subsequent to our decision in the cancellation proceeding, supra, appellant attempted to disclaim all of the articles contained in his previous registration except the trade-mark "BRACE" for hair and scalp preparations. That was the only issue presented by appellant's attempted disclaimer, and the First Assistant Commissioner properly held that he had no authority to permit such a disclaimer. However, in denying appellant's attempted disclaimer, the Assistant Commissioner further held that appellant's toilet preparation for the scalp and hair, which he referred to as a hair tonic, and the Leonard James Company's liniment for human use, possessed the same descriptive properties and that the marks of the parties were confusingly similar. *Leonard James Company* v. *McKesson & Robbins, Incorporated*, 54 USPQ 333.

[2] In view of our decision in the cancellation proceeding, supra, there was nothing left for the First Assistant Commissioner of Patents to do but to reject appellant's disclaimer and to cancel the McKesson & Robbins' registration of its trade-mark "BRACE," although some of the articles covered by that registration might not have possessed the same descriptive properties as antiseptic oils for sunburn, covered by that registration, and the Leonard James Company's liniment for human use. Accordingly, the Assistant Commissioner in his rejection of McKesson & Robbins' attempted disclaimer had no authority to determine whether the toilet preparation for the scalp and hair, covered by the McKesson & Robbins' registration, possessed the same descriptive properties as the liniment for human use, included in the registration of the Leonard James Company, and that the marks of the parties were confusingly similar. That portion of his decision, therefore, was obiter dictum and is not a proper basis for the decision of the Examiner of Trade-Marks and of the First Assistant Commissioner of Patents that the issue here presented is res adjudicata.

[3] Furthermore, the issue as to "A perfumed toilet preparation for the purpose of cleansing the scalp and hair, imparting a lustre to the hair and keeping it well groomed and in place," under consideration in the instant case, was not involved in the cancellation proceeding, and it was not held by this court nor by the First Assistant Commissioner of Patents that hair and scalp preparations involved in the cancellation proceeding possessed the same descriptive properties as liniment for human use or that the marks of the parties as to such goods were confusingly similar. Accordingly, our decision in the cancellation proceeding is not res adjudicata of the issue presented in the instant case. See *Last Chance Min. Co.* v. *Tyler Min. Co.*, 157 U. S. 683, 687, and *Carter Medicine Co.* v. *Barclay*, 36 App. D. C. 123, 128, 198 O. G. 238.

The First Assistant Commissioner of Patents held in the instant case that the goods of the parties possessed the same descriptive properties and that their respective marks were confusingly similar. We are not of that opinion.

[4] It clearly appears from the record that appellant's product here involved is merely a toilet preparation and is not advertised or used as a medicinal preparation, whereas, the liniment covered by the Leonard James Company's registration is a medicinal preparation and is advertised and used for its medicinal properties. It may be that in some instances a so-called toilet preparation may contain medicinal properties and might possess the same descriptive properties as a medicinal preparation, but that is not so in the instant case. See *Daggett & Ramsdell* v. *Samuel Bonat & Bro.*, 35 CCPA (Patents) 937, 166 F.2d 151, 76 USPQ 608, 610 O. G. 501.

[5] We are of opinion, therefore, that appellant's preparation for the scalp and hair, being merely a toilet preparation, does not possess the same descriptive properties as a medicinal preparation and that appellant's mark "BRACE," used on its goods, and the registered mark of the Leonard James Company, "BRACINE," used on liniment, are not confusingly similar.

For the reasons stated, the decision is reversed.

REVERSED.

U. S. Court of Customs and Patent Appeals

IN RE VALKO ET AL.

No. 6514. Decided March 1, 1949

[— F.2d —; 81 USPQ 102]

1. PATENTABILITY—STATUTORY REQUIREMENTS.

Held that in order to be considered patentable claims must not only be novel and have utility, but they are required by statute to be inventive in their subject matter.

2. APPEAL TO COURT OF CUSTOMS AND PATENT APPEALS—REASONS OF APPEAL—ABANDONMENT.

Where appellants in their reasons of appeal allege error in the decision of the Board with respect to the breadth of the claimed compounds, but appellants' brief makes no mention of these particular points, *Held* that the reasons of appeal pertaining to those points will not be considered by us.

3. PATENTABILITY—PARTICULAR SUBJECT MATTER—TEXTILE TREATMENT.

Certain claims to a textile impregnated with a benzotriazolium salt and to the process of treating textiles with said salt *Held* properly rejected as unpatentable over a prior art publication.

APPEAL from the Patent Office. Serial No. 509,140.

AFFIRMED.

Clarence M. Fisher (*Pennie, Edmonds, Morton & Barrows* and *R. T. McLean* of counsel) for Valko et al.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

JACKSON, *J.*:

Appellants have appealed from a decision of the Board of Appeals of the United States Patent Office affirming a decision of the Primary Examiner rejecting all of the claims, 1 to 10, inclusive, of an application, Serial No. 509,140, filed November 5, 1943, entitled "Textile Treatment" as lacking invention over the prior art publication, Kuhn et al., Berichte, vol. 73 (1940), pages 1109–1113.

Six claims describe a textile impregnated with benzotriazolium salt, and four a process of treating textiles with said salt.

Claims 1 and 9 are illustrative of the subject matter and read as follows:

1. A textile impregnated with a higher alkyl benzotriazolium salt having at least one aliphatic radical of at least 8 carbon atoms.

9. In the treatment of textiles the improvement which comprises exposing the textile to the action of a solution having a concentration of a higher alkyl benzotriazolium salt containing at least one aliphatic radical of at least 8 carbon atoms of from .01% to 1%.

The subject matter of the alleged invention is shown with sufficient clarity in the quoted claims.

The reference discloses methods for the production of alkyl benzotriazolium salts which include salts in which the alkyl group contains more than 8 carbon atoms including the bromides and specifically dioctyl benzotriazolium bromide. Benzotriazolium is well known as a bactericide.

It is admitted by appellants that it is old to impregnate textiles with bactericidal compositions, and that the chemical compounds disclosed in the reference are conceded to possess bacteriological properties, and are useful in the practice of the claimed invention. Because of such admissions, the tribunals of the Patent Office rejected the involved claims.

The sole issue is whether or not the impregnated textiles and the process of the claims constitute invention over the disclosure of the reference. Counsel for appellants contend that the subject matter defined by the claims responds to every criterion of patentable invention, having novelty, utility, and obvious qualities not predictable from the prior art. In support of that contention it is stated in their brief that appellants discovered various improvements in textiles impregnated with the compounds of the claims; such as an "improved hand" (soft feeling to the manual touch), an improved capacity for retaining the dye, and possessing marked antiseptic and insect-repellant properties. It is stated that appellants found that there was a great affinity between the compounds and the fabric, and that the compounds are readily absorbed by the textiles when in dilute aqueous solutions, and are tenaciously retained in the textiles after repeated washings and cleanings.

In their brief it is pointed out by counsel for appellants that the tribunals of the Patent Office have not suggested that the textiles of the article claims are not new articles of manufacture or that the process of the process claims is not new. They

further point out that it has not been held below that the impregnated textiles are not useful or that they have not the outstanding properties which are described in appellants' specification.

Appellants allege that both the Primary Examiner and the Board of Appeals failed to give due weight to the alleged fact that the prior art does not suggest the use of the involved chemical in the impregnation of textiles, nor did they suggest that there was anything in the prior art to indicate that such chemicals would be absorbed in textiles, or that there was an affinity between the impregnating material and the textiles, or that such materials after impregnation would possess a "desirable hand," or that the dyeing properties would be improved, or that the textiles would be made insect-resistant, or that the antiseptic or bactericidal properties of the chemical would not be destroyed in the textiles when washed or cleaned.

[1] It is true that the tribunals of the Patent Office did not deny that the appealed claims disclosed an article and a process which are novel and possess utility. However, it is trite to say that in order to be considered patentable claims must not only be novel and have utility, but they are required by statute to be inventive in their subject matter.

Appellants concede it is old in the art to impregnate textiles with bactericidal compositions. They have neither denied nor controverted a statement in the decision of the Board of Appeals stating; "In the prior art impregnation of textiles with compounds having germicidal properties such compounds are selected as would yield improved textiles with respect to hand, flexibility, etc., rather than inferior products as regards these properties." Such statement, therefore, must be considered by us as being true. *In re Williford*, 34 CCPA (Patents) 812, 153 F.2d 997, 72 USPQ 321, 598 O. G. 327; *In re Selmi et al.*, 33 CCPA (Patents) 1187, 156 F.2d 96, 70 USPQ 197, 591 O. G. 160; *In re Lewis*, 25 CCPA (Patents) 1273, 96 F.2d 1009, 37 USPQ 786, 497 O. G. 18.

In view of the admissions hereinbefore referred to and for the reason that the alkyl benzotriazolium salts used by appellants are known to possess great bactericidal properties, it is clearly obvious to impregnate textiles with such chemical compounds in order to make them resistant to bacteria. It appears to us, therefore, that if one wished to make a textile bacteria-resistant with benzotriazolium compounds, he had available such information, and, as stated in the brief of the Solicitor, "all the know how" in order to obtain that result. Certainly under the facts herein if other advantages or results were accomplished at the same time, no invention would be involved because of those other advantages. *In re Gaworke*, 24 CCPA (Patents) 725, 86 F.2d 330, 31 USPQ 330, 475 O. G. 3.

In view of what we have said, we are of opinion that no consideration should be given to appellants' contention that there was nothing in the prior art to suggest the properties and advantages which appellants claim.

All of the claims relate to the impregnation of textile materials with compounds concededly old in the art and well known to have a powerful disinfecting effect. We must conclude, therefore, that all appellants have done is to carry forward the known property of the old chemical article in an obvious way.

[2] While appellants in their reasons of appeal allege error in the decision of the Board with respect to the breadth of the claimed compounds, as distinguished from those which are specifically disclosed in the application and the ones which were tested as shown in an affidavit filed herein, appellants' brief makes no mention of those particular points. Under the rule announced in *In re Krasnow et al.*, 35 CCPA (Patents) 939, 166 F.2d 196, 76 USPQ 567, 609 O. G. 692, and in *In re McCabe*, 24 CCPA (Patents) 1224, 90 F.2d 111, 33 USPQ 539, 485 O. G. 266, the reasons of appeal pertaining to those points will not be considered by us.

[3] For the reasons hereinbefore set out, the decision of the Board of Appeals is affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

IN RE MERCIER

No. 5589. Decided March 1, 1949

[— F.2d —; — USPQ —]

1. PATENTABILITY—COMBINING REFERENCES—IMPRACTICABILITY ALLEGED.
Where it is contended that it would not be practical to weld a hard steel lining, such as that disclosed in the H. patent, into the C structure, but there is no evidence of such impracticability in the record, *Held* that the statement of counsel may not be considered as a substitute therefor.

2. SAME—PARTICULAR SUBJECT MATTER—CHAIN LINK.
Certain claims for a chain link construction *Held* properly rejected as unpatentable over the prior art.

APPEAL from the Patent Office. Serial No. 457,173.

AFFIRMED.

Harker H. Hittson for Mercier.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

JACKSON, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office affirming a decision of the Primary Examiner finally rejecting, as unpatentable over the prior art, all of the claims, 25 to 29, inclusive, of an application for a patent on a sprocket chain.

The references are: Horst, 830,849, January 1, 1907; Pike, 1,770,582, July 15, 1930; Collins, et al., 2,319,979, May 25, 1943.

All of the claims are so closely related that it is not necessary to deal with them separately. Claim 27 is considered illustrative of the involved subject matter, and reads as follows:

27. A chain link including in combination a knuckle member, a pair of spaced side straps projecting in the same direction from the ends of said knuckle member, said side straps each having an opening therein adjacent its free end, the openings being aligned with one another to receive a link connecting pin, means associated with one of said side straps for preventing rotation of a link connecting pin in the pin receiving opening therein, a sleeve member of bearing material in said knuckle member forming a permanent lining therefor, said sleeve member having a notch formed in each of its ends, and weld material welded to said knuckle member extending into the notches in said sleeve member immovably and permanently securing said sleeve and knuckle members together.

The construction of sprocket chains is quite old, and the device of the present application is said to be particularly adapted for use in a very high elevator structure in which there is a high temperature.

It appears that the claimed chain herein and the chain shown in the patent to Collins et al. resulted from the joint efforts of appellant on behalf of The Jeffrey Manufacturing Company and Collins et al. on behalf of the Lummus Company. It is said that appellant and Collins et al. worked together for the purpose of designing a successful conveyor which could be used in the structure already mentioned. Appellant apparently was not aware that Collins et al. had filed an application for a sprocket chain corresponding to the disclosure shown in Figs. 1, 2, 5 and 6 of appellant's application, and because of that unawareness, when appellant filed the instant application, he provided for a structure almost identical to that of the Collins patent, and designated it as the preferred embodiment of his invention.

Appellant does not question the right of patentees, Collins et al., to their invention.

In the involved application there appears a modification of appellant's preferred structure, pictured in Figs. 3 and 4, and it is the contention of appellant that such modification is patentable over the alleged basic design of his preferred form, and patentable as well over the device of the Collins et al. patent. Therefore, if the claims herein are to be held patentable over the prior art, invention must be found to reside in the modification of the chain depicted in Figs. 3 and 4 of appellant's application.

It appears from Fig. 3 that the linked chain structure comprises longitudinal side straps which have openings in their ends into which a tubular cross member, chamfered at its ends, extends, so that the cross member is set tightly into the openings of the side straps providing a groove around each end of the cross member. A weld is employed to fill those grooves, and the connecting cross member and the side straps are held in firm and rigid fashion. Inside of the cross member, forming a permanent lining therefor, is a hard metal wearing sleeve. The sleeve is notched on each of its ends, and weld material is poured into the notches by means of which the lining sleeve and cross member are connected. The pintle or pin extends through the side straps and the lining of the cross member. The pin is flattened toward the end of one of its sides, so as to cooperate with a flat portion of the adjacent side strap, thus preventing rotation of the pin. The pin is removable, but is held in place by a head on one end and a small cross pin on the other end near the flattened side thereof.

The patent to Horst relates to a sprocket chain and is said to have for its purpose the strengthening of the chain links so as to give longer life against the deterioration due to wear and strain. The patent discloses a tubular cross member within which there is an interior lining sleeve of hard metal through which a pin is placed. The pin is provided with a flat key which extends into a slot on the side strap of the link.

The Pike reference relates to what is said to be a novel method in the making of a bushing structure, and particularly to the welding of a copper and lead bushing to an outer shell of copper-iron-lead alloy.

The Collins et al. patent, like the present application, relates particularly to an articulated conveyor chain adapted for heavy-duty, and its principal object is said to be the production of such a chain in which the link is much stronger than that which is shown in the prior art.

It will be observed from what has already been set out, that the arrangement of appellant's links, pin, cross member and weld is clearly disclosed by the device described in the Collins et al. patent. One difference observable in the appealed claims from the Collins et al. structure is that in the former there is present the interior lining sleeve of the cross member, and the means by which the sleeve and cross member are attached are of course absent in the patent structure. It may be noted that that attachment in the present application is made by means of slots in the sleeve filled with metal welded to the inner surface of the tubular cross member. We do not consider that difference, however, to be patentable over the Collins et al. device in view of the other cited prior art.

[1] It is contended by counsel for appellant that it would not be practical to weld a hard steel lining, such as that disclosed in the Horst patent, into the Collins structure. There is no evidence of such impracticability in the record, and the statement of counsel may not be considered as a substitute therefor. *In re Burns*, 23 CCPA (Patents) 1091, 83 F.2d 292, 29 USPQ 423, 471 O. G. 246. The contention, as to the impracticability of welding a hard steel lining to the cross member of the Collins et al. structure, seems to be at variance with what is actually set out in appellant's specification, wherein it is stated that "Another important reason is that said sleeve may be and in some devices which I have built is of an alloy which does not weld properly." That statement appears to us to clearly imply there are some materials from which the hard steel sleeve may be made that are suitable for welding.

The statement in appellant's brief concerning the practicability of welding appears to be squarely contradicted in the brief of the Solicitor, wherein it is stated that the welding of hard, high carbon and alloy steels, which are conventionally used for tool and wearing surfaces, is practical. In support of that statement, the Solicitor cited, Fundamentals of Welding, James W. Owens, Penton Publishing Co., Cleveland, Ohio (1923), page 305, and quoted therefrom as follows: "The fusion welding of the higher carbon and other alloys of steel is quite possible, • • •." The Solicitor also noted that, on pages 55 and 64 of the Owens book, methods of such

welding are described. It appears to us, therefore, that it would be in accord with known practice to weld the wearing sleeve of the Horst structure into the Collins device. If that were done, it is obvious that there would be no new or patentable result, for the reason that the sleeve would function in precisely the same fashion as it does in the Horst device.

The claimed limitation of a shoulder as a means for preventing the pin from rotating, in our opinion, does not lend patentability to the structure defined in the claims. The use of a shoulder and flattened parts for the purpose of preventing rotation is old in the art, as may be seen in the structure of the Horst patent, wherein a shoulder is disclosed as a means for preventing rotation of the pin.

[2] It is true that the device of the Collins et al. patent does not disclose a lining sleeve within the tubular cross member. It seems to us, however, when so desirable, that the employment of such lining would be a common expedient, well known to any mechanic. In the device of the Horst patent, a hard metal sleeve is disclosed in exactly the same relationship to the tubular cross member, as is seen in the structure of appellant. While the sleeve lining of that patent is not fastened in any way, we do not think it would involve invention to weld such an inner wearing sleeve to the cross member of the Collins device by securing the sleeve of the Horst device in the link of the Collins et al. patent by the well known methods of keying, brazing or otherwise securing the sleeve. The manner of securing the sleeve and cross member is clearly a matter of choice and has no particular coaction with the other elements defined in the appealed claims.

The present case might possibly present the interesting question as to whether or not an applicant is entitled to the allowance of claims for a modified structure in an application, wherein the preferred form of his invention is anticipated by the prior art. That point, however, has not been raised herein, and it would be improper for us to discuss it.

The brief of counsel for appellant has been carefully examined, but we find no reason therein or in the record to disturb the decision appealed from.

The decision of the Board of Appeals is affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

WARE *v.* CARLTON, ROBIE, AND BALL

CARLTON *v.* WARE, ROBIE, AND BALL

Nos. 5485 and 5488. Decided February 1, 1949

[— F.2d —; 81 USPQ 196]

1. INTERFERENCE—RIGHT TO MAKE—CONTINUING APPLICATION.

Where the respective counts contain considerable language describing characteristic properties of the principal materials used in producing the article defined by the counts, and where such characteristics are neither enumerated nor described in the earlier application relied upon by appellee, *Held* that the omission is wholly immaterial, since under the law such characteristics need not be described in that specification.

2. SAME—REDUCTION TO PRACTICE—PRIOR APPLICATION.

Where appellees' application here involved was filed as a two-party application and as a division of a prior four-party application, which was a continuation-in-part of an earlier four-party application, and where the record shows that the subject matter in issue was the exclusive invention of the appellees, and was mistakenly disclosed, but not claimed in the prior four-party applications, *Held* that since the subject matter of the counts has been continued before the Patent Office by appellees since the filing date of the earlier application, that application is a constructive reduction to practice of the invention defined by the counts.

3. SAME—PRIORITY—COATED ABRASIVE SHEET AND METHOD OF MAKING.

Held that the decision of the Board of Interference Examiners awarding priority of invention of the ten counts in issue relating to a coated abrasive sheet of the sandpaper type and the method of manufacturing it to appellees, Robie and Ball, is affirmed.

APPEAL from the Patent Office. Interference No. 80,225.

AFFIRMED.

Ephriam Banning for Ware.

Harold J. Kinney (*Carpenter, Abbott, Coulter & Kinney*, and *Richard K. Stevens*, of counsel) for Carlton.

William H. Webb and *Donald A. Gardiner* (*Stebbins, Blenko & Webb* of counsel) for Robie and Ball.

O'CONNELL, *J.*:

This is an appeal in a three-party interference proceeding from the decision of the Board of Interference Examiners of the United States Patent Office awarding priority of invention of the ten counts in issue, Nos. 1 to 10, inclusive, to Norman P. Robie and Albert L. Ball, appellees.

The interference involves the patent to Ware, No. 2,278,158, granted March 31, 1942, on an application filed June 24, 1940, as a continuation-in-part of Ware's prior application, No. 302,322, filed November 1, 1939; the application of Carlton, No. 261,069, filed March 10, 1939; and the application of Robie and Ball, No. 457,174, filed September 3, 1942.

Robie and Ball also rely in this interference on two earlier, four-party applications filed jointly by them with Benner and Rossow, namely, application No. 137,796, filed April 19, 1937; and application No. 336,212, filed May 20, 1940.

After the patent to Ware was issued, its ten claims were copied by Carlton and this interference was declared between Ware and Carlton. The application hereinbefore described which Robie and Ball filed September 3, 1942, contained the ten claims which they had also copied from Ware's patent. On that basis, such application was included in the present interference.

The party Ware moved to dissolve the interference as to the party Carlton on the ground that Carlton's application did not disclose the subject matter defined by counts 1 to 6, inclusive, 9, and 10. That motion was denied by the Primary Examiner.

Ware also moved to dissolve as to Robie and Ball on the ground that they had no right to make any of the counts, for the alleged reason that Robie and Ball were guilty of laches in delaying until

September 3, 1942, to assert claims to the subject matter defined by such counts. That motion was likewise denied by the Primary Examiner.

Robie and Ball filed a motion to shift the burden of proof both as to Carlton and as to Ware in view of the alleged disclosure of the subject matter of the counts in the two earlier applications of April 19, 1937, and May 20, 1940, jointly filed by Robie, Ball, Benner, and Rossow. This motion was granted by the Primary Examiner. Robie and Ball thus became the senior party. On a motion for reconsideration, the Examiner adhered to his original decision as to all three motions.

Ware and Carlton each took testimony. Robie and Ball relied on the filing dates of the two earlier, four-party applications hereinbefore described for constructive reduction to practice. All three parties filed briefs and were represented at the final hearing. In that proceeding, the Board of Interference Examiners, among other things, agreed with the reasoning of the Primary Examiner, holding that as between Ware and Carlton, Ware was later both as to conception and reduction to practice, and that as to the three parties here involved, appellees Robie and Ball were entitled to the award of priority of invention of the subject matter defined by the counts.

The invention in issue relates to a coated abrasive sheet of the sandpaper type, and the method of manufacturing it. Counts 7 and 8 define the method, and the remainder of the counts define the article. With respect to the specifications upon which the patent to Ware was granted, and from which patent the counts were copied, it was stated by the Board of Interference Examiners that—

> • • • In these specifications it is pointed out that glue bonded sandpaper wears out rather quickly when it becomes heated during use, since the surface becomes sticky at a temperature of about 120° F. and collects dust from the abrading operation. This filling in of the spaces between the grit particles causes loss of cutting power in a short time. To avoid this difficulty while keeping certain advantages of glue, Ware retains three of the usual components, i. e. the base or backing, the "making" or initial coat of glue, and the abradants. However, he uses as a substitute for the usual glue "sizing" or second coat, a sealing film comprising an alkali metal silicate which remains dry at high temperature. Accordingly, the dust from the abrading operation does not adhere to, but is free to fall or be knocked from, the abrading surface. The loss of cutting power due to accumulation of dust on the abrading surface is thus effectively eliminated.

Counts 4 and 8 are regarded as sufficiently illustrative. They read:

> 4. A flexible abrasive sheet for use under conditions developing high abrading surface temperatures comprising a base, a layer of abrading particles spread over the base, an adhesive making coat of material of high adhesion qualities, but of relatively unstable consistency becoming sticky at temperatures exceeding 120° F., anchoring the abrading particles to the base, and a thin protective film of substantially uniform thickness comprising an alkali metal silicate, a filler, and a moisture retaining substance, united to the adhesive making coat, surrounding said particles in general conformity with the surface contours thereof, and forming a seal against exposure of the material of the adhesive making coat, said film being of relatively stable consistency remaining dry and non-sticky at temperatures up to 1200° F. and being relatively hard at such temperatures, whereby said film remains substantially dry and non-sticky at high abrading surface temperatures for materially avoiding accumulation of dust on said abrading surface and also enhancing the abrading qualities of said surface due to the hard film surrounding said abrading particles.

> 8. The method of protecting a thermoplastic adhesive making coat of an abrasive sheet which comprises the step of applying over such a making coat a thin continuous protective film which is relatively resistant to softening, tackiness and disintegration in the presence of mounting temperatures such as would tend to soften and render the making coat tacky whereby to maintain over the making coat a seal to prevent contact therewith or loose foreign particles.

The primary question involved is whether the disclosure of the four-party application filed April 19, 1937, is sufficient to support the counts. The disclosure of that application, so far as pertinent, was duplicated in the applications of May 20, 1940, and September 3, 1942. Appellants contend that the Board erred in holding appellees were entitled to shift the burden of proof on the ground that the applications of 1937 and 1940 contained the disclosure necessary to support the counts.

Carlton agrees with the arguments presented on the point in the brief of the party Ware who, after stating that the unique feature of the abrasive article here involved is provided by having a silicate sizing coat applied over a primary bonding coat of animal glue or the like, enumerates the following requirements of the counts:

> It will be noted that count 1 provides that the "thin protective film" of silicate is "*united* to the adhesive coat" of glue or the like. Likewise, in counts 2 and 4, note the wording "united to the adhesive making coat." Count 3 says "united to the making coat." Counts 5, 6 and 10 say, "applied over and joined to the making coat." Counts 7 and 8 are method claims and say, "applying over such a making coat a thin protective film" etc. The remaining count, i. e. count 9, calls for a "thin protective film" of silicate of soda "united to the adhesive coat." *In all the counts the feature of the silicate coat being positioned over and united to the making coat is recited.* • • • [Italics quoted.]

[1] The respective counts contain considerable language describing characteristic properties of the glue and of the sodium silicate, the principal materials disclosed in all the applications of the parties for use in the two layers or coatings which are produced in the manufacture of the article defined by the counts. Such characteristics of those materials are neither enumerated nor described in the application of 1937. The omission is wholly immaterial, however, since under the law such characteristics need not be described in that specification. See *Rincy* v. *Thomas*, 22 CCPA (Patents) 1250, 77 F.2d 525, 25 USPQ 418.

No words of exclusion are employed in any of the counts limiting the use alone of sodium silicate or of another alkali metal silicate as a sizing coat, or other protective film, in the manufacture of the abrasive. Furthermore, as the Board correctly indicated, the language of the counts is of such scope as to include an article in which the bonding adhesive consists of both a making coat and a sizing coat of glue, with a protective film containing alkali metal silicate extending thereover; or an article in which the making coat is glue, and the sizing coat is a protective film of alkali metal silicate.

The Board in describing the disclosure of the specification of 1937 correctly noted the statements therein to the effect that previously it had been customary to use glue or varnish as the adhesive in

the manufacture of the described abrasive articles. The Board also referred to the following disclosures therein: "In accordance with our invention we provide as adhesives, for use in the production of flexible abrasive articles, soluble silicate solutions which may be used alone or in various combinations with other materials to produce novel effects • • •. • • • These silicate solutions may be used in applying both the making coat and the sizing coat or either of these • • •." The Board further directed attention to the following paragraph of the specification, the italics being supplied by the Board:

> We have also found that we can strengthen or reinforce *flexible abrasive articles* such as discs, by applying to them *a coating of soluble silicate. This coating may be applied to articles bonded with glue*, varnish, resin or the like, or to the improved silicate bonded articles of our invention. The reinforcing coating may be applied by any suitable means and may *extend over the whole area of the article* if desired, though we have found that an annular coating around the periphery of an article such as a disc is productive of improved results. Such a coating may be applied to only one or to both sides of the article and may be of any desired thickness.

The Board, after a critical analysis of the decision of the Primary Examiner, the disclosures of each of the involved applications, and the contentions of the respective parties, together with the counts in issue, came to the conclusion, as did the Primary Examiner, that each of the four party applications of 1937 and 1940, and the application of September 3, 1942, upon which appellees rely, disclosed the invention defined by the counts.

In his reasons of appeal appellant Carlton alleges that the Board erred in reading into "the vague and ambiguous language" of the application of April 19, 1937, the specific subject matter of the counts. On the same point, appellant Ware alleges in his reasons of appeal, generally, that the Board erred in holding the 1937 and 1940 applications of Roble et al. disclosed the invention defined by the counts:

> • • • and specifically that these applications adequately and fully describe (a) a continuous protective film, of uniform thickness, surrounding the abradant particles in general conformity with the contours thereof, to form a seal therefor, and (b) a making coat of glue for the abradant particles.

With respect to the contention that the applications of Roble et al. do not disclose the described continuous protective film, the Board referred to and approved the position of the Examiner on that point; namely, that the sizing coats commonly used in the art are continuous, and there is no precise disclosure in the applications of any of the parties as to how anyone could apply a sizing coat that would be discontinuous, and still be effective to serve the purpose of a sizing coat. "Sizing coats, as generally applied, are not so thick," the Examiner correctly stated, "as to blanket the abrasive grains to such an extent as to interfere with or prevent the sharp points, corners and edges of the grains from cutting the work piece surface with a fairly high degree of freedom of action." Furthermore, the Board correctly held that the sizing coat of the early four-party application and the coating extending "over the whole area of the article," as disclosed in that application, constituted a continuous film meeting the requirements of the counts.

Appellants further urge that the short paragraph hereinbefore quoted by the Board from the specification in the application of 1937 is so vague as to be almost meaningless. They contend that the statement in that paragraph to the effect that the silicate coating may be applied "to articles bonded with glue," does not mean that the making coat only shall be of glue and the sizing or protective coat of a soluble silicate.

They argue that the counts do not read upon a structure in which the making coat and the sizing coat are of glue and a protective film over the sizing coat is of a soluble silicate. In dealing with this point, which was also raised before the tribunals below, the Board stated:

> Ware also contends that it cannot be urged when glue is used for two undercoats, viz., the making and sizing coats that the addition of a third outer coat of a silicate solution meets the requirements of the counts • • •. Most of the counts refer to a "making coat" of thermoplastic adhesive, but although the Ware's specification says the sealing film "may" be applied as a top or sizing coat • • • the silicate coat is recited broadly in the counts as a "protective film" or a "protective coat." The use of the term "comprise" does not exclude the use of an additional or intermediate coating, and the words "applying over such a making coat" in counts 7 and 8 merely mean that the film is applied above the making coat and not necessarily in contact therewith. Moreover, such language as "united" or "joined" to the making coat does not preclude the protective film from being united or joined to the making coat through an additional coat. Accordingly, aside from the statement in the early four party application that the silicate solution may be used for the sizing coat • • • and whether or not the words "bonded with glue" in the above quotation refers to two coats of glue, we believe that the contentions of Ware • • • are untenable.

Each of the appellants takes vigorous exception to the decisions of the Board hereinbefore expressed, not only with respect to the sufficiency of the disclosure of the applications upon which appellees rely, but also with respect to the alleged broad and "unreasonable" interpretation given to the counts. The court, however, is not convinced by the arguments of appellants that the Board erred with respect to its holdings hereinbefore described.

[2] Appellants further argue that even if the application of April 19, 1937, had disclosed the invention defined by the counts, appellees are not entitled to rely on the filing date of that application for constructive reduction to practice. Specifically appellants maintain that the Board erred in holding appellees' application of September 3, 1942, which was filed by one entity consisting of two parties, could qualify under the rule stated in the case of *In re Roberts*, 40 App. D. C. 250, as a division or continuation-in-part of earlier applications, filed by another entity consisting of four parties, since (1) reasonable diligence to correct a mistake, and (2) the establishment of good faith on the part of appellees, had not been established.

The involved application of 1937 was a four-party application, the application of May 20, 1940, was also a four-party application, filed by the same parties, as an alleged "continuation-in-part" of their previously filed application of 1937; and appellees' application here involved was filed by them September 3, 1942, as a two-party application and as a division of the then co-pending and hereinbefore described application of May 20, 1940.

The record establishes that the subject matter here in issue, namely, in a coated abrasive, the use of a thermoplastic making or bonding coat and a sizing or protective coat comprising a soluble silicate, was the exclusive invention of Roble and Ball and was mistakenly disclosed, but not claimed, in the applications of 1937 and 1940, filed by them jointly with others.

The record further discloses, and the Board correctly held, that appellees' divisional, two-party application, containing the claims drawn to the subject matter here in issue, was filed September 3, 1942, just before an appeal was entered on October 17, 1942, from the Examiner's rejection of the broad dominating subject matter of the preceding four-party application of May 20, 1940; that since appellees had filed their divisional application for the purpose of interference well within the year, from the issuance of the patent with which the interference was sought, as required by section 4903, R. S. (U. S. C., title 35, sec. 51), appellees were guilty of no laches, and acted in good faith in submitting their application containing the claims which they copied for the purpose of interference.

It should be noted that while application No. 137,796 was still pending, application No. 336,212 was filed; and while application No. 336,212 was still pending, application No. 457,174, here in issue, was filed. The subject matter of the counts, accordingly, has been continued before the Patent Office by appellees since the filing date of their parent application, April 19, 1937. On that basis, and for the reasons stated, we concur in the conclusions reached by the tribunals of the Patent Office on the respective points in question. See *Chapman et al. v. Wintroath*, 252 U. S. 126; *Alexander Milburn Company v. Davis-Bournonville Company*, 270 U. S. 390; *Benedict v. Menninger*, 20 CCPA (Patents) 1138, 64 F.2d 1001, 17 USPQ 499; *Teter v. Kearby*, 36 CCPA (Patents) —, 169 F.2d 808, 79 USPQ 65.

Subsequent to the filing of the record in this court the parties Roble and Ball filed a motion suggesting a diminution of the record of Ware by the addition thereto of certain parts of the record filed in the Patent Office. The motion was granted subject to an order of the court that the costs of printing the additional matter requested by appellees should be taxed on final decision. We are of opinion that the additional matter so certified to the court was reasonably necessary to a proper decision of the issues in this case. Under the facts thus presented, the costs of printing the additional matter requested by Roble and Ball will be taxed against the party Ware.

[3] In view of the conclusions hereinbefore set forth, it is deemed unnecessary to pass upon other points raised by the parties to this appeal. The decision of the Board of Interference Examiners is accordingly affirmed.

AFFIRMED

U. S. Court of Customs and Patent Appeals

IN RE SPAULDING ET AL.

No. 6538. Decided March 1, 1949

[— F.2d —; 81 USPQ 131]

1. PATENTABILITY — PROCESS — NEW COMBINATION OF STEPS.

Where the references, singly or in combination, do not disclose or suggest the process defined by the appealed claim, and where appellant in his process has disclosed a new combination of steps which not only perform a different function from those of the cited prior art but also produce new and unexpected results, *Held* that the claim is allowable.

2. SAME—PARTICULAR SUBJECT MATTER—PROCESS FOR SEPARATING CYCLOPENTADIENE FROM LIGHT OIL FRACTIONS.

Held that the decision of the Board of Appeals affirming the rejection of a claim to a process of separating cyclopentadiene from coke oven by-product light oil fractions as unpatentable over the prior art is reversed.

APPEAL from the Patent Office. Serial No. 481,160.

REVERSED.

James J. Shanley for Spaulding et al.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

O'CONNELL, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the action of the Primary Examiner in rejecting all the claims, Nos. 1, 2, and 3, in appellants' application for a patent for alleged improvements "For Recovery of Cyclopentadiene."

Appellants have moved in their brief to withdraw the appeal with respect to claims 1 and 3, which motion will be granted.

Claim 2 was rejected as lacking invention over the following cited prior patents and publication: Ward, 2,211,038, Aug. 13, 1940; Lycan et al., 2,340,047, May 16, 1944; Glowacki et al., 2,340,418, May 23, 1944; Harkness et al., "Journal Chemical Physics," 1937, volume 5, pages 684 and 685.

Appellants' alleged invention is defined in claim 2 as follows:

> 2. A process for separating cyclopentadiene from coke oven by-product light oil fractions containing the same comprising passing the fractions into a polymerization zone, maintaining the fractions in vapor phase in the polymerization zone and at a reaction temperature between about 150° C. and about 275° C. and under a pressure in the neighborhood of atmospheric pressure, maintaining the vapors at reaction temperature for a time sufficient to polymerize cyclopentadiene to dicyclopentadiene but insufficient to cause substantial polymerization of the dicyclopentadiene to higher polymers, passing the effluent of the polymerization zone to a condensation zone wherein the effluent is reduced to a temperature below 170° C. but above 40° C. to condense the dicyclopentadiene and collecting the liquid dicyclopentadiene.

The alleged invention relates to a process for recovering cyclopentadiene from light oil fractions from coke oven by-product plants. The process defined in the claim, as correctly stated in the brief of the Solicitor for the Patent Office, comprises the following steps:

> (1) passing light oil fractions containing cyclopentadiene into a polymerization zone.
> (2) maintaining the fraction in vapor phase in the polymerization zone and at a temperature between 150° C. and 275° C. at atmospheric pressure.

(3) maintaining the vapors at reaction temperature for a time sufficient to polymerise cyclopentadiene to dicyclopentadiene but insufficient to cause substantial polymerization to higher polymers.
(4) passing the effluent from the polymerization zone to a condensation zone wherein the temperature of the effluent is reduced below 170° C. but above 40° C.

The patent to Ward discloses a process for separating cyclopentadiene from light oils, such as are obtained in the manufacture of coke-oven gas. The oil is heated under superatmospheric pressure in a closed vessel, such as an autoclave, for a period of twenty-four hours at a temperature considerably in excess of 40° C., usually not to exceed 170° C., and preferably in the neighborhood of 100° C. As a result of this treatment, the larger part of the reacting material is maintained chiefly in a liquid phase.

The cyclopentadiene is selectively polymerized to dicyclopentadiene. As described in the specification, "the dicyclopentadiene may be separated from the lower boiling materials by any suitable means such as distillation at low pressure to purify the dicyclopentadiene." The purpose of the distillation at low pressure, it is stated, is to avoid depolymerization of the dicyclopentadiene back to cyclopentadiene.

The patent to Lycan et al. discloses a process for preparing cyclopentadiene from dicyclopentadiene in which the dicyclopentadiene, preferably dissolved in a solution such as xylol, trickles down over a heated surface, thus effecting the splitting of the dicyclopentadiene and vaporization of the monomer. The vapors so produced are then quickly passed through a zone or partial condenser wherein unconverted dicyclopentadiene is condensed to a liquid without condensing the cyclopentadiene vapors which are then passed through a second condenser and also condensed to a liquid.

The patent to Glowacki et al. discloses a process for separating cyclopentadiene from dicyclopentadiene. The specification states that vaporized cyclopentadiene is returned to the liquid state to be polymerized. The essence of the invention resides in the fact that when—

coke oven light oil fractions are heated at substantially the normal boiling point of cyclopentadiene and at substantially atmospheric pressure and with continuous refluxing of volatised components of said fractions to the heating vessel, the cyclopentadiene content is rapidly polymerised substantially completely to the dimer form * * *.

Upon completion of the polymerization of the cyclopentadiene to the dimer form, the objectionable materials are removed therefrom by fractional distillation.

The article published by Harkness et al. shows, as appellants concede in their brief, "that polymerization of pure cyclopentadiene in vapor phase can be accomplished in appellants' temperature range but without good control and with time factor undisclosed."

The appealed claim was rejected by the Examiner as lacking invention over the disclosure of either the patent to Ward or the patent to Glowacki et al. in view of the disclosure of the patent to Lycan et al. and the published article by Harkness et al. The Examiner's position was that no invention would be involved in substituting the vapor phase polymerization defined in the secondary references, and in the appealed claim, for the liquid phase polymerization disclosed in the patent to Ward and Glowacki et al., nor in the substitution of fractional condensation as claimed by appellant for the fractional distillation disclosed by each of those two patents.

The Board agreed with the grounds of rejections stated by the Examiner. The Board considered that the references disclosed vapor phase polymerization, and that to obtain the process defined by the claim on appeal it was only necessary, without the exercise of the inventive faculty, to substitute the specific disclosures of the cited art for the steps and conditions enumerated in the claim.

The Solicitor for the Patent Office contends that the disclosure of the patent to Ward contains everything set forth in the respective steps of the process claimed by appellants, with the possible exception of the temperature and pressure limitation of appellants' step 2, supra. He contends further that the temperatures set forth in the Harkness et al. publication clearly fall within the range defined in step 2 of the claim, and that the pressure limitation of the publication would appear to be clearly in "the neighborhood of atmospheric." Accordingly, the Solicitor submits, only skill of the art would be involved in utilizing those conditions for the ones specifically taught by the patent to Ward.

We are unable to agree with the conclusion expressed by the Solicitor or with the reasoning upon which the Board of Appeals reached its final conclusion. With respect to pure cyclopentadiene, the cited art discloses that vapor phase dimerization offers serious difficulties that are not presented in liquid phase polymerization. The reasonable inference to be drawn from the article by Harkness et al. is that the vapor phase dimerization of cyclopentadiene is unpredictable and that the liquid phase polymerization is the proper solution of the problem.

[1] The references, singly or in combination, do not disclose or suggest the process defined by the claim. The mere substitution of the vapor phase polymerization defined by the secondary references for the liquid phase polymerization disclosed by the patents to Ward and Glowacki et al. is not sufficient to meet the critical differences between the processes of the prior art and the process claimed by appellant. It is our opinion, in view of the record, that appellant in his process has disclosed a new combination of steps which not only perform a different function from those of the cited prior art but also produce new and unexpected results.

[2] In view of that conclusion, it is deemed unnecessary to discuss other points to which counsel have directed their arguments. Appellants' motion to dismiss the appeal with respect to claims 1 and 3 is granted, and the decision of the Board of Appeals with respect to claim 2 is reversed.

REVERSED.

JACKSON, J., dissents.

U. S. Court of Customs and Patent Appeals

IN RE HENDERSON ET AL.

No. 5539. Decided March 1, 1949

[— F.2d —; 81 USPQ 133]

1. DIVISION—PRODUCT AND METHOD OF MAKING—OTHER METHODS.

If a claimed product can be made by methods other than that called for by the claimed method, the product claims cover a different inventive act and division is properly required.

2. SAME—SAME—PRODUCT DIFFERING FUNCTIONALLY.

Where the crux of the alleged invention in the product claims rests solely upon the "essential distinguishing characteristics of the novel article," *Held* that the article claimed cannot be regarded as differing structurally from the article produced according to the other processes defined by the prior patents, since the patentable novelty of article claims cannot be predicated solely upon the properties or functions of the claimed article.

3. SAME—SAME—WHEN PROPER.

To properly include process and product claims in the same application there must be such a correlation between the process claims and the product claims as to limit them to a single inventive act, and if the different claims cover different inventive acts, division is properly required.

4. SAME—SILICONIZED ARTICLE AND METHOD OF PRODUCTION.

Where the Examiner required division between claims to a siliconized article and claims to a method of providing a silicon containing coating or case, and asserted that the article could be made by other processes, and where appellants concede that the article broadly speaking can be produced by other processes, and the involved article claims are much broader in scope than the process claims, *Held* that the decision of the Board of Appeals affirming the Examiner's rejection on misjoinder, is affirmed.

APPEAL from the Patent Office. Serial No. 475,560.

AFFIRMED.

Roy F. Steward for Henderson et al.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

O'CONNELL, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the action of the Primary Examiner in rejecting on the ground of misjoinder of invention claims 16 to 30, inclusive, in appellants' application for a patent for alleged "Improvements in Siliconizing Processes and Products Thereof."

Appellants' application relates specifically to the process of producing on metal articles, especially ferrous metal articles, an adherent coating or case containing silicon, and the articles so produced. In the prosecution of the application, the Examiner required division between the process and the article claims. After election by appellants, the Examiner allowed the process claims. Accordingly, claims 1 to 15, inclusive, directed to the process, were allowed by the Examiner, and claims 16 to 30, inclusive, directed to the article produced by the process, were rejected as drawn to a nonelected species.

The requirement for division made by the Primary Examiner was approved by the Examiner of Classification and affirmed by the Board of Appeals. Those decisions were based on the grounds (1) that the claimed article may be made by processes other than that disclosed and claimed by appellants; and (2) that the process and the product are separately classified and have different fields of search.

Appellants' petitioned the Board requesting reconsideration of its decision. The Board granted the request and considered appellants' contentions, but denied the petition with respect to making any change in the Board's original decision.

Claim 16 is representative of the article claims, and claim 1 is representative of the process claims. They read:

16. As a new article of manufacture, a siliconized article having a silicon-containing case bonded to a base or core, said case having a sufficiently high silicon content to render it satisfactorily resistant to corrosion by standard test, and being of such integral structure and so firmly bonded to said core that both the case itself and its bonding to the core are resistant to substantial thermal shock.

1. The process of providing a suitably heat-resistant article with a silicon-containing coating or case that is resistant to corrosion and thermal shock, which comprises maintaining said article in a reaction zone at a temperature of at least about 1400° F. but below a temperature sufficiently high to injure the article, while subjecting it to the action of a treating atmosphere substantially free from oxygen, both elemental and combined, and containing both silicon chloride and free hydrogen as essential components, the proportioning of said components in the atmosphere as supplied to the reaction zone being such that, expressing the silicon chloride component in the terms of silicon tetrachloride, the weight of the free hydrogen component is between 0.02 and 4.0 per cent of the weight of the silicon chloride component.

The following prior art patents were cited by the tribunals of the Patent Office as showing the different status of the process and article claims and as illustrative of other processes by which the claimed article may be made: Becket, 1,672,444, June 5, 1928; Marshall, 1,853,369, Apr. 12, 1932.

The claims for the article do not here involve, per se, consideration of the question of their patentability. The sole issue presented is whether it was proper to require division between the claims for the process and those directed to the article and to reject the article claims for alleged misjoinder of invention.

[1] No question is raised as to the correctness of the rule that if a claimed product can be made by methods other than that called for by the claimed method, the product claims cover a different inventive act, and division is properly required. *In re Hirschhorn*, 34 CCPA (Patents) 1156, 162 F.2d 489, 74 USPQ 183, 605 O. G. 6. Appellants contend (1) that the involved requirement for division ought not to be sustained, however, because in the instant case the available evidence adduced by the Patent Office, including the Becket and Marshall patents, is strongly against any probability that appellants' claimed article can be made by processes other than appellants' claimed process; and (2) the assertion that the two groups of claims have different fields of search is without support in the record and is manifestly erroneous but were it correct, the fact would not be of controlling consideration.

[2] More specifically, appellants urge that it was incumbent on the tribunals of the Patent Office when attempting to justify a requirement for division on the basis of the rule stated in the Hirschhorn case, supra, to consider the limitations of the

appealed claims, which claims, according to appellants' brief, "expressly emphasize, as essential distinguishing characteristics of the novel article," that the silicon coating or case shall be satisfactorily resistant to corrosion and to substantial thermal shock, as defined in appellants' specification.

The Board in its disposition of appellants' first contention considered the claimed product or article as a structure or composition and held that the structure claimed could be made by other processes. The Board explained its position as follows:

> Nor, do we think the suggestion that articles such as those claimed, might be made by other process, needs the support of a reference describing another method of making appellants' claimed article. That would require a complete examination of the merits of the non-elected article claims including a determination of the scope of the term "satisfactorily resistant to corrosion and to thermal shock" emphasized in the brief. We do not think the law requires a complete and detailed examination and determination of the merits of a claim or the finding of a substantial anticipation of such claim, as a condition precedent to a requirement to divide them from the application. It is believed sufficient to assert our opinion of the probability that articles of the same class, i. e, silicon-cased metal articles, are producible by other processes and we consider Becket and Marshall sufficient to support that opinion. • • •

Appellants take issue in their brief with the holding of the Board "that articles of the same class, i. e., silicon-cased metal articles, are producible by other processes" and make the following statement:

> Nobody, of course, would deny for a moment that silicon-cased metal articles, *broadly speaking*, are producible, and have been produced, by other processes. But this has nothing to do with the question at issue. The answer to that question depends upon what appellants are *claiming*. Obviously appellants are not claiming silicon-cased articles *broadly*. What they are claiming is a particular kind of silicon-cased article, assertedly novel and specifically defined by vitally important properties and characteristics which, as is elsewhere fully explained • • • sharply distinguish them from all other "articles of the same class" • • •. [Italics quoted.]

In view of the statement hereinbefore quoted from the brief for appellants and the fact that the involved article claims are much broader in scope than the process claims, as may be observed from an examination of the quoted claims herein, we cannot agree with appellants' contention. Under the authorities, the patentable novelty of article claims, as far as this case is concerned, cannot be predicated solely upon the properties or functions of the claimed article. *General Electric Co.* v. *Wabash Appliance Corp. et al.*, 304 U. S. 364, 491 O. G. 463; *In re Fullam et al.*, 34 CCPA (Patents) 1018, 161 F.2d 247, 73 USPQ 390, 603 O. G. 189.

Appellants having predicated their position as the crux of the alleged invention solely on the "essential distinguishing characteristics of the novel article," the article thus claimed cannot be here regarded as differing structurally from the article produced according to the other processes defined by the respective patents to Becket and Marshall. Nor can this conclusion be affected by the alleged fact that appellants are highly trained scientists and skilled workers in the involved art who know of no way of producing the article other than by the claimed process. See *In re Charles P. Wellman*, 18 CCPA (Patents) 1214, 48 F.2d 926, 9 USPQ 169, 410 O. G. 1057; *In re Smith, Jr.*, 29 CCPA (Patents) 1011, 127 F.2d 144, 53 USPQ 367, 542 O. G. 606.

[3] Appellants further contend that the Board in rendering its decision erroneously suggested that to properly include process and product claims in the same application they must constitute a single invention.

The statement which appellants made in support of their position, when read in the light of all that was stated on the subject in the decision by the Board, indicates that the challenged statement was in full accord with the proper rule of law applicable to the question here in issue; namely, that to properly include process and product claims in the same application there must be such a correlation between the process claims and the product claims as to limit them to a single inventive act, and if the different claims cover different inventive acts, division is properly required. *In re Ferenci*, 21 CCPA (Patents) 856, 68 F.2d 737, 20 USPQ 242, 444 O. G. 256; *In re Smith, Jr.*, supra; *In re Coulter*, 33 CCPA (Patents) 1088, 155 F.2d 271, 69 USPQ 531, 590 O. G. 519.

The Board in its decision on appellants' petition for reconsideration stated the members of the Board were well aware that, as appellants contended, where two groups of process and product claims are submitted in the same application, the fact that such claims have different fields of search, while persuasive, may not in all instances be of controlling consideration on the issue of misjoinder of invention. In view of that position, no further discussion of appellants' second ground of contention is deemed necessary.

[4] In view of the conclusions hereinbefore set forth, it is deemed unnecessary to pass upon other points raised by the parties to this appeal. The decision of the Board of Appeals is accordingly affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

IN RE PRUTTON

No. 5549. Decided March 1, 1949

[— F.2d —; 81 USPQ 144]

1. APPEAL TO COURT OF CUSTOMS AND PATENT APPEALS—REASONS OF APPEAL—NON-ELECTED SPECIES.
   Where appellant brings all of the claims set out in his application before us on appeal, and in his reasons of appeal alleges error by the Board of Appeals "in rejecting each and all of the claims on appeal," and where claims are rejected on the ground that they are drawn to non-elected species, and appellant does not deny that the claims rejected on that ground are actually drawn to non-elected species, *Held* that, unless a generic claim is found allowable, the rejection is proper.
2. WORDS AND PHRASES—CARBOXYLIC ACID.
   Held that in a carboxylic acid the free valence of the carbon atom of the —COOH group is always attached to either carbon or hydrogen, with the sole exception of carbamic acid, and that the free valence is never bonded to oxygen.
3. SAME—XANTHATES.
   Held that, strictly speaking, xanthates cannot be said to be derivatives of a carboxylic acid.

4. PATENTABILITY—INVENTION—EQUIVALENTS.
   Where the essence of the reference patent is the addition to lubricating oils of certain types of organic sulfur compounds including the xanthic acid esters, and the essence of appellant's alleged invention is the addition of sulfur-containing derivatives of organic acids, a principal group being derivatives of this acid, *Held* that, in view of the striking similarity of the chemical formulas, the compounds disclosed by the reference and appellant are equivalents.
5. SAME—SAME—SAME.
   Where the M patent teaches the use of halogenated petroleum (paraffin) wax, and appellant's patents teach the equivalence as addition agents of halogenated paraffin wax and chlorinated diphenyl ether, *Held* that appellant is not entitled to an award of patentability of a claim covering the latter.
6. SAME—PARTICULAR SUBJECT MATTER—LUBRICANT.
   Certain claims to a lubricant containing a small amount of an oil-soluble derivative of a thiocarboxylic acid *Held* properly rejected as lacking invention over the prior art, and other claims *Held* properly rejected as not reading on the elected species.

APPEAL from the Patent Office. Serial No. 485,891.

AFFIRMED.

Oberlin & Limbach (*Almon S. Nelson* and *Oscar C. Limbach* of counsel) for Prutton.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

JOHNSON, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the rejection by the Primary Examiner of all the claims, 1 to 26, inclusive, 29 to 51, inclusive, and 53 to 58, inclusive, in appellant's application for a patent for new and useful improvements in "Lubricant Improving Agent and Lubricant Containing Same." Claims 5–13, 19–24, 26, 31–33, 38–42, 44–47, 49–51, and 55–58 were rejected as not reading on the elected species. The remaining claims were rejected as lacking invention over the prior art.

The references cited by the Examiner and Board are: Humphreys et al., 2,073,841, March 16, 1937; Adams et al., 2,110,281, March 8, 1938; Miller et al., 2,156,265, May 2, 1939; Prutton et al., 2,208,162, July 16, 1940; Prutton et al. (British), 454,552, Sept. 29, 1936.

Claim 1 is illustrative of the matter alleged to be new. It reads as follows:

> 1. A lubricant characterized by the presence therein of a minor amount, sufficient to stabilize the oil components, of an oil-soluble derivative of a thiocarboxylic acid.

Appellant's application, filed May 6, 1943, is said to be a continuation-in-part of an earlier application, Serial No. 193,960, filed March 4, 1938, which has since matured into Patent No. 2,318,629, dated May 11, 1943, which was in turn a continuation-in-part of appellant's application, Serial No. 737,070, filed July 26, 1934.

The subject matter of the alleged invention relates to lubricating compositions characterized by the presence of oil soluble derivatives of organic thio acids, limited to those compounds where a substituent has replaced one of the acid hydrogens. These derivatives, designated "Characterizing Addition Agents," are further limited to sulphur-containing derivatives of carboxylic acids.

The primary function attributed by appellant to his alleged invention is the imparting to lubricants of the property of increased load carrying ability, known to the art as the "extreme pressure characteristic." That results from a reaction occurring between the characterizing addition agent in the lubricant and the metal surfaces of the moving parts of the machinery being lubricated, in which a film forms on those metal surfaces and acts effectively as a barrier to acids formed in the lubricant in the heat and stress of operating conditions. A further function of the agent is that of a deterrent against the deterioration of the oil base of the lubricant from decomposition and oxidation.

Claims 1 through 26, inclusive, cover the use of the characterizing addition agent alone in the lubricating medium.

Claims 29 through 38, inclusive, and 53 through 56, inclusive, relate to a further advance in the art which appellant asserts is realized when the characterizing addition agents are used in a lubricating medium together with other substances, described as "Cooperating Addition Agents." The cooperative effect resulting from the combined presence of the characterizing and cooperating addition agents in achieving the objectives of the alleged invention is asserted to be greater than the normal cumulative effect of the individual components. Among the cooperating addition agents claimed are members of the following classes: the organic halogen compounds; organic compounds containing a metal; organic derivatives of inorganic oxy-acids; and organic oxygen compounds.

The application limits the compounds used either as characterizing or cooperating addition agents to those which are soluble in refined mineral lubricating oil at least to the extent of 0.1%.

Claims 39 through 51, inclusive, 57, and 58 cover the use with the characterizing addition agent in the lubricant of a plurality of cooperating addition agents of the type specified.

[1] The Examiner rejected claims 5–13, 19–24, 26, 31–33, 38–42, 44–47, 49–51, and 55–58 as not reading on the elected species. The Board of Appeals referred to that rejection and held that the involved claims were therefore not before it for consideration. Appellant brings all of the claims set out in his application before us on appeal, and in his reasons of appeal he alleges error by the Board of Appeals "In rejecting each and all of the claims on appeal." Where claims are rejected on the ground that they were drawn to non-elected species, and the appellant does not deny that the claims rejected on that ground are actually drawn to non-elected species, unless a generic claim is found allowable, the rejection is proper. *In re Prutton*, 35 CCPA (Patents) 934, 166 F.2d 181, 76 USPQ 606, 610 O. G. 767; *In re Hock*, 35 CCPA (Patents) 1235, 168 F.2d 540, 78 USPQ 75, 614 O. G. 16.

The patent to Humphreys et al. discloses a lubricant composed of a major portion of hydrocarbon or fatty lubricating oils with from 0.5% to about 5.0% of "organic derivatives of organic thio acids,

particularly the esters and 'anhydrides' of organic thio acids."

The Miller et al. reference discloses a lubricant composed of a major proportion of a mineral lubricating oil to which has been added a minor proportion of halogenated petroleum wax and an agent containing "corrosive" sulphur.

The Adams et al. patent discloses a lubricant prepared by adding a small quantity of xanthic disulfides or xanthates to mineral lubricating oils. Among the additives disclosed are xanthic acid esters.

The Prutton domestic patent cited discloses the combined use of halogenated organic oxygen-bearing compounds and organic sulphur compounds in a suitable lubricating oil base. The compounds of the first category used include aliphatic derivatives of hydrocarbons of the paraffin series, while the latter category includes organic disulfides, thio acids, and organic xanthates.

The British patent to Prutton et al. discloses a lubricant comprised of a lubricating oil base together with a halogenated organic compound, such as aliphatic derivatives of hydrocarbons of the paraffin series, and a separate oxygen or sulphur-containing organic compound, such as carboxylic acids and the esters and salts of such acids.

The claims which were rejected as lacking invention over the prior art may be conveniently grouped for consideration here into the following categories:

I. Those which the Primary Examiner held to be directly anticipated by the patent to Humphreys et al.; claims 1 to 4, inclusive, 14, 15, and 25.

II. Those rejected by the Examiner as lacking patentability over the Humphreys et al. patent; claims 16 to 18, inclusive, 48, and 53.

III. Those rejected by the Examiner as lacking invention over the patent to Humphreys et al. in view of the patent to Miller et al.; claims 29, 30, 34 to 37, inclusive, 43, 48, 53, and 54.

IV. Those further rejected as lacking invention over the patent to Adams et al.; claims 1 to 4, inclusive, 14 to 18, inclusive, and 25.

V. Those further rejected as lacking invention over the patent to Adams et al. in view of the patent to Miller et al., and in the light of the disclosures of the Prutton et al. domestic and foreign patents cited; claims 29, 30, 34 to 37, inclusive, 43, 48, 53, and 54.

VI. Those further rejected as being too broad in failing to set forth that the additive is present in amounts sufficient to stabilize the oil components; claims 1, 2, and 3.

The basis for rejection applying to the claims in group VI, supra, was met by an amendment filed by appellant which the Board held corrected the defect noted by the Examiner. The Board affirmed the basis for rejection set forth in groups I through V, supra, applying to the claims there enumerated.

Appellant's contentions before us may be briefly summarized as follows:

First. Since the parent application, Serial No. 737,070, filed July 26, 1934, of which the present application is alleged to be a continuation-in-part, antedates the Humphreys et al. reference (filed Dec. 8, 1934), and, since the disclosures in the instant application are based on subject matter set out and claimed in the parent application, the Humphreys et al. patent is not properly citeable as a prior art reference. If that contention of appellant is upheld here, it would dispose of the grounds for rejection hereinbefore grouped in categories I, II, and III.

Second. The Adams et al. patent is not a proper reference, as the derivatives of xanthic acid there disclosed are patentably distinct from the derivatives of thio-carboxylic acid disclosed by appellant. If that contention of appellant is upheld here, it will dispose of grounds for rejection in groups IV and V, supra.

Grounds I, II, and III, supra, embrace all of the claims not otherwise rejected as reading on non-elected species. Likewise, grounds IV and V, supra, cover all of the claims other than those rejected for failure to read on the elected species. Because of the nature of the issues involved, we shall first examine the merits of the rejection as applying to claims in groups IV and V, supra. If we should affirm the rejection of those claims, it will be unnecessary to consider the basis for rejection of the claims in groups I, II, and III, supra.

As to groups IV and V, supra, in which the Adams et al. patent is cited as the basis of rejection, the Examiner held that the compounds of thio-carbonic acid disclosed by Adams et al. "literally conform to the definition of thio carboxylic acids." Those compounds, esters of xanthic acid (a sulphur-containing derivative of carbonic acid) were also considered by the Board to constitute the basis whereby Adams et al. anticipate appellant's subject matter. All of the claims in group IV specify the use of a thio acid derivative of some type. Appellant contends that xanthic acid is distinguishable from carboxylic acid. The Board held that inasmuch as xanthic acid contains a thio-carboxyl radicle, it is a thio-carboxylic acid. That issue was argued with some emphasis before us. Appellant contends that "Any standard chemical textbook will give the formula of a carboxylic acid as an acid containing the —COOH group with the free valence of the carbon atom attached to either carbon or hydrogen"; whereas "the free valence of carbon in a xanthic acid is bonded to oxygen • • •." Neither the Examiner nor the Board cited textual authorities on that issue. The Board said in its decision, however,

> Appellant's argument that xanthic acid is not known in a free state is immaterial. It contains a thio-carboxyl radicle and is therefore a thiocarboxylic acid according to Webster's Dictionary.

Webster's New International Dictionary, 2d Ed., does not define the term "thio-carboxylic acid"; however, it does contain a definition of "thio acid," "carboxyl," and "carboxylic," as follows:

> thio acid. *Chem.* An acid in which oxygen is partly or wholly replaced by sulphur. • • •
> carboxyl, *n.* *Chem.* The univalent radical CO_2H, the characteristic group of most organic acids, • • •
> carboxylic, *adj.* *Chem.* Of, pertaining to, or containing, carboxyl.

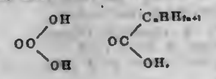
The Solicitor for the Patent Office challenges appellant's contention, stating that by its terms carbamic acid would be excluded from the class of carboxylic acids. In carbamic acid, the free valence of carbon is bonded not to carbon, hydrogen, or oxygen, but to nitrogen. The solicitor quotes from Karrer's Organic Chemistry, 2nd English Edition, Elsevier Publishing Co., New York, 1946, page 217, as follows:

> The formation of viscose silk from cellulose depends on a general reaction of carbon disulfide with alcohol. It combines with them in the presence of alkalis to give xanthates, ester-salts of the dithiocarboxylic acids, • • •.

Appellant insists that standard text books support his contentions respecting the distinction between xanthic acid and carboxylic acid, as hereinbefore set out. He cited no specific texts.

We have examined six standard texts in the field of organic chemistry, as well as the Third English Edition, 1947, of the text cited by the solicitor. The texts examined, in addition to the latter, are:

Introductory Organic Chemistry, by E. Wertheim, Blakiston Co., Philadelphia, 1948.
Organic Chemistry, Lucas, American Book Co., New York, 1935.
Organic Chemistry, Fuson and Snyder, John Wiley & Sons, New York, 1942.
Organic Chemistry, Eldin V. Lynn, Lea & Febiger, Philadelphia, 1945.
Textbook of Organic Chemistry, Geo. H. Richter, John Wiley & Son, New York, 1938.
Organic Chemistry, Frank C. Whitmore, D. Van Nostrand, New York, 1937.



[2], [3] Based on our examination of these texts, our conclusions are as follows: (1) in a carboxylic acid the free valence of the carbon atom of the —COOH group is always attached to either carbon or hydrogen, with the sole exception of carbamic acid, where the free valence of the carbon atom of the —COOH group is attached to nitrogen; (2) the free valence of carbon in xanthic acid is always bonded to oxygen; (3) it cannot be said that xanthates are derivatives of a carboxylic acid, strictly speaking, because of the unique bonding of the free valence of the carbon atom to oxygen in xanthic acid. In the case of carboxylic acid, the free valence of the carbon is never bonded to oxygen. Thus, we are led by our conclusions to agree with the appellant's contention; however, this alone does not dispose of the Allen et al. reference.

[4] The Examiner stated in his decision, "But even if it be held that thio carbonic acids are not thio carboxylic acids, the two types of compounds are so closely related as to be equivalents from the standpoint of patentability." In considering that finding of the Examiner, it will be helpful to examine the chemical formulas of the compounds involved. As taken from the texts hereinbefore cited, they are:

Xanthic acid $C_nH_{2n+1}OCSSH$
Thio acids $C_nH_{2n+1}COSH$
Dithio acids $C_nH_{2n+1}CSSH$
Ethyl acid ester, known as ethyl xanthic acid
$CH_3—CH_2—O—CSSH$

In the foregoing table, thio acid would express the formula for thio-carboxylic acid. The relationship between carbonic acid and carboxylic acid is expressed at page 182 of Karrer's Organic Chemistry, 3rd English Ed., Amsterdam, 1947, as follows:

> • • • it is also convenient to regard the carboxylic acids as derivatives of carbonic acid, one of the hydroxyl groups of the latter having been replaced by an alkyl radical:

The essence of the Adams et al. patent is the addition to lubricating oils of "certain types of organic sulphur compounds," one group of which is that of xanthic acid esters. The essence of appellant's alleged invention is the addition of sulphur-containing derivatives of organic acids, a principal group of which is that of the thio acids and their derivatives. The essential elements of both the Adams et al. patent and appellant's alleged invention, therefore, are carbon (organic) and sulphur (thio). From this point of view, and in view of the striking similarity of the chemical formulas, supra, for xanthic acid and thio acids, we agree with the Examiner that insofar as patentability is concerned, the compounds in issue disclosed by Adams et al., and appellant are equivalents. *Read Holliday & Sons, Ltd.* v. *Schulze-Berge et al.*, 78 Fed., 493; *Ufer et al.* v. *Williams*, 23 CCPA (Patents) 797, 79 F.2d 892, 27 USPQ 449, 464 O. G. 237; *In re Ayres*, 23 CCPA (Patents) 1118, 83 F.2d 297, 29 USPQ 424, 471 O. G. 247.

Appellant contends further that carbonic acid is an inorganic acid and thus distinguishable from the organic carboxylic acid. It is a matter of general knowledge that organic chemistry is concerned with the chemistry of carbon compounds, while inorganic chemistry deals with compounds of all other elements. Carbonic acid, H_2CO_3, is not clearly excluded from either class, but is ordinarily dealt with, as a matter of convenience, in inorganic chemistry. Carbonic acid, however, receives prominent treatment in standard works on organic chemistry, and, being a carbon compound, is not properly distinguishable from the field of organic chemistry.

While the claims in group IV, supra, were rejected by the Examiner on the basis of lacking invention over the patent to Adams et al., those in group V, supra, were rejected on the basis of lacking invention over Adams et al. in view of Miller et al. All of the claims in group V, supra, with the exception of claim 53, concern the use with a derivative of a thio-carboxylic acid as a characterizing addition agent in a lubricating composition, of one or more cooperating addition agents consisting of organic oxygen or halogen compounds. Claim 1 of the Miller et al. reference reads:

> 1. An improved lubricant for extreme pressure conditions comprising a major proportion of a mineral lubricating oil, a minor proportion of a halogenated petroleum wax and an agent containing "corrosive" sulfur.

The specification to the Miller et al. reference patent discloses the desirability of using sulphur and chlorine in separate compounds rather than in a single compound in a lubricating composition. The examiner held that disclosure, when considered in the light of the disclosures in the Prutton et al. domestic and foreign patents cited as references, teaches the use of halogen and organic compounds in a lubricating composition, and that the claims in this group are unpatentable in view of the references. Appellant contends that the Miller et al. reference to "corrosive" sulphur distinguishes that patent from the sulphur compounds he is claiming. As pointed out in the Solicitor's brief, however, the

claims in group V, supra, were rejected on Adams in view of Miller, not vice versa. Thus the combination of the references adds the use of Miller's halogenated paraffin to the characterizing agent disclosed by Adams et al. The subject matter of appellant's claims rejected in group V, supra, is unpatentable in view of that combination. Both of the Prutton references teach the use as addition agents of halogen and oxygen bearing organic compounds, and Miller et al. solved the problem of bringing a halogen (chlorine) into effective use in a lubricating composition containing sulphur, by introducing the chlorine and sulphur in separate compounds.

[5] Claim 37 of group V, supra, discloses the use of "chlorinated diphenyl ether" as the addition agent. The Prutton domestic patent specifically points out "halogenated diphenyl ether" as an example of a halogenated organic compound useful as an addition agent, while the Prutton British patent sets out chlorinated diphenyl as a halogenated addition agent. Both patents teach that halogen and oxygen bearing derivatives of the hydrocarbons of the paraffin series are equivalent in effectiveness as addition agents to halogenated derivatives of diphenyl ether. Since the Miller patent teaches the use of halogenated petroleum (paraffin) wax, and the Prutton references teach the equivalence as addition agents of halogenated paraffin wax and chlorinated diphenyl ether, appellant, as the Examiner and the Board held, is not entitled to an award of patentability of a claim covering the latter. *In re Ayres*, supra; *In re McKee*, 25 CCPA (Patents) 1064, 96 F.2d 294, 37 USPQ 532, 496 O. G. 563; *In re Withington*, 28 CCPA (Patents) 1290, 104 F.2d 192; 41 USPQ 742, 508 O. G. 296.

Claim 53 defines the addition agent as "an extreme pressure addition agent." The teaching of Adams et al. in view of Miller et al. is the use of an organic sulphur compound (xanthic disulfides, or xanthates) with an addition agent (halogenated petroleum wax) in a lubricant to improve that lubricant for extreme pressure conditions. Functionally speaking, those agents are "extreme pressure agents," and appellant's claim 53 in specifying the use with an organic sulphur compound in a lubricant, of "an extreme pressure addition agent," obviously adds nothing patentable over that combination of references cited by the tribunals below.

[6] For the foregoing reasons, we agree with the decision of the Primary Examiner and the Board of Appeals rejecting all of the claims in groups IV and V, supra. Those claims, together with those rejected as reading on non-elected species, comprise all of the claims in the application and before us on appeal.

It is unnecessary to burden this opinion with a detailed consideration of the grounds for rejection of the claims on appeal, as set forth in groups I, II, and III, supra. We considered them in full in the course of arriving at our decision. We cannot refrain from commenting, however, that on the issue of estoppel raised by the Examiner, we believe the rule expressed in *Chapman* v. *Beede*, 54 App. D. C. 209, 296 F. 956, 323 O. G. 230, as followed in *Jenks* v. *Knight*, 24 CCPA (Patents) 1227, 90 F.2d 654, 33 USPQ 601, 485 O. G. 202, would apply. Of interest on this issue are the cases of *In re Prutton*, 28 CCPA (Patents) 1343, 121 F.2d 524, 50 USPQ 128, 533 O. G. 755, and *In re Hanna*, 30 CCPA (Patents) 1115, 136 F.2d 749, 58 USPQ 393, 556 O. G. 712.

For the reasons hereinbefore set out, the decision of the Board of Appeals rejecting all of the claims in appellant's application is affirmed.

AFFIRMED.

NOTICES

Notice of Tentative Recordation of Trade Name

[T. D. 52206]

Tentative recordation of trade name under section 48, Trade-Mark Act of July 5, 1946, and section 11.16, Customs Regulations of 1943

TREASURY DEPARTMENT
OFFICE OF THE COMMISSIONER OF CUSTOMS,
Washington, D. C., Apr. 27, 1949

To Collectors of Customs and Others Concerned:

An application has been filed in the Treasury Department for the recordation of the following-described trade name under the provisions of section 42, Trade-Mark Act of July 5, 1946, and section 11.16, Customs Regulations of 1943:

"L. & C. HARDTMUTH," owned by L. & C. Hardtmuth, Inc., Bloomsbury, New Jersey, applied to paper and stationery, including items such as pencils of all kinds, refills, point protectors, letter openers, crayons, rubber bands, rubber erasers, pen holders, tracing cloth and similar products manufactured in Bloomsbury, New Jersey.

The recordation of the foregoing trade name shall become final at the expiration of 30 days after May 31, 1949. Any person who desires to file an opposition to the recordation of this trade name shall file it with the Commissioner of Customs prior to the expiration of such 30-day period.

Until the expiration of the above-mentioned 30-day period any articles of foreign manufacture bearing names or marks which copy or simulate the above-mentioned trade name shall be detained, but not seized, and thereafter shall receive the treatment provided for in section 11.17, Customs Regulations of 1943, unless notice of the cancellation of the recordation is sooner received.

(Signed) W. R. JOHNSON,
Acting Commissioner of Customs.

Changes in The Roster of Attorneys And Agents

Notice is hereby given of certain changes to be made in the Roster of Attorneys and Agents Registered to Practice Before the U. S. Patent Office, published as of January 1, 1949, to correct its contents as of that date. Notices of change not of record in the Patent Office as of that date are not included.

Copies of the Roster of Attorneys and Agents Registered to Practice Before the U. S. Patent Office, as of January 1, 1949, may be obtained from the Patent Office at $1.00 each. Patent Office coupons are acceptable in payment for this publication.

Adjudicated Patent

(D. C. Ohio) Travis Patent No. 1,432,499, for a bed-spring-border brace, *Held* valid and infringed. *Simmons Co. v. Champion Spring Co.*, 82 F. Supp. 910.

Classification Bulletins

The Classification Bulletins listed below are now available. The definitions contained in these bulletins have been revised to include all changes through Classification Order Number 50 of March 29, 1949. Copies of these publications may be procured from the Commissioner of Patents at the prices indicated below.

Bulletin No.	Content	Price
144	Class 3—Artificial Body Members	10¢
145	Class 4—Baths, Closets, Sinks, and Spittoons	15¢
147	Class 7—Compound Tools	10¢
149	Class 10—Bolt, Nail, Nut, Rivet, and Screw Making	15¢
150	Class 12—Boot and Shoe Making	15¢
151	Class 16—Miscellaneous Hardware	15¢
152	Class 18—Plastics	15¢
153	Class 20—Wooden Buildings	10¢
154	Class 22—Metal Founding	20¢
155	Class 24—Buckles, Buttons, Clasps, Etc.	20¢
156	Class 25—Plastic Block and Earthenware Apparatus	10¢
157	Class 28—Textiles	10¢
160	Class 36—Boots, Shoes, and Leggings	10¢
162	Class 48—Gas, Heating and Illuminating	15¢
163	Class 49—Glass	10¢
165	Class 59—Chain, Staple, and Horseshoe Making	10¢

Cancellation Notices

Verne H. Carter, his assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Grace Bros. Brewing Co., Second and Wilson Sts., Santa Rosa, Calif., to effect the cancellation of trade-mark registration of Verne H. Carter, 3094 San Pablo Ave., Emeryville, Calif., No. 317,850, dated October 9, 1934, and the notice of such proceeding sent by registered mail to the said Verne H. Carter at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Verne H. Carter, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

JOE E. DANIELS,
Assistant Commissioner of Patents.

April 28, 1949.

Nathan Manis, his assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Perfect Negligee Co., 16 East 34th St., New York, N. Y., to effect the cancellation of trade-mark registration of Nathan Manis, c/o Marna Undergarment Co., 37 East 28th St., New York 16, N. Y., No. 502,764, dated October 5, 1948, and the notice of such proceeding sent by registered mail to the said Manis at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Nathan Manis, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

May 9, 1949.

Abandonment of Trade-Mark

TREASURY DEPARTMENT
BUREAU OF CUSTOMS, *Washington, D. C.*

To All Collectors of Customs and Appraisers of Merchandise:

The Bureau has received a letter from Peck & Peck, a corporation of New York, 581–583 Fifth Avenue, New York 17, N. Y., stating that it no longer has any interest in the trade-mark "Pour Le Sport," No. 227,292, registered May 3, 1927, under the Trade-Mark Act of 1905 for perfume in Class 6, and requesting that the trade-mark be cancelled on the records of this Department. This trade-mark was recorded in the Treasury Department and at the port of New York, N. Y., on October 24, 1927, and the mark was listed on page 8 of Bureau Circular Letter 1792 of December 30, 1937.

In view of the abandonment of the above-mentioned trade-mark, appropriate notations shall be made on the records of your office and all customs offices in your district showing the abandonment of the mark and the cancellation of its recordation. This action also should be noted on all copies of CIE 240/47, dated May 12, 1947, containing a list of recorded trade-marks applied to perfumery and analogous products.

(Signed) W. R. JOHNSON,
Acting Commissioner of Customs.

April 26, 1949.

Interference Notices

Weldon M. Ward, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Portis Style Industries, Inc., 320 West Ohio St., Chicago, Ill., for registration of a trade-mark and Registration No. 265,034, issued December 10, 1929, to Weldon M. Ward, 18 East 27th St., New York, N. Y., and the notice of such declaration sent by registered mail to the said Ward at the said address having been returned by the post office undeliverable, notice is hereby given that unless Weldon M. Ward, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the interference will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

May 9, 1949.

Levy, Forman & Co., Inc., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Powell & Campbell, Inc., 122 Duane St., New York, N. Y., for registration of a trade-mark and Registration No. 286,758, issued September 1, 1931, to Levy, Forman & Co., Inc., 710 Broadway, New York, N. Y. The assignment records of this Office show a transfer of title to this registration to Robert J. Levy, c/o Maurice Schwartz & Co., 1450 Broadway, New York, N. Y., who has been substituted for said Levy, Forman & Co., Inc. to defend the registration concerned. The notice of such declaration sent by registered mail to the said Robert J. Levy, at the said address of record having been returned by the post office undeliverable, notice is hereby given that unless said Robert J. Levy, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

JOE E. DANIELS,
Assistant Commissioner of Patents.

April 29, 1949.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Distillation Products, Inc., offers the following 16 patents for non-exclusive, unrestricted license on reasonable terms. Inquiries concerning the patents should be addressed to Distillation Products, Inc., 755 Ridge Road West, Rochester, N. Y.

Pat. 1,955,321. VACUUM DISTILLATION. Patented Apr. 17, 1934. Liquid organic materials normally subject to thermal decomposition are distilled under vacuum and condensed within a distance approximating the mean free path of the distillate molecules. Groups 29—11; 35—59. Reg. No. 19,516.

Pat. 2,047,196. REFINING OF CRUDE FATS AND FATTY OILS. Patented July 14, 1936. Refining crude fats and fatty oils by breaking the fat or oil es by treatment with alkali or acid, separating impurities, and thereafter subjecting the broken fat or oil to short-path distillation under high vacuum conditions. Group 28—22. Reg. No. 19,516.

Pat. 2,065,728. PROCESS FOR REMOVING LOW MOLECULAR GLYCERIDES FROM POLYMERIZED OILS BY DISTILLATION. Patented Dec. 29, 1936. Improved drying oil produced by polymerizing a raw oil and subjecting the polymerized oil to evaporative distillation under high vacuum conditions to remove undesirable constituents such as unpolymerized materials. Group 28—22. Reg. No. 19,517.

Pat. 2,073,202. VACUUM DISTILLATION. Patented Mar. 9, 1937. Multiple-distillation apparatus having a plurality of distillation units housed in a common vacuum chamber together with pumps and conduits for circulating and re-cycling distillates and residues in specified manners. Group 35—59. Reg. No. 19,518.

Pat. 2,073,327. HIGH VACUUM DISTILLATION AND APPARATUS THEREFOR. Patented Mar. 9, 1937. Solid materials and substances giving rise to non-flowing distillates or residues are distilled under short-path high-vacuum conditions by feeding the material to be distilled in the form of a thin layer on a moving belt heated to the required temperature and collecting condensate on a second moving belt disposed in parallel spaced relation to the first belt and being cooled to the requisite temperature, residues and condensates being separately collected from the two belts. Group 35—59. Reg. No. 19,519.

Pat. 2,078,788. DIFFUSION VACUUM PUMP. Patented Apr. 27, 1937. Single jet diffusion vacuum pump having a condenser unit projecting downwardly into the space between the jet assembly and the outer casing of the pump. Group 35—59—61. Reg. No. 19,520.

Pat. 2,096,578. PROCESS OF PRODUCING ROTENONE AND ASSOCIATED SUBSTANCES FROM NATURAL SOURCES CONTAINING THE SAME. Patented Oct. 19, 1937. Rotenone insecticide prepared by subjecting a natural rotenone-containing material such as the roots of derris and cube to short-path distillation under high vacuum. Group 28—33. Reg. No. 19,521.

Pat. 2,109,129. APPARATUS FOR HIGH VACUUM DISTILLATIONS. Patented Feb. 22, 1938. High vacuum distillation apparatus having a hot evaporating surface and a cool condensing surface arranged within a vacuum chamber together with means for scraping at least one of the surfaces to remove materials therefrom. Group 35—59. Reg. No. 19,522.

Pat. 2,111,992. LINOLEUM CEMENT AND THE METHOD OF PREPARING THE SAME. Patented Mar. 22, 1938. Improved linoleum cement prepared by bodying a fatty oil having drying characteristics, subjecting the bodied oil to short-path distillation under high vacuum to remove undesirable components and thereafter oxidizing the oil to a desired consistency. Groups 22—63, 29—32. Reg. No. 19,523.

Pat. 2,128,223. FRACTIONAL SHORT-PATH DISTILLATION. Patented Aug. 30, 1938. Fractional short-path distillation by means of a specified circulation of residues and condensates in a system comprising several short-path high vacuum stills which may if desired be disposed within a single vacuum chamber. Group 35—59. Reg. No. 19,524.

Pat. 2,128,354. DRYING OIL. Patented Aug. 30, 1938. Improved drying oil prepared from fish oils by polymerizing the fish oil and subjecting the polymerized oil to evaporative distillation under high vacuum to remove unpolymerized and unpolymerizable materials. Group 28—25. Reg. No. 19,525.

Pat. 2,129,596. TREATMENT OF SOLIDS. Patented Sept. 6, 1938. Solid substances are distilled by admixing the solid substance with a medium to form a fluid and subjecting the fluid to evaporative distillation under high vacuum. Group 28—25. Reg. No. 19,626.

Pat. 2,137,553. APPARATUS FOR HIGH VACUUM DISTILLATION. Patented Nov. 22, 1938. A series of upstanding plates arranged in parallel spaced relation, alternate plates being heated and cooled, provide evaporating and condensing surfaces in a short-path high vacuum still. Group 35—59. Reg. No. 19,527.

Pat. 2,143,587. TREATMENT OF VITAMIN-CONTAINING OILS AND PRODUCTS OBTAINED THEREFROM. Patented Jan. 10, 1939. Securing from raw fish oils a concentrated vitamin preparation substantially free of objectionable taste and odor by subjecting the oil to evaporative distillation under high vacuum conditions and hydrogenating the resulting distillate. Group 28—26—31. Reg. No. 19,528.

Pat. 2,144,906. FLAVORING MATTERS AND THEIR APPLICATION. Patented Jan. 24, 1939. Concentrate of essential flavors and vitamins contained in butter is prepared by subjecting water-free butter fat to evaporative short-path distillation under high vacuum. Group 20—95; 28—31. Reg. No. 19,529.

Pat. 2,186,669. APPARATUS FOR HIGH-VACUUM DISTILLATION. Patented Jan. 9, 1940. In a short-path high vacuum still of the vertical surface or falling-film type, the distilling surface is grooved in such a way as to alter the course of the downwardly flowing film at intervals and thereby to expose fresh material. Group 35—59. Reg. No. 19,530.

Pat. 2,454,445. WEDGE ACTUATOR ATTACHMENT FOR JOURNAL BOXES. Patented Nov. 23, 1948. An adjusting device for journal boxes in which a wedge-like face plate can be adjusted by inserting a ratchet wrench between the spokes of the engine wheel. Arms of a U-shaped bracket are bolted beneath the locomotive frame and against the binder block, and an inner U-shaped plate is secured against the arms of the bracket. A worm wheel between the two plates has a square opening to receive the squared lower end of a wedge bolt on inner plate. An actuating block supported by the inner plate forms a top for compartment within which the worm wheel works. When the worm shaft is turned, the wheel is actuated along with the wedge bolt by the sliding engagement of the bolt in the worm wheel. (Owner) Jesse L. Gosnell, 222 Blake St., St. Joseph, Mo. Group 37—11. Reg. No. 19,531.

Pat. 2,453,800. KNIFE RACK. Patented Nov. 16, 1948. Lower portion of a back panel (attached to wall) and upper edge of a front panel are chamfered where they overlap to allow knives to be inserted downward. Knife blades are protected behind front panel, and handles are supported by a horisontal cleat on back panel. Various ledges for holding pencil, match box, etc., and several hooks on lower edge for suspending utensils make this a useful item in a kitchen. It may be manufactured from wood, plastic, or other inexpensive material. (Owner) George H. Lowell, Jr., R. F. D. 1, South Portland, Maine. Groups 25—99; 30—81; 40. Reg. No. 19,532.

Pat. 2,448,554. ULTRA HIGH FREQUENCY TUNING UNIT. Patented Sept. 7, 1948. (Granted under the act of March, 1883, as amended April 30, 1928; 370 O. G. 757.) A radio frequency tuning unit in which the inductance and capacity are simultaneously varied by a single tuning operation. A hollow cylindrical stator is formed with axial slots to provide inductive loops. A hollow cylindrical rotor mounted in the stator is slotted to provide a pair of capacitor plates and is radially spaced from the stator means to provide capacitance therebetween. Inductive-capacitive tuning is produced by a single rotative adjustment of the rotor with respect to the stator. (Owner) Nicholas T. Simopoulos, 832 Neal Ave., Dayton 6, Ohio. Group 36—61. Reg. No. 19,533.

Pat. 2,456,213. DIESEL ENGINE AIR METER. Patented Dec. 14, 1948. Mixing and metering mechanism will admit a mixture of exhaust gases and air into engine cylinders in varying proportions depending upon engine speed. The proportion of exhaust gases in the mixture will vary from maximum at idling engine speed to minimum when engine is under full load to obtain efficient operation of engine. A pressure regulator maintains the exhaust gases at fairly constant pressure within a pressure chamber by opening a valve to admit exhaust gases from engine into the chamber through a heat exchanger coil when pressure in the chamber drops. A fly-ball governor controls actuation of a valve to admit a variable amount of exhaust gases from the pressure chamber into the mixing chamber. When desired, carbon dioxide stored in a tank associated with the mechanism may be mixed with the air instead of the exhaust gases. (Owner) Stanley Pelc, 1142 Emerson Ave., Farrell, Pa. Group 35—12—19. Reg. No. 19,534.

Pat. 2,294,991. COMBINATION RAZOR STROP HOLDER AND HEATER. Patented Sept. 8, 1942. Reg. No. 19,535.

Pat. 2,453,519. COMBINATION RAZORSTROP HOLDER AND HEATER. Patented Nov. 9, 1948. Reg. No. 19,536.

These two patents describe an elongated hollow holder for a flexible razor strop which incorporates a coil to heat the strop prior to use. The inner end of the strop is swiveled to a spring-actuated winding spool. This enables the strop to be drawn out and reversed as required and to be automatically returned within the holder when released. In Pat. 2,453,519 the holder is vertically mounted and includes a roller within an offset nose portion. The strop is caused to pass angularly over the roller to maintain it in flat condition and prevent it from curving transversely to insure proper contact by razor. (Owner) William V. Kommer, Catawissa, Mo. Groups 31—09; 35—41.

Pat. 2,451,574. CHIP GUARD. Patented Oct. 19, 1948. A guard for lathes and similar machines to protect the operator from flying chips. A concavo-convex disk has a rectangular slot at center. A stem is pivoted to the convex side of disk for insertion into the toolpost of a lathe adjacent the cutting tool which extends through the slot. Modifications are given. (Owner) John Paraschuk, 211 East 104 St., New York, N. Y. Group 35—43. Reg No. 19,537.

Pat. 2,454,455. TELESCOPING CIGARETTE CASE. Patented Nov. 23, 1948. A rectangular case, having container and cover portions telescopingly and frictionally engaging each other, is adjustable to two lengths for holding a standard or a longer package of cigarettes. Around the open edge of each portion are spaced-apart abutments offset to inter-fit when the two portions are in telescoping position. To contain a longer package, one portion is turned 180° so that the abutments (arranged alternately on opposite sides of each portion) telescope in end-to-end rather than inter-fitting position. An extension is provided to cover the open spaces formed when the case is thus extended. (Owner) James W. Irwin, Apt. 104, 3031 Sedgwick St., N. W., Washington 8, D. C. Groups 31—72; 34—51; 39—72—81. Reg. No. 19,538.

Pat. 2,456,285. CONCRETE, FEED, AND FERTILIZER MIXER. Patented Dec. 14, 1948. A mixing device for concrete, feed, or fertiliser. A shaft at top of frame can be rotated or tilted and retained in position by a link and notched handle. A supporting block mounted on the shaft has a rotatable shaft extending therethrough supporting the mixer on one end and a counterweight on opposite end. A fixed member secured to shaft at top of frame supports a pair of arms which rotate with the frame and which are attached to a pulley attached to the mixer and to an electric motor. The parts, including the motor, will be rotated or tilted as the mixer is tilted to the discharge or raised position. (Owner) John S. Kamper, Moscow Road, Demopolis, Ala. Group 35—22—31—51. Reg. No. 19,539.

Pat. 2,456,836. BOX BLANK SEPARATOR. Patented Dec. 7, 1948. A rotary separator for box blanks having window openings, for use in box-making machines. Separator has anti-frictional rollers to project through window openings and shift the outermost blank from a stack of blanks on a rack onto a conveyor. A disk is mounted on a drive shaft adjacent the edge of the rack. A pair of spaced rocker arms pivoted to the disk are held in position by springs. The arms extend outwardly beyond the disk and support rollers, which are consecutively brought into contact with the blanks. Rollers have rolling friction only with the immediately succeeding and underlying blank while more forcefully engaging and shifting the outermost blank. (Owner) Marinus Van Brummelen, 1234 Washington Ave., Bronx, N. Y. Group 35—54. Reg. No. 19,540.

Pat. 2,453,941. TRAILER HITCH. Patented Nov. 16, 1948. A hitch for attaching trailer to a tractor vehicle whereby the weight of the trailer is evenly distributed in order to minimize overloading the rear part of tractor. The hitch functions semi-automatically to fasten a trailer to or release it from a tractor by backing the tractor toward or moving it away from the trailer. A combination of parts automatically control the course of trailer when making turns or passing over rough roads. Resilient shock absorption means are adjusted to accommodate various loads carried in trailer. (Owner) Andrew Smit, 9933 South Menard Ave., Oaklawn, Ill. Group 38—11—41. Reg. No. 19,541.

Pat. 2,458,642. AUTO TIRE CHAIN RING. Patented Jan. 11, 1949. A non-skid tire chain easily mounted without the use of a jack. Spring-wire rings to encircle outer and inner sides of tire are connected by spaced cross chains. The outer ring has a turnbuckle for adjusting its diameter. The split inner ring has a sleeve and spring latch on one end to engage a recess in the opposite end. The cross chains are attached to the rings by clevises having eyes freely mounted on the rings to allow easy motion. With the outer ring properly adjusted, the inner ring is slightly sprung to pass over the tire, and it then springs back to position, the ends being guided to snap into locking engagement. (Co-owner) Charles H. Reynolds, Donora, Pa. Groups 33—49; 38—31. Reg. No. 19,542.

Pat. 2,460,770. ARTILLERY WAR GAME. Patented Feb. 1, 1949. Shallow box-like form has a model artillery piece at each end, a group of small electric light bulbs (constituting targets) inside each end protruding through top panel, and a combined rotary switch plate and a movable switch arm for opposing players. A shielded knob at each end of device is mounted on top of a vertical shaft, and each shaft is connected by an endless band to the shaft of a switch plate. When playing game, either player may spoil his opponent's aim by turning his shielded knob in either direction to turn opponent's switch plate. The lights have varying game value. To add realism to game, the artillery pieces may be constructed to emit a report. (Owner) Charles Harold Shirey, 757 Forest Road, Ruthfred Acres, R. F. D. 2, Bridgeville, Pa. Group 39—41. Reg. No. 19,543.

Pat. 2,113,879. LIFTING APPARATUS. Patented Apr. 12, 1938. Wheeled device for lifting and transporting automobiles and parts may be used inside garages, workshops, etc., and quickly converted into a trailer for road service. The inner end of an adjustable jib of the device may be pivotally connected at different elevations to a channeled upright so that jib will function as a jack when positioned near the bottom and as a crane when positioned near the top. After jib has been secured to upright, the inner end of a mechanical jacking device carried by a rotatable transverse block in the jib is adjustably secured to the upright. A crank is used to rotate a worm of jacking device to pivotally raise and lower jib after it has been secured to upright. The device has four small rollers for moving it about an enclosure, and an axle for receiving a pair of road wheels to convert it into a trailer. Inventor states he has a hydraulically equipped working model available. (Owner) Camille Delalandre, 7, Av. Léon-Bourgeois, Suresnes (Seine), France. Groups 33—52; 35—69. Reg. No. 19,544.

Pat. 2,447,947. VARIABLE UNION. Patented Aug. 24, 1948. Pipe union has angled abutting faces so that it may be used as a straight union or as a 45° angle union. It consists of a pair of heads to be threaded on the ends of pipes, and a removable interiorly threaded clamping nut to draw the heads together. When installed, the interior abutting edges of the heads provide a smooth uninterrupted surface so as not to restrict flow of fluid through union. (Owners) George K. Larson and August Larson, Box 143, Smethport, Pa. Groups 33—61; 35—69. Reg. No. 19,545.

Pat. 2,459,992. SLEEVELET PURSE. Patented Jan. 25, 1949. A sleevelet, made of material matching or contrasting with dress or suit, is worn over the forearm and contains various zipper-closed pockets to hold pen, key, coin, card, cosmetics, handkerchief, etc. Shaped to fit forearm, with a closed band around larger end, a zipper side-closing, and a suitable fastener at smaller end to fit comfortably around wrist. (Owner) Thomas D. Cimino, 1633 Third Ave., New Kensington, Pa. Groups 23—31—33—39; 31—72; 40. Reg. No. 19,546.

Des. Pat. 152,386. DESIGN FOR A COMBINED KEY RETAINER, FLASHLIGHT, AND LIGHTER. Patented Jan. 11, 1949. (Owner) Robert Zelenka, 2212 West 50th St., Chicago, Ill. Groups 34—51—81; 39—09; 40. Reg. No. 19,547.

United States Government Owned Patent

The following patent is owned by the United States as represented by the Secretary of the Interior by virtue of assignment from the inventor, George J. Vahrenkamp. Non-exclusive and royalty-free licenses will be granted. Applications for licenses should be addressed to: Solicitor, Department of the Interior, Washington 25, D. C.

Pat. 2,459,203. PRODUCTION OF SHAPED ARTICLES FROM FLUORITE. Patented Jan. 18, 1949. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Shaped articles suitable for metallurgical and other purposes may be formed from finely divided fluorite (normally unsuitable for many uses) by employing bentonite as a bonding agent. Basically, a stiff paste is made from finely divided fluorite, bentonite, and water molded into pellets, cubes, etc., and calcined at a temperature preferably ranging from 800° to 1200° C. When cooled, the resulting product is extremely hard and abrasive-resistant. Group 28—34. Reg. No. 19,548.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 24, 1949

[VOL. 622. No. 4]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 2

RECEPTACLES

Ser. No. 498,040. EARL S. TUPPER, doing business as Tupper Plastics, Farnumsville, Mass., assignor to Tupper Plastics, Inc., Farnumsville, Mass., a corporation of Delaware. Filed Mar. 11, 1946.

Poly-T

FOR MOLDED PLASTIC WATER TUMBLERS.
Claims use since Dec. 26, 1945.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 504,870. UNITED STATES PLYWOOD CORPORATION, New York, N. Y. Filed June 29, 1946.

TRUWOOD

FOR LAMINATED MATERIAL COMPRISING PLASTICS AND WOOD IN THE FORM OF SHEETS AND PANELS FOR BUILDING AND CONSTRUCTION PURPOSES.
Claims use since July 23, 1936.

COLORINSE

Applicant claims ownership of Registration No. 264,670.
FOR HAIR-TREATING COMPOSITION USED IN CONNECTION WITH TINTING HAIR.
Claims use since July 9, 1929.

Ser. No. 550,383. CALIFORNIA SPRAY-CHEMICAL CORPORATION, Wilmington, Del., and Richmond, Calif. Filed Feb. 24, 1948.

ORTHOPHOS

FOR PARASITICIDES—NAMELY, INSECTICIDES AND FUNGICIDES; AND HERBICIDES.
Claims use since Jan. 9, 1948.

Ser. No. 550,384. CALIFORNIA SPRAY-CHEMICAL CORPORATION, Wilmington, Del., and Richmond, Calif. Filed Feb. 24, 1948.

PERSISTOPHOS

FOR PARASITICIDES—NAMELY, INSECTICIDES AND FUNGICIDES; AND HERBICIDES.
Claims use since Jan. 9, 1948.

Ser. No. 550,947. PUGET SOUND PULP AND TIMBER CO., Bellingham, Wash. Filed Mar. 1, 1948.

LIGNOSITE

FOR POWDERED MATERIAL OBTAINED SUBSTANTIALLY ENTIRELY FROM SULPHITE WASTE LIQUOR REDUCED TO A POWDERED FORM AND PRINCIPALLY EMPLOYED AS A DISPERSING AGENT FOR CEMENT IN MIXING CONCRETE.
Claims use since Nov. 19, 1947.

Ser. No. 551,035. NATIONAL CYLINDER GAS COMPANY, Chicago, Ill. Filed Mar. 2, 1948.

NATIONAL

Applicant claims ownership of Registration No. 401,928.
FOR CHEMICAL FLUXES FOR WELDING, BRAZING, SOLDERING, AND METAL BONDING OPERATIONS GENERALLY.
Claims use since November 1938.

Ser. No. 554,206. WARD BLENKINSOP & COMPANY LIMITED, London W., England. Filed Apr. 9, 1948.

TEXTANT

Applicant claims ownership of British Registration No. 640,444, dated July 3, 1946.
FOR CHEMICAL SUBSTANCES FOR USE AS ASSISTANTS IN THE DYEING OR TREATING OF TEXTILES AND OTHER FIBROUS MATERIALS.

Ser. No. 554,644. ELISABETH ARDEN SALES CORPORATION, New York, N. Y. Filed Apr. 15, 1948.

VEILED SILK

FOR FOUNDATION CREAMS.
Claims use since Feb. 2, 1948.

Ser. No. 558,402. MEYER CHEMICAL COMPANY, Detroit, Mich. Filed June 3, 1948.

ALMESTRONE

FOR PARENTERAL SOLUTION FOR THE TREATMENT OF MENOPAUSAL SYNDROME, HYPOMENNORRHEA; AMENORRHEA, MASTITIS AND CHRONIC MASTITIS, MENOPAUSAL ARTHRITIS, SENILE VAGINITIS AND VULVITIS.
Claims use since Nov. 15, 1946.

Ser. No. 561,240. IRENE L. HOLTZ, doing business as Dell Products, Plainfield, N. J. Filed July 13, 1948.

SANAR

FOR MEDICINAL OINTMENT.
Claims use since May 1, 1935.

Ser. No. 561,686. RARE CHEMICALS, INC., Harrison, N. J. Filed July 19, 1948.

MUCORETTES

FOR HORMONES FOR SUBLINGUAL USE.
Claims use since March 1948.

Ser. No. 562,076. M. MICHEL & COMPANY, INC., New York, N. Y. Filed July 23, 1948.

Cachalot

FOR HIGHER ALIPHATIC ALCOHOLS FROM C_{10} TO C_{20} INCLUSIVE.
Claims use since Apr. 1, 1947.

Ser. No. 562,547. DISTILLATION PRODUCTS, INC., Wilmington, Del., and Rochester, N. Y. Filed July 30, 1948.

MYVEROL

FOR MONOESTERS OF POLYHYDRIC ALCOHOLS.
Claims use since July 13, 1948.

Ser. No. 562,746. AMPHAC LABORATORIES, INC., Everett, Wash. Filed Aug. 4, 1948.

TOUR-AID

The word "Aid" is disclaimed.
FOR MEDICINAL PREPARATION FOR THE PREVENTION AND TREATMENT OF MOTION SICKNESS, PROPHYLAXIS, AND RELIEF OF NAUSEA.
Claims use since July 20, 1948.

Ser. No. 564,459. NULOX CORPORATION OF AMERICA, New York, N. Y. Filed Aug. 31, 1948.

NULOX

FOR HAIR DRESSING.
Claims use since July 21, 1948.

Ser. No. 564,608. WILLIAM COOPER & NEPHEWS INCORPORATED, Chicago, Ill. Filed Sept. 3, 1948. Under section 2f of the act of 1946.

SPONGE-AWAY

Applicant claims ownership of Registration No. 398,091.
FOR ANIMAL INSECTICIDE.
Claims use since July 13, 1941.

Ser. No. 567,328. CUTTER LABORATORIES, Berkeley, Calif. Filed Aug. 24, 1948.

(B. T. V.)

Applicant claims ownership of Registration No. 395,325.
FOR VACCINE FOR THE PREVENTION OF CHOLERA IN SWINE.
Claims use since Feb. 20, 1940.

CLASS 7

CORDAGE

Ser. No. 569,231. TUBBS CORDAGE COMPANY, San Francisco, Calif. Filed Nov. 22, 1948.

ABACORD

FOR HARD FIBER TWINE.
Claims use since Nov. 4, 1948.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 539,371. VIRGINIA METAL PRODUCTS CORPORATION, Orange, Va. Filed Oct. 28, 1947.

VMP CORPORATION

The word "Corporation" is disclaimed. The drawing is lined for the color orange.
FOR METAL BI-PASSING DOORS, DOOR FRAMES, WINDOWS, WINDOW FRAMES, AND AUXILIARY STEEL PARTITIONS.

ASH GROVE

PPZ

PORTLAND POZZOLANA

The words "Portland" and "Pozzolana" are disclaimed apart from the mark. Applicant claims ownership of Registrations Nos. 78,926, 197,630, 257,000, 275,137, 316,016, 326,530, and 374,335.

FOR PORTLAND POZZOLANA CEMENT.

Claims use since Nov. 8, 1947.

Ser. No. 550,344. PLIBRICO JOINTLESS FIREBRICK COMPANY, Chicago, Ill. Filed Feb. 21, 1948.

PLISULATE

Applicant claims ownership of Registration No. 365,650.

FOR PLASTIC AND NON-PLASTIC HEAT INSULATING MATERIAL, COMPRISING INSULATING CEMENT; INSULATING BLOCK COMPRISING MINERAL WOOL, ASBESTOS FIBRE, AND COLLOIDAL CLAY; INSULATING FELT; INSULATING BLANKETS; AND INSULATING WOOL.

Claims use since July 14, 1938, on plastic heat insulating material; and since September 1939 on non-plastic heat insulating material.

Ser. No. 550,510. INLAND STEEL PRODUCTS COMPANY, Milwaukee, Wis. Filed Feb. 25, 1948.

MILCOR

Applicant claims ownership of Registration No. 179,554.

FOR METAL ARTICLES FOR BUILDING CONSTRUCTIONS: CONDUCTOR PIPE AND CONDUCTOR PIPE ELBOWS FOR CARRYING RAIN, BUILDING CORNERS, CORNER BEADS, BASE SCREEDS, MOLDINGS AND PLASTER TERMINALS, SIDING, ROOFING AND ACCESSORIES—NAMELY, ROOF EDGES AND EAVES DRIPS; FINIALS AND SHUTTERS FOR VENTILATING CUPOLAS, GUTTERS AND ACCESSORIES—NAMELY, SPIKES, FERRULES, HANGERS, END PIECES, OUTLETS, CIRCLES, SLIP JOINT CONNECTIONS, END CAPS, MITRES, AND DROPS; RIDGE ROLLS, VALLEYS, FLASHING, LATH, FLUE CLEAN OUT DOORS, STUDS, CHANNELS FOR SUPPORTING METAL LATH, DOOR AND WINDOW CASING, ACCESS DOORS, PACKAGE RECEIVERS, WINDOW SASH, AND ROOF DECK.

Claims use since November 1911.

Ser. No. 553,581. EVODE CHEMICAL WORKS LIMITED, Stafford, England. Filed Apr. 1, 1948.

MELLITOL

Applicant claims ownership of British Registration No. 610,470, dated Jan. 25, 1940.

FOR PREPARATIONS TO BE ADDED TO A CEMENT MIX FOR WATERPROOFING CEMENT.

Ser. No. 553,703. THE WEATHER-PROOF COMPANY, Cleveland, Ohio. Filed Apr. 3, 1948.

Alum-A-Lite

FOR AUXILIARY WINDOW AND SCREEN.

Claims use since February 1947.

Ser. No. 556,280. THE PHILIP CAREY MANUFACTURING COMPANY, Cincinnati, Ohio. Filed May 5, 1948. Under section 2f of the act of 1946.

CAREYCRETE

Applicant claims ownership of Registrations Nos. 105,340 and 134,525.

FOR BITUMINOUS MASTIC FLOORING COMPOSITION.

Claims use since Aug. 1, 1935.

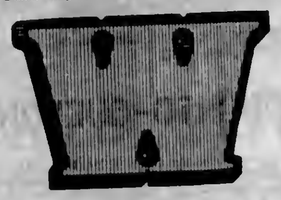
Ser. No. 556,282. THE PHILIP CAREY MANUFACTURING COMPANY, Cincinnati, Ohio. Filed May 5, 1948. Under section 2f of the act of 1946.

FELTEX

FOR ASPHALT ROLL ROOFING AND BUILDING PAPER.

Claims use since July 1, 1925.

Ser. No. 557,706. WELL EQUIPMENT MFG. CORP., Houston, Tex. Filed May 24, 1948.



The drawing is lined to indicate the colors red and black.

FOR DRILL COLLAR DOPE, TOOL JOINT DOPE, AND SEALING COMPOUND, ALL OF WHICH ARE PLASTIC COMPOUNDS FOR LUBRICATING AND SEALING THREADED JOINTS.

Claims use since Mar. 4, 1947.

Ser. No. 557,709. WELL EQUIPMENT MFG. CORP., Houston, Tex. Filed May 24, 1948.

The drawing is lined to indicate the colors red and black.

FOR DRILL COLLAR DOPE, TOOL JOINT DOPE, AND SEALING COMPOUND, ALL OF WHICH ARE PLASTIC COMPOUNDS FOR LUBRICATING AND SEALING THREADED JOINTS.

Claims use since Mar. 4, 1947.

Ser. No. 561,409. GEORGE C. BROWN & COMPANY, Greensboro, N. C. Filed Mar. 17, 1948. Under section 2f of the act of 1946.

SUPERCEDAR

Applicant claims ownership of Registration No. 246,243.

FOR CLOSET LINING MADE OF CEDAR.

Claims use since Apr. 1, 1926.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 528,186. BENJAMIN AIR RIFLE COMPANY, St. Louis, Mo. Filed July 9, 1947. Under section 2f of the act of 1946.

BENJAMIN

FOR PRECISION ATOMIZING NOZZLES FOR ATOMIZING FUEL OILS.

Claims use since Sept. 11, 1931.

Ser. No. 530,448. THE WAGNER MANUFACTURING COMPANY, Sidney, Ohio. Filed Aug. 4, 1947. Under section 2f of the act of 1946.

WAGNER WARE

The word "Ware" is disclaimed apart from the mark. Applicant claims ownership of Registrations Nos. 211,388 and 207,738.

FOR POTS, KETTLES, TEAKETTLES, PANS, BAKING PANS, SAUCEPANS, FRYING PANS, SKILLETS, ROASTERS, DUTCH OVENS, AND GRIDDLES MADE OF CAST IRON, CAST ALUMINUM, AND OTHER BASE MENTALS, AND OF SPECIAL ALUMINUM ALLOYS.

Claims use since 1914.

Ser. No. 534,634. ILLINOIS TOOL WORKS, Chicago, Ill. Filed Sept. 16, 1947. Under section 2f of the act of 1946.

SHAKEPROOF

Applicant claims ownership of Registrations Nos. 167,320 and 232,805 (both expired).

FOR THREAD CUTTING SCREWS, LOCKING SCREWS, ASSEMBLED SCREWS AND WASHERS, LOCK WASHERS, PLAIN METAL WASHERS, NUTS, QUICK OPENING FASTENERS FOR INDUSTRIAL INSTALLATIONS, SNAP FASTENERS FOR INDUSTRIAL USE, MACHINE SCREWS, SET SCREWS, DRIVE SCREWS, AND MOLDING CLIPS.

Claims use since Dec. 1, 1921.

Ser. No. 538,666. SCOVILL MANUFACTURING COMPANY, Waterbury, Conn. Filed Oct. 22, 1947.

Green Spot

FOR GARDEN HOSE CLAMPS, QUICK CONNECTORS FOR HOSE, Y HOSE CONNECTORS, HOSE COUPLINGS, GOOSE NECKS, HOSE MENDERS, HOSE NIPPLES, HOSE NOZZLES, GARDEN HOSE REPAIR OUTFITS—NAMELY, HOSE CLAMPS AND HOSE MENDERS SOLD AS A UNIT; FAN SPRAYERS, AND VARIOUS TYPES OF LAWN SPRINKLERS.

Claims use since Sept. 8, 1947.

Ser. No. 542,083. CHERRY RIVET COMPANY, Los Angeles, Calif. Filed Nov. 24, 1947. Under section 2f of the act of 1946.

Cherry Rivet

The word "Rivet" is disclaimed apart from the mark. Applicant claims ownership of Registrations Nos. 403,650 and 434,641.

FOR RIVETS.

Claims use since Aug. 14, 1942.

Ser. No. 542,419. WALWORTH COMPANY, Boston, Mass. Filed Sept. 23, 1947. Under section 2f of the act of 1946.

The representation of the goods is disclaimed apart from the mark shown. Applicant claims ownership of Registration No. 202,089.

FOR METAL PIPE FITTINGS.

Claims use since January 1901.

Ser. No. 551,096. CRIBBEN AND SEXTON COMPANY, Chicago, Ill. Filed Mar. 11, 1948.

"WHIRLPOOL"

FOR BROILER PANS.
Claims use since Mar. 1, 1948.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 545,149. MUELLER CO., Decatur, Ill. Filed Dec. 22, 1947.

HM

Applicant claims ownership of Registrations Nos. 30,910, 229,813, 231,257, 231,322, and 290,835.
FOR STEEL FORGINGS AND ALUMINUM FORGINGS.
Claims use since Aug. 30, 1933, on steel forgings; and since July 1, 1942, on aluminum forgings.

Ser. No. 547,026. PARKER RUST PROOF COMPANY, Detroit, Mich. Filed Jan. 14, 1948. CERTIFICATION MARK.

The drawing is lined to represent blue and silver.
FOR METALS AND METAL CASTINGS AND FORGINGS.
Claims use since Mar. 15, 1936.

Ser. No. 556,860. ALL-STATE WELDING ALLOYS CO., INC., White Plains, N. Y. Filed May 12, 1948.

KROMOVER

FOR BRAZING METAL IN STICK FORM FOR REFINISHING WORN CHROMIUM PLATING.
Claims use since Mar. 3, 1948.

CLASS 15

OILS AND GREASES

Ser. No. 533,576. E. F. HOUGHTON & CO., Philadelphia, Pa. Filed Sept. 5, 1947.

HOUGHTO-QUENCH

No claim is made to the term "Quench" apart from the mark as shown. Applicaot claims ownership of Registrations Nos. 256,724 and 256,723.
FOR QUENCHING OILS.
Claims use since Oct. 25, 1940.

Ser. No. 546,830. DOW CORNING CORPORATION, Midland, Mich. Filed Jan. 13, 1948.

DC

FOR UNCTUOUS ORGANOSILICON POLYMERS OF USE AS LUBRICANTS, AS VIBRATION DAMPINO MEDIA, AS HYDRAULIC MEDIA FOR TRANSMITTING POWER AND AS MEDIA FOR RELEASING RUBBER AND PLASTIC MOLDINGS FROM THEIR MOLDS.
Claims use since November 1944.

Ser. No. 554,640. CITIES SERVICE OIL COMPANY, Chicago, Ill., and Bartlesville, Okla. Filed Apr. 15, 1948.

D-C

FOR LUBRICATING OILS.
Claims use since Dec. 1, 1936.

Ser. No. 556,487. SEASIDE OIL COMPANY, Santa Barbara, Calif. Filed May 7, 1948.

SILVER GULL

FOR GASOLINE.
Claims use since Oct. 31, 1933.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 538,072. ARMSTRONG PAINT & VARNISH WORKS, Chicago, Ill. Filed Oct. 17, 1947. Under section 2f of the act of 1946.

KILBOURN

FOR READY MIXED PAINT, VARNISHES AND PAINT ENAMELS, ALL SOLD IN LIQUID FORM.
Claims use since Feb. 1, 1926.

Ser. No. 543,179. M. GRUMBACHER, INC., New York, N. Y. Filed Dec. 3, 1947. Under section 2f of the act of 1946.

Gainsborough

The word "Gainsborough" is the name of a noted English artist deceased 1788. Applicant claims ownership of Registration No. 243,871.
FOR ARTISTS' PAINTS—NAMELY, OIL COLORS.
Claims use since Mar. 1, 1922.

Ser. No. 545,215. BALTIMORE PAINT & COLOR WORKS, Baltimore, Md. Filed Dec. 23, 1947.

FOR LIQUID BLACK UTILITY PAINT ENAMEL.
Claims use since Apr. 28, 1945.

Ser. No. 548,600. PIDGEON-THOMAS IRON COMPANY, Memphis, Tenn. Filed Feb. 3, 1948.

The portrait forming a part of the mark is fanciful.
FOR DRY, PASTE, AND READY-MIXED PAINTS.
Claims use since Aug. 21, 1932.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 503,283. THE CLEVELAND HEATER COMPANY, Cleveland, Ohio. Original filed Jan. 5, 1946, under the act of 1905; amended to application under act of 1946, Nov. 5, 1947.

The drawing is lined to represent the colors red, blue, and silver.
FOR METALLIC FITTINGS AND ALLOYS—NAMELY, ANODE RODS FOR ELECTROLYTICALLY PREVENTING CORROSION OF TANKS, LIQUID CONTAINERS AND WATER HEATERS.
Claims use since Apr. 1, 1946.

Ser. No. 538,285. MILTON R. IVERSEN, doing business as Radio Electric Supply Co., Minneapolis, Minn. Filed Oct. 18, 1947.

EDUCATOR

FOR SOUND RECORD PLAYERS AND AMPLIFYING UNITS THEREFOR.
Claims use since Mar. 3, 1947.

Ser. No. 542,063. AIRBORNE ACCESSORIES CORPORATION, Hillside, N. J. Filed Nov. 24, 1947.

The word "Trim" is disclaimed apart from the mark shown in the drawing. The latitudinal lines are for the purpose of indicating shading only.
FOR ELECTRO MECHANICAL APPARATUS IN THE NATURE OF A ROTARY ACTUATOR FOR ACTUATING THE TABS AND OTHER CONTROL SURFACES ON AIRCRAFT.
Claims use since May 31, 1947.

Ser. No. 544,100. NATIONAL CYLINDER GAS COMPANY, Chicago, Ill. Filed Dec. 11, 1947.

SHIELD-O-MATIC

FOR ELECTRIC ARC WELDING UNITS AND MACHINES.
Claims use since October 1941.

Ser. No. 546,609. JOHN A. ROEBLING'S SONS COMPANY, Trenton, N. J. Filed Jan. 9, 1948.

ROECABLE

FOR ELECTRICAL WIRE AND CABLE.
Claims use since Aug. 31, 1938.

Ser. No. 547,066. THE THOMAS & BETTS CO., Elizabeth, N. J. Filed Jan. 14, 1948. Under section 2f of the act of 1946.

LUG-IT

FOR ELECTRIC CONDUIT FITTINGS—NAMELY, LUGS FOR SOLID AND STRANDED WIRES.
Claims use since December 1938.

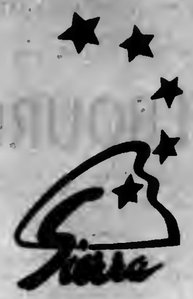
Ser. No. 549,763. SYNTRON COMPANY, Homer City, Pa. Filed Feb. 14, 1948.

SYNTRON

Applicant claims ownership of Registrations Nos. 171,065, 415,309, and 419,108.
FOR RECTIFIERS OF THE THERMIONIC TUBE, VALVES, DRY PLATE, AND METALLIC TYPES.
Claims use since Dec. 1, 1922.

Ser. No. 549,775. AMERICAN BATTERY MFG. COMPANY, doing business as Pioneer Battery Company, Kansas City, Mo., and Kansas City, Kans. Filed Feb. 16, 1948.

PIONEER



FOR ELECTRIC STORAGE BATTERIES.
Claims use since Spring of 1945.

Ser. No. 549,817. MCDONALD MANUFACTURING COMPANY, Los Angeles, Calif. Filed Feb. 16, 1948.

Sierra

FOR ELECTRICAL APPARATUS—NAMELY, CONNECTING DEVICES, FLUSH SWITCHES, SURFACE SWITCHES, LAMPHOLDERS, FLUSH AND WALL PLATES, RECEPTACLES, CONVENIENCE OUTLETS, SOCKETS, PLUGS, TAPS, CORD SWITCHES, CONNECTORS, AND CIRCUIT BREAKERS.
Claims use since Mar. 15, 1946.

Ser. No. 549,818. MCDONALD MANUFACTURING COMPANY, Los Angeles, Calif. Filed Feb. 16, 1948.

FOR ELECTRICAL APPARATUS—NAMELY, CONNECTING DEVICES, FLUSH SWITCHES, SURFACE SWITCHES, LAMPHOLDERS, FLUSH AND WALL PLATES, RECEPTACLES, CONVENIENCE OUTLETS, SOCKETS, PLUGS, TAPS, CORD SWITCHES, CONNECTORS, AND CIRCUIT BREAKERS.
Claims use since Mar. 15, 1946.

Ser. No. 549,819. MCDONALD MANUFACTURING COMPANY, Los Angeles, Calif. Filed Feb. 16, 1948.

THE SIERRA LINE

FOR ELECTRICAL APPARATUS—NAMELY, CONNECTING DEVICES, FLUSH SWITCHES, SURFACE SWITCHES, LAMPHOLDERS, FLUSH AND WALL PLATES, RECEPTACLES, CONVENIENCE OUTLETS, SOCKETS, PLUGS, TAPS, CORD SWITCHES, CONNECTORS, AND CIRCUIT BREAKERS.
Claims use since Mar. 15, 1946.

Ser. No. 549,920. THE GENERAL TIRE & RUBBER COMPANY, Akron, Ohio. Filed Feb. 17, 1948.

The GENERAL

Applicant claims ownership of Registration No. 383,180.
FOR STORAGE BATTERIES.
Claims use since Feb. 22, 1940.

Ser. No. 550,036. ELECTRO MANUFACTURING CORPORATION, Chicago, Ill. Filed Feb. 18, 1948.

SLIMLINER

FOR FLUORESCENT LIGHTING FIXTURES.
Claims use since Feb. 13, 1948.

Ser. No. 550,356. SCHILLER BROS., Union City, N. J. Filed Feb. 21, 1948.

FOR ELECTRICAL LAMPS.
Claims use since Jan. 12, 1948.

Ser. No. 550,551. THE PYLE-NATIONAL COMPANY, Chicago, Ill. Filed Feb. 25, 1948.

PYLET

Applicant claims ownership of Registration No. 354,890.
FOR ELECTRICAL CONDUIT FITTINGS.
Claims use since Sept. 15, 1938.

Ser. No. 550,722. MORRIS MUCHNICK, doing business as Wonder-Aid Products Co., Burbank, Calif. Filed Feb. 27, 1948.

WONDER-AID

FOR ELECTRICALLY-DRIVEN, GARBAGE DISPOSAL UNIT.
Claims use since Feb. 25, 1948.

Ser. No. 550,776. AUTOMATIC HEADLIGHT DIMMER CORPORATION, Camden, N. J. Filed Feb. 28, 1948.

BEAMASTER

FOR ELECTRONIC CONTROL APPARATUS FOR CONTROLLING THE RANGE OF THE HEADLIGHT BEAMS OF ONE AUTOMOBILE UPON THE APPROACH IN THE OPPOSITE DIRECTION OF ANOTHER AUTOMOBILE.
Claims use since Nov. 18, 1947.

Ser. No. 550,948. RADIANT LAMP CORPORATION, Newark, N. J. Filed Mar. 1, 1948.

RADIANT

FOR INCANDESCENT LAMPS.
Claims use since June 1935.

Ser. No. 551,266. GENERAL DRY BATTERIES, INC., Lakewood, Ohio. Filed Mar. 5, 1948.

STORM KING

FOR DRY BATTERIES.
Claims use since Sept. 16, 1925.

Ser. No. 551,651. NEW ENGLAND MICA COMPANY, Waltham, Mass. Filed Mar. 10, 1948.

NEMCOITE

FOR BONDED MICA INSULATION PRIMARILY USED FOR ELECTRICAL INSULATING PURPOSES IN THE FORM OF SHEETS AND ARTICLES CUT, STAMPED, OR FORMED THEREFROM.
Claims use since Feb. 1, 1933.

Ser. No. 551,652. NEW ENGLAND MICA COMPANY, Waltham, Mass. Filed Mar. 10, 1948.

SUPER-NEMCOITE

FOR BONDED MICA INSULATION PRIMARILY USED FOR ELECTRICAL INSULATING PURPOSES IN THE FORM OF SHEETS AND ARTICLES CUT, STAMPED, OR FORMED THEREFROM.
Claims use since Jan. 1, 1938.

Ser. No. 551,653. NEW ENGLAND MICA COMPANY, Waltham, Mass. Filed Mar. 10, 1948.

Y-26

FOR BONDED MICA INSULATION PRIMARILY USED FOR ELECTRICAL INSULATING PURPOSES IN THE FORM OF SHEETS AND ARTICLES CUT, STAMPED, OR FORMED THEREFROM.
Claims use since Mar. 15, 1922.

Ser. No. 551,830. TRIANGLE CONDUIT & CABLE CO., INC., New Brunswick, N. J. Filed Mar. 12, 1948.

TRIANGLE
GLAZON TRIEX

FOR NON-METALLIC SHEATHED ELECTRIC CABLE.
Claims use since Dec. 19, 1947.

Ser. No. 552,044. DUOTONE COMPANY, INC., New York, N. Y. Filed Mar. 16, 1948.

DUOTONE

Applicant claims ownership of Registration No. 434,941.
FOR ELECTRICAL SOUND RECORDING MACHINES, ELECTRICALLY CONTROLLED PHONOGRAPH TURNTABLES, AND ELECTRICALLY CONTROLLED MECHANISM FOR SOUND PRODUCING APPARATUS.
Claims use since January 1942.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 508,573. CENTRAL INDUSTRIES, INC., Watertown, Conn. Original filed Sept. 6, 1946, under the act of 1905; amended to application under act of 1946, Jan. 8, 1948.

MIDGETOOL

FOR POWER-DRIVEN BENCH MATERIAL WORKING TOOLS—NAMELY, ROTARY SAWS, JIG SAWS, BAND SAWS, JOINERS, WOODWORKING LATHES, SANDERS, AND SHAPERS.
Claims use since Aug. 1, 1946.

Ser. No. 510,670. FRED S. CARVER, INC., New York, N. Y. Original filed Jan. 31, 1947, under the act of 1905; amended to application under act of 1946, Jan. 10, 1948.

CARVER

FOR HYDRAULIC PRESSES AND PARTS THEREOF, HYDRAULIC ACCUMULATORS, HYDRAULIC PUMPS, HYDRAULIC COCOA PRESSES, HYDRAULIC COCOA BUTTER PRESSES, HYDRAULIC LABORATORY PRESSES, HYDRAULIC FILTER PRESSES, AND HYDRAULIC LAMINATING PRESSES.
Claims use since 1916.

Ser. No. 523,260. THE GENERAL DETROIT CORP., Detroit, Mich. Original filed May 29, 1947, under the act of 1905; amended to application under act of 1946, Dec. 26, 1947. Under section 2f of the act of 1946.

SAFETY PHLARE

The word "Safety" is disclaimed apart from the mark shown.
FOR PORTABLE FIRE EXTINGUISHERS USING CARBON DIOXIDE.
Claims use since November 1939.

Ser. No. 529,216. THE VAUGHN MACHINERY COMPANY, Cuyahoga Falls, Ohio. Filed July 22, 1947. Under section 2f of the act of 1946.

VAUGHN

FOR WIRE DRAWING MACHINES, BOTH INDIVIDUAL, TANDEM AND CONTINUOUS, WIRE-GRINDING MACHINES, MACHINES FOR COLD-DRAWING METAL TUBES, BARS, AND OTHER SHAPES, DRAW BENCHES FOR WIRE, DRAW BENCHES FOR BARS, TUBES, AND SHAPES, PARTS OF SUCH MACHINES AND DRAW BENCHES, TAKE-UP FRAMES FOR GALVANIZING, TINNING AND PATENTING, SPOOLERS, DIE STRINGERS, POINTERS, FLOOR REELS, BLOCK STRIPPING SPIDERS, SHEARS, MACHINES FOR MILLING, REFINING, AND WASHING RUBBER, AND PARTS OF SUCH MACHINES, SCRAP-BUNDLING MACHINES AND PARTS OF SUCH MACHINES.
Claims use since 1918.

Ser. No. 534,201. STANDARD SHOE MACHINERY COMPANY, Chicago, Ill. Filed Sept. 11, 1947.

FOR FRENCH HAMMERS, COBBLERS' HAMMERS, NIPPERS.
Claims use since 1912.

Ser. No. 541,606. THOMAS HOIST COMPANY, Chicago, Ill. Filed Nov. 18, 1947. Under section 2f of the act of 1946.

BARKER

FOR CHUCKS.
Claims use since January 1918.

Ser. No. 543,595. FREE SEWING MACHINE CO., Rockford, Ill. Filed Dec. 6, 1947.

FOR SEWING MACHINES AND ATTACHMENTS.
Claims use since June 8, 1945.

Ser. No. 543,596. FREE SEWING MACHINE CO., Rockford, Ill. Filed Dec. 6, 1947.

No claim is made to the words "Free Sewing Machine Co., Rockford, Ill., U. S. A." apart from the mark as shown.
FOR SEWING MACHINES AND ATTACHMENTS.
Claims use since June 8, 1945.

Ser. No. 543,883. CARLSON TOOL AND MACHINE COMPANY, Geneva, Ill. Filed Dec. 10, 1947. Under section 2f of the act of 1946.

Carlson

Applicant claims ownership of Registration No. 431,364.
FOR MACHINES FOR MAKING AND MACHINES FOR TRIMMING ALL CLASSES OF HOUSEHOLD, PERSONAL AND INDUSTRIAL BRUSHES WHICH ARE STAPLE SET, ANCHOR SET, TWISTED-IN-WIRE, PITCH SET WIRE DRAWN, AND SOLID BACK.
Claims use since April 1940.

Ser. No. 549,464. REVOLVATOR COMPANY, North Bergen, N. J. Filed Feb. 11, 1948.

GO-GETTER

FOR POWER LIFTRUCKS.
Claims use since Jan. 3, 1948.

Ser. No. 549,689. AIR REDUCTION SALES COMPANY, New York, N. Y. Filed Feb. 14, 1948.

AIRCO

Applicant claims ownership of Registration No. 119,485.
FOR WRENCHES.
Claims use since June 20, 1946.

Ser. No. 549,849. SOUTHERN COAL COMPANY, INCORPORATED, Memphis, Tenn. Filed Feb. 16, 1948.

George

FOR GARDEN ALL-PURPOSE TRACTOR.
Claims use since Dec. 23, 1947.

Ser. No. 550,280. AMPCO METAL, INC., Milwaukee, Wis. Filed Feb. 21, 1948.

AMPCO

Applicant claims ownership of Registration No. 419,045.
FOR CENTRIFUGAL PUMPS.
Claims use since June 2, 1914.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 513,545. ZENITH CAMERA CORPORATION, Chicago, Ill. Original filed Nov. 30, 1946, under the act of 1905; amended to application under act of 1946, June 2, 1948.

COMET

FOR CAMERAS OF THE ROLL FILM TYPE.
Claims use since Nov. 9, 1946.

Ser. No. 519,965. MANBEE EQUIPMENT COMPANY, INC., Chicago, Ill. Original filed Apr. 1, 1947, under the act of 1905; amended to application under act of 1946, June 22, 1948.

MANBEE

FOR APPARATUS FOR GAUGING, CHECKING, BALANCING, AND CORRECTING THE ALIGNMENT, SHAPE AND POSITIONING OF WHEELS, WHEEL MOUNTINGS, SUSPENSION AND FRAME STRUCTURES OF AUTOMOTIVE VEHICLES.
Claims use since Dec. 28, 1931.

Ser. No. 526,308. STIMPSON COMPUTING SCALE COMPANY, Louisville, Ky. Original filed July 4, 1947, under the act of 1905; amended to application under act of 1946, Jan. 27, 1948. Under section 2f of the act of 1946.

Stimpson

FOR COMPUTING COMMODITY SCALES FOR WEIGHING FOOD COMMODITIES AND THE LIKE.
Claims use since 1925.

Ser. No. 542,876. PHOTO REFRIGERATION EQUIPMENT CO., Kansas City, Mo. Filed Dec. 1, 1947.

Orben EQUIPMENT

The word "Equipment" is disclaimed apart from the mark shown.
FOR REFRIGERATED PHOTOGRAPHIC FINISHING EQUIPMENT IN THE NATURE OF DEVELOPING TRAYS AND REFRIGERATED TABLES THEREFOR TO MAINTAIN THE SOLUTION AT A PREDETERMINED TEMPERATURE.
Claims use since Nov. 22, 1947.

Ser. No. 551,760. THE BLACK AND DECKER MANUFACTURING COMPANY, Towson, Md. Filed Mar. 12, 1948.

BD

FOR PORTABLE LOAD WEIGHING SCALES, MECHANICALLY AND ELECTRICALLY OPERATED.
Claims use since Mar. 19, 1915.

Ser. No. 555,954. OPTICAL DEVELOPMENT CORPORATION, Chicago, Ill. Filed Apr. 30, 1948.

REFLECTO-LITE

The word "Lite" is disclaimed apart from the mark.
FOR OPTICAL LENSES.
Claims use since Apr. 1, 1948.

Ser. No. 560,275. J & M PRODUCTS CO., Brooklyn, N. Y. Filed June 26, 1948.

Zadiix

FOR OPTICAL GOODS—NAMELY, OPERA GLASSES, TELESCOPES, LENSES AND MOUNTINGS FOR LENSES AND BINOCULARS.
Claims use since May 1, 1948.

CLASS 27

HOROLOGICAL INSTRUMENTS

Ser. No. 558,801. EMIL LEICHTER WATCH CO., INC., New York, N. Y. Filed May 11, 1948.

CORRECTOMATIC

FOR WATCHES.
Claims use since March 1948.

Ser. No. 560,484. EMIL LEICHTER WATCH CO., INC., New York, N. Y. Filed June 30, 1948.

CORRECTOGRAPH

FOR WATCHES.
Claims use since May 1948.

Ser. No. 565,464. VIKING MERCANTILE CORP., New York, N. Y. Filed Sept. 18, 1948.

ROBIN HOOD

FOR WATCHES.
Claims use since Aug. 17, 1948.

Ser. No. 566,438. MOVADO WATCH AGENCY, INC., New York, N. Y. Filed Sept. 30, 1948.

CELESTOGRAPH

FOR WATCHES.
Claims use since Jan. 31, 1948.

Ser. No. 566,468. B. LEICHTER, doing business as American Watch Co. of Canada, Montreal, Quebec, Canada. Filed Oct. 5, 1948.

SANTA

FOR CLOCKS AND WATCHES.
Claims use since Sept. 20, 1948.

Ser. No. 568,202. EMIL LEICHTER, New York, N. Y. Filed Nov. 4, 1948. Under section 2f of the act of 1946. Applicant claims ownership of Registration No. 408,220.

HYDEPARK

FOR WATCHES.
Claims use since January 1943.

Ser. No. 568,203. EMIL LEICHTER, New York, N. Y. Filed Nov. 4, 1948. Under section 2f of the act of 1946. Applicant claims ownership of Registration No. 408,878.

Packard

FOR WATCHES.
Claims use since September 1942.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 564,997. THE INTERNATIONAL SILVER COMPANY, Meriden, Conn. Filed Sept. 11, 1948.

SPRING GARDEN

FOR SILVER-PLATED FLAT-WARE.
Claims use since July 28, 1948.

Ser. No. 565,687. J. P. BYRNE & SONS CO., Omaha, Nebr. Filed Sept. 23, 1948.

DENOMA

FOR FINGER RINGS.
Claims use since Feb. 1, 1947.

CLASS 29

BROOMS, BRUSHES, AND DUSTERS

Ser. No. 513,351. WHITING-ADAMS COMPANY, INC., Boston, Mass. Original filed Nov. 27, 1946, under the act of 1905; amended to application under act of 1946, Sept. 13, 1947. Under section 2f of the act of 1946.

AFRIC

FOR ARTISTS' BRUSHES, AND FOR PAINT BRUSHES USED FOR APPLYING VARNISH, ENAMEL, WALL PAINT, KALSOMINE, DUTCH KALSOMINE, AND STUCCO.
Claims use since Jan. 1, 1930.

Ser. No. 513,356. WHITING-ADAMS COMPANY, INC., Boston, Mass. Original filed Nov. 27, 1946, under the act of 1905; amended to application under act of 1946, Sept. 13, 1947. Under section 2f of the act of 1946.

HANKOW

FOR ARTISTS' BRUSHES, AND FOR PAINT BRUSHES USED FOR APPLYING VARNISH, ENAMEL, WALL PAINT, KALSOMINE, DUTCH KALSOMINE, AND STUCCO.

DIANOL

FOR INSECTICIDE AND INSECT REPELLANT.
Claims use since Nov. 28, 1945.

Reg. No. 426,247. Registered Dec. 24, 1946. WITCO CHEMICAL COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

MONTY WAX

The word "Wax" is disclaimed as constituting a part of the mark.
FOR HARD WAX-LIKE SUBSTANCE COMPOSED OF SEVERAL CHEMICALS, CONTAINING NO PETROLEUM DERIVATIVES, USED IN RUBBER COMPOUNDING AND IN PLASTIC COMPOSITION.
Claims use since March 1942.

Reg. No. 437,857. Registered Mar. 30, 1948. T. ROY BARNES, Tulsa, Okla. Republished by registrant.

MAG-SO-LAX

The word "Lax" is disclaimed apart from the mark as shown.
FOR ANTI-ACID LAXATIVE.
Claims use since 1927.

Reg. No. 439,291. Registered June 15, 1948. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

Minute Man

FOR SHAMPOO.
Claims use since May 13, 1946.

Reg. No. 439,295. Registered June 15, 1948. ANSUL CHEMICAL COMPANY, Marinette, Wis., a corporation of Wisconsin. Republished by registrant.

THE MASTER OF FLAME

The word "Flame" is disclaimed apart from the mark as shown.
FOR COMMINUTED, FREE-FLOWING, FIRE-EXTINGUISHING DRY CHEMICAL.
Claims use since May 17, 1946.

CLASS 7
CORDAGE

Reg. No. 436,047. Registered Jan. 20, 1948. TUBBS CORDAGE COMPANY, San Francisco, Calif., a corporation of California. Republished by registrant.

TUBBS

FOR ROPES, CORDS, AND TWINES MADE FROM HARD FIBRES.
Claims use since on or about July 1, 1856.

CLASS 12
CONSTRUCTION MATERIALS

Reg. No. 265,523. Registered Dec. 31, 1929. CENTURY CEMENT CORPORATION, Rosendale, N. Y. Republished by Century Cement Manufacturing Company, Inc., Rosendale, N. Y., a corporation of New York.

CENTURY

FOR CEMENT FOR CONSTRUCTION WORK.
Claims use since on or about Feb. 25, 1929.

Reg. No. 273,127. Registered July 22, 1930. CENTURY CEMENT CORPORATION, Rosendale, N. Y. Republished by Century Cement Manufacturing Company, Inc., Rosendale, N. Y., a corporation of New York.

The word "Cement" is disclaimed apart from the mark as shown.
FOR CEMENT FOR CONSTRUCTION WORK.
Claims use since on or about Aug. 23, 1929.

Reg. No. 324,608. Registered May 21, 1935. N. V. TOT VOORTS. DER BAKEN VAN PIETER SCHOEN & ZOON, Zaandam, Netherlands. Republished by Pieter Schoen & Zoon N. V., Zaandam, Netherlands, a limited liability company organized and existing under the laws of the Kingdom of the Netherlands.

STOPSTARA

FOR GLAZER'S PUTTY; STIFF, DRY, PASTE, AND READY-MIXED PAINT; OILS USED FOR MANUFACTURING PAINTS, LACQUERS-PAINTS, AND VARNISHES.
Claims use since May 27, 1930.

CLASS 13
HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 54,753. Registered June 26, 1906. J. P. BURTIS MFG. CO., Portland, Maine. Republished by Burnitol Manufacturing Co., Boston, Mass., a corporation of Maine.

The Brasscrafters

FOR HOLDERS FOR SOAP, SPONGES, BRUSHES, TOWELS, TUMBLERS, AND PAPER HOLDERS.
Claims use since July 1901.

Reg. No. 120,995. Registered Mar. 19, 1918. THE NEWPORT ROLLING MILL COMPANY, Newport, Ky. Republished by International Detroit Corporation, Detroit, Mich., a corporation of Indiana.

FOR CORRUGATED CULVERTS, PLAIN CONDUCTOR-PIPES, ROUND CORRUGATED CONDUCTOR-PIPES, SQUARE CONDUCTOR-PIPES, PLAIN CONDUCTOR-PIPE ELBOWS AND SHOES, ROUND CORRUGATED CONDUCTOR-PIPE ELBOWS AND SHOES, SQUARE CORRUGATED CONDUCTOR-PIPE ELBOWS AND SHOES.
Claims use since Apr. 13, 1891.

Reg. No. 143,927. Registered June 21, 1921. CRANE COMPANY, Chicago, Ill. Republished by Crane Co., Chicago, Ill., a corporation of Illinois.

FOR SCREWED PIPE FITTINGS, PIPE FLANGES, SCREWED AND FLANGED PIPE UNIONS, STOP VALVES, GATE VALVES AND CHECK VALVES, ALL MADE OF BRASS, CAST IRON, MALLEABLE IRON, FERROSTEEL, CAST, FORGED OR ROLLED STEEL OR OTHER ALLOYS.
Claims use since Aug. 1, 1896.

Reg. No. 283,724. Registered June 2, 1931. FRANTZ MANUFACTURING COMPANY, Sterling, Ill., a corporation of Illinois. Republished by registrant.

Over-the-Top

FOR DOOR EQUIPMENT, INCLUDING HARDWARE FOR DOORS OPENING OVERHEAD—NAMELY, ARMS, ARM BEARINGS, ARM ANGLE BRACKETS, PULLS, TRACK BRACKETS, SPRING CLIPS, SPRING ANCHOR BRACES, SPRING ANCHOR BRACKETS, ANGLE-IRON BRACES, TRACKS, BRACES, WASHERS, DROP STRAPS, ARM PLATES, GOOSENECKS, TRUCKS, SPRING STUD ROLLER CASES, ROLLER BEARINGS, EXTENSION-TYPE SPRINGS, COMPRESSION (BUMPER) SPRINGS, BEARING STUDS, SPRING STUDS, RIVETS, BALLS, NUTS, SCREW EYES, LAG SCREWS, BOLTS, AND ESCUTCHEON PINS.
Claims use since Aug. 15, 1930.

Reg. No. 370,772. Registered Sept. 5, 1939. CENTURY METALCRAFT CORPORATION, Chicago, Ill., a corporation of Delaware. Republished by registrant, present address Los Angeles, Calif.

GUARDIAN

FOR ALUMINUM COOKING AND SERVING HOLLOW WARE.
Claims use since Dec. 30, 1938.

CLASS 15

OILS AND GREASES

Reg. No. 145,778. Registered Aug. 16, 1921. PHINNY BROTHERS COMPANY, Oil City, Pa. Republished by Quaker State Oil Refining Corporation, Oil City, Pa., a corporation of Delaware.

Quaker State

FOR LUBRICATING OILS AND GREASES, FUEL AND ILLUMINATING OILS, ROAD-OILS, BLENDED AND STRAIGHT REFINED GASOLINE AND WAX—NAMELY, PARAFFIN REFINED FROM PARAFFIN CRUDE PETROLEUM.
Claims use since 1914.

Reg. No. 166,155. Registered Mar. 27, 1923. THE CONTINENTAL OIL COMPANY, Denver, Colo. Republished by Continental Oil Company, Ponca City, Okla., a corporation of Delaware.

MOTORINE

FOR LUBRICATING OILS AND GREASES.
Claims use since about June 1911.

Reg. No. 302,949. Registered May 2, 1933. MACMILLAN PETROLEUM CORPORATION, Los Angeles, Calif., a corporation of Delaware. Republished by registrant.

RING-FREE

FOR PETROLEUM PRODUCTS CONSISTING OF GASOLINE, KEROSENE, LUBRICATING OILS, AND LUBRICATING GREASES.
Claims use since Nov. 2, 1932.

Reg. No. 302,950. Registered May 2, 1933. MACMILLAN PETROLEUM CORPORATION, Los Angeles, Calif., a corporation of Delaware. Republished by registrant.

RING-FREE

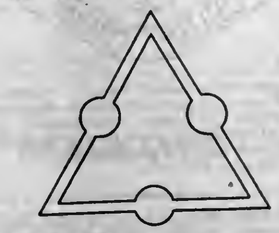
The representation of a piston is disclaimed apart from the mark as shown.
FOR PETROLEUM PRODUCTS CONSISTING OF GASOLINE, KEROSENE, LUBRICATING OILS, AND LUBRICATING GREASES.
Claims use since Nov. 2, 1932.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 120,422. Registered Feb. 5, 1918. PHELAN-FAUST PAINT MANUFACTURING COMPANY, St. Louis, Mo. Republished by Phelan-Faust Paint Mfg. Co., St. Louis, Mo., a corporation of Missouri.

Hollanite



FOR ENAMEL PAINT.
Claims use since about Jan. 1, 1915.

Reg. No. 267,003. Registered Feb. 11, 1930. THE NEWPORT COMPANY, Carrollville, Wis. Republished by Newport Industries, Inc., Pensacola, Fla., a corporation of Delaware.

FOR TURPENTINE.
Claims use since August 1924.

Reg. No. 267,004. Registered Feb. 11, 1930. THE NEWPORT COMPANY, Carrollville, Wis. Republished by Newport Industries, Inc., Pensacola, Fla., a corporation of Delaware.

FOR TURPENTINE.
Claims use since September 1916.

Reg. No. 331,732. Registered Jan. 21, 1936. AMERICAN ASPHALT PAINT COMPANY, Chicago, Ill. Republished by American-Marietta Company, Chicago, Ill., a corporation of Illinois.

VALDURA

FOR ASPHALT PAINT, ASPHALT ALUMINUM PAINT, PAINT ENAMELS, DECORATIVE UNDERCOAT, ENAMELIZED PAINT, REDUCING OIL, AND IMPROVED ASPHALT PAINT.
Claims use since January 1914.

Reg. No. 324,608. Registered May 21, 1935. N. V. TOT VOORTZ. DER SAKEN VAN PIETER SCHOEN & ZOON, Zaandam, Netherlands. Republished by Pieter Schoen & Zoon N. V., Zaandam, Netherlands, a limited liability company organized and existing under the laws of the Kingdom of the Netherlands.

Claims use since May 27, 1930.

Reg. No. 415,969. Registered Aug. 21, 1945. WITCO CHEMICAL COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

WITCOTE

FOR INDUSTRIAL ASPHALT PAINT.
Claims use since September 1942.

CLASS 17

TOBACCO PRODUCTS

Reg. No. 439,056. Registered June 1, 1948. FLEMING-HALL TOBACCO CO., INC., New York, N. Y., a corporation of Delaware. Republished by registrant.

SKIS

FOR CIGARETTES.
Claims use since Dec. 10, 1946.

CLASS 19

VEHICLES

Reg. No. 143,508. Registered May 31, 1921. JOHN WARREN WATSON COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

STABILATOR

FOR SHOCK ABSORBERS FOR VEHICLES.
Claims use since July 13, 1920.

CLASS 20

LINOLEUM AND OILED CLOTH

Reg. No. 439,483. Registered June 29, 1948. SPIEGEL, INC., Chicago, Ill., a corporation of Delaware. Republished by registrant.

Super Sarvoleum

FOR FELT BASE TYPE FLOOR COVERINGS.
Claims use since July 1942.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 252,608. Registered Feb. 12, 1929. OHMITE MANUFACTURING COMPANY, Chicago, Ill. Republished by Ohmite Manufacturing Company (1943), Chicago, Ill., a corporation of Illinois.

OHMITE

FOR RESISTORS FOR VOLTMETERS, X-RAY WORK, ELECTRIC LOCOMOTIVES, DIMMING HEADLIGHTS; RADIO RECEIVERS, TRANSMITTERS, AND BATTERY ELIMINATORS; ELECTRIC-FURNACE CONTROL, MOTOR-SPEED CONTROL, ETC.
Claims use since Aug. 1, 1925.

Reg. No. 312,555. Registered May 1, 1934. CONTINENTAL CORPORATION, Chicago, Ill. Republished by Continental Products, Inc., Chicago, Ill., a corporation of Illinois.

Continental

FOR SPARK PLUGS AND DISTRIBUTORS, COILS, CABLES, AND TIMERS, USED FOR AUTOMOBILE IGNITION.
Claims use since Apr. 1, 1933.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 418,813. Registered Jan. 8, 1946. FRED ARBOGAST, Akron, Ohio. Republished by Fred Arbogast and Co., Inc., Akron, Ohio, a corporation of Ohio.

HULA SKIRTS

FOR ARTIFICIAL FISH BAIT.
Claims use since Dec. 1, 1935.

Reg. No. 421,770. Registered June 18, 1946. PAUL BUNYAN BAIT COMPANY, Minneapolis, Minn. Republished by The Paul Bunyan Bait Company, Minneapolis, Minn., a corporation of Minnesota.

FOR FISHING TACKLE—NAMELY, SPOONS, LURES, BOBBERS, SINKERS, ARTIFICIAL FLIES, TACKLE BOXES, DECOYS, AND MINNOW PAILS.
Claims use since on or about Jan. 1, 1936.

Reg. No. 425,291. Registered Nov. 12, 1946. FRED ARBOGAST, Akron, Ohio. Republished by Fred Arbogast and Co., Inc., Akron, Ohio, a corporation of Ohio.

Hula Spinner

The word "Spinner" is disclaimed apart from the mark as shown.
FOR ARTIFICIAL FISH BAIT.
Claims use since Nov. 1, 1940.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 73,931. Registered June 1, 1909. BEMIS & CALL HARDWARE & TOOL COMPANY, Springfield, Mass. Republished by The Billings & Spencer Company, Hartford, Conn., a corporation of Connecticut.

B&C

FOR WRENCHES.
Claims use since Dec. 10, 1908.

MAJESTY

FOR SCISSORS.
Claims use since Dec. 12, 1939.

Reg. No. 423,440. Registered Sept. 3, 1946. J. B. ENGINEERING SALES COMPANY, New Haven, Conn. Republished by Mansaver Industries, Inc., New Haven, Conn., a corporation of Connecticut.

MANSAVER

FOR STOCK HANDLING MACHINERY—NAMELY, GRABS, HOISTS, CRANES, GRAPPLES, AND BELT, CHAIN, AND ROLLER CONVEYORS.
Claims use since on about Feb. 1, 1932.

CLASS 25

LOCKS AND SAFES

Reg. No. 377,773. Registered May 14, 1940. J. CHESLER & SONS COMPANY, Brooklyn, N. Y. Republished by J. Chesler & Sons, Brooklyn, N. Y., a co-partnership.

TROJAN

FOR CYLINDER DOOR LOCKS.
Claims use since Nov. 29, 1939.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Reg. No. 191,942. Registered Nov. 25, 1924. HENRY L. SCOTT & COMPANY, Providence, R. I. Republished by Scott Testers, Inc., Providence, R. I., a corporation of Rhode Island.

SERIGRAPH

FOR MACHINES FOR TESTING THE STRENGTH OR STRETCH OF MATERIALS.
Claims use since Sept. 1, 1921.

Reg. No. 249,701. Registered Nov. 20, 1928. FOX CASE CORPORATION, New York, N. Y. Republished by Movietonews, Inc., New York, N. Y., a corporation of New York.

MOVIETONE

FOR MOTION PICTURES.
Claims use since about May 25, 1928.

Reg. No. 251,623. Registered Jan. 8, 1929. FOX CASE CORPORATION, New York, N. Y. Republished by Movietonews, Inc., New York, N. Y., a corporation of New York.

FOX MOVIETONEWS
IT SPEAKS FOR ITSELF

FOR MOTION PICTURES.
Claims use since about Oct. 20, 1926.

Reg. No. 275,761. Registered Sept. 30, 1930. THE SCHOLL MFG. CO., INC., Chicago, Ill., a corporation of New York. Republished by registrant.

PEDO-PRINT

FOR MEASURING AND RECORDING DEVICE FOR OBTAINING AN IMPRESSION OF THE CONTOUR OF THE SOLE OF THE FOOT.
Claims use since May 1, 1930.

Reg. No. 296,334. Registered Aug. 2, 1932. HENRY L. SCOTT COMPANY, Providence, R. I. Republished by Scott Testers, Inc., Providence, R. I., a corporation of Rhode Island.

Tensilgraph

FOR MACHINES FOR TESTING THE STRENGTH OR STRETCH OF MATERIALS.
Claims use since Jan. 30, 1932.

Reg. No. 368,735. Registered June 27, 1939. HENRY L. SCOTT COMPANY, Providence, R. I. Republished by Scott Testers, Inc., Providence, R. I., a corporation of Rhode Island.

I-P

FOR TENSION, COMPRESSION, AND FATIGUE TESTING MACHINES.
Claims use since Jan. 14, 1935.

Reg. No. 438,568. Registered May 4, 1948. LINK AVIATION DEVICES, INC., Fenton, N. Y., now by change of name Link Aviation, Inc. Republished by Link Aviation, Inc., Binghamton, N. Y., a corporation of New York.

LINK

FOR GROUNDED APPARATUS FOR TRAINING AIR PILOTS FOR FLYING, GROUNDED APPARATUS FOR TRAINING NAVIGATORS IN CELESTIAL NAVIGATION, GROUNDED APPARATUS FOR TRAINING BOMBARDIERS, INSTRUMENTS FOR USE WITH TRAINING APPARATUS AS AFORESAID FOR PLOTTING AN ASSUMED FLIGHT TRACK WITH INTRODUCED ASSUMED WIND CONDITIONS.
Claims use since about March 1937.

CLASS 27

HOROLOGICAL INSTRUMENTS

Reg. No. 422,453. Registered July 23, 1946. NIVADA WATCH CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

COMPENSAMATIC

FOR WATCHES.
Claims use since Mar. 5, 1943.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 369,795. Registered Aug. 1, 1939. NATIONAL SILVER COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

GUILDCRAFT

FOR STERLING SILVER AND SILVER PLATED FLATWARE, HOLLOW WARE, AND TABLEWARE.
Claims use since on or about Mar. 15, 1939.

Reg. No. 378,408. Registered June 11, 1940. NATIONAL SILVER COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

ASTRID

FOR KNIVES, FORKS, SPOONS, AND OTHER TABLEWARE MADE FROM A BASE METAL OR ALLOY WITH A SILVERPLATE THEREON.
Claims use since on or about Mar. 15, 1939.

Reg. No. 384,531. Registered Jan. 21, 1941. NATIONAL SILVER COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

CONCERTO

FOR STERLING SILVER AND SILVER PLATED FLATWARE, HOLLOW WARE, AND TABLEWARE.
Claims use since on or about June 27, 1940.

Reg. No. 427,427. Registered Feb. 11, 1947. NATIONAL SILVER COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

FOR STERLING SILVER AND SILVER PLATED FLATWARE, HOLLOW WARE, AND TABLEWARE.
Claims use since Mar. 15, 1939.

Reg. No. 439,624. Registered July 6, 1948. ONEIDA LTD., Sherrill and Oneida, N. Y., a corporation of New York. Republished by registrant, present address Oneida, N. Y.

PENDANT

FOR SILVERPLATED FLAT TABLEWARE.
Claims use since 1941.

Reg. No. 439,625. Registered July 6, 1948. ONEIDA LTD., Sherrill and Oneida, N. Y., a corporation of New York. Republished by registrant, present address Oneida, N. Y.

SENECA

FOR SILVERPLATED FLAT TABLEWARE.
Claims use since 1928.

Reg. No. 439,626. Registered July 6, 1948. ONEIDA LTD., Sherrill and Oneida, N. Y., a corporation of New York. Republished by registrant, present address Oneida, N. Y.

THOR

FOR SILVERPLATED FLAT TABLEWARE.
Claims use since 1933.

CLASS 29

BROOMS, BRUSHES, AND DUSTERS

Reg. No. 109,151. Registered Mar. 21, 1916. W. T. WHEATLEY, Pueblo, Colo., assignor to National Broom Mfg. Co., Pueblo, Colo., a corporation of Colorado. Republished by National Broom Manufacturing Company, Pueblo, Colo., a corporation of Colorado.

NATIONAL

FOR BROOMS.

Golden Rod

FOR FRESH APPLES AND FRESH PEARS.
Claims use since June 1919.

Reg. No. 205,137. Registered Nov. 3, 1925. PERHAM FRUIT COMPANY, Yakima, Wash. Republished by Perham Fruit Corporation, Yakima, Wash., a corporation of Washington.

Violet

FOR FRESH APPLES AND FRESH PEARS.
Claims use since June 1919.

Reg. No. 205,754. Registered Nov. 17, 1925. CORONA CITRUS ASSOCIATION, Corona, Calif., a corporation of California. Republished by registrant.

QUEEN BEE

FOR FRESH CITROUS FRUITS—NAMELY, ORANGES, LEMONS, GRAPEFRUIT.
Claims use since 1895.

Reg. No. 205,940. Registered Nov. 17, 1925. HIGHLAND EXCHANGE ASSOCIATION, Highland, Calif. Republished by Shibi S. Dsmna, doing business as United Citrus Growers, Colton, Calif.

JOHN ALDEN

FOR FRESH CITRUS FRUITS—NAMELY, ORANGES AND GRAPEFRUIT.
Claims use since 1898.

Reg. No. 205,945. Registered Nov. 17, 1925. THE IRVINE CITRUS ASSOCIATION, Tustin, Calif., a corporation of California. Republished by registrant, present address Santa Ana, Calif.

Congress

FOR FRESH CITRUS FRUITS—NAMELY, LEMONS.
Claims use since Apr. 5, 1925.

Reg. No. 213,061. Registered May 18, 1926. VENTURA CITRUS ASSOCIATION, Ventura, Calif., a corporation of California. Republished by registrant.

BIG HIT

FOR FRESH CITRUS FRUITS—NAMELY, LEMONS.
Claims use since 1916.

Reg. No. 213,062. Registered May 18, 1926. VENTURA CITRUS ASSOCIATION, Ventura, Calif., a corporation of California. Republished by registrant.

DISPLAY

FOR FRESH CITRUS FRUITS—NAMELY, LEMONS.
Claims use since 1915.

Reg. No. 213,063. Registered May 18, 1926. VENTURA CITRUS ASSOCIATION, Ventura, Calif., a corporation of California. Republished registrant.

AWARD

FOR FRESH CITRUS FRUITS—NAMELY, LEMONS.
Claims use since 1915.

Reg. No. 213,241. Registered May 25, 1926. CORONA CITRUS ASSOCIATION, Corona, Calif., a corporation of California. Republished by registrant.

ROYAL

FOR FRESH CITROUS FRUITS—NAMELY, ORANGES, LEMONS, GRAPEFRUIT.
Claims use since 1895.

Reg. No. 215,490. Registered July 20, 1926. VENTURA CITRUS ASSOCIATION, Ventura, Calif., a corporation of California. Republished registrant.

ARMADA

FOR FRESH CITRUS FRUITS—NAMELY, LEMONS.
Claims use since 1916.

Reg. No. 216,183. Registered Aug. 3, 1926. IAMERT-HINCKS MILLING COMPANY, Kansas City, Kans., and Kansas City, Mo., a corporation of Kansas. Republished by registrant, present address Kansas City, Mo.

SPOKESMAN

FOR WHEAT FLOUR.
Claims use since October 1921.

Reg. No. 217,374. Registered Aug. 31, 1926. VENTURA CITRUS ASSOCIATION, Ventura, Calif., a corporation of California. Republished registrant.

FORGE

FOR FRESH CITRUS FRUITS—NAMELY, LEMONS.
Claims use since 1915.

Reg. No. 219,543. Registered Oct. 19, 1926. UPLAND HEIGHTS ORANGE ASSOCIATION, Upland, Calif., a corporation of California. Republished by registrant.

GOLDEN CROSS

FOR FRESH CITRUS FRUITS—NAMELY, ORANGES, GRAPEFRUIT.
Claims use since Feb. 1, 1910.

Reg. No. 222,209. Registered Dec. 28, 1926. CHULA VISTA CITRUS ASSOCIATION, Chula Vista, Calif. Republished by The Chula Vista Citrus Association, Chula Vista, Calif., a corporation of California.

SERRA

FOR FRESH CITROUS FRUITS—NAMELY, LEMONS.
Claims use since Jan. 1, 1916.

Reg. No. 223,400. Registered Feb. 1, 1927. HIGHLAND EXCHANGE ASSOCIATION, Highland, Calif. Republished by Shibli S. Damus, doing business as United Citrus Growers, Colton, Calif.

Priscilla

FOR FRESH CITRUS FRUITS—NAMELY, ORANGES AND GRAPEFRUIT.
Claims use since 1898.

Reg. No. 223,436. Registered Feb. 1, 1927. UPLAND HEIGHTS ORANGE ASSOCIATION, Upland, Calif., a corporation of California. Republished by registrant.

Gold Star

FOR FRESH CITRUS FRUITS—NAMELY, ORANGES, GRAPEFRUIT.
Claims use since Mar. 1, 1905.

Reg. No. 223,715. Registered Feb. 8, 1927. SWEETWATER FRUIT COMPANY, Bonita, Calif. Republished by The Chula Vista Citrus Association, Chula Vista, Calif., a corporation of California.

HIBISCUS

FOR FRESH CITROUS FRUITS—NAMELY, LEMONS.
Claims use since January 1945.

Reg. No. 226,606. Registered Mar. 29, 1927. CHULA VISTA CITRUS ASSOCIATION, Chula Vista, Calif. Republished by The Chula Vista Citrus Association (1936), Chula Vista, Calif., a corporation of California.

PALS

FOR FRESH CITROUS FRUITS—NAMELY, LEMONS.
Claims use since Jan. 1, 1916.

Reg. No. 226,380. Registered Apr. 5, 1927. CHULA VISTA CITRUS ASSOCIATION, Chula Vista, Calif. Republished by The Chula Vista Citrus Association (1936), Chula Vista, Calif., a corporation of California.

CORONET

FOR FRESH CITROUS FRUITS—NAMELY, LEMONS.
Claims use since Jan. 1, 1917.

Reg. No. 226,748. Registered Apr. 19, 1927. MALCOLM G. GIBBS, doing business as Mammy Lou Candy Co., Washington, D. C. Republished by Peoples Drug Stores, Inc., Washington, D. C., a corporation of Maryland.

Mammy Lou

FOR CANDY.
Claims use since Apr. 1, 1920.

Reg. No. 228,065. Registered May 24, 1927. SWEETWATER FRUIT COMPANY, Bonita, Calif. Republished by The Chula Vista Citrus Association, Chula Vista, Calif., a corporation of California.

MONTICELLO

FOR FRESH CITROUS FRUITS—NAMELY, LEMONS.
Claims use since Jan. 1, 1899.

Reg. No. 234,675. Registered Nov. 1, 1927. POMONA FRUIT GROWERS EXCHANGE, Pomona, Calif., a corporation of California. Republished by registrant.

PUEBLO

FOR FRESH CITRUS FRUITS—NAMELY, ORANGES AND GRAPEFRUIT.
Claims use since Jan. 1, 1912.

Reg. No. 243,525. Registered June 26, 1928. VICTORIA AVENUE CITRUS ASSOCIATION, Riverside, Calif., a corporation of California. Republished by registrant.

VICTORIA

FOR FRESH CITRUS FRUITS—NAMELY, ORANGES, GRAPEFRUIT.
Claims use since 1905.

Reg. No. 245,832. Registered Aug. 21, 1928. POMONA FRUIT GROWERS EXCHANGE, Pomona, Calif., a corporation of California. Republished by registrant.

PARROT

FOR FRESH CITRUS FRUITS—NAMELY, ORANGES AND GRAPEFRUIT.
Claims use since Jan. 1, 1900.

Reg. No. 247,254. Registered Sept. 25, 1928. BUFFALO FLOUR MILLS CORPORATION, Buffalo, N. Y. Republished by Commander-Larabee Milling Company, Minneapolis, Minn., a corporation of Delaware.

FOR WHEAT FLOUR.
Claims use since Apr. 25, 1928.

Reg. No. 253,859. Registered Mar. 5, 1929. CHULA VISTA CITRUS ASSOCIATION, Chula Vista, Calif. Republished by The Chula Vista Citrus Association, Chula Vista, Calif., a corporation of California.

SUNDIAL

FOR FRESH CITRUS FRUITS—NAMELY, LEMONS.
Claims use since Jan. 1, 1916.

Reg. No. 256,755. Registered May 21, 1929. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., a corporation of Colorado. Republished by registrant.

SUNNY-HOUR

FOR WHEAT FLOUR.
Claims use since October 1928.

Reg. No. 256,756. Registered May 21, 1929. THE COLORADO MILLING & ELEVATOR CO., Denver, Colo., a corporation of Colorado. Republished by registrant.

COLUMBINE

FOR WHEAT FLOUR.
Claims use since January 1905.

Reg. No. 265,918. Registered Jan. 7, 1930. VICTOR FRUIT GROWERS, INC., Victor, Calif. Republished by Victor Fruit Growers, Victor, Calif., a firm.

SMALL BLACK

The words "Small Black" are disclaimed apart from the mark as shown.
FOR FRESH GRAPES.
Claims use since Mar. 16, 1929.

Reg. No. 287,881. Registered Oct. 13, 1931. C. A. GLASS CO., INC., Los Angeles, Calif., a corporation of California. Republished by registrant.

LO-LA-LITA

FOR FRESH BOXED APPLES AND PRUNES IN TUBS.
Claims use since Apr. 28, 1930.

Reg. No. 348,408. Registered July 27, 1937. Norris, Incorporated, Atlanta, Ga., a corporation of Georgia. Republished by registrant.

Truly Southern

FOR CANDY.
Claims use since Oct. 1, 1934.

Reg. No. 352,637. Registered Dec. 7, 1937. Cudahy Brothers Company, Cudahy, Wis., a corporation of Wisconsin. Republished by registrant.

TOPSOL

FOR VEGETABLE SHORTENING.
Claims use since May 15, 1937.

Reg. No. 355,545. Registered Mar. 22, 1938. Seaboard Lemon Association, Oxnard, Calif., a corporation of California. Republished by registrant.

The representation of the fruit and the representation of a label are disclaimed apart from the mark as shown.
FOR FRESH LEMONS.
Claims use since July 20, 1937.

Reg. No. 355,716. Registered Mar. 29, 1938. Seaboard Lemon Association, Oxnard, Calif., a corporation of California. Republished by registrant.

STRAND

FOR FRESH CITRUS FRUITS.
Claims use since July 20, 1937.

Reg. No. 359,378. Registered Aug. 16, 1938. C. C. Lang & Son, Incorporated, Baltimore, Md., a corporation of Maryland. Republished by registrant.

XTRA HI

FOR PICKLES, PICKLED ONIONS AND SWEET RELISHES, AND PEPPER RELISHES.
Claims use since Feb. 22, 1938.

Reg. No. 370,267. Registered Aug. 22, 1939. Ray A. Hartness, Weslaco, Tex. Republished by Love-Ford Fruit Company, Pharr, Tex., a firm.

HARTNESS'
RED OWL

The word "Hartness" is disclaimed apart from the mark as shown.
FOR FRESH VEGETABLES.
Claims use since Mar. 9, 1939.

Reg. No. 372,587. Registered Nov. 7, 1939. Iemert-Hincke Milling Company, Kansas City, Mo., and Topeka, Kans., a corporation of Kansas. Republished by registrant, present addresses Kansas City, Kans., and Kansas City, Mo.

Lovely Lady

FOR WHEAT FLOUR.
Claims use since on or about July 18, 1938.

Reg. No. 372,712. Registered Nov. 14, 1939. Cudahy Brothers Company, Cudahy, Wis., a corporation of Wisconsin. Republished by registrant.

CeBeCo

FOR SMOKED MEATS—NAMELY, BACON.
Claims use since May 1931.

Reg. No. 372,713. Registered Nov. 14, 1939. Cudahy Brothers Company, Cudahy, Wis., a corporation of Wisconsin. Republished by registrant.

PAVONE

FOR BEEF AND PORK PRODUCTS—NAMELY, SALAMI SAUSAGE, PEPPERED BUTTS, AND PROSCIUTTO (HAM).
Claims use since Dec. 23, 1924.

Reg. No. 372,901. Registered Nov. 21, 1939. Cudahy Brothers Company, Cudahy, Wis., a corporation of Wisconsin. Republished by registrant.

CREAM CITY

FOR LARD, SPICED PORK AND BEEF, AND VEGETABLE SHORTENING.
Claims use since January 1921.

Reg. No. 375,684. Registered Feb. 27, 1940. Iemert-Hincke Milling Company, Kansas City, Mo., a corporation of Kansas. Republished by registrant, present addresses Kansas City, Kans., and Kansas City, Mo.

The words "White Dough" are disclaimed apart from the mark as shown.
FOR WHEAT FLOUR.
Claims use since on or about Mar. 25, 1939.

Reg. No. 394,616. Registered Apr. 14, 1942. Cudahy Brothers Co., Cudahy, Wis., a corporation of Wisconsin. Republished by registrant.

Granoro

FOR REFINED EDIBLE VEGETABLE OILS.
Claims use since Nov. 13, 1941.

Reg. No. 406,078. Registered July 18, 1944. Robert Fierro, Martinsburg, W. Va. Republished by registrant.

The drawing is lined for red.
FOR FRESH DECIDUOUS FRUITS.
Claims use since Sept. 8, 1943.

Reg. No. 436,352. Registered Apr. 13, 1948. D. Ghirardelli Co., San Francisco, Calif., a corporation of California. Republished by registrant.

GHIRARDELLI

FOR GROUND CHOCOLATE, COCOA, BITTER SWEET CHOCOLATE, MILK CHOCOLATE, MINT CHOCOLATE AND RAISIN CHOCOLATE SOLD IN THE FORM OF BARS AS CANDY AND FOR COOKING PURPOSES.
Claims use since October 1878.

CLASS 47

WINES

Reg. No. 310,311. Registered Feb. 20, 1934. Bohemian Distributing Co. Ltd., Los Angeles, Calif. Republished by Bohemian Distributing Company, Los Angeles, Calif., a corporation of California.

BOHEMIAN BANQUET

FOR WINES.
Claims use since on or about Sept. 15, 1933.

Reg. No. 315,394. Registered July 24, 1934. M. L. Régnier de Nuits, Nuits-Saint Georges, France. Republished by Maison Geisweiler & Fils, Societe Anonyme, Nuits-St. Georges, France, a corporation of France.

All notations shown, excepting "ML" and the name of the applicant, are disclaimed.
FOR WINES.
Claims use since 1906.

Reg. No. 405,456. Registered Feb. 1, 1944. Lucien Ardin, Inc., New York, N. Y., a corporation of New York. Republished by registrant.

The drawing is lined for red.
FOR WINES.
Claims use since 1908.

Reg. No. 405,884. Registered Feb. 29, 1944. Lucien Ardin, Inc., New York, N. Y., a corporation of New York. Republished by registrant.

Ardin
Mosellebloom

The surname "Ardin" is disclaimed apart from the mark as shown.
FOR WINES.
Claims use since 1903.

Reg. No. 406,155. Registered Mar. 14, 1944. LUCIEN ARDIN, INC., New York, N. Y., a corporation of New York. Republished by registrant.

Ardin
Igor

The surname "Ardin" is disclaimed apart from the mark as shown.
FOR WINES.
Claims use since 1934.

Reg. No. 406,427. Registered Apr. 4, 1944. LUCIEN ARDIN, INC., New York, N. Y., a corporation of New York. Republished by registrant.

Ardin
Pralido

The surname "Ardin" is disclaimed apart from the mark as shown.
FOR WINES.
Claims use since 1903.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 292,528. Registered Mar. 15, 1932. GLENFORREA GLENLIVET DISTILLERY CO. LIMITED, Burnside and Leith, Scotland, and London, England. Republished by William Whiteley & Co. Inc., Dover, Del., a Delaware corporation.

KING'S RANSOM

FOR SCOTCH WHISKY.
Claims use since Feb. 28, 1928.

Reg. No. 314,550. Registered July 3, 1934. J. & G. STEWART LIMITED, Edinburgh, Scotland, a limited liability company of Great Britain. Republished by registrant.

USHER'S
(EDINBURGH)
EXTRA QUALITY
"GREEN STRIPE"
BLENDED
OLD SCOTCH WHISKY
(A BLEND OF CHOICE OLD WHISKIES)
J. & G. STEWART LTD.
DISTILLERS ESTABLISHED 1779
EDINBURGH PRODUCED IN SCOTLAND

All the wording on the drawing is disclaimed apart from the mark as shown.
FOR WHISKY.
Claims use since 1929.

Reg. No. 318,813. Registered Nov. 6, 1934. WILLIAM WHITELEY & CO. INC., Dover, Del., a corporation of Delaware. Republished by registrant.

HOUSE OF LORDS

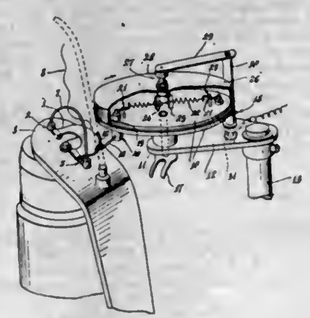
FOR WHISKY.
Claims use since 1910.

Reg. No. 329,088. Registered Oct. 15, 1935. WILLIAM WHITELEY & CO. INC., Dover, Del., a corporation of Delaware. Republished by registrant.

"HOUSE OF COMMONS"

FOR WHISKEY.
Claims use since June 20, 1935.

Reg. No. 338,532. Registered Sept. 8, 1936. WILLIAM WHITELEY & CO. INC., Dover, Del., a corporation of Delaware. Republished by registrant.



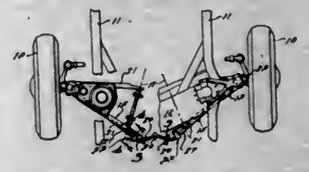
ROUND THE WORLD

FOR SCOTCH WHISKEY.
Claims use since Feb. 28, 1928.

REISSUES

MAY 24, 1949

23,114
THREAD OPERATED STOP MOTION IN CIRCULAR LOOMS
Victor Marie Joseph Ancet, Lyon, France, assignor, by mesne assignments, to Regina, S. A., a societe anonyme, Tangiers, Morocco
Original No. 2,433,824, dated January 6, 1948, Serial No. 661,920, April 13, 1946. Application for reissue December 29, 1948, Serial No. 68,333
9 Claims. (Cl. 139—371)



1. A weft stop motion for use in a loom having a shuttle assembly and means for advancing the assembly through a shed of warp threads, which comprises loom stopping means, a finger operable to advance with the assembly and penetrate one sheet of warp threads of the shed periodically adjacent the assembly, the finger also being movable to operate the loom stopping means, means for operating the finger, and a member mounted on the assembly and engaging the weft thread leaving the shuttle and held thereby as long as the thread is under tension, the member biased toward a position, in which it intercepts and causes movement of the finger to operate the loom stopping means.

23,115
PLANT REGULANT COMPOSITION AND METHOD
John F. Lontz, Nutley, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Original No. 2,322,761, dated June 29, 1943, Serial No. 431,696, February 20, 1942. Application for reissue June 26, 1948, Serial No. 35,516
10 Claims. (Cl. 47—58)

1. A plant regulant composition containing as an essential active ingredient a compound selected from the group consisting of 2,4-dichlorophenoxyacetic acid, its esters, amides, and salts.

23,116
MOTOR VEHICLE STABILIZING MEANS
Chester C. Utz, Magnolia, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Original No. 2,442,252, dated May 25, 1948, Serial No. 458,625, September 17, 1942. Application for reissue September 16, 1948, Serial No. 49,665
17 Claims. (Cl. 267—11)

1. In a vehicle including a pair of oppositely disposed wheels and independent suspension means for each wheel including a member oscillated with the associated wheel, torsion bars respectively associated with said members each having the main body thereof disposed approximately parallel to and immediately adjacent the associated member and having one end portion thereof fixedly anchored to said associated member for movement therewith, an insulating bushing rotatably connecting the main body of each of said bars with its associated member, the other end portion of each of said bars being angled from said main body thereof and connected one with the other, said connected ends cooperating with said fixed ends to torsionally stress each of said main bodies in response to relative oscillation of said members.

PLANT PATENTS

GRANTED MAY 24, 1949

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

838
ROSE PLANT
Roy L. Byrum, Richmond, Ind., assignor to Joseph H. Hill Company, Richmond, Ind., a corporation of Indiana
Application September 19, 1947, Serial No. 774,915
1 Claim. (Cl. 47—61)

A new and distinct variety of rose plant of the polyantha class, characterized as to novelty by its heavy canes, the form and color of its thorns, and by the size and color of its blossoms, substantially as shown and described.

839
ROSE PLANT
Roy L. Byrum, Richmond, Ind., assignor to Joseph H. Hill Company, Richmond, Ind., a corporation of Indiana
Application September 19, 1947, Serial No. 774,916
1 Claim. (Cl. 47—61)

A new and distinct variety of rose plant, characterized as to novelty by its very free growth; good production of flowers of distinct coloring, substantially as shown and described.

840
ROSE PLANT
Vincenzo Sodano, known as Jimmy Sodano, Madison, N. J.
Application April 22, 1947, Serial No. 743,110
1 Claim. (Cl. 47—61)

The new and distinct variety of hybrid tea rose plant, substantially as herein shown and described, characterized particularly by the large dark green foliage devoid of thorns; its free and vigorous growth; the large size of its flowers and petals; its lasting fragrance; the retained high-centered form of the flowers as well as the unruffled and only slightly reflexed edge of the petals; and the velvety brilliance of its newly-opened flowers of dark Tyrian Rose which deepens as the flower ages.

PATENTS

GRANTED MAY 24, 1949

2,470,749
ROTATABLE SHELF
Waldo Emerson Randall, Cranston, R. I.
Application August 9, 1946, Serial No. 689,315
1 Claim. (Cl. 211—146)

A supporting structure comprising a base, a spindle extending upwardly from said base, a plurality of sleeves of different axial extent removably and rotatably mounted on said spindle one upon the other upwardly from the base, at least one of said sleeves serving as a hub for a shelf carried thereby and extending therethrough and collars on both sides of the shelf threadedly secured to the hub, said hub providing a bearing for rotatable mounting on a spindle whereby the shelf may be adjustably positioned for rotation about the spindle with reference to the base by selecting the order of arrangement of the sleeves with reference to the base.

2,470,750
METHOD OF PREPARING GUM-CONTAINING SEEDS FOR DEHUSKING
Bernard Chiego, Newark, N. J.
No Drawing. Application June 16, 1944, Serial No. 540,745
2 Claims. (Cl. 146—235)

2. The process of treating seeds having a tough outer coating or husk difficult of removal, such as the seeds from the carob tree and the *Delonix regia* from their endosperms containing gum valuable in industry which consists in treating the seeds, to aid in removing the coating or husk, in an aqueous, approximately 2% solution of an acid reducing salt of the group consisting of bisulfites and bisulfates at super-atmospheric pressures and temperatures at a steam gauge pressure, ranging from 20 to 100 lbs. for from approximately 5 to 30 minutes which will soften the seed coat without effecting the state of hydration of the endosperms, then washing the seeds and removing the husks, then removing the cotyledons and other parts of the embryo from the endosperms.

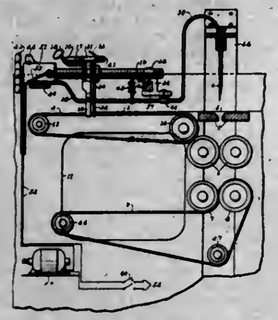
2,470,751
METHOD OF PREPARING GUM-CONTAINING SEEDS FOR DEHUSKING
Bernard Chiego, Newark, N. J.
No Drawing. Original application June 16, 1944, Serial No. 540,745. Divided and this application February 12, 1949, Serial No. 76,199
4 Claims. (Cl. 146—235)

1. The method of preparing *Ceratonia siliqua* (carob) and *Delonix regia* seeds for dehusking which comprises treating the seeds over a relatively short period of time ranging substantially from five to thirty minutes at super-atmospheric pressure and temperature at steam gauge pressure ranging from 20 to 100 lbs., in a solution of water and a substance selected from the group consisting of (1) water soluble alcohols in approximately 5–15% concentration, (2) water soluble mono glycol ethers in approximately 5–15% concentration which will soften the coats of said seeds while at the same time perfectly controlling the state of hydration of the endosperms.

2,470,752
INTERPOLYMER PRODUCED FROM POLYHYDRIC ALCOHOL, POLYBASIC ACID, AND INTERPOLYMER OF MONOVINYLAROMATIC COMPOUND, OLEFINIC ACID, AND DRYING OIL OR OIL FATTY ACID
Edward G. Bobalek, Cleveland, Ohio, assignor to The Arco Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application June 2, 1947, Serial No. 751,966
11 Claims. (Cl. 260—22)

1. An ungelled resinous interpolymer formed from about 30 to 80 percent by weight of (1) an ungelled interpolymer produced from (a) a monovinylaromatic compound selected from the group consisting of styrene, vinylnaphthalene, fluorostyrene, chlorostyrene, methoxystyrene, hydroxystyrene, methylstyrene, trifluoromethylstyrene, trichloromethylstyrene, and alpha-methylstyrene, in amount from about 10 to 60 percent by weight, (b) a monocarboxylic olefinic acid containing a single olefinic carbon-carbon linkage and the carboxyl group as sole functional group, at least one hydrogen atom on the beta-carbon, and an aliphatic carbon chain length up to four carbon atoms, exclusive of carboxyl groups, in amount from about 2 to 25 percent by weight of the monovinylaromatic compound, and (c) a compound selected from the group consisting of drying oils and drying oil fatty acids having an average double bond content, as determined by Woburn iodine number, between about 133 and 274; the remaining 70 to 20 percent by weight of the starting reactants being (2) a polyhydric alcohol containing as sole functional groups at least three and not more than six hydroxyl groups per molecule, and (3) a polybasic organic acid selected from the group consisting of saturated and unsaturated polybasic acids containing the carboxyl groups as sole functional groups; the relative proportions of polyhydric alcohol (2) and polybasic acid (3) being such as to render the ratio of hydroxyl groups to carboxyl groups in the starting reactants between about 1.1 and 2.0 to 1, said resinous interpolymer having an acid value below about 40.

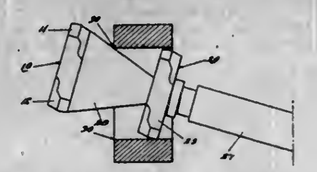
2,470,753
THERMOSTATIC LAMINATED METAL
Clarence F. Alban, Pontiac, Mich., assignor to W. M. Chace Company, Detroit, Mich., a corporation of Michigan
Application February 16, 1946, Serial No. 648,373
7 Claims. (Cl. 29—195.5)



6. Laminated thermostatic metal comprising at least three laminations joined together, said laminations each consisting of a metal or metal alloy, one of said laminations having a higher thermal

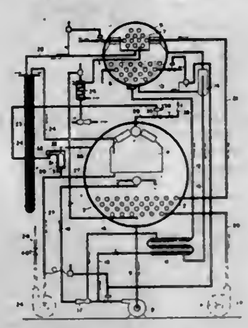
expansion rate throughout a given range of temperatures than the expansion rates of the other two laminations, and said other two laminations having thermal expansion rates, the plotted

curves of which are equal or approach equality at a certain temperature within said given range of temperatures whereby the deflection rate of said thermostatic metal decreases above said certain temperature.



2,470,754
FOLDING MACHINE
Myron D. Alber, Alexandria, Va.
Application April 25, 1947, Serial No. 743,905
3 Claims. (Cl. 270—83)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a sheet folding machine having a drop knife for folding sheet material, means for feeding sheet material to a station below said knife, a motor for driving the knife and the feeding means, and means for arresting sheet material at said station, the improvement comprising means for controlling the operation of the machine motor, means responsive to movement of the knife in sheet folding operations to actuate said motor control means for stopping said motor, and movable means positioned in the path of movement of said sheet material and being mounted for movement by engagement with the leading edge of sheet material advancing into engagement with said arresting means, said movable means being operated by said advancing sheet material for rendering said actuating means inoperative.

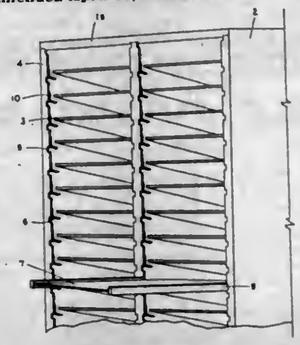


2,470,755
BORE GAUGE
Erik H. Aldeborgh, Poughkeepsie, and Alfred Hamilton Emery, Wappingers Falls, N. Y., assignors to Standard Gage Company, Inc., Poughkeepsie, N. Y., a corporation of New York
Application April 24, 1945, Serial No. 590,010
3 Claims. (Cl. 33—178)

3. In a progressive bore gage, in combination, a handle, a maximum gaging member mounted on said handle with its center coinciding with the axis of the handle, a conical frustum mounted on said handle with its apex adjacent the surface of said maximum gaging member, said conical frustum being concentric with said handle and maximum gaging member, and a minimum gaging member mounted on said handle adjacent the base of said conical frustum, said minimum gaging member being likewise concentric with said conical frustum, said maximum gaging member, and the axis of said handle, whereby said coni-

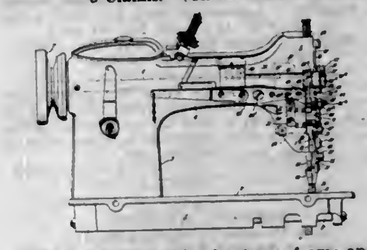
cal frustum permits tilting of the gage in the bore and forms a guide to facilitate the entrance of the minimum gage member into the bore during withdrawal of the gage from a through bore.

2,470,756
CONTROL ARRANGEMENT FOR ABSORPTION REFRIGERATION SYSTEMS
Alexis A. Berestneff, Syracuse, N. Y., assignor to Carrier Corporation, Syracuse, N. Y., a corporation of Delaware
Application July 13, 1946, Serial No. 683,389
6 Claims. (Cl. 62—5)



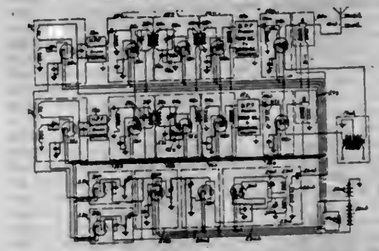
1. In an absorption refrigeration system, the combination of a shell, a cooling member in said shell, said shell and said cooling member cooperating to form an absorber, a second member in said shell, said shell cooperating with said second member to form an evaporator, refrigerant supplied to the evaporator being flash-cooled, the flashed vapor passing to the absorber to be absorbed by solution therein, the cooled refrigerant collecting in the evaporator, a generator, a condenser, the absorber, evaporator, generator and condenser being disposed in a closed circuit, a line through which refrigerant is supplied to the evaporator, a second line through which refrigerant is withdrawn from the evaporator, means for passing refrigerant through said lines and the evaporator, control means in said first line for regulating the quantity of refrigerant supplied to the evaporator, and means responsive to variation in refrigerant level in said evaporator for governing the operation of said control means.

2,470,757
INTERPOLYMER OF MONOVINYLAROMATIC COMPOUND, MONOCARBOXYLIC OLEFINIC ACID AND DRYING OIL OR ACID
Edward G. Bobalek, Cleveland, Ohio, assignor to The Arco Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application June 2, 1947, Serial No. 751,965
12 Claims. (Cl. 260—23)



1. An ungelled resinous interpolymer formed from about 10 to 60 per cent by weight of (a) a monovinylaromatic compound selected from the group consisting of styrene, vinylnaphthalene, fluorostyrene, chlorostyrene, methoxystyrene, hydroxystyrene, methylstyrene, trichloromethylstyrene, trifluoromethylstyrene, and alphamethylstyrene, (b) a monocarboxylic olefinic acid containing a single olefinic carbon-carbon linkage and the carboxyl group as sole functional group, at least one hydrogen atom on the beta-carbon, and an aliphatic carbon chain length up to four carbon atoms, exclusive of carboxyl groups, in amount from about 2 to 25 per cent by weight of the monovinylaromatic compound (a), the remainder being (c) a compound selected from the group consisting of drying oils and drying oil fatty acids having an average double bond content, as determined by Woburn iodine number, between about 133 and 274.

2,470,758
DISTRIBUTION OF MANIFEST SHEETS
Clem Bursett, Seattle, Wash.
Application July 3, 1946, Serial No. 681,266
5 Claims. (Cl. 211—134)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

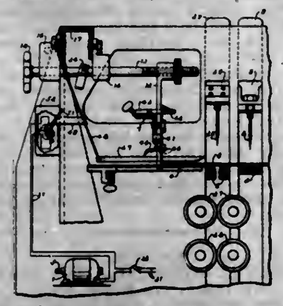


4. In combination in apparatus for the distribution of material, a housing, vertically spaced shelves in said housing, a distributing tray having a portion extending into said housing and adapted to rest on any one of said shelves, said shelves terminating short of the front of said housing, vertically disposed facing members on the front of said housing opposite the sides of said shelves and spaced from the forward ends of said shelves, said facing members having openings therein at a point above one of said shelves to permit passage of said extended portion of said tray into said housing, and said facing members having inwardly extending members extending beneath said shelves, said facing members and inwardly extending members being disposed for engagement with said extended portion of said tray during movement of said tray from one shelf to another and normally retaining said extended tray portion within said housing during said movement of said tray, said tray comprising a base plate, side members adapted to receive said base plate for a portion of their length, hook members affixed in said side members, and providing lateral projections, said hook members being retained in position by a portion of said base plate.

2,470,759
FEEDING MECHANISM FOR SEWING MACHINES
Andrew B. Clayton, Silver Bay, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application October 18, 1947, Serial No. 780,727
5 Claims. (Cl. 112—212)

1. In a sewing machine having a frame and a rotary drive-shaft journaled in said frame; a work feeding mechanism comprising an upper four-motioned feeding-foot engaging the work at its upper side; a rotary feed-shaft journaled in said frame adjacent and substantially parallel to said drive-shaft; a rotary driving connection between said drive-shaft and said feed-shaft for rotating the latter from the former; a feed-drive eccentric on said feed-shaft; operative connections between said feed-drive eccentric and said feeding-foot to give to the feeding-foot feed and return movement; a feed-lift eccentric on said feed-shaft; and operative connections between said feed-lift eccentric and said feeding-foot to give to the feeding-foot rising and falling movements in timed relation with its feed and return movements.

2,470,760
ELECTRICAL COMMUNICATION SYSTEM
Paul Curry, New Haven, Conn.
Application November 2, 1946, Serial No. 707,348
12 Claims. (Cl. 250—6)



1. A method for electrically communicating intelligence, which method comprises: coincidental-

ly transmitting two frequency-modulated carrier-waves each of which carrier-waves has at least one of its frequency-limits differing from the similar frequency-limit of the other of said carrier-waves; additionally modulating at least one of the said frequency-modulated carrier-waves by imposing thereon the intelligence or signal to be transmitted; and at a receiving-station extracting the intelligence from the doubly-modulated carried-wave under the control of the other of the said carrier-waves.

2,470,761
SOLVENTS AND PLASTICIZERS FOR VINYL RESINS
Jean Delorme, Bron, and René Bluma, Asnieres, France, assignors to Societe Anonyme des Manufactures des Glaces et Produits Chimiques de Saint-Gobain, Chauny & Cirey, Paris, France
No Drawing. Application May 21, 1945, Serial No. 595,078. In France July 30, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires July 30, 1963
2 Claims. (Cl. 260—32.8)

2. A composition from which the solvent may be substantially completely removed, that is adapted to use as a glue or varnish consisting essentially of a clear, ungelled solution of polyvinyl chloride and benzaldehyde.

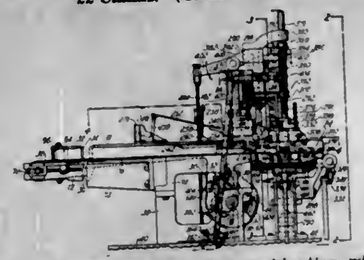
2,470,762
FOLDING MACHINE
Leo R. Dickenson, Washington, D. C.
Application April 25, 1947, Serial No. 743,906
4 Claims. (Cl. 270—83)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a sheet folding machine having a motor for driving the machine, a movable guide bar, sheet guide means carried by said bar, means carried by said bar for gripping sheets, means for perforating sheets arrested by said guide means, a folding knife intermediate said guide bar and said perforating means, and means for reciprocating said bar to advance perforated sheets gripped by said gripping means from a sheet perforating station below said perforating means to a sheet folding station in which the perforations of the perforated sheets underly said knife, the improvement comprising means including a pawl and ratchet bar, said pawl being carried by the guide bar, said pawl and said ratchet bar normally being in operative engagement with each other to transmit the sheet advancing movement of said guide bar to said ratchet bar, a device operable by said ratchet bar and adapted to control the motor of said machine, and means responsive to sheets fed into engagement with said guide means for disconnecting said pawl from said ratchet bar.

2,470,763
FLUX COATED ALUMINUM ROD FOR GAS WELDING
Dorris Monell Doyle, Springfield, Pa.
No Drawing. Application September 13, 1946, Serial No. 696,958
3 Claims. (Cl. 148—26)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

2. A flux composition for use in welding aluminum consisting of about 40% of lithium fluoride, about 40% of sodium fluoride, and about 20% of calcium fluoride.

2,470,764
METHOD OF TREATING WASTE SULFITE LIQUOR
Thomas Leonidas Dunbar, Watertown, N. Y.
No Drawing. Application September 23, 1943, Serial No. 503,559
10 Claims. (Cl. 92—11)

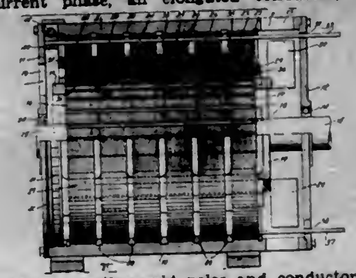


1. A process of producing cellulosic pulp which comprises digesting cellulosic material with sulphite liquor in a digestion zone, withdrawing spent liquor from the zone after completion of the digestion; treating the spent liquor with an oxidizing agent separating the solid material which is formed from the liquor, treating said liquor with a precipitating agent, separating the clear liquor from the precipitate, and employing the separated liquor for digestion.

2,470,765
BREAD COOLING AND PROOFING RACK
James M. Dunston, Jeffersonville, Ind.
Application September 11, 1945, Serial No. 615,685
7 Claims. (Cl. 211—136)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

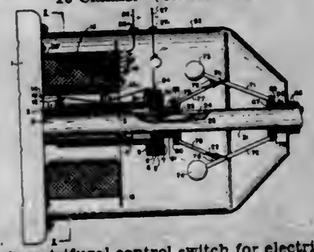
5. A rack comprising front and rear channeled standards, the flanges of said rear standards being provided with vertically spaced U-shaped slots and the flanges of each of said front standards being provided with vertically spaced curved indentations terminating in notches, said notches being opposite said slots, a plurality of vertically spaced shelves supported by the flanges of said standards, two laterally projecting threaded pins connected to each of two opposite sides of each of said shelves, each of said pins being provided with a head on the outer end thereof, and nuts disposed on the threaded portions of said pins whereby said shelves may be securely attached to said flanges when said shelves are positioned with that portion of the pins between the nuts and the heads thereof disposed in the slots and the notches of said flanges and the nuts are tightened thereagainst.

2,470,766
CIGAR MACHINE
James P. Durning, deceased, late of St. Albans, N. Y., by Jean L. Durning, executrix, St. Albans, N. Y., assignor to International Cigar Machinery Company, a corporation of New Jersey
Application February 17, 1944, Serial No. 522,701
22 Claims. (Cl. 131—21)



1. In a cigar machine, the combination with mechanism for superimposing bunch lengths of long filler tobacco to form a vertical column of laminated cigar bunch lengths wherein the filler tobacco is arranged horizontally, of means for compacting said tobacco column vertically, a horizontal knife having a cutting edge on its forward end extending diagonally thereof, a reciprocable support movable horizontally toward and away from said column, said knife having its rear end fastened to said support and projecting forwardly from said support in a horizontal plane spaced from one end of the tobacco column a distance considerably less than the horizontal width and length of said column and to traverse said column of tobacco when said support is moved toward the column and thereby separate a thin bunch charge from said one end of the compacted tobacco column, the cutting edge of said knife being beveled and extending diagonally thereof at an angle of approximately 45 degrees or more and the beveled side of said cutting edge being on the side of the knife which is out of contact with said bunch charge.

14. In a cigar machine, the combination with means for separating bunch lengths from a continuous layer of filler tobacco and superimposing them to form a vertical column of bunch lengths, of a hollow charge transfer having an open bottom and arranged to admit the lower end of said column, a device for separating the portion of said column within said charge transfer from the remainder of the column, a rolling apron having a portion thereof arranged at a position laterally spaced from the bottom of said transfer, mechanism for moving the charge transfer with the separated charge therein to advance the charge upon said portion of said apron, and a member underlying said transfer to support the charge therein while it is being advanced toward said apron.



2,470,767
POLYPHASE ALTERNATING CURRENT DYNAMO
Charles E. Ellis, Mahwah, N. J.
Application December 6, 1945, Serial No. 633,151
16 Claims. (Cl. 318—243)

1. In a polyphase alternating current dynamo-electric machine, the combination of a plurality of magnetic poles having their faces disposed in a row, windings for the several poles each adapted to be connected to a corresponding alternating current phase, an elongated conductor, and

means mounting said poles and conductor for relative movement of said conductor substantially parallel to itself in a direction at an angle to its length with the row of energized pole faces disposed at an angle to said conductor and spaced therefrom by a substantially uniform air gap.

2,470,768
RHEOSTAT WITH CENTRIFUGAL OPERATOR
Robert A. Felburg, Newark, N. J.
Application April 23, 1946, Serial No. 664,166
10 Claims. (Cl. 201—48)

1. A centrifugal control switch for electric motors comprising a driven motor shaft, a centrifugal weight system displaceable in proportion to the speed of the motor shaft, a tubular projection concentrically surrounding said motor shaft and forming a guide, a collar member slidable on the guide formed by said tubular projection, a connection between said centrifugal weights and said collar member, an electric contact system associated with said collar member, a complementary electric contact system associated with said tubular projection, and spring means for normally maintaining said contact systems in electrical contact for completing an electrical circuit through said contact systems, said centrifugal weights operating under conditions of excessive speed for separating said contact systems and opening the electrical circuit.

2,470,769
COLOR PHOTOGRAPHIC MATERIAL AND PROCESSES FOR PRODUCING SAME
Bela Gaspar, Hollywood, Calif., assignor to Chromogen Incorporated, a corporation of Nevada
No Drawing. Application May 29, 1944, Serial No. 537,967. In Great Britain August 28, 1939
19 Claims. (Cl. 95—6)

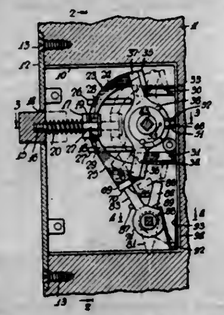
7. A process for producing a colored photo-

graphic image in a photographic material comprising a plurality of colloid layers, at least one of said layers containing a silver image and at least one of said layers being diffusely dyed with a soluble high molecular weight dye which includes the following general structure

$$(-Ar-N=N)_n$$

formed by a plurality of identical low molecular weight members Ar—N=N, wherein Ar stands for a group which has both a coupling position and at least one salt-forming substituent and comprises an aromatic radical capable of carrying an azo group, n stands for an integer greater than one, said members Ar—N=N being linked together by the azo group of one member being attached to the coupling position of the next member which comprises treating said material to locally destroy by reduction said dye in the presence of said silver image and washing said material.

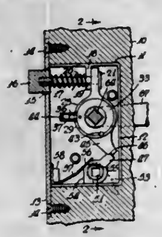
17. A photographic material comprising at least two superposed colloid layers, at least one of the layers being a light sensitive silver halide emulsion layer and at least one layer comprising a soluble high molecular weight dye which carries at least one solubilizing group and includes the following general structure:



$$[-B(-Ar_1-N=N-)_aAr_2-]_n$$

formed by a plurality of low molecular weight members

$$-B(-Ar_1-N=N-)_aAr_2-$$

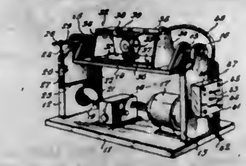


wherein Ar_1 and Ar_2 stand for a group comprising a radical selected from the class consisting of aromatic, heterocyclic and aliphatic radicals capable of carrying an azo group, B stands for a heteronuclear bond which in at least one low molecular weight member of the series comprises the group —CO—NH—, n stands for an integer greater than one and a stands for an integer from one to four and the product of a and n is greater than two.

2,470,770
COMMUNICATING DOOR LOCK
Henry Stephen Harvey, Palm Beach, Fla., assignor to Independent Lock Company, Fitchburg, Mass., a corporation of Massachusetts
Application January 24, 1945, Serial No. 574,315
2 Claims. (Cl. 292—173)

2. In a communicating door or the like having a spring projected latch bolt, the combination therewith comprising a spindle operable rollback hub engaging a retractor link for the latch bolt, locking elements mounted upon rotatable hubs, each including a dogging finger, a lug on said link directed edgewise toward said dogging fingers and restrained radially toward said fingers in a pre-dead-center position, said locking elements being independently operable from each face of the door.

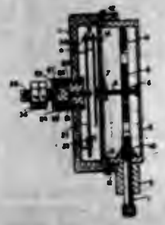
2,470,771
LATCH
Henry Stephen Harvey, Palm Beach, Fla., assignor to Independent Lock Company, Fitchburg, Mass., a corporation of Massachusetts
Application January 24, 1945, Serial No. 574,316
9 Claims. (Cl. 292—173)



1. In a lock including a casing having a spring projected latch bolt and a retractor assembly including a rollback operated by a spindle, a hub for said retractor including spring means for orienting the rollback to a neutral position, comprising a coiled spring mounted upon a spool and housed within the rollback and axially thereof, the spring having its opposite ends anchored against expansion in said spool, said spool being keyed with said rollback, an end of said spring having anchoring engagement with respect to said casing, to urge said rollback to the neutral position.

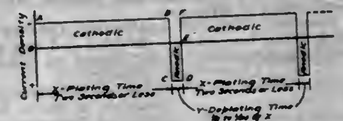
2,470,772
METHOD OF REDUCING THE ADHESION OF ICE TO RUBBERY SURFACES
Eugene G. Haas, Copley Township, Summit County, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application March 11, 1944, Serial No. 526,140
12 Claims. (Cl. 117—139)

3. The method of reducing the adhesion of ice to the surface of a rubbery material normally subjected to icing conditions which comprises associating with at least the surface of said rubbery material a liquid polymeric silicone, said silicone having been prepared by the hydrolysis of a mixture of dimethyl silicon dichloride and monomethyl silicon trichloride and subsequent polymerization to the liquid stage, and providing thereby a resulting extensible elastic film on said surface stretchable with the rubbery material and resistant to adhesion of ice under said icing conditions.



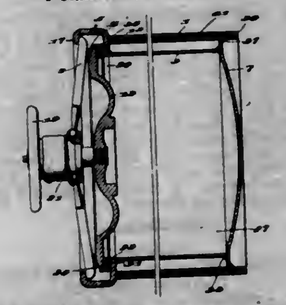
6. The method of making ice-removing apparatus which comprises admixing a liquid polymeric silicone with a rubbery material and forming an inflatable structure from the mixture, said silicone providing on an exposed surface of said structure an extensible and elastic film stretchable with the rubbery material upon inflation of the said structure.

2,470,773
ASYMMETRIC SCORSBY AND METHOD OF OPERATION
Robert Haskins, Jr., Rutherfordton, N. C., assignor to The Sperry Corporation, a corporation of Delaware
Application May 3, 1944, Serial No. 533,985
13 Claims. (Cl. 73—1)



1. In a rotating gyro bearing friction determining device wherein bearing friction is determined in place in the gyro, the improvements comprising means for mounting a gyro for movement about an axis in line with a bearing axis of the gyro, means for maintaining said gyro in a fixed position with respect to said bearing axis, means for imparting asymmetrical motion to said mounting means about said bearing axis, and means for measuring the displacement of said gyro due to said asymmetrical motion as a measurement of bearing friction.

2,470,774
INDICATING DEVICE
Walter T. Haswell, Jr., United States Navy
Application April 12, 1945, Serial No. 588,050
2 Claims. (Cl. 200—56)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



2. In an indicating instrument having a rotary indicator needle rotated in a vertical plane and a follower arm movable by and with the needle in both of two opposite movements of the needle for closing and opening an electric circuit through the needle and follower arm in response to one or the other opposite movements of the needle respectively, a pivotal bearing for the follower arm comprising a pivot shaft, a sleeve bearing member having a horizontal bore in which the shaft fits loosely, a thrust-bearing block of magnetized material closing one end of the bore and against which one end of the pivot shaft is held in direct contact by magnetic attraction in a direction away from the needle, said one end having a point bearing directly against the magnetized pivot block, a casing and transparent cover-plate housing the needle, said sleeve bearing member being threaded into a portion of the cover-plate, the thrust-bearing block being fixedly secured to the sleeve bearing member and provided with a turning shaft for rotating the block and sleeve bearing for adjustment of the bearing as a whole to and away from the needle, said follower arm being connected with the pivot shaft through a follower rod at a point mid way between the ends of the rod.

2,470,775
ELECTROPLATING NICKEL AND COBALT WITH PERIODIC REVERSE CURRENT
George W. Jernstedt and Myron Ceresa, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 9, 1947, Serial No. 759,796
7 Claims. (Cl. 204—43)

1. In the process of electroplating nickel, cobalt and nickel-cobalt alloys on a member from an electroplating electrolyte thereof, the steps comprising applying to the member, while in contact with the electrolyte, a periodically reversed electrical current consisting of successive cycles, of which each cycle renders the member cathodic for a period of time of less than two seconds to electrodeposit an increment of metal on the member and then renders the member anodic for a period of time of from ½ to 1/25 of the cathodic time period to deplate the metal, the anodic period being not less than 1/500 of a second, the current density during the anodic period being substantially equal to the current density applied during the cathodic period.

2,470,776
STERILIZER CONSTRUCTION
Raymond L. Jewell, Erie, Pa., assignor to American Sterilizer Company, Erie, Pa.
Application November 14, 1944, Serial No. 563,365
4 Claims. (Cl. 220—10)

1. In a sterilizer, the combination comprising a continuous metal door frame having an approximately U-shaped cross section with parallel, inwardly directed long and short legs; a spaced pair of metal body sheets defining a steam jacket and a sterilizing chamber; closure means for the sterilizing chamber and the steam jacket fixedly secured to the body sheets at one end of the sterilizer, said body sheets at the other end of the sterilizer being arranged with their entire

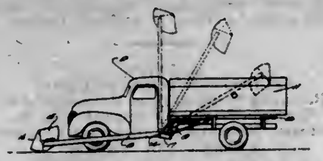
corresponding ends continuously abutting the outer face of the long leg of said door frame; and continuous welding seals extending around the respective ends of the body sheets and securing said sheets to the outer face of the long leg of said door frame.

2,470,777

PROCESS OF PREPARING 10,11-DIHYDRO-7-R-PHENANTHRO-[2,1-d] ISOXAZOLES, AND PRODUCTS OF SUCH PROCESS

William S. Johnson, Madison, Wis., Jack W. Petersen, Oakland, Calif., and Carl David Gutsche, St. Louis, Mo., assignors to Wisconsin Alumni Research Foundation, Madison, Wis., a corporation of Wisconsin

No Drawing. Original application October 1, 1946, Serial No. 700,380. Divided and this application November 13, 1947, Serial No. 785,822
6 Claims. (Cl. 260—307)



1. The process of producing a 10,11-dihydro-7-R-phenanthro-[2,1-d] isoxazole, in which R is a member of the class consisting of hydrogen and lower alkoxy groups and lower aralkoxy groups, which consists in treating a 1-keto-2-hydroxymethylene-7-R- 1,2,3,4 - tetrahydrophenanthrene with hydroxylamine.

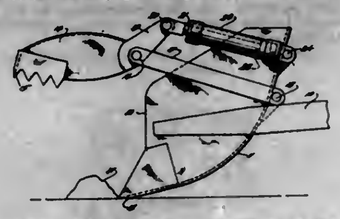
2,470,778

HYDRAULIC SYSTEM FOR SELF-LOADING TRUCKS

Anatoly Lankovski and Michael Graves, Los Angeles, Calif., assignors to Matthew B. Butler, Chicago, Ill.

Application June 25, 1946, Serial No. 679,244
9 Claims. (Cl. 214—78)

1. In combination with a truck having arms swingably mounted thereon for lifting a load and depositing it on the body of the truck through a position wherein the center of gravity of the load and arms is over the center of swing of the arms, hydraulic cylinders having pistons therein for actuating the arms, means for optionally supplying fluid pressure to either end of each cylinder and returning fluid from the other end thereof, and means for throttling the return of fluid from said other ends whenever the load begins to descend by gravity from said position so as to retard its descent.



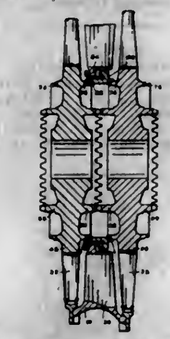
2,470,779

SCOOP CONSTRUCTION FOR SELF-LOADING TRUCKS

Anatoly Lankovski and Michael Graves, Los Angeles, Calif., assignors to Matthew B. Butler, Chicago, Ill.

Application June 25, 1946, Serial No. 679,245
7 Claims. (Cl. 214—145)

1. In combination with a scoop, a closure for the forward end of the scoop, means providing a pivot for the closure which pivot is movable relatively to the scoop, and means for swinging the closure relatively to the pivot to open and close the forward end of the scoop whereby the closure may descend into engagement with a ground surface on which the scoop is positioned and cause to engage the ground in advance of



the forward end of the scoop and then be drawn into scoop closing position and in so doing to scrape material on the ground in advance of the scoop into the scoop.

2,470,780

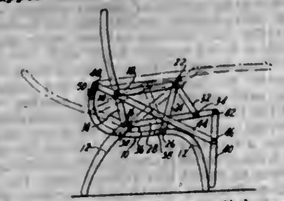
DIAPHRAGM SEAL FOR GAS TURBINES

Walter A. Ledwith, Hartford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware

Application August 23, 1944, Serial No. 550,890
5 Claims. (Cl. 60—41)

1. A turbine rotor including blade carrying disks having spacing means therebetween for holding said discs in predetermined spaced relation and concentric to one another, said discs also having laterally projecting flanges adjacent the blade roots and spaced radially outward from said spacing means, and a diaphragm seal supported by said flanges, said seal extending between the discs and having passages for the escape of cooling air from within the rotor.

2,470,781



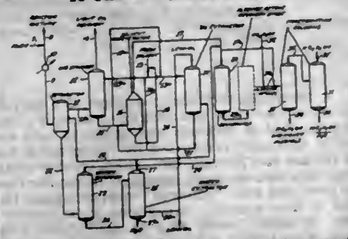
RECLINING ARTICLE OF FURNITURE

Anton Lorenz, Buffalo, N. Y.

Application August 22, 1946, Serial No. 692,225
In Czechoslovakia March 15, 1946
7 Claims. (Cl. 155—105)

1. A reclining article of furniture, comprising: a support, a back-rest pivoted to said support, a top link, the rear portion of said top link being pivoted to an intermediate point of said back-rest above said pivotal connection between the back-rest and the support, a connecting link, one end portion of said connecting link being pivoted to the front portion of said top link, the other end

portion of said connecting link being pivoted to said support at a point spaced from the pivotal connection between the back-rest and the support, said back-rest, said top link, said connecting link and the stationary portion of the support between the pivotal connection of the connecting link with the support and of the back-rest with the support



forming the links of a four-bar link-mechanism, a seat, the rear portion of said seat being pivoted to said support at a point spaced from the pivotal connection between the back-rest and the support, and a front link, one end portion of said front link being pivoted to the front portion of said seat, and the other end portion of said front link being pivoted to the top link.

2,470,782

SEPARATION OF ORGANIC COMPOUNDS

Henry G. McGrath, Elizabeth, Herbert J. Passino, Englewood, and Louis C. Rubin, West Caldwell, N. J., assignors to The M. W. Kellogg Company, Jersey City, N. J., a corporation of Delaware

Application November 14, 1940, Serial No. 709,871
15 Claims. (Cl. 260—450)

1. A process for treating the reaction product obtained in the hydrogenation of carbon monoxide wherein said product contains hydrocarbons and oxygenated organic compounds comprising aldehydes, ketones, alcohols, acids, and esters which comprises cooling said product to obtain an uncondensed gas phase and a condensate comprising an oil phase and a water phase wherein each of said phases contains at least a portion of said hydrocarbons and at least a portion of said oxygenated compounds, separating the oil phase and the water phase, separately subjecting the oil phase to extraction with a solvent for oxygenated compounds to obtain an extract containing oxygenated compounds substantially hydrocarbon-free and a lean oil raffinate, separately subjecting the water phase obtained in the first-mentioned cooling step to distillation to separate said water phase into a high-boiling fraction comprising an aqueous mixture of organic acids, esters, aldehydes, ketones, and alcohols having at least four carbon atoms per molecule and a low-boiling fraction comprising alcohols having up to three carbon atoms per molecule, subjecting said last-mentioned high-boiling fraction to extraction treatment with a portion of said lean oil raffinate to obtain an extract containing alcohols having at least four carbon atoms per molecule and a water raffinate, and passing said last-mentioned extract to said first-mentioned extraction treatment in combination with said first-mentioned oil phase.

2,470,783

PLANE MARKER BUOY

Vincent A. Mead, United States Navy

Application May 15, 1945, Serial No. 593,696
18 Claims. (Cl. 9—9)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An air-sea rescue device for indicating the location of submerged aircraft, comprising a housing releasably secured to the aircraft, a buoyant chamber within the housing, hydrostatic release means including slidable catches operable upon submersion of the housing to release the housing from the aircraft, an anchor line for connecting the housing to the aircraft, and visual indicating means energized by actuation of the hydrostatic release means to indicate the location of the buoy and the aircraft.

2,470,784

GAMMA IRON OXIDE-ALKALI METAL FERRATE AND PROCESS OF PREPARATION

Max A. Mosesman, Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware

No Drawing. Original application December 20, 1946, Serial No. 717,562, now Patent No. 2,455,696. Divided and this application June 23, 1948, Serial No. 34,843
10 Claims. (Cl. 252—474)

1. A method for preparing a catalyst adapted for use in a Fischer-Tropsch synthesis which consists of the steps of preparing an admixture of gamma iron oxide and alkali metal ferrate in an amount in the range between 0.2 and 20% by weight of said gamma iron oxide, heating said admixture at a superatmospheric temperature of about 1000° F. for about 4 hours in the presence of an oxidizing atmosphere, and subsequently contacting the admixture with a reducing atmosphere at a superatmospheric temperature in the range between 700° and 1600° F. for about 24 hours.

2,470,785

ALPHA IRON OXIDE-ALKALI METAL FERRATE CATALYST AND PROCESS OF PREPARATION

Max A. Mosesman, Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware

No Drawing. Original application December 20, 1946, Serial No. 717,562, now Patent No. 2,455,696. Divided and this application June 28, 1948, Serial No. 35,741
10 Claims. (Cl. 252—474)

1. A method for preparing a catalyst adapted for use in a Fischer-Tropsch synthesis which con-

sists of the steps of preparing an admixture of alpha iron oxide and alkali metal ferrate in an amount in the range between 0.2 and 20% by weight of said alpha iron oxide, heating said admixture at a superatmospheric temperature of about 1000° F. for about 4 hours in the presence of an oxidizing atmosphere, and subsequently contacting the admixture with a reducing atmosphere at a superatmospheric temperature in the range between 700° and 1600° F. for about 24 hours.

2,470,786

FERRO-FERRIC OXIDE-ALKALI METAL FERRATE CATALYST AND ITS METHOD OF PREPARATION

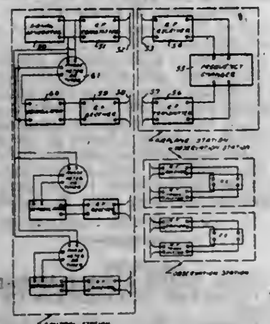
Max A. Mosesman, Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware

No Drawing. Original application December 20, 1946, Serial No. 717,582, now Patent No. 2,455,696. Divided and this application July 29, 1948, Serial No. 41,413

10 Claims. (Cl. 252—474)

1. A method for preparing a catalyst adapted for use in a Fischer-Tropsch synthesis which consists of the steps of preparing an admixture of ferro-ferric oxide and alkali metal ferrate in an amount in the range between 0.2 and 20% by weight of said ferro-ferric oxide, heating said admixture at a superatmospheric temperature of about 1000° F. for about 4 hours in the presence of an oxidizing atmosphere, and subsequently contacting the admixture with a reducing atmosphere at a superatmospheric temperature in the range between 700° and 1600° F. for about 24 hours.

2,470,787



SYSTEM FOR DETERMINING THE POSITION OR PATH OF AN OBJECT IN SPACE

Paul W. Noaker, Yellow Springs, Ohio

Application May 4, 1944, Serial No. 534,126

2 Claims. (Cl. 342—12)

Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. Means for continuously obtaining information sufficient to determine the instantaneous position of an airplane with respect to three ground points located at the vertices of a triangle, said means comprising a control station located at the first of said ground points, said control station comprising a local oscillator and means for radiating a first carrier wave modulated by the frequency of said local oscillator, means in said airplane for receiving and demodulating said first carrier wave and for modulating a second carrier wave with the signal resulting from demodulation of said first carrier wave, means in said airplane for radiating said modulated second carrier wave, means at said control station for receiving and demodulating said second carrier wave and for comparing the phase of the resulting signal with that of the local oscillator signal, means at the second of said ground points for receiving and demodulating said second carrier wave and for modulating a third carrier wave with the signal resulting from demodulation of said second carrier wave, means at said second ground point for radiating said modulated third carrier wave, means at the third ground point for receiving and demodulating said second carrier wave and for modulating a fourth carrier wave with the signal resulting from demodulation of said second carrier wave, means at said third ground point for radiating said modulated fourth carrier wave, means at said control station for receiving and demodulating said third carrier wave and for comparing the phase of the resulting signal with that of the local oscillator signal, and means at said control station for receiving and demodulating said fourth carrier wave and for comparing the phase of the resulting signal with that of the local oscillator signal.

2,470,788

SEVERABLE ELECTRICAL CONDUIT SECTION

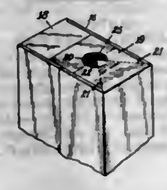
Joseph F. O'Brien, Lebanon, and Earl S. Boynton, East Orange, N. J., assignors to John B. Pierce Foundation, New York, N. Y., a corporation of New York

Application December 7, 1944, Serial No. 567,054

7 Claims. (Cl. 174—99)

1. A severable rectilinear section of a seriatim connected electrical conduit system, said system being formed of sections mechanically and electrically mutually connected by conforming male and female end formations, said severable section comprising sub-sections having conforming housings provided with "squared" ends arranged to be brought into mutual contiguous engagement at their "squared" ends, one of said sub-sections having a male end formation and another of said sub-sections having a female end formation; electrical conductors insulatedly and removably mounted within said housings, said electrical conductors individually extending integrally coextensively through said plurality of housings; and means for maintaining said housings in rectilinear extension and in contiguous engagement at their stated "squared" ends, whereby the "squared" end of one of said housings may be severed thereby reducing the length of such housing and whereby the ends of said electrical conductors may be severed adjacent the outer end of the severed housing to a common length corresponding to the reduction of length of such housing.

2,470,789



SIFTPROOF BAG

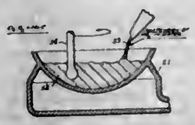
Frank D. Palmer, Chicago, Ill., assignor to Frank D. Palmer, Inc., a corporation of Illinois

Application November 26, 1945, Serial No. 630,771

2 Claims. (Cl. 229—17)

1. A package comprising inner and outer receptacles, the inner receptacle having a closure embodying an ear having separable plies of material respectively extending from a pair of walls of the receptacle and united around the free edges of the ear, the outer receptacle having a closure embodying a plurality of flaps successively folded over and adhesively secured to one another to form an end wall for the package, said ear of the inner receptacle being folded into position between the outermost and an inner end wall flap,

said ear having a portion projecting beyond an edge portion of said outermost flap so as to be accessible for direct manual gripping and unfolding to a projecting, spout-forming position, said ear being adapted to have an end portion thereof severed therefrom so as to permit separation of the plies of the ear to form a tubular dispensing spout communicating with the interior of the package.



2,470,790

MANUFACTURE OF ALLOYS

Towson Price, Glen Ridge, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application April 24, 1945, Serial No. 590,046

2 Claims. (Cl. 75—176)

1. The method of manufacturing coherent chromium alloys of metals selected from the group consisting of molybdenum and tungsten, comprising making a mixture of a powdered oxide and a powdered carbide of the selected metal and a solution of a chromium compound in an amount sufficient to yield approximately 9% of chromium in the product and containing from about .01% to about 1% of at least one metal of series 4, group VIII, of the periodic table, in the form of a soluble salt, to facilitate combination of the chromium with the selected alloying metal, the proportions of the ingredients and the ratio between the carbide and the other ingredients being such that after the reaction product, carbon monoxide has been driven off during the operation of the method, the metal produced is substantially free from both carbon and oxygen, constantly stirring the mixture and heating to a temperature of about 100° C., thereby avoiding segregation of the liquid and obtaining a uniformly commingled dry mixture, loading said well-mixed mass in suitable receptacles, and heating said loaded receptacles slowly in an atmosphere of dry hydrogen to a temperature between about 800° and 1000° C., continuing said treatment for from one to two hours, and cooling the reduced material.

2,470,791

METHOD FOR IMPROVING THE PROPERTIES OF PRECIPITATION HARDENABLE CASTINGS

William A. Reich, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

No Drawing. Application April 22, 1944, Serial No. 532,360

5 Claims. (Cl. 148—11.5)

1. The method for improving a precipitation hardenable alloy casting which comprises subjecting said casting in the ductile solution heat treated and quenched condition to a prestress slightly beyond its elastic limit whereby microstress concentrations in said casting are eliminated and thereafter aging said casting, said prestress simulating the stress encountered by said casting under service conditions.

2,470,792

NONCORROSIVE HYDRAULIC FLUIDS

Walter Schlesinger, Chicago, Ill., and Paul Becher, Brooklyn, N. Y.

No Drawing. Application August 27, 1947, Serial No. 770,960

2 Claims. (Cl. 252—78)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A composition of matter consisting of 95 per cent to 99.5 per cent of triethyl phosphate and 0.5 per cent to 5 per cent by weight of di-iso-butyl ketone.

2,470,793

AEROCHEMICAL DEVICE

Frank Short, Haddam Neck, Conn.

Original application February 3, 1944, Serial No. 520,966. Divided and this application January 6, 1948, Serial No. 662

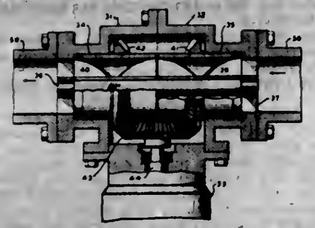
2 Claims. (Cl. 89—1.5)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A liquid tight container adapted for releasing and disseminating a persistent vesicant liquid in the air stream of an air craft in flight, comprising a thin elongated sheet metal casing having an integral thin metal midsection provided with indented marginal portions and being susceptible to being ruptured and torn away from the container by a sudden torque force, adjacent integral tubular portions having substantially semi-spherical end portions, means for charging the casing with the liquid, a fastening on said midsection for attaching an arming cable through which the torque force is applied, and a suspension lug fixed to each of said tubular portions for attachment to a releasing shackle on said air craft.

2,470,794

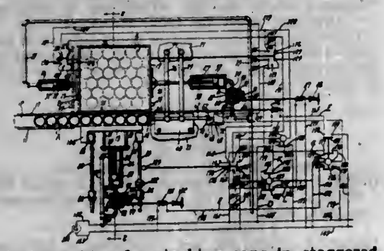
IN-LINE FLUID PUMP



Robert E. Snyder, Los Angeles, Calif.

Application December 20, 1943, Serial No. 514,927

18 Claims. (Cl. 103—87)

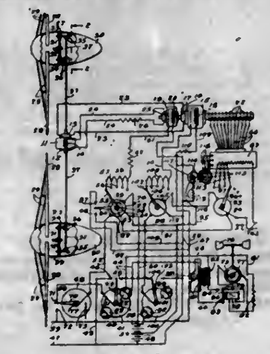


1. An in-line fluid pump comprised of two helical blade conveyors contained within a common housing and mounted on a common shaft in juxtaposition, with their blades in opposite pitch relation, means to rotate said conveyors slowly

with the normal fluid flow through said pump without interference when the pump is not

pumping, and a second means to rotate said conveyors rapidly to force fluid through said pump.

2,470,795
CAN STACKING MACHINE
John E. Socke, Pelham Manor, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application March 30, 1945, Serial No. 585,665
11 Claims. (Cl. 226—14)



1. A machine for stacking cans in staggered rows, which comprises in combination, conveyor means for propelling cans to be stacked along a straight line path of travel, a tray having means for movably mounting the same adjacent one side of said path of travel for receiving said cans, a reciprocable pusher member disposed adjacent the opposite side of said path of travel for pushing a row of said cans transversely of said path of travel and into said tray, and means for shifting said tray in opposite directions relative to and longitudinally of said path of travel in time with the reception of each row of cans, the tray thereby receiving adjacent rows of cans in staggered relation.

2,470,796
APPARATUS FOR COATING PIPE
Russell C. Stromquist, Westfield, N. J., assignor, by mesne assignments, to Koppers Company, Inc., a corporation of Delaware
Application October 25, 1945, Serial No. 624,459
9 Claims. (Cl. 91—13)

1. Apparatus for coating a metal pipe with hot, liquid bitumen which comprises a heater for locally heating the skin of the pipe to a temperature at which the bitumen will adhere to the metal, a nozzle at one side of the heater for applying hot, liquid bitumen to the heated areas of the pipe, a support for the heater and nozzle at the other side of the heater, and means for moving the heater along the pipe with the bitumen-applying means immediately following.

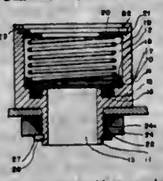
2,470,797
AEROGENERATOR
Percy H. Thomas, Washington, D. C., assignor to the United States of America as represented by the Chairman of the Federal Power Commission
Application April 19, 1946, Serial No. 663,340
14 Claims. (Cl. 290—44)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A direct current generator driven by a fixed blade wind wheel and constructed with a maximum safe operating limit corresponding to a prescribed wind velocity and wheel speed, an alternating power system, means for passing energy between said generator and said power system; control means operating on said generator to continuously increase the generator output as long as the speed of said generator exceeds a critical speed at which the wind velocity bears a prescribed ratio to the wheel speed, and for reducing the said output as long as the generator speed is less than said critical value, additional means for deenergizing said control means when the generator output exceeds said prescribed maximum limit and means, brought into action by said additional means, operative as long as the generator output exceeds said maximum limit, to increase the generator field charge to the point where the output falls below said maximum limit.

2,470,798
INTERMITTENT FLUSH VALVE
William S. White, Denver, Colo.
Application April 3, 1943, Serial No. 481,666
1 Claim. (Cl. 137—145)

An intermittent flush valve comprising a casing having a portion of larger diameter and an inlet communicating therewith, and a portion of smaller diameter and an outlet communicating therewith; a double-headed primary piston having one head in said portion of larger diameter and dividing said portion into a receiving chamber communicating with said inlet and a pressure chamber on the opposite side of said head, and a second head in said portion of smaller diameter; a tube connecting said heads of larger and smaller diameter and provided with openings for admitting liquid from said receiving chamber to the interior thereof; a stem extending centrally from the head of larger diameter within said tube and provided with inwardly and outwardly extending flanges at the lower end thereof; a ball valve and seats provided with flow regulating notches disposed in a bore extending through said head of larger diameter and communicating with said stem; a tubular member having a head disposed within said stem and adapted to be lifted by said inwardly extending flange; a collar attached to said tubular member and adapted to be moved into sealing engagement with a seat therefor; a reciprocable cup having a predetermined limited motion and having a valve seat adjacent said outlet; a secondary piston extending into

sealing engagement with said cup at one end and at the other end into sealing engagement with the inner wall of said tube, and provided with a seat for said collar and means cooperating with said outwardly extending flange, whereby said primary piston is adapted to lift said secondary piston; a valve attached to the end of a tubular member extending from said secondary piston opposite said primary piston and adapted to cooperate with the valve seat on said cup, for controlling the flow of water to said outlet, said tubular member extending through said cup and being provided with an aperture adapted to permit a greater flow to said outlet from the interior of said secondary piston upon opening movement of said outlet valve, said tubular member also extending through a tubular portion of said cup and providing a clearance therewith to permit drainage of said cup upon opening of said outlet valve.

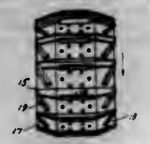


2,470,799
VENTILATOR
Butler Ames, Boston, Mass.
Application August 24, 1945, Serial No. 612,380
4 Claims. (Cl. 98—2)

1. An air conditioning ventilator designed to be attached to a wall element of a vehicle and to conduct air from the exterior to the interior of the vehicle so as to build up pressure within the vehicle and thereby prevent uncomfortable drafts from open windows, said ventilator comprising a scoop arranged at the outside of and closely adjacent to said wall element and facing in the direction of vehicle motion, said scoop defining a through passage within which a current of air is established which is substantially free from eddies and which acquires a substantial velocity in a rearward direction, a baffle extending up from the floor of said passage so as to block a part of the passage thereby to deflect a portion of the current of air passing through the passage laterally, a tubular conduit constituting a support for the air scoop, said conduit being designed to pass through an aperture in the wall element, means for rigidly clamping the conduit to the wall element, the conduit being situated

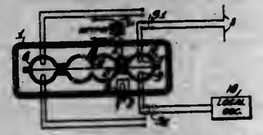
laterally of and tangential to said passage and having a peripheral inlet opening near its point of tangency through which the laterally deflected air may enter it from the scoop, a screen guarding said inlet opening, a rotatable tubular valve member coaxial with the conduit and having an opening which may be placed into or out of registry with the inlet opening, and means at the interior of the vehicle for turning said valve member.

2,470,800
CONNECTING DEVICE
Benjamin N. Ashton, Kingston, N. Y., assignor to Electrol Incorporated, Kingston, N. Y., a corporation of Delaware
Original application April 14, 1944, Serial No. 530,976. Divided and this application April 20, 1945, Serial No. 589,430
6 Claims. (Cl. 285—25)



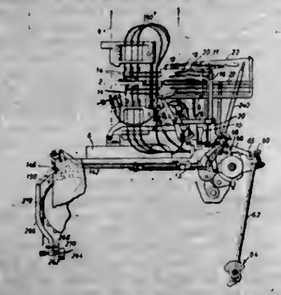
1. A device for connecting a tubular member in liquid-tight relationship to a wall of a receptacle, said member having a shoulder engageable with said wall and a reduced portion adapted to extend through an aperture in said wall, comprising a toroidal rubbery ring encircling a portion of said tubular member adjacent to said wall, and detachable resilient means for compressing said ring against said tubular member and said wall and retaining said shoulder in engagement with said wall.

2,470,801
TRACTOR TREAD
Ralph B. Boltman, Pittsburgh, Pa.
Application October 15, 1946, Serial No. 703,371
2 Claims. (Cl. 305—10)



1. A tractor tread element adapted to be secured to a tractor linkage, comprising a flat portion, a straight gripping projection on the outer face of the flat portion and extending longitudinally of the latter, an outwardly and upwardly extending wing portion projecting from each end

of said flat portion and secured thereto, and a gripping projection on the outer face of each of said wing portions, the gripping projection on

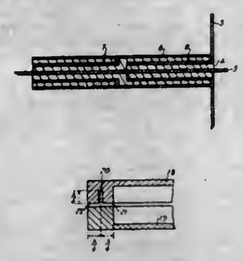


each of said wing portions being arranged so that it extends diagonally with respect to the projection on said flat portion.

2,470,802
MICROWAVE DEVICE
Rene A. Braden, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application August 10, 1943, Serial No. 498,127
10 Claims. (Cl. 315—6)

1. Multi-resonant microwave apparatus including two resonant devices each tuned to predetermined resonant frequencies, said resonant devices being mutually coupled together, means coupled to only one of said devices for establishing therein standing waves at two different frequencies, a predetermined one of said devices being adapted to have an electric field established in a predetermined direction therein, and means coupled to only said predetermined one of said devices defining an electron beam path extending through only said predetermined device in a direction parallel to the path of said electric field whereby said electron beam is moduated by both of said waves.

2,470,803
KNITTING MACHINE
Paul W. Bristow, Laconia, N. H., assignor to Scott & Williams, Incorporated, Laconia, N. H., a corporation of Massachusetts
Application March 26, 1947, Serial No. 737,193
26 Claims. (Cl. 66—131)



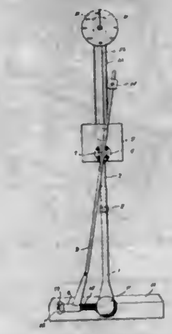
1. In a knitting machine of the superposed cylinder type, means for feeding main yarns to the needles, means for feeding a plating yarn to the needles, means for effecting changes of the main yarns fed to the needles, and means for inserting into action, for maintaining in action, and for removing from action said plating yarn independently of changes of the main yarns which are fed to the needles simultaneously with the plating yarn.

2,470,804
ENRICHMENT COMPOSITION
Thomas S. H. Clark, Rensselaer, N. Y., assignor, by mesne assignments, to Winthrop-Stearns Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application May 16, 1947, Serial No. 748,649
6 Claims. (Cl. 167—72)

1. An enrichment tablet for the fortification of cereal doughs and batters which comprises ferrous sulphate as the major source of assimilable iron and an additional iron compound selected from the group consisting of sodium iron pyrophosphate and ferric orthophosphate.

2,470,805
MEANS FOR PREVENTING OR REDUCING THE ESCAPE OF HIGH-FREQUENCY ENERGY
John Collard, Hammersmith, London, England, assignor to Electric & Musical Industries Limited, Hayes, Middlesex, England, a company of Great Britain
Application August 31, 1943, Serial No. 500,651
In Great Britain September 12, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires September 12, 1961
6 Claims. (Cl. 178—44)

3. A conductive enclosure for high frequency energy, said enclosure having an aperture therein forming a leakage path for the escape of said energy, said leakage path having one portion communicating with the interior of said enclosure and having an electrical length substantially equal to an odd integral number including unity of quarter wavelengths at the frequency of said energy and another portion communicating with the exterior of said enclosure and having an electrical length substantially equal to an odd integral number including unity of quarter wavelengths at the frequency of said energy, said portions being resonant at the frequency of said energy tending to escape to provide a low impedance thereto, and at least one branch path connected in series with said leakage path at a point intermediate said portions, said branch path presenting a high impedance to said energy tending to escape over said leakage path.



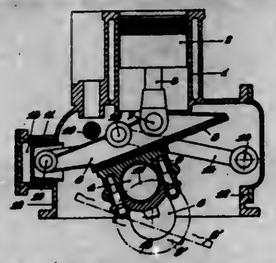
2,470,806
DEVICE FOR HEATING, COOLING, OR RADIATING LIQUIDS
Raul del Cueto, Papantla, Mexico
Application September 19, 1946, Serial No. 697,966
In Mexico September 25, 1945
2 Claims. (Cl. 219—43)

2. In combination with a circular base member formed of insulating material and having in its upper surface a recess of semi-toroidal form concentric with the base, a central upwardly projecting dome-shaped portion inside the recess and an upwardly projecting rim portion encircling the recess and higher than the dome, a drainage channel extending from the bottom of the recess to the exterior of the base, a container having a closed top provided with an opening therein, a closed bottom of semi-toroidal shape adapted to be received by and fit in the semi-toroidal recess of the base member, a central upwardly extending cavity of elongated tubular shape with a semi-spherical upper end, a closure for the opening in the top of the container and a source of radiant energy projecting upwardly from the dome of the base and having substantially the same configuration as the tubular cavity in the bottom of the container so as to be received in the cavity with substantially uniform small space between the radiant energy source and the wall of the cavity.

2,470,807
DISTANCE INDICATOR
Carl F. Davis, Jr., Knoxville, Tenn.
Application December 27, 1946, Serial No. 718,715
4 Claims. (Cl. 73—379)

1. A distance indicator of the character described comprising, a vertical standard, a vertical extension adjustably carried by said standard, a housing carried by said extension, a horizontal bearing carried by said housing, a shaft rotatably mounted in said bearing, an elongated arm secured vertically intermediate its length to the forward extension of said shaft, a counter-balanced weight adjustably secured to the upper end of said arm, a golf ball carried by the normally depending end of said arm, a pulley wheel rotatably carried by said housing, double reduction gearing means interconnecting the rearward extension of said shaft and said pulley, a horizontal pin rotatably supported at an extended distance above said housing, a dial indicator carried by said pin, a second pulley wheel carried on a rearward extension of said indicator dial pin above said first pulley, driving means interconnecting

said pulleys, and means adapting the said ball when struck to rotate said pin for the purpose described.



2,470,808
PROCESS FOR BREAKING PETROLEUM EMULSIONS
Melvin De Groote, University City, and Bernhard Keiser, Webster Groves, Mo., assignors to Petrolite Corporation, Ltd., Wilmington, Del., a corporation of Delaware
No Drawing. Application March 12, 1947, Serial No. 734,213
5 Claims. (Cl. 252—340)

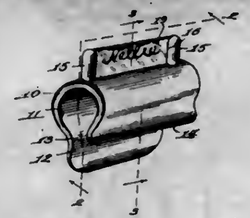
1. A process for breaking petroleum emulsions of the water-in-oil type, characterized by subjecting the emulsion to the action of a demulsifying agent comprising a product consisting of an oxyalkylated, drastically oxidized, partially hydroxylated member of the class consisting of polyethylenic acids and their glycerides; said partial hydroxylation being by agency of hydrogen peroxide; said oxyalkylation being by agency of an alkylene oxide having not over 4 carbon atoms, and said drastic oxidation being by agency of a gaseous oxygen containing medium.

2,470,809
MEANS FOR OBVIATING CYLINDER WEAR IN ENGINES AND THE LIKE
Adriaan Theodorus Elants, Brussels, Belgium
Application July 10, 1947, Serial No. 760,036
In Belgium February 8, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires February 8, 1961
6 Claims. (Cl. 74—45)

1. Mechanism for the transmission of power from piston to crankshaft in an engine with plunger pistons, each displaceable in a cylinder, comprising an actuating member which is rotatably connected with a piston rod mounted fast in the piston and is also slidably connected with a block rotatably mounted on a crank-pin of said crankshaft, and means for guiding the said actuating member in a plane passing through the cylinder axis so that the said actuating member executes a composite motion which consists of a swinging motion in the direction of the motion of

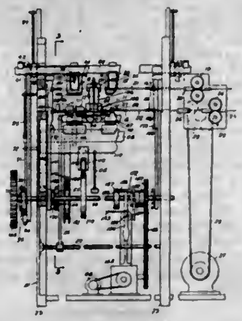
the piston and a reciprocating motion transverse to the axis of the cylinder, in such a way as to

impart a rectilinear motion to the piston and piston rod.



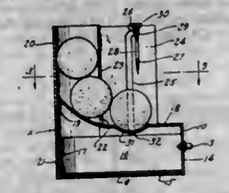
2,470,810
BELT-APPLYING TOOL
John R. Engard and Albert L. Engard, Hazleton, Pa.
Application February 17, 1946, Serial No. 8,764
2 Claims. (Cl. 74—242.7)

1. A belt-applying tool for applying a belt to a grooved pulley, including an elongated handle member having at one end a pulley-engaging member which is of substantially wedge-shaped form with the cross-section thereof increasing toward its outer end to present an inclined working surface upon the side thereof and at the outer end terminating in a knurled concave or grooved extremity, and a toe portion upon one side of the latter extremity projecting a sufficient distance beyond the other side thereof to increase the length of the inclined working surface over the length of the opposite side of said pulley-engaging member.



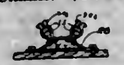
2,470,811
TOWEL CLIP
Elmer F. Engleman, Burbank, Calif.
Application July 3, 1946, Serial No. 681,387
1 Claim. (Cl. 24—81)

As a new article of manufacture, a one-piece identification card holding towel clip comprising an inverted U-shaped resilient member, the lower portions of the leg of which member are curved toward each other, with one leg longer than the other to facilitate application of the clip to provide a bearing and a supporting rail, posts projecting upwardly from the top of said member adjacent its ends, there being a card receiving groove formed in the top of said member between said posts, there being vertical card re-



ceiving grooves formed in said posts and communicating with the ends of the groove in said member and card engaging and retaining studs in the bottoms of the grooves in said posts near their upper ends.

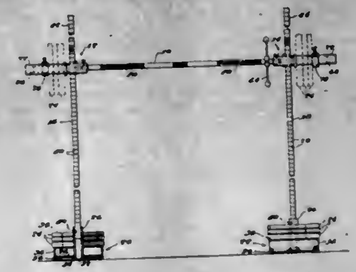
2,470,812
MACHINE FOR ASSEMBLING SPRINGS
Joseph Gauci and Daniel Krakauer, Brooklyn, N. Y., assignor to Kay Manufacturing Corporation, Brooklyn, N. Y., a corporation of New York
Application May 28, 1946, Serial No. 672,754
19 Claims. (Cl. 140—3)



1. In a machine for assembling coil springs, a slotted guideway for the springs, means in the guideway for overlapping adjacent end coils of a pair of corresponding springs in adjacent rows of such springs, means reciprocating horizontally in the slot of the guideway for advancing the springs into a tying position wherein the rear part of one of the pair of springs and the front part of the other spring are in position to be tied together by a helical, vertically reciprocating means at the tying position for compressing the springs to move the upper and lower coils thereof to a predetermined level and for positioning the upper and lower coils in predetermined overlapping relation, a pair of vertically spaced apart collers at one side of the machine for forming and advancing helicals horizontally around said parts of the upper and lower coils of the springs at the tying position while the springs are at rest and compressed, and means for resisting the advance of the springs thereby to control the movement of said springs into the tying position.

2,470,813
SLICER FOR CITRUS FRUIT AND THE LIKE
Adolph O. Goldstein, Santa Cruz, Calif.
Application October 7, 1947, Serial No. 778,291
2 Claims. (Cl. 146—72)

2. A combined unitary citrus fruit slicer and storage receptacle, comprising a relatively narrow elongated box forming a base and including a generally horizontal top including a rear inclined portion, the top having a depression and a transverse slot extending across the depression, a removable tray slidably mounted within the box beneath the top thereof and constructed and arranged to catch juice drippings from the transverse slot, an upstanding storage hopper mounted upon the box at the rear end thereof and above the inclined portion and being of substantially the same width as the box and having a fruit discharge opening at its forward side and adjacent to the top of the box, upstanding spaced wide flat sides secured to the top of the box adjacent to its side edges and connected to the hopper, the upstanding sides and hopper forming with the top of the box a fruit slicing chamber having its forward side open, the upstanding sides having aligned vertical slots and short horizontal slots leading into the tops of the vertical slots, and a vertically moveable slicer blade disposed between the upstanding sides and including a cross-bar to engage in the vertical slots and short horizontal slots, the blade entering the transverse slot when in the lowered position for severing the fruit.



2,470,814
ELECTRICAL CABLE SUPPORT OR RACK
Max Hain, Pittsburgh, Pa.
Application March 4, 1948, Serial No. 13,027
2 Claims. (Cl. 248—49)

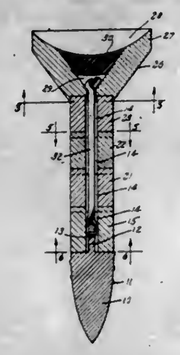
1. A cable hanger comprising a bracket member that is adapted to be connected at its base portion to a girder or wall, the body portion being provided with holes, supporting members each comprising a pair of bowed clamping elements adapted to receive an insulating bushing between their mid portions, the inner ends of each pair of said elements having shoulders formed thereon that extend through one of the holes and make interlocking engagement with the bracket member, and means for connecting together the outer ends of each pair of clamping elements, the bracket being of generally bowed form but having flattened areas through which the holes extend.

2,470,815
ATHLETIC APPARATUS
Roosevelt W. W. Harvey, Somerville, Mass.
Application March 10, 1948, Serial No. 14,102
6 Claims. (Cl. 272—84)

3. Athletic apparatus of the character described comprising a pair of spaced vertical rods having provision at their lower ends for removably supporting weight elements, a horizontal bar extending between said vertical rods, clamping means connected at each end of said bar for adjustably securing the bar to the rods, each of said clamping means comprising a connecting member arranged to slidably receive a vertical rod

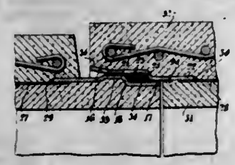
therethrough and having an internally threaded portion arranged to receive one end of the bar, and a clamping piece carried by said connecting member and movable into clamping engagement with the rod upon rotation of the bar, said bar being oppositely threaded at each end whereby to effect simultaneous clamping of each end of the bar to its respective rod.

2,470,816
EXERCISING DEVICE
Roosevelt W. W. Harvey, Somerville, Mass.
Application March 10, 1948, Serial No. 14,103
2 Claims. (Cl. 272—84)



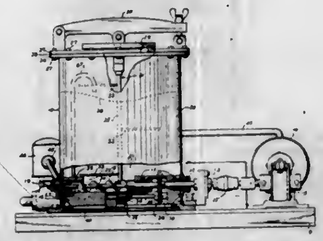
1. An exercising device of the character described comprising an elongated bar, a pair of spaced hand grips at one end of the bar comprising an endmost hand grip fixed to the bar and adapted for use as a fulcrum, and an intermediate hand grip by which the unit is lifted through an arcuate path, said intermediate hand grip being concentrically rotatably mounted on the bar, and a weight mounted upon the second end of the bar and capable of adjustment longitudinally thereof.

2,470,817
FLEXIBLE GOLF TEE
Homer D. Hendricks, Seattle, Wash.
Application April 29, 1947, Serial No. 744,699
5 Claims. (Cl. 273—33)



1. A golf tee comprising a stem comprising a plurality of sections arranged in end-to-end relationship and formed with axially-aligned bores, a head at one end of said stem, a point at the opposite end of said stem, and a flexible contractile member extending through the bores of the stem sections having one end secured to said point and having the other end carried by said head to thereby assemble said head, stem, and point in relatively flexible relation, said point having an external thread, and interlocking means cooperating between the ends of said stem and said head and said point and preventing relative axial

rotation of said head, stem, and point, whereby said point can be screwed into the ground by

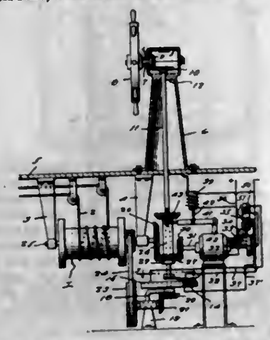


turning said head with said point in contact with the ground.

2,470,818
PIPE JOINT
Philip R. Hirsh, Montclair, N. J., assignor to Lock Joint Pipe Company, East Orange, N. J., a corporation of New Jersey
Application September 25, 1945, Serial No. 618,542
3 Claims. (Cl. 285—115)

3. In combination with a concrete pipe having steel reinforcement running longitudinally thereof, a spigot ring made from one piece of steel connected at its ends to close the ring, said spigot ring having an annular spigot portion, an annular bearing portion, an annular portion having connection with said bearing portion and connecting the spigot ring to the steel reinforcing of the pipe, and a sloped portion joining said spigot portion and said bearing portion whereby axial thrust may be applied to a gasket, each of said three annular portions having outer cylindrical surfaces of different diameters; a bell ring made from one piece of steel connected at its ends to close the ring, and having two annular portions of different diameters including an annular portion providing a cylindrical bearing surface having a diameter slightly greater than said cylindrical bearing surface on said spigot ring, and a second annular bell portion having a cylindrical surface dimensioned for disposition over the spigot portion of a complementary spigot ring, and a sloped portion joining said two annular portions of said bell ring, whereby axial thrust may be applied to a gasket confined between the sloped portions of said spigot and bell rings and between said spigot portion of said spigot ring and said bell portion of said bell ring.

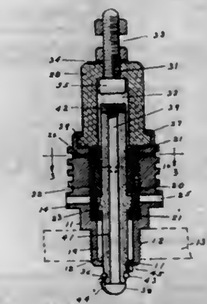
2,470,819
APPARATUS FOR FEEDING POWDERED MATERIAL
Howard G. Hughey, Fanwood, N. J., assignor to Air Reduction Company, Incorporated, a corporation of New York
Application December 20, 1946, Serial No. 717,554
5 Claims. (Cl. 302—53)



1. Apparatus for feeding powdered material into a gas stream comprising a hopper for the powdered material, means forming as aspiration chamber, means for feeding powdered material from the hopper to the ispiration chamber, a valve block, a gas inlet conduit leading to the aspiration chamber and including a passage extending through a portion of the valve block, a gas outlet conduit leading from the aspiration chamber and including a second passage extending through another portion of the valve block, the valve block having a by-pass connecting said first and second block passages, and a valve associated with the valve block having a valve element at the juncture of said first block passage and the by-pass adapted to regulate the amount of gas that flows through said first block passage to the aspiration chamber and the amount that flows through the by-pass to said second block passage.

2,470,820
ELECTRIC STEERING CONTROL
Harper H. Hull, Birmingham, Ala.
Application June 15, 1945, Serial No. 599,707
2 Claims. (Cl. 318—2).

2. In a steering gear for ships, comprising a rudder-operating drum having a rotatably mounted shaft fixed thereto, an electric motor having a rotatable armature shaft and three connections among which one serves for operation of said armature shaft in either direction and the other two for selective operation in either direction, an upright hollow support, a manually-operated tiller having a tiller shaft extending into the upper portion of the hollow support, a gear within the latter fixed on the inner end of the tiller shaft, an interior bearing within the hollow support, and a depending shaft extending rotatably through the interior bearing and carrying a gear upon the upper end thereof above said bearing which meshes with the first-mentioned gear, the features which include a drive gear on one end of the motor armature shaft, a relatively larger gear fixed on one end of the drum shaft, a slidable sleeve mounted for positive rotation upon the depending shaft and having an annular engagement portion thereon, a gear fixed upon the lower portion of the sleeve adapted in raised position of the latter to mesh with the drive gear and the relatively larger gear,

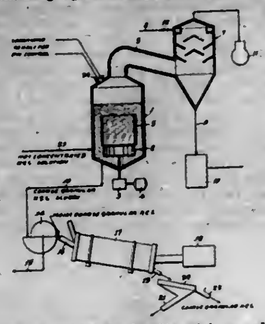


a further gear fixed upon the upper end of said sleeve and meshing with said larger gear alone in lowered position of said sleeve while the gear at the lower end of the latter idles, a movable sleeve-shifting member pivotally supported at one end below said hollow support and at the other end engaging with the annular engagement portion upon said sleeve for raising the latter when actuated, a solenoid fixed above the sleeve-shifting member having a plunger connected at the lower end thereof to an intermediate portion of said sleeve-shifting member to raise the latter when the solenoid is energized, a brake disc fixed on the other end of said armature shaft, a brake member pivotally mounted adjacent to the motor and biased into contact with said brake disc, a second solenoid stationary above the latter having a plunger connected to said brake member for raising the latter and freeing said brake disc when said second solenoid is energized, both solenoids being connected to the motor circuit, a contact arm fixed upon the lower

end of said depending shaft below said sleeve, a pulley on the drum shaft, a bearing stationary below the latter shaft and the drum, a horizontal shaft rotatably mounted in the latter bearing carrying a pulley on one end and a gear on the other end, a further bearing rigidly fixed in right-angled relation to said latter bearing and in line with and below said depending shaft, a further shaft rotatably mounted in said further bearing and carrying a gear upon the lower end meshing with the last-mentioned gear and a disk upon the upper end thereof, a belt connecting the two pulleys, and a pair of insulated commutating contacts fixed on the disc in position to be selectively brought under the contact arm and having insulated gaps between the ends thereof, said contact arm being connected to the first-mentioned connection of the motor and said pair of contacts being individually connected to said other two connections of said motor, and there being means for bringing electric current to said motor and solenoids.

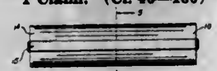
2,470,821
SPARK PLUG
Walter E. Humrichouse and Davis B. Humrichouse, Baltimore, Md., assignors of twenty-two and one-half per cent to Walter H. Smith, Sr., and twenty-two and one-half per cent to George W. Abell, both of Baltimore, Md.
Application December 14, 1945, Serial No. 634,829
5 Claims. (Cl. 123—169)

5. A spark plug comprising a shell adapted for attachment to gas explosion equipment, said shell having a tapered orifice, a hollow spindle insulator disposed in said shell and having a portion tapered to fit tightly in said orifice when said portion is projected thereinto, an electrode disposed in said hollow portion of said spindle insulator and fitting closely therein, said electrode having a head thereon contacting closely against the projecting portion of the insulator so as to tightly close the hollow portion thereof, and including another portion with an attachment thereon for fastening the positioned electrode to the insulator, adjustable means for holding said insulator to the shell but spaced at various portions from the wall thereof to provide for air circulation on the internal surfaces of the shell of the insulator, a dome fastened to the shell having a chamber therein for said insulator and



electrode to project into and be spaced from the walls thereof, another electrode mounted on the dome and projecting into the chamber thereof but spaced from the first mentioned electrode predeterminedly to provide an intensified electrical coupling therebetween, said head being so placed in regard to the shell as to provide for plural sparking in between same external to the shell and electrode when operated by electrical energy, conductor means mounted on the spindle insulator for providing an intervening conducting path between said head and shell and introducing a plural spark gap in between and across the insulator external to the shell, said shell having its wall perforated to connect the passages into chamber and dome for the ingress and egress of air therethrough.

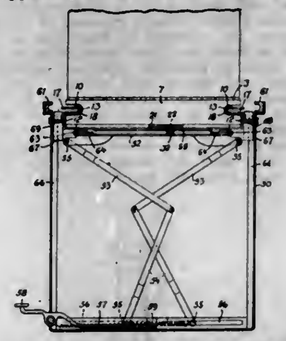
2,470,822
PROCESS FOR MANUFACTURING COARSE GRANULAR POTASSIUM CHLORIDE
Arthur Kenneth Johnson, Hawthorne, and Henry B. Suhr, Trona, Calif., assignors to American Potash & Chemical Corporation, Trona, Calif., a corporation of Delaware
Application August 16, 1947, Serial No. 769,074
11 Claims. (Cl. 23—300)



1. A process for production of coarse granular potassium chloride, which process consists of crystallizing the potassium chloride from a hot saturated solution of same through cooling, which solution is maintained at a pH of above 8.5 throughout the crystallization operation, a nuclei formation retarding agent being added to the

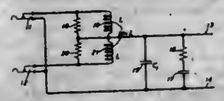
solution before crystallization, said nuclei formation retarding agent being selected from the class

consisting of oxides and salts of iron, aluminum, thorium, zinc, bismuth and lead.



2,470,823
DEER CALL
Henry F. Luch, Portland, Oreg.
Application May 6, 1947, Serial No. 746,393
1 Claim. (Cl. 46—180)

In a deer call comprising two substantially coextensive elongated members spaced apart and one of said elongated members having an endless resilient elastic reed encircling the same with a length of the reed disposed in the space between both elongated members, the features which include having the inner facing sides of both elongated members flat and substantially parallel and each member externally arcuately convex in form transversely of the longitudinal dimension thereof, means integrally securing said two elongated members together at one end only thereof between the facing sides along one longitudinal side edge thereof in such fashion as to close the space between said members at said end while the correspondingly-opposite longitudinal side edges and opposite end remain open, and having the endless resilient elastic reed longitudinally disposed with respect to the one elongated member upon which it is mounted and extending longitudinally through the space between said two members from one end to the other thereof intermediate the facing flat sides of said two members.



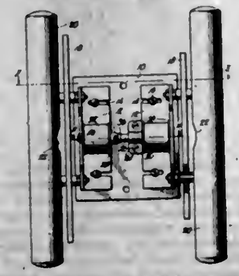
2,470,824
CARD INDEX FILE
Axel Georg Lundqvist, Lulea, and Nils Hjalmar Lundqvist, Kiruna, Sweden, assignors to Karl Olov Alenius, Lulea, Sweden
Application October 2, 1946, Serial No. 700,806
In Sweden October 6, 1945
2 Claims. (Cl. 45—2)

1. In combination with an index card file arranged to constitute a vertical index file and a horizontal index file for the cards, a frame support provided with spaced longitudinally extending fixed guide members and with spaced longitudinal rails, a box associated with the frame support, vertically movable magazines mounted in said box, a support connected to each magazine, pivoted link means connected to said magazine support and to the box, each of the magazines having a separable interfitting front and rear section, index cards arranged in vertical packs in each of said magazines, individual card holders connected to the lower ends of the cards, guide means in each of said magazines for the holders, means when each magazine is moved to its raised position for connecting the rails on the supporting frame to guides on the sides of

said box, means for releasably maintaining the sections of the magazines in their closed positions, and means for releasing the front section of each of the magazines from its rear section so that when a magazine is moved to its raised position, the front section thereof may be moved longitudinally to withdraw the cards from the magazine with the card holders sliding on said fixed guide members in order that the cards may assume a substantially horizontal position above the box.

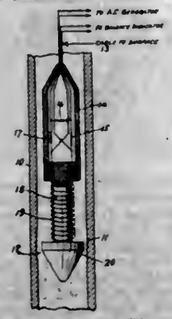
2,470,825
ELECTRICAL CONTACT PROTECTION NETWORK
Robert C. Mathes, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 10, 1945, Serial No. 587,462
2 Claims. (Cl. 175—294)

2. The combination of a pair of circuit makers and breakers connected in parallel and arranged to operate simultaneously, of a constant resistance protecting network in series with each consisting of an inductance shunted by a resistance, said inductances being mutually coupled and a condenser bridged about said combination.



2,470,826
FIXED CAPACITOR
William McMahon, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 6, 1947, Serial No. 784,326
5 Claims. (Cl. 175—41)

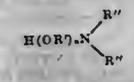
1. A fixed capacity electrical capacitor comprising a rolled dielectric sheet having a metallized coating on each face thereof, and terminals in electrical contact with each coating, said sheet



being folded once along its center line after metallization and before rolling.

2,470,827
ELECTRIC STRIKER SYSTEM FOR CHIMES
Milo F. Miller, Kansas City, Mo.
Application June 3, 1946, Serial No. 673,973
7 Claims. (Cl. 177—7)

1. In a striker system for chimes comprising a base; a resonant tube and chime bar assembly carried by the base; a pair of coils on the base to one side of the chime bar; and a striker plunger extending into and under the influence of the coils, one of the coils serving, upon energization thereof, to set the plunger in a predetermined position prior to its movement against the chime bar.

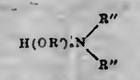


2,470,828
TUBE TESTING APPARATUS
John W. Millington and William H. Stewart, Beaumont, Tex., assignors to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
Application January 10, 1946, Serial No. 640,343
1 Claim. (Cl. 175—183)

A device adapted to be used in magnetically exploring well tubing which comprises a Wheatstone bridge, a housing for receiving three resistance coils of said bridge, a magnetic core having an upper pole and a lower pole, said magnetic core having its upper pole removably secured to the lower end of said housing, an exploring coil surrounding said magnetic core and having its free ends extending through apertures in said upper pole of the magnetic core and connected in circuit with the resistance coils of said bridge which are positioned within the housing, said lower pole of the magnetic core being adapted to transmit changes in magnetic permeability of the tubing as it encounters corroded areas during the passage of the device through the tubing.

2,470,829
PROCESSES FOR BREAKING OIL-IN-WATER EMULSIONS
Louis T. Monson, Alhambra, Calif., assignor to Petrolite Corporation, Ltd., Wilmington, Del., a corporation of Delaware
No Drawing. Application August 2, 1946, Serial No. 687,959
29 Claims. (Cl. 252—341)

14. A process for breaking emulsions composed of oil dispersed in a non-oily continuous phase, in which the dispersed phase is not greater than 20%, characterized by subjecting the emulsion to the action of a reagent comprising an acylated derivative of a basic aminoalcohol of the formula:



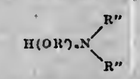
said acylated derivative thereof being such that there is at least one occurrence of the radical RCO, which is the acyl radical of a monocarboxy detergent-forming acid having at least 6 and not more than 32 carbon atoms; the amino nitrogen atom is basic; R'' is a member of the class consisting of alkanol radicals, aminoalkanol radicals, and polyaminoalkanol radicals, in which polyaminoalkanol radicals the amino nitrogen atoms are united by divalent radicals selected from the class consisting of alkylene radicals, alkyleneoxyalkylene radicals, hydroxyalkylene radicals, and hydroxyalkyleneoxyalkylene radicals, and all remaining amino nitrogen valences are satisfied by hydroxyalkyl radicals, including those in which the carbon atom chain is interrupted at least once by an oxygen atom; R' is an alkylene radical having at least 2 and not more than 10 carbon atoms; n is a small whole number varying from 1 to 10; RCO is a substituent for a hydroxyl hydrogen atom; and the molecular weight of said compound in monomeric form is at least 213 and not over 4,000; said amino compound being selected from the class consisting of the anhydro base, the hydrated base, and salts.

2,470,830
PROCESS OF REMOVING MUD SHEATHS FROM OIL WELLS
Louis T. Monson, Los Angeles County, Calif., assignor to Petrolite Corporation, Ltd., Wilmington, Del., a corporation of Delaware
No Drawing. Application January 2, 1947, Serial No. 719,925
19 Claims. (Cl. 252—8.55)

1. A process for the removal of mud sheaths from geological formations penetrated in the drilling of wells, characterized by the application thereto of a reagent comprising a mixture of (a)

an acylated derivative of a basic aminoalcohol of the formula:

said derivative being such that there is at least one occurrence of the radical RCO, which is the acyl radical of a monocarboxy detergent-forming acid having at least 8 and not more than 32 carbon atoms; the amino nitrogen atom is basic; R'' is a member of the class consisting of alkanol radicals, aminoalkanol radicals, and polyaminoalkanol radicals, in which polyaminoalkanol radicals the amino nitrogen atoms are united by divalent radicals selected from the class consisting of alkylene radicals, alkyleneoxyalkylene radicals, hydroxyalkylene radicals, and hydroxyalkyleneoxyalkylene radicals, and all remaining amino nitrogen valences are satisfied by hydroxyalkyl radicals, including those in which the carbon atom chain is interrupted at least once by an oxygen atom; R' is an alkylene radical having at least 2 and not more than 10 carbon atoms; and n is a small whole number varying from 1 to 10; RCO being a substituent for a hydroxyl hydrogen atom; and the molecular weight of said compound being at least 273 and not over 4,000; said amino compound being selected from the class consisting of the anhydro base, the hydrated base, and salts; and (b) a water-insoluble oil solvent; the proportions of (c) and (b) lying between 1 to 9 and 9 to 1.



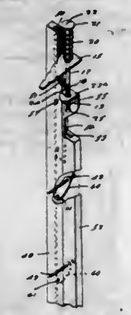
2,470,831

PROCESS FOR PREVENTING AND/OR REMOVING ACCUMULATIONS OF SOLID MATTER FROM OIL WELLS, FLOW LINES, AND PIPE LINES

Louis T. Monson, Los Angeles County, Calif., assignor to Petrolite Corporation, Ltd., Wilmington, Del., a corporation of Delaware

No Drawing. Application January 2, 1947, Serial No. 719,926
18 Claims. (Cl. 252—8.55)

1. A process for removing deposits of organic matter from oil wells, flow lines, and pipe lines, which consists in the application thereto of a reagent comprising a mixture of (a) an acylated derivative of a basic aminoalcohol of the formula:



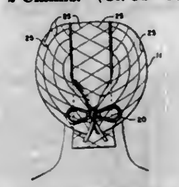
said derivative being such that there is at least one occurrence of the radical RCO, which is the acyl radical of a monocarboxy detergent-forming acid having at least 8 and not more than 32 carbon atoms; the amino nitrogen atom is basic; R'' is a member of the class consisting of alkanol radicals, aminoalkanol radicals, and polyaminoalkanol radicals, in which polyaminoalkanol radicals the amino nitrogen atoms are united by divalent radicals selected from the class consisting of alkylene radicals, alkyleneoxyalkylene radicals, hydroxyalkylene radicals, and hydroxyalkyleneoxyalkylene radicals, and all remaining amino nitrogen valences are satisfied by hydroxyalkyl radicals, including those in which the carbon atom chain is interrupted at least once by an oxygen atom; R' is an alkylene radical having at least 2 and not more than 10 carbon atoms; and n is a small whole number varying from 1 to 10; RCO being a substituent for a hydroxyl hydrogen atom; and the molecular weight of said compound being at least 273 and not over 4,000; said amino compound being selected from the class consisting of the anhydro base, the hydrated base, and salts; and (b) a water-insoluble oil solvent; the proportions of (a) and (b) lying between 1 to 9 and 9 to 1.

2,470,832

SASH HOLDING DEVICE

Ernest E. Montgomery, Gering, Nebr.

Application December 16, 1947, Serial No. 791,969
2 Claims. (Cl. 292—71)



1. In a window sash having a groove in a side stile thereof, a sash adjuster comprising a bar running the length of the stile, means supporting the bar for limited sidewise movement on the stile and spaced expander links having pivotal connections with the bar and with a fixed portion of the stile, said links being inclined at an angle to the horizontal, said supporting means including an anchor plate driven through the groove and into the side stile and provided with a passage, a bolt slidable in the passage and having a head at one end, a coil spring on the bolt between the head and the anchor plate, said bolt having threaded connections with the bar so that when the bolt is turned the bar will be raised or lowered causing the links to move the bar sidewise towards or away from a blind stop of a window casing.

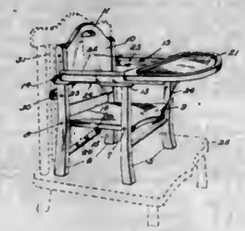
2,470,833

HAIR DRIER

Spencer O. Moore, Burbank, Calif.

Application January 5, 1948, Serial No. 580
2 Claims. (Cl. 34—95)

1. A hair dryer comprising a hood-like member having a centrally disposed double wall strip arranged to extend from the forehead of the wearer to the back of her neck and a pair of double wall side flap members each joined to said rectangular strip, the double walls of said flap members and said rectangular strip each being stitched to form a plurality of closed chambers therebetween, moisture absorbing material disposed within each one of said chambers, fastening



means disposed on each one of the flap members at the back thereof for joining such flap members together to at least partially overlap the central double wall strip.

2,470,834

INFANT'S CHAIR

Leslie C. Peltier, Delphos, Ohio, assignor to The Delphos Bending Company, Delphos, Ohio, a corporation of Ohio

Application January 29, 1945, Serial No. 575,013
4 Claims. (Cl. 155—127)

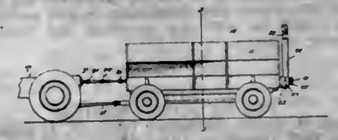
1. A high-chair forming auxiliary for chairs, comprising a chair structure embodying a pair of front legs, a pair of back legs, a seat connected adjacent to its front and rear edges with said front legs, a pair of arms disposed above said seat in parallel relation thereto, said arms having the under sides thereof longitudinally recessed, means uniting the front and rear ends of said arms with said legs, a tray having a pair of spaced rearwardly-projecting extensions slidably positioned on said arms, turnable elements carried by said extensions engageable with the recesses of said arms to limit inward and outward sliding movement of said tray on said arms in a substantially horizontal plane, said elements being movable to positions providing for the separation of said tray from said arms, and detachable means for retaining said tray against sliding movement on said arms when the tray occupies its innermost position thereon.

2,470,835

YARN PACKAGE SUPPORT

Fred W. Paffen, Great Neck, and Harry L. Cornelius, Kew Gardens, N. Y., assignors to Celanese Corporation of America, a corporation of Delaware

Application April 5, 1945, Serial No. 586,804
21 Claims. (Cl. 242—118)



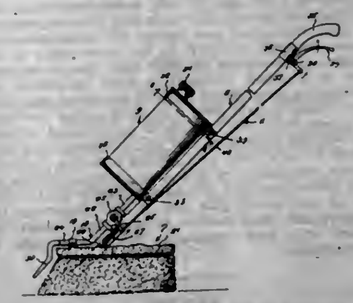
1. A yarn package support having a barrel and a base flange attached thereto, said base flange comprising a disk having a peripheral groove in the circumference thereof and a recess extending inwardly of said disk from said peripheral groove, and an insert, having on the plane surface thereof a groove extending into said peripheral groove, mounted in said recess.

2,470,836

LOAD DISCHARGING APPARATUS FOR FARM WAGONS

Roy A. Piper, Princeton, Ill.

Application July 16, 1946, Serial No. 683,881
3 Claims. (Cl. 214—83.32)

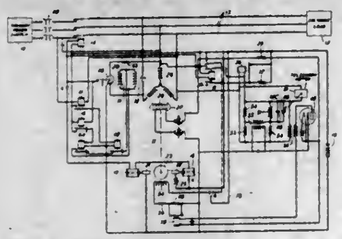


1. The combination with a farm wagon body including a fixed flat bottom, a trough extending longitudinally of said body and supported on said bottom, a baffle plate arranged in superimposed spaced relation with respect to said trough and resting upon the walls of the latter to thereby form a hollow body, a rotatable spiraled conveyor extending through said hollow body having one end projecting beyond the front end of said wagon body for attachment to the power take-off of a tractor, the other end of said conveyor projecting from the rear end of said wagon body and terminating at a point contiguous to said rear end, a housing surrounding the end of said conveyor projecting from the rear end of the wagon body and mounted for rotation about the axis of said conveyor, a laterally-extending tube communicating with said housing and secured to the latter, a second rotatable spiraled conveyor in said tube having one end overlapping said first-named conveyor, and means operatively connecting the overlapping end of the second spiraled conveyor to the adjacent end of the first-named conveyor.

2,470,837

FLOOR WAXING DEVICE

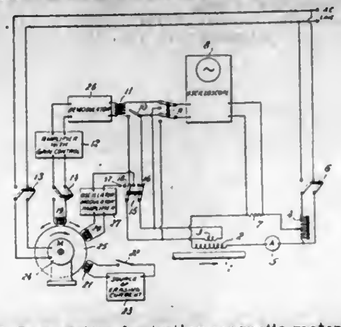
Kenneth M. Polson, Williams, Ariz.



Application April 30, 1946, Serial No. 666,136
1 Claim. (Cl. 91—25)

A device of the kind described, comprising a spreader head formed from a block of material having a removable cover, a rigid handle bar fitted to the block for disposition at a forward inclination thereto and having an outer curved horn-like grip, a pair of spaced loop-like bands secured to the bar to extend outwardly and upwardly from its axis, a reservoir held by the bands, a single discharge tube leading from the reservoir in bridging relation to the block and having plural outlet nozzles dipped forwardly of the latter at determined points thereto for dispensing fluid in

advance of said block onto a foundation, a plug valve fitting the tube aft of the nozzles and having a turning crank extended beneath the bar, a throw lever pivotally attached to the bar next to its grip and beneath the latter, an operating link wholly outside of the bar pivoted to the lever and the crank, and tensioning means active on the crank to normally maintain the valve in closing position.



2,470,838
POWER SUPPLY SYSTEM
Hugh M. Stoller, Mountain Lakes, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 19, 1946, Serial No. 663,361
5 Claims. (Cl. 171—97)

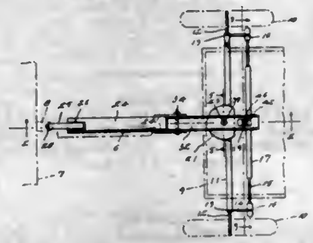
5. In a system for supplying uninterrupted alternating current power to an alternating current load comprising an alternating current power line, switch means normally connecting said power line to said load, an alternating current generator connected to said load on the load side of said switch means so as to operate as a motor on power from said line and adapted to experience a power reversal therein upon the occurrence of an abnormal condition on said line and the consequent release of said switch means, a normally open-circuited direct current motor coupled to said generator, a storage battery, means including the mechanical energy stored in the rotating masses of said generator and motor for sustaining the power reversal incident to the occurrence of an abnormal condition on said line, means responsive to a power reversal in said generator for connecting said direct current motor to said battery whereby said direct current motor operates on power from said battery to drive said alternating current generator and said generator supplies power to said load, and means effective incident to the correction of the abnormal condition on said power line and responsive jointly to the output of said power line and of said generator for reoperating said switch means only when the power line and generator frequencies are in synchronism.

2,470,839
MAGNETIC TESTING WITH ARTIFICIAL STANDARD
Theodore Zuschlag, West Englewood, N. J., assignor to Magnetic Analysis Corporation, Long Island City, N. Y., a corporation of New York
Application February 5, 1946, Serial No. 645,651
10 Claims. (Cl. 175—183)

2. The method of testing elongated magnetic material which comprises the steps of recording on a record medium a representation of the magnetic characteristics of a standard specimen of material to be tested, electrically reproducing the recorded representation in the form of first electric fluctuations, generating second electric fluctuations representative of the magnetic characteristics of successive portions of the material under test, successively repeating the electrical reproduction of the record at such rate that said first and second fluctuations are in substantial synchronism, combining said fluctuations, and actuating an indicating device with the resultant of said combined fluctuations.

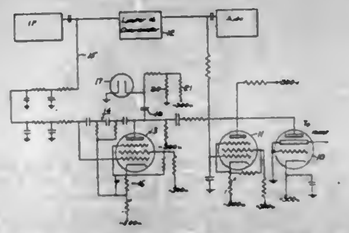
7. In a system for testing magnetic materials, an energizing coil connected to be energized from an alternating current source, a pickup coil positioned symmetrically with respect to said energizing coil, means for placing a specimen of said material within the fields of both coils, a recording device including recording and reproducing means, means for connecting said pickup coil to said recording means, an indicating device, means for connecting said reproducing means to said indicating device, and means for connecting said pickup coil to said indicating device such that fluctuations from said reproducing device and said pickup coil are impressed on said indicating device simultaneously.

2,470,840
SHOE HEEL PLATE AND SKATE FASTENING MEANS
Thomas Anz, Tampa, Fla.
Application October 8, 1945, Serial No. 621,015
5 Claims. (Cl. 280—11.30)



5. A shoe heel having a plate secured to the bottom thereof, the plate being formed with an opening therethrough, a latch carried by the plate and movable across a portion of the opening and a closure member movable from the heel outwardly into the opening and provided with a notch to receive the latch.

2,470,841
METHOD FOR THE SEPARATION OF HYDROXY ORGANIC ACIDS
William E. Barch, Bronx, N. Y., assignor to Standard Brands Incorporated, New York, N. Y., a corporation of Delaware
No Drawing. Application June 5, 1946, Serial No. 674,665
13 Claims. (Cl. 260—536)



1. A method for the separation of hydroxy organic acids which comprises quantitatively separating such acids by dissolving a mixture of salts of hydroxy organic acids in a concentrated solution of a highly soluble salt of a metal forming a highly soluble chloride and an insoluble salt of the organic acid to form a metal salt of such organic acid which is soluble in a concentrated solution but insoluble in a dilute solution of said highly soluble metal salt, diluting the solution so produced with ensuing precipitation of said metal salt, removing precipitated salt, converting the unprecipitated organic acids into insoluble basic salts by reaction with an alkaline hydroxide, removing basic salts so produced, and converting them into the corresponding acids through treatment with an inorganic acid.

2,470,842
TRAILER HITCH
Robert W. Barrington, Throckmorton, Tex.
Application December 6, 1946, Serial No. 714,528
1 Claim. (Cl. 280—33.55)

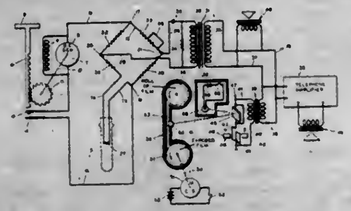
In a trailer hitch, in combination with a draft vehicle having a rearwardly projecting coupling link and a trailer vehicle having front steering wheels connected by a tie rod, an elongated tongue, a coupling pin connecting said tongue at its forward end to the coupling link of the draft vehicle for swinging movement of said tongue in substantially a horizontal plane relatively to the draft vehicle, a pin secured to the trailer vehicle and disposed substantially perpendicularly thereof and to which said tongue is pivotally connected adjacent its rear end, and means for pivotally connecting said tongue to the tie rod rearwardly of said pin, said last mentioned pivotal means and said pin providing pivots for permitting the swinging movement of said tongue in substantially a horizontal plane and whereby the tie rod will be moved laterally of the trailer vehicle, when the tongue is pivoted on said pin, for causing the steering wheels of the trailer vehicle to be turned in the same direction that the forward end of the tongue is moved, said trailer hitch being provided with adjustable wear compensating means associated with the journal of said pin and of said pivotal means to prevent reciprocating movement of the hitch relatively to the trailer vehicle, said wear compensating means including an upstanding sleeve fixed to the tongue and in which the pin is loosely disposed, an externally tapered bushing extending into the upper end of the sleeve and in which the pin is journaled, and adjustable means for urging the bushing downwardly into the sleeve.

2,470,843
STOP-ON CARRIER TUNER
Wilson P. Boothroyd and William H. Forster, Philadelphia, Pa., assignors, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application October 4, 1944, Serial No. 557,201
1 Claim. (Cl. 250—20)

In a superheterodyne receiver adapted to receive signals within a band of frequencies and having a local oscillator for supplying heterodyne frequencies, means for automatically sweeping the tuning of the receiver over the frequency band comprising, in combination, an electron tube oscillator, means to apply a voltage to the control grid of said oscillator to cause said tube to oscillate, said voltage being derived from the receiving circuit and being proportional to the normal noise level therein, means to apply the output of said oscillator to the control circuit of the heterodyne oscillator to thereby cause the receiver tuning to sweep over the frequency band and means operable upon the reception of a signal within the band to increase the voltage applied to the control grid of said sweep oscillator and thereby cause said oscillator to cease to operate.

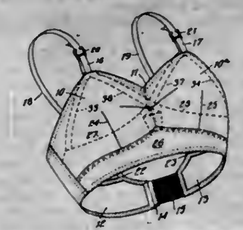
2,470,844
COMBINED PHOTOGRAPHIC COPYING STAND AND APPARATUS
Philip J. Brownscombe, Chatham, N. J., assignor to Griscombe Corporation, Newark, N. J., a corporation
Application October 21, 1946, Serial No. 704,777
9 Claims. (Cl. 88—24)

1. Photocopy apparatus comprising, an upright frame having a bottom and a transparent top, a camera, a hanger pivotally mounted with one end in said frame adjacent the top thereof



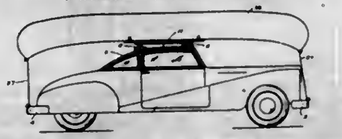
and carrying said camera at the other end, said hanger being so swingable in a substantially vertical plane into and from said frame that said camera is focussed on said top and is adjacent said bottom when swung into a certain position in said frame, and means in said frame releasably arresting said camera in said certain position.

2,470,845
DYNAMOELECTRIC MACHINE
Pierre I. Chandeysson, St. Louis, Mo.
Application May 3, 1944, Serial No. 533,839
7 Claims. (Cl. 171—324)



1. In a dynamo-electric machine, a ring structure comprising a pair of integrally and electrically connected laterally spaced conducting rings lying in parallel planes, and brush holder supports integrally and electrically connected to both rings and bridging the same.

2,470,846
SEISMOGRAPH BLASTER TIME BREAKER CIRCUIT
Deslonde R. de Boisblanc and John E. Bondurant, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
Application November 13, 1945, Serial No. 628,310
1 Claim. (Cl. 346—33)

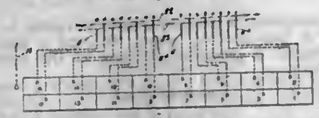


In apparatus for geophysical exploration, a circuit for recording the time break which comprises, in combination, a Wheatstone bridge circuit of the resistance type, one arm of said bridge including the heating element of an electrical blasting cap, and a resistor in series with said blasting cap, the ohmic value of said resistor being greater than the ohmic value of said blasting cap, a transformer having its primary winding connected across two opposite corners of the bridge, a generator connected across the other opposite corners of the bridge, means for actuating said generator to pass an electric current through said blasting cap for initiating an explosion in an attached charge which causes disintegration of said heating element, thereby opening said one arm of the bridge circuit, and a differentiating circuit for receiving and sharpening the pulse produced by the opening of said arm of the bridge circuit, said transformer transmitting the sharpened pulse to a recording mechanism to record the pulse.

2,470,847
BRASSIÈRE AND SIMILAR GARMENT
Edwin W. Gluckin, Brooklyn, N. Y.
Application February 22, 1945, Serial No. 579,188
2 Claims. (Cl. 2—42)

1. A garment of the class described comprising breast supporting pockets, means for supporting the pockets upon the body of a wearer, a hammock-type support arranged at the lower portion of each pocket, means at the outer end portion only of each support maintaining predetermined fixed position of the support on the pocket, the remainder of each support being free, a curved strap structure at the upper portion of each pocket, said strap structure being coupled with the outer end portion of one support and the inner end portion of an opposed support and freely movable in the pockets, a member coupling adjacent inner end portions of said supports, and short strap loops coupling upper portions of said strap structures and pockets for hanging the supports in connection with the pockets.

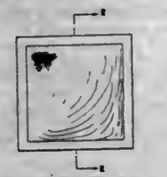
2,470,848
BOAT CARRIER FOR AUTOMOBILES
George C. Guest, Winnipeg, Manitoba, Canada
Application August 1, 1947, Serial No. 765,293
3 Claims. (Cl. 224—42.1)



1. A boat carrier for an automobile, comprising: an open base frame having a cross member fastened thereunder at each end; the ends of said cross members provided with downwardly projecting rubber suction cups for attachment to the roof of an automobile; a central cross bar on said base frame having a central hole therethrough; a secondary open frame supported above and by said base frame; said secondary frame having a central cross bar with a central downwardly projecting pin thereon; said pin receivable in said central hole; and means on said secondary frame for restrainingly aligning a boat thereon.

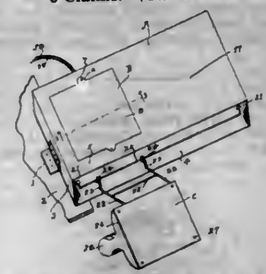
2,470,849
RECOVERY OF BY-PRODUCT ACIDS
William E. Hanson, Gibsonia, Pa., assignor to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application December 19, 1946, Serial No. 717,243
10 Claims. (Cl. 260—537)

1. The process of obtaining useful products from the non-volatile by-product acid mixture



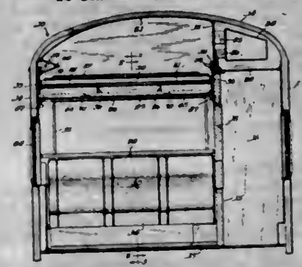
obtained in the manufacture of sabacic acid by treatment of a member of the group consisting of castor oil and esters and salts of ricinoleic acid with an alkali, said process comprising contacting said acid mixture under extraction and hydrolyzing conditions with an aqueous mixture of a water-soluble lower aliphatic alcohol, separating an extract phase containing chemically modified components of said acid mixture and having substantially lighter color than said acid mixture, and thereafter removing the aqueous alcohol mixture from said extract phase to recover said lighter-colored chemically modified components.

2,470,850
WATER LEVEL INDICATOR FOR FLOATING DRY DOCKS
Frederic R. Harris, New York, N. Y.
Application November 21, 1945, Serial No. 630,006
11 Claims. (Cl. 114—45)



1. Indicator apparatus for a floating dry dock having a hull with interior compartments along both sides, each compartment on one side being opposed to a compartment on the other; a row of tubes each containing a liquid, a support for holding said tubes relatively close together in one field of view; said tubes being mounted side by side in pairs, and connections for transmitting pressure to the liquid in each tube, said connections extending singly and separately from one tube of each pair to the compartments in succession at one side of the dock and from the other tube of each pair in the like order and succession to the compartments along the other side of the dock.

2,470,851
SOAP POWDER PACKET
William A. Hermanson, Brookline, Mass.
Application October 25, 1945, Serial No. 624,412
1 Claim. (Cl. 252—93)



A soap packet consisting of webs of thin, porous, absorbent paper, forming opposing walls of the packet, said webs having on their inner faces each a second web, consisting of synthetic thermoplastic fibers pressed to the first webs, forming each a composite duplex web, with large asymmetrical interfiber interstices said duplex webs being heat sealed in face to face relation only around their peripheral surface edge, said paper webs adapted to shrivel into a small ball when wet and rubbed in the hands, said paper web having a wet strength treatment and provided with large asymmetrical interfiber interstices through which water may readily infuse, a quantity of soap particles retained within said packet occupying substantially not more than 60% of the normal volume of the packet, said particles being generally asymmetrical in shape and of a size generally substantially larger than the size of said interfiber interstices.

2,470,852
SEALER
Frank N. Irwin, Jr., South Miami, Fla.
Application August 13, 1945, Serial No. 610,542
3 Claims. (Cl. 219—19)

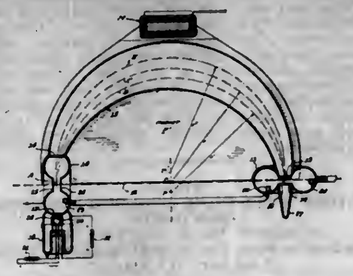
1. In a device for sealing bags, wrappers or the like by the application of heat and pressure to their open portions, a block having on its upper face a heated plate portion and an unheated portion adjacent thereto, a presser, a rod secured to a side wall of the block and extending along the heated and unheated portions of the block, arms pivotally securing the presser to the rod whereby said presser can be swung from a position at one side of and beyond said block into a position to engage the upper face thereof, said arms engaging the side wall of the block and limiting the movement of the presser in its rotary travel away from the upper face of the block and said block pivotal securing arms having sliding engagement with the rod whereby the presser can be moved longitudinally of the block while the presser is in either of the defined positions.

2,470,853
BERTH ARRANGEMENT
Basil E. Jones, Flossmoor, Ill., assignor to The Pullman Company, Chicago, Ill., a corporation of Illinois
Application October 15, 1945, Serial No. 622,335
16 Claims. (Cl. 105—317)

1. In a passenger vehicle having a lower berth, an intermediate berth and an upper berth all disposed in parallel overlying relationship, said lower berth being convertible into a seat having a seat

portion and a backrest and said intermediate berth being foldable to an inoperative position providing headroom above said seat, means for closing the space between the various berths at respectively opposite ends comprising end closure members foldable into the intermediate berth in the inoperative position thereof and movable to vertical positions extending respectively between the intermediate berth and the upper berth and between the intermediate berth and the lower berth when all of the berths are disposed in operative positions, means releasably securing the end closure members in vertical position, and means maintaining said members in folded position in the inoperative position of the intermediate berth.

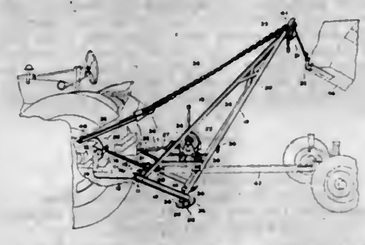
2,470,854
HEATING TOOL
Michael L. Kovac, Garfield, N. J.
Application August 10, 1946, Serial No. 689,650
4 Claims. (Cl. 219—21)



1. A heating tool of the class described comprising a pair of separable jaws having portions disposed relative to each other whereby to substantially surround sections of a pipe coupling, each of said jaws having a concave recess for the reception of its respective coupling section, a plurality of electric heating elements in each of said jaws, a shield covering the heating elements in each of said jaws and conforming to the contour of said recesses, a unitary handle of spring material having a pair of arms connected to said jaws normally retaining the jaws in operative position on a coupling, and a common connection for removably securing the heating elements in said recesses and for providing a pivotal mounting for said arms.

2,470,855
ROSIN MALEIC GLYCERINE ESTERS
William Krumbhaar, New York, N. Y.
No Drawing. Application September 4, 1946, Serial No. 694,525
7 Claims. (Cl. 260—26)

1. The method of producing a soluble and fusible rosin maleic glycerine ester soluble in coal tar solvents with a melting point higher than 160° C. and a viscosity higher than Z_3 by esterifying at temperatures above 225° C. but below 280° C. with 15 to 25% glycerine by weight the monomolecular crystalline rosin maleic acid, the monomer being the only rosin maleic acid present.



2,470,856
ELECTRON DISCHARGE DEVICE
Polykarp Kusch, Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 20, 1941, Serial No. 407,539
12 Claims. (Cl. 250—27.5)

1. An electron discharge device comprising a buncher resonator and a catcher resonator at right angles to each other and having mid-points thereof in a common plane, means for producing a beam of electrons through the buncher resonator, electrode means for applying a lateral component of travel periodically on said beam, and means between said buncher and said catcher

for establishing a curvature of fixed radius to the path of the electron beam, whereby a density modulation is produced effective at the catcher resonator.

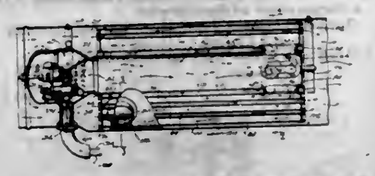
2,470,857
HOISTING ATTACHMENT FOR MOTOR-DRIVEN VEHICLES, SUCH AS TRACTORS
William C. Lathers, Jr., Madison, Wis.
Application January 13, 1947, Serial No. 721,860
11 Claims. (Cl. 214—86)

1. The combination with a motor driven vehicle having means for connecting its motor with other mechanism, of a derrick pivotally connected with the rear end of the vehicle and provided with a winding drum and tackle, extensible shafting for connecting the vehicle motor with the winding drum, and means for adjustably connecting the upper end of the derrick with said vehicle in different positions for lifting loads of different weights.

2,470,858
ANIMAL TRAP
Caswell L. Leonard, Memphis, Tenn., assignor of one-half to J. H. Kail, Memphis, Tenn.
Application September 25, 1944, Serial No. 555,677
2 Claims. (Cl. 43—67)

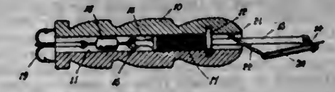
1. An animal trap having end walls, and an intermediate wall forming snare and cage chambers, the end wall of said snare chamber and said intermediate wall having openings for respective entrance to and exit from said snare chamber, shutters mounted on said walls for respective cooperation with said openings and respectively biased open and shut, a platform within said

snare chamber and below said openings, hinged along one side of said snare chamber, means in said snare chamber extending longitudinally of and spaced from the hinged side of said snare chamber to prevent approach of an animal within said snare chamber to the hinge edge of said



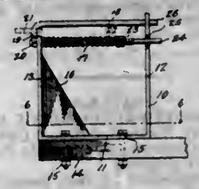
platform, and links operatively coupling said platform to said shutters, said platform being responsive to the weight of an animal within said snare chamber, for effecting coordinated closure and opening of said shutters respectively against the bias thereof.

2,470,859
NONANOIC ACID
Albert A. Pavlic, Claymont, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 25, 1948, Serial No. 10,939
3 Claims. (Cl. 260—540)



1. A normally liquid alkanoic acid of the formula $CH_3C(CH_3)_2CH_2CH(CH_3)CH_2COOH$.

2,470,860
HEATER
William C. Parrish, Park Ridge, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application March 8, 1944, Serial No. 525,535
20 Claims. (Cl. 257—245)

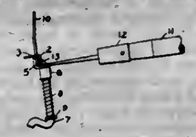


1. In a hermetically sealed type heating apparatus for aircraft and the like having means forming a combustion chamber with a relatively large diameter outlet opening, a central core tube of substantially the same diameter as the outlet opening of said combustion chamber and forming a continuation thereof, means comprising sheet metal wrapped spirally about said core tube in spaced relation thereto and in two layers to form alternate passageways for the flow of products of combustion and ventilating air, said passageway for products of combustion being of enlarged cross-sectional area in the region of the inlet thereto and the outlet therefrom, means providing a connecting passageway between said core tube and the products of combustion passageway formed by said sheet metal, such connecting passageway leading from a part of said core remote from the combustion chamber, means to hold the turns of said sheets in spaced relation, and means to cause flow of ventilating air longitudinally through the ventilating air passageways between turns of said spiral sheet metal.

2,470,861
FISHING LURE
Thomas G. Prentice, Detroit, Mich.
Application September 1, 1945, Serial No. 614,002
1 Claim. (Cl. 43—35)

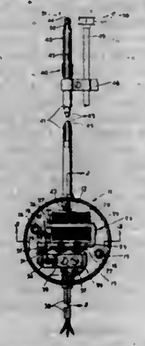
In a device of the class described, in combination, a tubular body, a reciprocable member in said body, a spring biasing said member in a rearward direction in said body, a hook retractable against said body by movement of said member against resistance of said spring, a releasable element for locking said member in its hook-retracting position, and a line operably connected to said element to withdraw it from its locking to its released position when strained by a fish grasping said body, said element being slidably mounted on said line and, in its released position, being supported only by said line.

2,470,862
SAFETY HITCH
Robert D. Fresdorf, Decatur, Ind.
Application July 15, 1947, Serial No. 761,017
1 Claim. (Cl. 280—33.16)



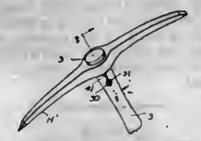
A hitch comprising a frame having spaced arms, a pull-rod slidable transversely of said arms, a latching rod having a depending end pivotally connected to one end of the pull-rod beyond the frame, said latching rod also having a protruding latching end, one of said arms having an inverted bayonet slot for receiving the latching end of said pull-rod to hold the latching rod in a latched position, the depending end of said latching rod being adapted to engage a towing connection for a towed vehicle and to automatically release the towing connection when the latching rod is released, and a spring carried by said pull-rod and abutting the frame to releasably and normally hold the depending end of the latching rod in flat abutting relation with the outer face of said frame and to thereby hold the latching end of the latching rod against accidental release by jarring until said latching rod is automatically released by excessive pull thereon should the implement carrying the hitch strike an obstruction.

2,470,863
RAKE CLEANER
Glenn D. Pringle, Lansing, Mich.
Application June 28, 1948, Serial No. 35,557
1 Claim. (Cl. 56—400.09)



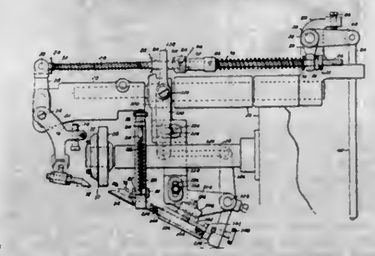
In combination with a garden rake, a rake cleaner comprising a sheet metal angle bar, the angle of the said bar being a right angle, a pair of flanges extending from points common to each other, one of the said flanges having a plurality of holes therethrough, the said holes adapted for

projection therethrough the said first flange by the prongs of a rake, the second flange having attached midway thereto a rod, the said rod extending perpendicularly to the edge thereof the said second flange, a hollow cylindrical member slidably attached to the said rod, the said cylindrical member having a retainer member securely attached thereto, the said retainer member adapted for conforming to a bar of a rake, and adapted for retaining the said garden rake cleaner attached to the said rake, a spiral spring, a spring stop, the said spring stop being secured to the said rod, the said spring being projected by



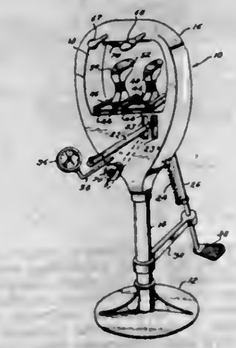
the said rod, and being located between the said retainer member and the said spring stop, the said spring stop adapted for retaining the said spring around the said rod between the said stop and the said hollow cylindrical member, a portion of an end of the said rod being substantially bent and the said bent portion adapted for pressing the same against the earth, forcing the said cylindrical member downwardly, forcing the said angle bar downwardly, and scraping debris from the prongs of the rake, and the said spiral spring adapted for returning the said angle bar to its original position when the pressure upon the said bent portion of the said rod is released.

2,470,864
THERMOELECTRIC CONTROL DEVICE
William A. Ray, North Hollywood, Calif., assignor to General Controls Co., Glendale, Calif., a corporation of California
Application September 18, 1946, Serial No. 697,817
4 Claims. (Cl. 175—320)



1. A unitary thermostatic device for controlling an electric circuit and adapted to be mounted on a burner in thermally-responsive relation to the flame thereof, comprising: an enclosed housing; thermostatic means comprising an elongated tubular member of rigid construction extending from and rigidly secured to said housing, the outer end of said tubular member being adapted to be subjected to said flame; switching means within the housing; means within the housing operated by said thermostatic means for actuating said switching means; a cable, permanently connected to said switching means, extending from said housing so as to form, in part, an electric circuit controllable by the device; and means for supporting the device on said burner, said supporting means consisting entirely of a bracket attached to said tubular member adjacent its outer end.

2,470,865
TOOLHEAD RETAINER
Swan Norman Rosengren, Seattle, Wash.
Application March 9, 1946, Serial No. 653,280
5 Claims. (Cl. 306—32)



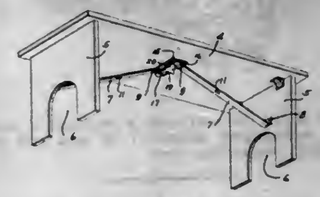
1. A retainer for securing a handle within the aperture of a tool head, comprising a member including a leg portion, and a portion integral with said leg portion, extending transversely thereof, and in anchoring engagement with the tool handle to prevent movement of said leg portion in one direction lengthwise of the handle, the tip of said leg portion abutting the edge of the tool head adjacent to said transverse portion to prevent movement of the tool head relative to said leg portion lengthwise of the handle in said one direction.

2,470,866
ROUGHING MACHINE
Ernest E. Sabin, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application May 22, 1947, Serial No. 749,696
3 Claims. (Cl. 69—1)

1. In a machine for roughing shoe parts, a pair of roughing tools for operating simultaneously upon different parts of the same shoe, a pair of work supports engageable respectively with the different parts of the shoe, a treadle, and connections through which depression of the treadle causes each work support to press that part of the shoe with which it is engageable against the tool which operates on that part, said connections having provision for lost motion whereby a partial depression of the treadle operates only one of the work supports and a further depression of the treadle operates the other work support.

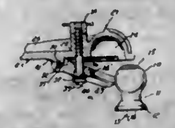
2,470,867
MACHINE FOR BREAKING IN SHOES
Abraham Sachs, Baltimore, Md.
Application September 26, 1946, Serial No. 699,565
5 Claims. (Cl. 12—41.1)

2. In a machine for breaking in shoes, the combination of a supporting frame, a monobloc head supported thereon having an aperture therein, a lift slidably secured in said head and received in said aperture, tracks secured to said lift, an anvil detachably received in said tracks, a magnetized mold slidably secured to said anvil, hydraulic jack means secured in said head having said lift operatively connected thereto, a plurality of selectively operable actuating means protruding from apertures in said head, said actuating means comprising a manually operated arm and a second arm adapted to be actuated by foot pressure.



2,470,868
FUR BUTTON OR ORNAMENT
Moses J. Schifrin, New York, N. Y.
Application June 11, 1946, Serial No. 676,017
5 Claims. (Cl. 24—92)

5. A covered button structure comprising, a covering blank of fur-like material, a strip of elastic tape sewed to the entire periphery of said blank under tension and gathering its edge together when released from tension, a mold part in the space within the thus gathered blank, and a back secured to said mold part with said tape positioned between said mold part and said back.

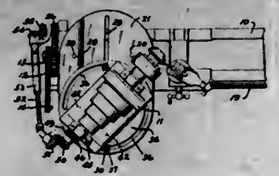


2,470,869
COLLAPSIBLE BENCH
Francis J. Schmidt, Wauwatosa, Wis., assignor to The Peter-Schmidt Corporation, Chicago, Ill., a corporation of Illinois
Application December 21, 1945, Serial No. 636,362
7 Claims. (Cl. 155—151)

3. In a bench comprising a top and foldable legs, mechanism for releasably latching and clamping said legs in erected and folded positions, said mechanism comprising braces hingedly connected with the legs and provided with a plurality of apertures, pins with which selected apertures of the respective braces are engageable in the said positions of the legs, a threaded stud, said pins and stud being connected with and depending from said top in adjacent position, latch means pivoted to the stud and engageable beneath said braces to secure said braces against

release from said pins, and a clamping nut upon said stud in supporting relation to said latch means, said latch means being adapted to transmit clamping pressure from said nut to said braces.

2,470,870
COUPLING OF THE BALL-AND-SOCKET TYPE
Harley B. Scholten, Sheboygan Falls, Wis.
Application October 8, 1947, Serial No. 778,701
7 Claims. (Cl. 287—89)

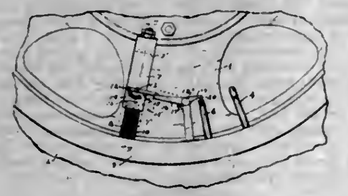


1. A coupling of the ball and socket type, including the combination of an upstanding ball member, a socket member having a downwardly facing spherically rounded socket, a jaw having one end horizontally pivoted to the socket member and provided with fork arms adapted for engagement with the ball, a clamping bolt extending through the jaw and socket member between the socket and the pivotal jaw connection, with the headed end of the bolt in engagement with the jaw, a nut threaded on the upper end of the bolt above the socket member, and locking means for holding the bolt in jaw clamping position.

2,470,871
HEADSTOCK ATTACHMENT FOR LATHES
Gilbert C. Schwantes and Robert C. Schwalbach, Milwaukee, Wis.
Application November 3, 1945, Serial No. 628,465
4 Claims. (Cl. 82—28)

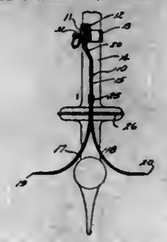
1. An attachment for a lathe having a lathe bed and headstock, said attachment comprising a mounting plate adapted to be secured to the bed in a transversely extending position and provided with a slot also extending transversely of the bed, a slide bolted to the mounting plate by bolts extending through said slot, a headstock supporting plate connected to the slide by said bolts and having arcuate slots through which the bolts extend, means for securing the headstock supporting plate to the under surface of a

headstock, and means for transmitting motion from the headstock spindle to the working ele-



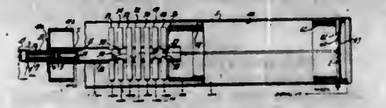
ments of the lathe in various positions of headstock adjustment permitted by said slot and headstock supporting plate.

2,470,872
PREPARATION OF ACID ACTIVATED CLAY
Robert B. Secor, South Gate, Calif., assignor to Filtrol Corporation, Los Angeles, Calif., a corporation of Delaware
No Drawing. Application November 14, 1946, Serial No. 709,778
7 Claims. (Cl. 252—450)



1. In a process of acid activating an acid activatable clay in which said clay is activated by treatment with acid, washed to remove soluble salts and any residual acid, and the clay is separated from water and dried, the improvement which comprises compressing the clay, prior to acid treatment, into relatively stable forms having increased density of at least 7% over the particles of said clay before such compressing.

2,470,873
AIRPLANE TIRE VALVE RELEASE MECHANISM
Walter Kenneth Seits, Tampa, Fla.
Application May 11, 1945, Serial No. 593,245
5 Claims. (Cl. 152—415)



1. In combination, a wheel for an airplane, a casing upon the wheel, a tube within the casing having a valve for inflation thereof to provide the pressure in the casing desired at the landing of the airplane, a supplemental tube within the said inner tube and having an independent valve whereby the supplemental tube may be inflated to increase the pressure within the casing as desired for efficient take-off of the airplane from the ground, a weight mounted for movement away from the axle of the wheel and actuated by centrifugal force due to rotation of the wheel, a spring mounted to resist the outward movement of the weight and means actuated by the spring when the centrifugal force decreases to cause release of the air pressure in the supplemental tube.

2,470,874
PROPELLER GUARD FOR OUTBOARD MOTORS
Harry A. Sidney, Milwaukee, Wis.
Application June 15, 1946, Serial No. 677,029
11 Claims. (Cl. 115—42)

1. A weed guard for an outboard motor having a propeller and an upwardly extending housing member for a propeller driving shaft, comprising the combination with said housing member, of a hanger connected therewith normally in a guarding position in front of the housing, and provided with fork arms diverging from the end of the hanger distant from said pivotal connection laterally, downwardly and rearwardly on opposite sides of the propeller, said fork arms having sharp weed cutting edges.

2,470,875
STORAGE TUBE
Richard L. Snyder, Jr., New York, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application April 12, 1946, Serial No. 661,684
13 Claims. (Cl. 250—150)

1. A cathode ray beam storage tube comprising an evacuated envelope containing a gun, a target having a plurality of mutually insulated elemental areas, an electron multiplier between said gun and said target, a screen adjacent and in front of said target adapted to control secondary electrons bombarded from said target by said cathode ray beam, a plate capacitatively associated with said target for applying successive signal potentials simultaneously to all of the elemental areas of said target, means for electrostatically scanning said beam over said elemental areas and means for electrostatically focusing on said multiplier the electrons escaping from said target.

2,470,876
PREPARATION OF ALIPHATIC ACIDS
Roderick S. Spindt, Gibsonia, and Donald R. Stevens, Wilkinsburg, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
No Drawing. Application September 26, 1947, Serial No. 776,412
16 Claims. (Cl. 260—540)

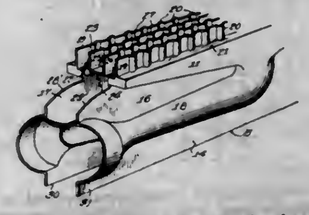
1. The process for preparing aliphatic carboxylic acids which comprises hydrolyzing a sulfurized tertiary mono-olefine of the formula

$C_nH_{2n-4}S_2$, wherein n represents an integer from 4 to 16, in an aqueous alkaline solution, and recovering an aliphatic carboxylic acid from the resulting hydrolysis product.

2,470,877
METHOD AND APPARATUS FOR DETECTING VARIATIONS IN THE APPEARANCE OF AN OBJECT OR SAMPLE
Tor Stuland, Stord, Norway
Application October 18, 1946, Serial No. 704,115
In Great Britain July 10, 1945
3 Claims. (Cl. 250—41.5)

1. An apparatus for the detection of variations in the appearance of an object, comprising means for supporting a negative image of said object, means for projecting an optical image upon said image, photo-sensitive means responsive to the light passing through said negative image, further means for supporting a positive image of said object, means for projecting an optical image of said object upon the positive image, photo-sensitive means responsive to the light passing through said positive image, and means responsive to the output from both said photo-sensitive devices.

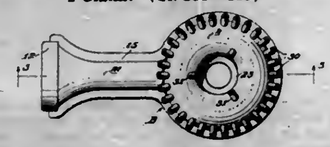
2,470,878
HOOK
Robert W. Tate, Chicago, Ill.
Application March 19, 1945, Serial No. 583,534
5 Claims. (Cl. 248—215)



1. In means for suspending cuts of meat or the like in a refrigerated or other meat-storage compartment, the combination comprising: a clevis-like member adapted to be supported on an overhead beam or rail within the compartment, said member having side arms adapted to engage the opposite lateral sides of the rail and portions depending from said arms below the bottom of the rail; and a hook having the end of its shank connected to said member within and between said portions for detachment by manual manipulation of said hook, the shank of said hook having a transversely extending integral part for suspending said hook on said member for swinging movement in a single plane, and for preventing accidental disconnection of said hook from said member by vertical displacement in the act of removing a cut of meat from said hook.

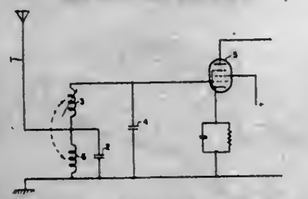
2,470,879
PORTABLE GARMENT HOLDER OR HANGER
Glenn F. Wiggins, Palo Alto, Calif.
Application April 23, 1945, Serial No. 589,723
1 Claim. (Cl. 248—308)

A hanger including a single length of resilient strip material folded upon itself at its center to provide an eye, the strip including straight arms extending from the eye in engagement with each other substantially throughout their length, and diverging jaw portions extending from the respective arms, a pivot device carried by the eye, a hook having an eye engaging the pivot device, the arms being formed, between the eye and jaw portions of the folded strip, with matching slots defining an opening equal in depth to the combined thicknesses of the arms, the hook being provided with a pointed bill adapted to be housed within said opening, and a sleeve slidable on the arm to draw the jaw portions together, the sleeve being adapted, when the bill is housed within the opening, to enclose the bill protectively and to prevent movement thereof out of the opening.



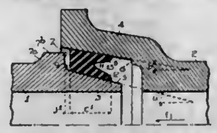
2,470,880
SHEET-METAL GAS BURNER
George W. Zimbelman, Signal Mountain, and Roy Shelton, Red Bank, Tenn., assignors to Samuel Stamping and Enameling Company, Chattanooga, Tenn., a corporation of Tennessee
Application September 19, 1944, Serial No. 554,800
2 Claims. (Cl. 158—99)

1. A gas burner comprising a pair of separate similar sheet metal stampings including elongated vertically disposed wall portions secured in face to face contact, the wall portions adjacent their lower edges having cooperating substantially semi-cylindrical portions forming a gas entry tube and the wall portions at their upper



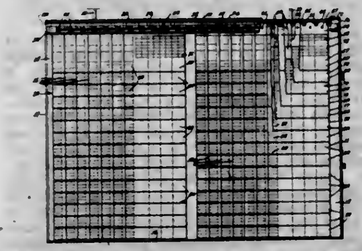
edges having elongated horizontally disposed hollow portions in communication with said gas entry tube, said stampings further including upper laterally spaced walls, coextensive with said hollow portions, said upper walls each provided with outwardly bulged vertically disposed spaced semi-cylindrical portions, and a channel member supported within the hollow portions and including vertically disposed walls having inwardly bulged vertically disposed spaced semi-cylindrical portions cooperating with the first semi-cylindrical portions forming two longitudinal rows of spaced gas ports.

2,470,881
PORCELAIN-COATED GAS BURNER
George W. Zimbelman, Signal Mountain, Tenn., assignor to Samuel Stamping and Enameling Company, Chattanooga, Tenn., a corporation of Tennessee
Application December 17, 1945, Serial No. 635,521
1 Claim. (Cl. 158—116)



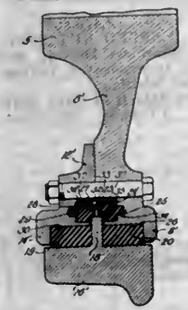
A gas burner comprising a burner housing circular in plan and a manifold communicating therewith, the housing and manifold being formed of relatively light gauge steel, the housing having a circumferential series of relatively long nozzles extending through a wall thereof and projecting therefrom both inwardly and outwardly thereof and tapering toward their inner ends, and the inner and outer surfaces of the housing, manifold and nozzles having a porcelain enamel coating.

2,470,882
RECEIVER INPUT CIRCUIT
Henri Blok, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application July 2, 1946, Serial No. 680,888
In the Netherlands March 10, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires March 10, 1963
2 Claims. (Cl. 250—40)



1. A receiver input circuit arrangement to reduce interference from power line frequencies, comprising a first variable inductive element having a given range of self-inductance, a capacitive element in series with said first variable inductive element, an antenna, means to couple said antenna to the series connection of said first variable inductive element and capacitive element, a second variable inductive element connected in parallel to said capacitive element having a range of self-inductance greater than the first variable inductive element and mutually coupled thereto, and mechanical means to vary simultaneously the mutual inductive coupling between the first and second inductive element and the self-inductance of the first inductive element.

2,470,883
PIPE CONNECTION AND PACKING RING THEREFOR
Pierre Boissou, Pont-a-Mousson, France, assignor to Compagnie De Pont-a-Mousson, Nancy, France, a French company
Application August 7, 1947, Serial No. 767,025
In France January 27, 1939
Section 1, Public Law 690, August 8, 1946
Patent expires January 27, 1959
2 Claims. (Cl. 285—163)



1. A fluid seal for a bell and spigot pipe joint comprising a bell member having an internally tapered bell surface and a cooperating spigot member having an externally tapered spigot surface, said spigot member having a shoulder at the junction of the tapered portion with the rest of the pipe body, said tapered surfaces lying opposite one another when the respective pipes are joined, the degree of taper of the spigot surface being greater than that of the bell surface with respect to the longitudinal axis of the pipe, and a packing ring positioned between said members and engaging said surfaces, and limited in movement in one direction by said shoulder, said ring comprising a body having a solid portion adjacent the bell mouth and two annular flaps extending toward the spigot end, said ring being of a diameter less than that of the spigot member and stretched over said spigot member, the solid portion of said ring being compressed between the said surfaces to form a seal when the pipes are joined, while the flaps are adapted to be compressed against the bell and spigot tapered surfaces by the prevailing internal pressure.

2,470,884
DISTRIBUTION BOARD
St. Clair Bromfield, Jackson Heights, Long Island, N. Y.
Application April 10, 1943, Serial No. 482,855
12 Claims. (Cl. 129—23)

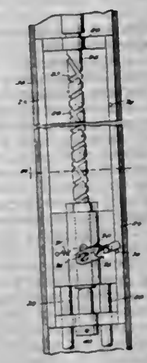
3. In a peg-board, in combination, a writing surface, a rear wall extending above the writing surface, a ledge carried by the rear wall in spaced relation to the writing surface, said ledge being formed with a row of perforations having predetermined spacing, locking pins in the perforations, means adapted to retain the locking pins in the perforations, said writing surface being formed with a row of perforations registering with the perforations in the ledge, plungers reciprocating in the last mentioned perforations and adapted to engage and elevate the locking pins, a cam follower actuating the plungers, a cam block, operative connections between the cam follower and the cam block to reciprocate said cam block, a lever, and means pivotally connecting one end of the lever to the cam block.

2,470,885
RESILIENT WHEEL
Robert J. Burrows and Alfred O. Williams, Battle Creek, Mich., assignors to Clark Equipment Company, Buchanan, Mich., a corporation of Michigan
Application November 1, 1946, Serial No. 707,184
5 Claims. (Cl. 295—11)

2. A rail car wheel assembly comprising a hub member having a radially outwardly directed annular channel, opposed axially directed annular channels in said member lying radially within said first channel, circumferentially spaced axial recesses in said second-mentioned channels, a tire member surrounding said first channel and having a central radially inwardly extending flange projecting through said first channel and partially through the radial extent of said axially directed channels, said flange having openings therein in alinement with said recesses, a pair of rubber rings disposed in said first channel on opposite sides of said flange, and a second pair of rings in said axial channels having laterally projecting boss portions on opposite sides thereof projecting into said recesses and into the openings in said flange.

2,470,886
INSULATING BUSHING
Francis A. Buzzell, Chicago, Ill.
Application February 7, 1948, Serial No. 7,002
11 Claims. (Cl. 174—82)

1. An insulating bushing for electrical conduits, and the like, comprising a flexible body having a tubular body portion adapted to be received within a conduit, said tubular body having an outwardly-extending integral flange and a rearwardly-extending integral ring threaded on its inner side to engage threads of said conduit, said ring and body being divided on one longitudinal side, and said ring being provided with



interlocking connections for locking the divided edge portions of the ring together.

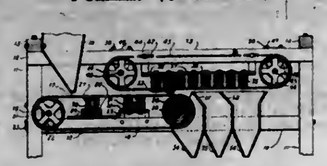
2,470,887
METHOD OF TREATING CRACKED GASOLINE TO REMOVE METALS
Joseph A. Chenicek, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application April 16, 1947, Serial No. 741,936
9 Claims. (Cl. 196—23)

1. A method of treating cracked gasoline to remove metals which catalyze oxidative deterioration, which comprises contacting the cracked gasoline with a reagent solution of an ortho-hydroxy aromatic aldehyde in an excess of an amino compound selected from the group consisting of alkylene polyamine and alkanol amines, and subsequently separating the cracked gasoline reduced in metal content from reagent solution.

2,470,888
DEEP WELL PUMP
Charles F. Degner, Chicago, Ill., assignor of one-half to Henry M. Unschuld, Chicago, Ill.
Application October 28, 1944, Serial No. 560,787
6 Claims. (Cl. 74—57)

1. In combination, power means, a screw shaft constantly rotated in one direction by said power means, said screw shaft having coextensive right and left screw threads, one of said threads having a greater amount of lead than the other, a hollow elongated stationary member, a cross-head longitudinally reciprocable but nonrotatable in said stationary member, a pair of axially spaced nuts

rotatably mounted in the cross-head but held against axial movement with relation thereto, one of said nuts being in engagement with the thread of lesser lead and the other nut being in engagement with the thread of greater lead, a clutch head axially slidably but nonrotatably mounted in said cross-head between said nuts, a trigger lever pivotally mounted on said cross-head intermediate of its length, one end of said lever being connected to the clutch head and the other end of the lever being free, and a pair of stop members spaced apart longitudinally of the stationary member whereby when the cross-head approaches one end of its movement the free end of said lever will strike one of said stop members and be moved thereby to shift the clutch head into engagement with one of said nuts to hold it stationary relative to the cross-head for slow movement of the cross-head in the reverse direction, and when the cross-head approaches the end of its last mentioned movement the free end of the lever will strike the other one of said stops and shift the clutch head into engagement with the other one of said nuts to hold it against rotation with relation to the cross-head for fast movement of the cross-head in the opposite direction.



2,470,889

METHOD AND APPARATUS FOR SEPARATING MAGNETIC FROM NONMAGNETIC MATERIALS

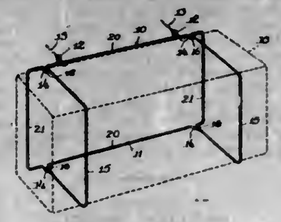
Arthur B. Drescher, Daingerfield, Tex., assignor to Lone Star Steel Company, Daingerfield, Tex.

Application October 5, 1944, Serial No. 557,314

4 Claims. (Cl. 209—214)

1. The method of magnetically separating a mixture of materials certain particles of which have magnetic properties and other of which have non-magnetic properties, which consists in passing said mixture through a direct current magnetic field so as to impart to or to increase the coercive force of the particles having magnetic properties, then passing all of said mixture above an alternating current magnetic field of a strength less than the coercive force of the particles having magnetic properties so as to cause at least a partial stratification of the said mixture, and finally passing said materials below a second alternating current magnetic field of progressively increasing and diminishing force, the force of said second alternating current magnetic field being greater than the coercive force of some of the particles having magnetic properties and not greater than the coercive force of most of the magnetic particles, whereby to separate the latter from said particles of nonmagnetic force.

2,470,890



HOLDER FOR DISPENSING CONTAINERS

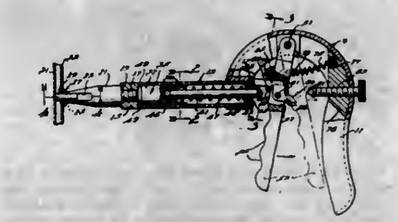
Charles H. Goodpasture, Chicago, Ill.

Application December 8, 1945, Serial No. 633,808

5 Claims. (Cl. 248—311)

5. A holder for a dispensing box or the like comprising a rectangular wire frame forming a backing member, means for securing said frame to the surface of a wall, and two U-shaped rigid

members pivotally mounted on opposite spans of said frame to provide means for embracing a box, said spans being flexurally resilient.



2,470,891

SPEED NUT TOOL

William P. Hammers, Detroit, Mich., assignor to Hammers, Incorporated, Detroit, Mich., a corporation of Michigan

Application March 18, 1947, Serial No. 735,389

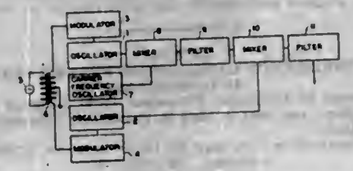
7 Claims. (Cl. 81—3)

1. A tool for applying speed nuts to associated members so as to secure the latter together comprising a body having a handle at one end thereof and having a magnetized end portion at the opposite end thereof, the latter adapted to magnetically receive and hold a speed nut thereon so that the same may be pushed manually into engagement with said associated members by means of said tool, a spring operated inertia element slidably supported by said body for movement toward and away from said magnetic end including a head portion and a plunger portion extending rearwardly from said head, trigger means pivotally mounted in said handle, latch means pivotally mounted in said trigger and adapted to releasably engage the rear end of said plunger, whereby when said trigger is squeezed said inertia element is cocked, and means adjustably mounted in said handle adapted to contact said latch means at a predetermined point upon rearward movement of said trigger whereby to release said spring operated inertia element to permit the same to move forwardly and strike said magnetized end and deliver a final setting blow to the speed nut after it has been applied to the associated member.

2,470,892

STABILIZED FREQUENCY MODULATOR

Gerard Hepp, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee



Application July 2, 1946, Serial No. 680,886

In the Netherlands November 25, 1942

Section 1, Public Law 690, August 8, 1946

Patent expires November 25, 1962

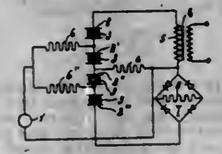
6 Claims. (Cl. 332—19)

6. A circuit arrangement for frequency-modulating a given stable oscillation of carrier frequency, comprising means to generate a stable pilot oscillation of carrier wave frequency, a first oscillator to generate a first auxiliary oscillation of predetermined frequency, a second oscillator to generate a second auxiliary oscillation of said predetermined frequency, said first and said second oscillators being identical in construction and being subject to the same extraneous influences tending to vary the frequencies produced therein undesirably, a first reactance tube circuit coupled to said first oscillator, a second reactance tube circuit coupled to said second oscillator, a frequency control circuit comprising a first amplitude limiter coupled to said first oscillator, a second amplitude limiter coupled to said second oscillator and being adjusted to limit the amplitude value of said second auxiliary oscillation to the amplitude value of said first auxiliary oscillation, a first diode having the anode thereof capacitively coupled to said first limiter, a second diode having the cathode thereof connected to the anode of said first diode, a third diode having the cathode thereof capacitively coupled to said second limiter, a fourth diode having the anode thereof connected to the cathode of said third diode and the cathode thereof connected to the anode of said second diode and to said second reactance tube circuit, means to apply negative bias to said first diode, means to apply negative bias to said third diode and a capacitor coupling the cathode of said first diode and the anode of said third diode to the anode of said second diode and the cathode of said fourth diode whereby the frequency of said first oscillator is maintained substantially equal to that of said second oscillator, means to mix said pilot oscillation and said first frequency-modulated auxiliary oscillation to produce a resultant frequency-modulated carrier oscillation having sum and difference sideband frequencies, means to filter said resultant frequency-modulated carrier oscillation to derive a resultant frequency-modulated carrier oscillation having difference sideband frequencies only, means to mix said derived resultant frequency-modulated carrier oscillation with said second frequency-modulated auxiliary oscillation to produce a resultant frequency-modulated carrier oscillation having sum and difference sideband frequencies, and means to filter said resultant frequency-modulated carrier oscillation to derive a frequency-modulated carrier oscillation of sum sideband frequency only whereby said first and said second auxiliary oscillations having undesirable frequency variations are suppressed.

2,470,893

CIRCUIT ARRANGEMENT FOR MODULATING AN ELECTRIC SIGNAL

Gerard Hepp, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee



Application May 3, 1947, Serial No. 745,878

In the Netherlands March 27, 1946

Section 1, Public Law 690, August 8, 1946

Patent expires March 27, 1966

8 Claims. (Cl. 179—171)

1. A circuit arrangement for amplifying a signal voltage, comprising a circuit having first and second capacitors having dielectric properties which vary in accordance with the potential existing thereacross, means to apply an auxiliary voltage to said capacitors in series, means comprising a high resistance element to apply said signal voltage to said capacitors in parallel to modulate said auxiliary voltage, and means to demodulate said modulated auxiliary voltage to derive a potential proportional to said signal voltage.

2,470,894

PRODUCTION OF POLYOLEFINIC HYDROCARBONS

Warren W. Johnstone, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

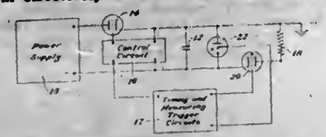
No Drawing. Application September 21, 1945, Serial No. 617,927

3 Claims. (Cl. 260—666)

1. A process for the production of a polyolefinic material containing hydrocarbons possessing both conjugated and non-conjugated unsaturation which comprises contacting a hydrocarbon charge consisting essentially of saturated hydrocarbons with hydrogen fluoride at a temperature of from about —20° C. to about 150° C. and a pressure sufficient to maintain at least a portion of the reaction mixture in the liquid phase, separating the reaction mixture into a hydrocarbon phase and a hydrogen fluoride phase containing said polyolefinic material, distilling said hydrogen fluoride phase at a subatmospheric pressure not greater than about 100 millimeters absolute to separate hydrogen fluoride therefrom, and recovering the residual polyolefinic material.

2,470,895

IMPULSE TYPE POWER SUPPLY



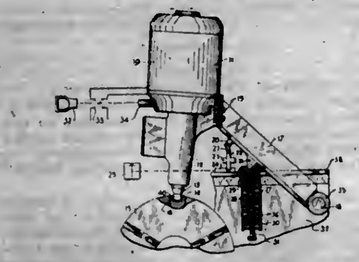
Elbert W. Marlowe, Chicago, Ill., and Howard A. Wilcox, Los Alamos, N. Mex., assignors to the United States of America as represented by the United States Atomic Energy Commission

Application December 13, 1945, Serial No. 634,867

1 Claim. (Cl. 320—1)

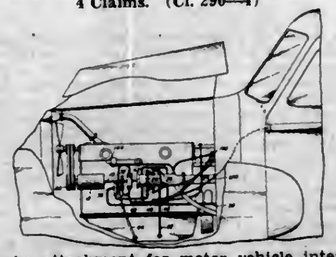
In an electronic circuit, a capacitor, a source of potential for charging said capacitor, an output circuit, control and regulating means intermediate said source and said capacitor for controlling the initiation and termination of charging and rate of charging of said capacitor and responsive to a predetermined signal to prevent the passage of charging potential to said capaci-

tor immediately prior to discharge, means associating said capacitor and said output circuit and adapted to be responsive to a predetermined signal to permit discharge of said capacitor through said output circuit, means in shunt with said output circuit and responsive to a predetermined signal effectively to short circuit said capacitor,



and signal producing means for supplying successive signals in predetermined time relationship respectively to said control means, said means associating said capacitor and said output circuit and said short circuiting means, said signal to said short circuiting means being supplied prior to complete discharge of said capacitor.

2,470,896
RECOVERY OF SULFONIC ACIDS FROM SPENT SULFONATING AGENT
Julian M. Mavity, Hinsdale, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application November 15, 1947, Serial No. 786,298
11 Claims. (Cl. 260—505)

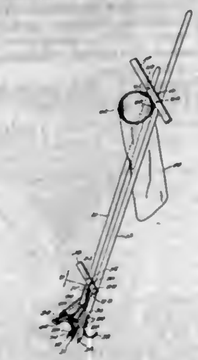


1. In a sulfonation process wherein the charging stock to be sulfonated is contacted with a sulfonating agent and the resulting sulfonation reaction mixture containing the sulfonic acid product admixed with the sulfonating agent is diluted with water to spring the sulfonic acid product from said sulfonation reaction mixture, thereby forming a sulfonic acids product phase and an aqueous sulfuric acid phase containing residual sulfonic acids, the additional treatment of the aqueous sulfuric acid phase to extract residual sulfonic acids therefrom which comprises contacting said aqueous sulfuric acid phase with a water-insoluble solvent for said sulfonic acids selected from the group consisting of the hydrocarbons and halogenated hydrocarbons liquefiable at the temperature and pressure conditions of extraction.

2,470,897
HINGED SUPPORTED MOTOR WRENCH
Floyd E. Niederhiser, Cleveland, Ohio
Application April 5, 1946, Serial No. 659,928
5 Claims. (Cl. 279—1)

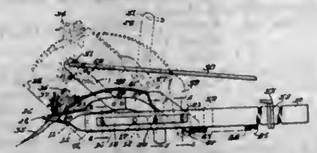
5. A power wrench for operating the jaw actuating elements of a work holding device comprising, a driving motor, a shaft member driven by said motor, said shaft member having engaging surfaces to slidably engage with and disengage from driving relationship with said jaw actuating elements by relative axial movement with respect to said jaw actuating elements, a bracket arm having a support end and a pivot end, said pivot end having a pivot axis, said shaft member being fixedly carried on said support end, said pivot end being adapted to be pivotally mounted on a base a distance from said jaw actuating elements, said shaft member thereby being swingable in an arcuate path about said pivot end as an axis.

2,470,898
EMERGENCY GENERATING SYSTEM FOR AUTOMOBILES
Joseph M. Parzinger, Columbus, Ohio, assignor of thirty per cent to Max H. Parzinger, Columbus, Ohio
Application February 16, 1948, Serial No. 8,703
4 Claims. (Cl. 290—4)



1. An attachment for motor vehicle internal combustion engines comprising a starting-generating dynamo, resiliently biased drive means associated with said starting-generating dynamo, a shaft extending from said starting-generating dynamo, power means associated with said shaft, said power means selectively operable with said starting-generating dynamo relative to said resiliently biased drive means, a circuit connecting said drive means and said starting-generating dynamo, thermostatic means in said circuit for selectively controlling said starting-generating dynamo for use as a motor and a generator, said power means including a compressor and an ignition fired turbine.

2,470,899
WEEDING DEVICE
Leo S. Rink, Moline, Ill.
Application October 18, 1945, Serial No. 623,093
13 Claims. (Cl. 254—132)



2. A weed removing device comprising a ground penetrating spade fixed to a hand pole, a weed throw-out member pivotally attached to the hand pole for movement from a position adjacent the spade for entering the ground therewith to a position away from the spade, means for effecting pivotal movement of the weed throw-out member when the spade is in the ground behind a weed, said means including a lever arm pivotally attached to said hand pole above said spade and throw-out member, a chain attached to said lever arm at a point spaced to one side of its pivotal attachment to the hand pole, said chain extending downwardly and attached to the weed throw-out member at a point spaced from its pivotal attachment to the hand pole, whereby a downward movement of the lever arm at a point spaced to the other side of its pivotal attachment to the hand pole causes an upward and forward move-

ment of the throw-out member thus lifting the weed from the ground, a rest pole positioned parallel to said hand pole, said lever arm pivotally attached to said rest pole on the chain attachment side of its pivotal attachment to the hand pole, and a second lever arm parallel to the first lever arm and pivotally attached to the hand and

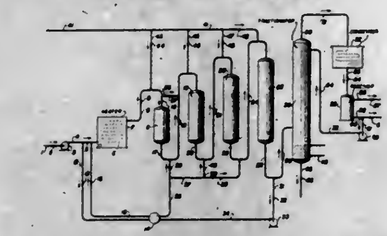
rest poles at points spaced upwardly from said first lever arm, whereby the first lever arm is operated by foot and the second lever arm is operated by hand and both either together or singly performing the same function because of the parallel arrangement of the poles and the parallel arrangement of the lever arms.

2,470,900
WEEDER WITH WEED STRIPPER
Leo S. Rink, Moline, Ill.
Application May 13, 1947, Serial No. 747,654
10 Claims. (Cl. 254—132)

1. A weeder comprising a support, a ground penetrating spade fixedly positioned on said support, a second ground penetrating spade hinged on said support for swingable movement from a position immediately above and adjacent said first spade to a position spaced from and above said first spade, means for effecting swinging movement of said second spade, and a stripping member hinged for swinging movement above said second spade about a point spaced from the hinge of said second spade, said stripping member being arranged and constructed to slide longitudinally of said second spade upon swinging movement of said second spade.

2,470,901
UNDERGARMENT
Sylvia Roodner, New York, N. Y.
Application April 18, 1947, Serial No. 742,363
3 Claims. (Cl. 2—73)

1. An undergarment of the character described comprising a brassière portion and an attached skirt portion, said skirt portion comprising a main body panel and an intermediate wedge shaped front panel, said main body panel comprising a fabric section in which the median line is on the bias and the upper side edge portions are on the "straight" of the material and positioned at the front of the garment, the said upper side edge portions diverging upwardly toward the waist line of the garment and attached to the side edges of the intermediate wedge shaped front panel, the lower side edge portions of the main body panel being secured together below the wedge shaped front panel.



2,470,902
ALKYLATION OF PHENOLS
Robert H. Rosenwald, Western Springs, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application September 28, 1946, Serial No. 700,177
8 Claims. (Cl. 260—613)

1. In the catalytic alkylation of phenols wherein there is formed a catalyst phase containing dissolved mono-alkylated phenol and unreacted phenol, the improvement which comprises removing said catalyst phase from the alkylating zone and extracting the mono-alkylated phenol therefrom by contacting the catalyst phase with a selective solvent selected from the group consisting of paraffinic hydrocarbons and chlorinated paraffinic hydrocarbons, thereafter returning the thus treated catalyst phase to the alkylating zone, and recovering the extracted mono-alkylated phenol from said solvent.

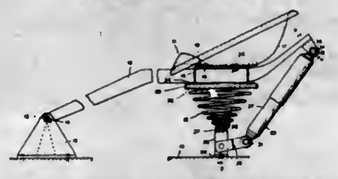
2,470,903
MANUFACTURE OF DERIVATIVES OF ETIOCHOLENIC ACID
Walter Charles Joseph Ross, London, England
No Drawing. Application February 13, 1946, Serial No. 647,437. In Great Britain February 21, 1945
7 Claims. (Cl. 260—397.1)

1. A method of preparing a derivative of etiocholenic acid which consists in condensing with an aldehyde a pregnene derivative having a keto group in the 20-position and a hydroxy group in the 3-position, acetylating the condensation product to convert said hydroxy group into an acetoxy group, and oxidizing the acetate of the condensation product by means of potassium permanganate in an organic solvent selected from the class consisting of dioxane and simple ketones without protecting the double bond.

2,470,904
POLYMERIZATION OF OLEFINIC HYDROCARBONS
William B. Shanley, San Marino, Calif., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application April 23, 1947, Serial No. 743,425
14 Claims. (Cl. 260—683.15)

1. A process for producing polymers from a hydrocarbon fraction containing at least about 50 mole percent of olefins of higher molecular weight than ethylene, which comprises contacting said olefin-containing hydrocarbon fraction at polymerizing conditions with a solid polymerizing catalyst contained in a series of catalyst sections of increasing thickness in the direction of flow, cooling between catalyst sections by introducing a hydrocarbon quenching stock between said catalyst sections, fractionating hydrocarbon effluent from said catalyst sections to separate polymers and unconverted hydrocarbons, and recovering said polymers.

2,470,905
CHERRY PITTER
Clarence N. Springer and Hester Rae Springer, Grand Rapids, Mich.
Application April 23, 1947, Serial No. 743,240
1 Claim. (Cl. 146—21)



A fruit pitting device comprising a unitary sheet metal bar sheared and pierced to form a U-shaped scoop portion having its legs connected to the body of the bar and having its bight extending laterally from the body of the bar a sufficient distance to penetrate the fruit to the center thereof, said device having said body of the bar curled to form a ring portion adapted to snugly embrace a human finger with the scoop portion projecting therefrom in one lateral direction and a curled hook portion adapted to engage an adjacent finger projecting from the ring portion in a lateral direction opposite to the scoop portion.

2,470,906
DENTIFRICE
Ralph Taylor, New York, N. Y.
No Drawing. Application July 31, 1946, Serial No. 687,539
3 Claims. (Cl. 167—93)

1. A dentifrice comprising in combination a bodying agent and more than .5% by weight of an active medium, adapted to transform mucinous coatings in the oral cavity into easily removable form, from the class consisting of ascorbic acid and acid analogues of ascorbic acid, the bodying agent being present in amount sufficient to render the dentifrice of paste consistency.

2,470,907
VEHICLE SEAT CONSTRUCTION
Glen L. White, Grosse Pointe, and Clayton H. Diedrich, Monroe, Mich., assignors to Monroe Auto Equipment Company, Monroe, Mich., a corporation of Michigan
Application February 7, 1945, Serial No. 576,572
9 Claims. (Cl. 155—9)

3. A seat assembly for a vehicle comprising a single beam pivotally supported at one end in such a manner as to be capable of swinging in a vertical plane only, a seat mounted on said beam adjacent to the rear end thereof, a conical coil spring disposed beneath said seat and beam with its apex at the lower end adapted to engage a stationary support in said vertical plane of the beam, anda shock absorber disposed in the vertical plane of the beam with its upper end connected to said beam and with its lower end adapted to be connected to a support.

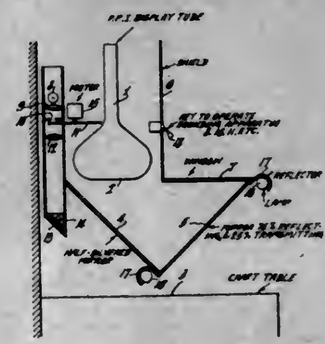
2,470,908
PREPARATION OF GRANULAR POLYMERS OF VINYL HALIDES
Massimo Baer, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application December 10, 1947, Serial No. 790,931
13 Claims. (Cl. 260—78.5)

1. In a process wherein a polymerizable material containing a vinyl halide from the group consisting of vinyl chloride and vinyl bromide is polymerized while dispersed in an aqueous medium having dissolved therein as a dispersing agent a heteropolymer of vinyl acetate and a substance from the group consisting of maleic acid and maleic anhydride, the step which comprises incorporating in the aqueous medium prior to polymerization 0.5–15%, based on the polymerizable material, of an alkyl phthalate in which the alkyl groups each contain more than 1 but less than 11 carbon atoms, as a particle size reducing agent.

2,470,909
PREPARATION OF GRANULAR POLYMERS OF A VINYL HALIDE
Massimo Baer, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application December 10, 1947, Serial No. 790,932
12 Claims. (Cl. 260—78.5)

1. In a process wherein a polymerizable material containing a vinyl halide from the group consisting of vinyl chloride and vinyl bromide is polymerized while dispersed in an aqueous medium having dissolved therein as a dispersing agent a heteropolymer of vinyl acetate and a substance from the group consisting of maleic acid and maleic anhydride, the step which comprises incorporating in the aqueous medium a glycol ester of a fatty acid as a particle size reducing agent in an amount of 0.5–15% based on the monomeric material, said glycol containing not more than 10 carbon atoms and said fatty acid containing more than 1 but less than 7 carbon atoms.

2,470,910
PREPARATION OF GRANULAR POLYMERS OF VINYL HALIDES
Massimo Baer, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application December 10, 1947, Serial No. 790,933
13 Claims. (Cl. 260—78.5)



1. In a process wherein a polymerizable material containing a vinyl halide from the group consisting of vinyl chloride and vinyl bromide is polymerized while dispersed in an aqueous medium having dissolved therein as a dispersing agent a heteropolymer of vinyl acetate and a substance from the group consisting of maleic acid and maleic anhydride, the step which comprises incorporating in the aqueous medium prior to polymerization 0.5–15%, based on the polymerizable material, of a phosphoric acid ester of an hydroxy benzene from the group consisting of phenol, cresols, and xylenols, as a particle size reducing agent.

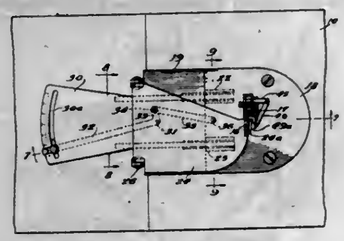
2,470,911
PREPARATION OF GRANULAR POLYMERIZATION PRODUCTS OF VINYL HALIDES
Massimo Baer, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application December 11, 1947, Serial No. 791,165
9 Claims. (Cl. 260—78.5)

1. In a process for preparing polymerization products in granular form, the step which comprises polymerizing an aqueous dispersion of a polymerizable material containing a vinyl halide from the group consisting of vinyl chloride and vinyl bromide in the presence of, as a dispersing agent, a heteropolymer of vinyl methyl ether and a compound selected from the group consisting of maleic acid and maleic anhydride dissolved in the aqueous phase, said heteropolymer being free from salt groups.

2,470,912
NAVIGATION AIDING APPARATUS
Frank Powell Best, Chelmsford, Christopher Dering Colchester, Danbury, and James Twatt, Chelmsford, England, assignors to Radio Corporation of America, a corporation of Delaware
Application November 28, 1947, Serial No. 788,700
In Great Britain April 5, 1946
4 Claims. (Cl. 177—386)

1. An apparatus comprising in combination a P. P. I. radar display tube, a chart table, a light-reflecting light-transmitting mirror system for enabling a chart on said table and the P. P. I. pattern produced by said tube to be viewed simultaneously in correct superimposition by the principle of the "Pepper's ghost" illusion, an echo sounder, a light source arranged to be energized on receipt of an echo signal by said sounder, a sounding scale member having sounding indications so arranged and driven as to be interposed in turn in the light path from said source, means for transmitting a sounding pulse when the zero of the sounding scale member is interposed in the light path, an optical system for

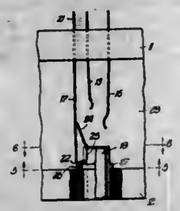
superimposing on the chart and display presentation, in the position corresponding to ship's position thereon, an image of the indication in the light path when the light source is energized.



2,470,913
A COOLANT FOR METAL MACHINING PROCESSES
Johan Bjorksten, Chicago, and Thomas C. Crowley, Plainfield, Ill., assignors to Bee Chemical Company, a corporation of Illinois
No Drawing. Application September 26, 1945, Serial No. 618,790
1 Claim. (Cl. 252—33)

A self-emulsifying water dispersible coolant for contacting a grinding wheel during a grinding operation consisting essentially of from ½% to 30% of a refractory oil having a U. O. P. characterization number between 9.8 and 10.9 and a boiling point substantially about 575° F.; between 3 and 50% of a water soluble emulsifier, and between 20 and 60% of a volatile solvent selected from the group consisting of saturated aliphatic and naphthenic hydrocarbons having a boiling range substantially between 300° and 500° F.

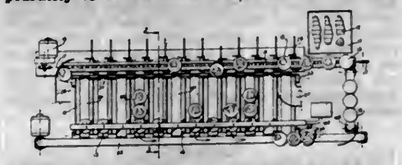
2,470,914
BLIND STITCHING APPARATUS
Sylvester J. Birginal, Omaha, Nebr.
Application July 8, 1944, Serial No. 544,951
9 Claims. (Cl. 112—140)



1. In a sewing machine having a reciprocal needle, and a presser foot blind stitching apparatus of the character described, including: a guide member adapted to have a material-guiding edge closely adjacent the path of movement of the needle; a mounting member having the guide member pivotally mounted thereon, about an axis perpendicular to and spaced from the line of movement of the needle, the mounting member being movable in a plane perpendicular to the direction of movement of the needle; actuating means for moving the mounting member to adjust precisely the position of the guiding edge of the guide member with respect to the path of movement of the needle, the actuating means including a manually movable actuating member

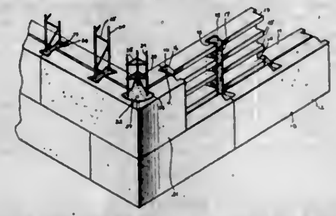
and a motion-reducing actuating connection between said actuating member and the mounting member; a guiding arm pivotally mounted on the presser foot for movement about two axes at right angles to each other, one end of the guiding arm

being provided with a pressure shoe adapted to lie adjacent said material guiding edge for pressing the material being sewed against the guide means; and spring means for urging the pressure shoe towards the guide means.



2,470,915
DUAL PURPOSE SLEEVE-SPRING SPRING JACK
James E. Bosh, Berwyn, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a corporation of Illinois
Application July 5, 1945, Serial No. 603,321
10 Claims. (Cl. 179—96)

1. A sleeve-spring contact device for use in spring jacks of the class described, comprising a bushing-like sleeve for receiving a plug, and a sleeve-spring secured at one end and carrying at the free end thereof a plurality of contact means for the dual purpose, first, of maintaining at all times contact with said bushing-like sleeve and, second, of establishing positive contact engagement with the sleeve contact surface of a plug inserted thereinto.

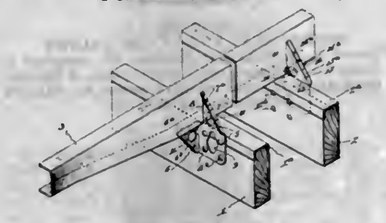


2,470,916
APPARATUS FOR SELECTIVELY PACKING PRODUCTS OF VARIABLE WEIGHT
Eben Hunter Carruthers, Ithaca, N. Y., assignor to E. H. Carruthers Co., Warrenton, Oreg., a corporation of Oregon
Application May 26, 1942, Serial No. 444,510
18 Claims. (Cl. 209—121)

1. An apparatus for use in packing a predetermined weight of articles of variable weight in a single container comprising, in combination, means including weighing mechanism for sorting the articles into groups by weight, and means for automatically and simultaneously selecting a plurality of said articles whose combined weight

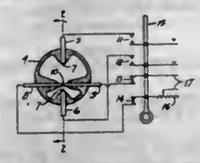
substantially equals the desired weight to be placed in the container.

2,470,917
BUILDING WALL OF PLASTIC FILLED SECTIONAL BLOCKS
Aage Christensen, Chula Vista, Calif.
Application April 26, 1946, Serial No. 665,207
1 Claim. (Cl. 72—30)



In a building wall construction, a pair of opposed sections arranged in parallel relation with respect to each other and provided with spaced ribs extending from their confronting surfaces in parallel horizontal planes, said ribs being provided with opposed vertically aligned dovetailed notches, each of said sections having a lining seated in and conforming to said dovetailed notches, said opposed linings spanning said ribs and forming an enclosure, and cementitious material filling said enclosure and tying said sections together in said parallel relation.

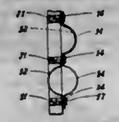
2,470,918
METHOD OF IMPREGNATING AND DECORATING CEMENTITIOUS MATERIALS
Ling Chung, New York, N. Y.
No Drawing. Application July 23, 1942, Serial No. 452,829
1 Claim. (Cl. 117—123)



The method of producing art objects or the like which consists in impregnating a body of porous cementitious material with a viscous resinous impregnating solution, placing the impregnated body in a curing oven and gradually raising the temperature in the oven to approximately 60° centigrade, maintaining the oven temperature at approximately 60° centigrade for a predetermined length of time, removing the impregnated body from the oven and applying heat hardening coloring paint to the body, returning the body to the oven and gradually raising the temperature in the curing oven to approximately 85° centigrade, maintaining the oven at such temperature for a predetermined length of time, gradually raising the temperature of the oven to 100° to 120° centigrade and maintaining such temperature in the oven for a predetermined length of time, and then removing the cured impregnated body from the curing oven.

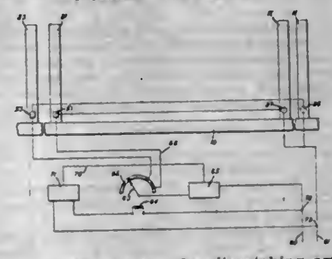
2,470,919
FRAME STRUCTURE FOR TRUCK OR TRAILER BODIES OR THE LIKE
Nelson E. Cole, Reading, Pa., assignor to Parish Pressed Steel Co., Reading, Pa., a corporation of Delaware
Application May 18, 1946, Serial No. 670,786
4 Claims. (Cl. 296—35)

1. In combination with two superimposed crosswise extending base frame elements of a truck body or the like; of a gusset device comprising two integrally united angularly arranged members, one of which members is provided with a flat body section adapted to be secured in sidewise relation to the lower frame element and has a triangular brace extension one edge of which terminates in a reinforcing flange and the other edge of which is secured in crosswise relation to the upper frame element; and the other of which members is triangularly shaped and provided with an upper edge section secured in lengthwise relation to the underside of the upper frame element.



2,470,920
ELECTRON COUNTER
Thomas Colson, San Francisco, Calif.
Application January 30, 1948, Serial No. 5,272
7 Claims. (Cl. 250—83.6)

1. In an electron counter, an envelope, high voltage electrodes extending into the envelope with their inner ends spaced apart, means for conducting electrons from the outside of the envelope to a point substantially between the inner ends of said electrodes and a resistor in said means adapted to control the flow of electrons into said envelope.

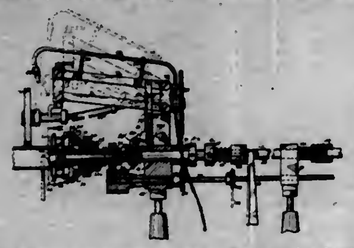


2,470,921
PLASTIC WINDOW
Alden B. Dow, Midland, Mich.
Application June 16, 1943, Serial No. 491,027
2 Claims. (Cl. 160—352)

1. In a window, the combination including: spaced coplanar supporting members; and a plurality of alternately overlapping panes supported therebetween; said panes being of width greater than the distance between said supporting members, at least one of said panes being of flexible plastic material adapted to be flexed inwardly and outwardly thereby to cause the overlapping ends of said flexible pane selectively to be in surface contact with and to be separated from the

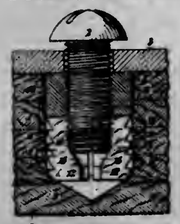
overlapped portions of the adjacent panes in the series.

2,470,922
WORK DISTRIBUTING CONVEYER SYSTEM
John R. Dunn, South Groveland, Mass., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application September 27, 1946, Serial No. 699,732
3 Claims. (Cl. 198—81)



3. A conveyor system for dispatching articles from a supply area to a work area, the conveyor system comprising a driven main conveyor traveling from the supply area through the work area, branch conveyors disposed at spaced positions in the work area and positioned to receive articles from the main conveyor, supply conveyors for the branch conveyors disposed at spaced positions in the supply area and positioned to feed articles disposed thereon to the main conveyor, retaining units, for the supply conveyors normally urged into the path of the articles thereon, electrically operable to release a given number of articles for movement onto the main conveyor, an electrical circuit for each unit, a normally closed switch for each circuit disposed at its respective branch conveyor to be held open by articles on the branch conveyor and freed to close by the removal of a given number of articles from the branch conveyor, a selector having a contact for each circuit and a brush operable successively into engagement with the contacts to render the circuits effective in a given order, and a timing unit to hold the brush of the selector unoperated until the lapse of a given interval of time after the closing of one circuit by the brush engaging its contact before the next circuit may be closed by the brush.

2,470,923
TUBE END FORMING MACHINE
Charles Eisler, South Orange, N. J.
Application January 26, 1945, Serial No. 574,800
4 Claims. (Cl. 49—7)

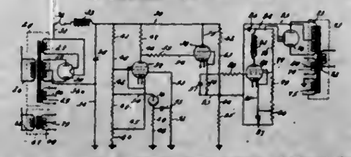


1. In a tool for forming the end of a tube, a bearing, a plunger shaft slidably arranged in said bearing, a forming die fixed to one end of said shaft, a flange on said forming die, means on said shaft to reciprocate the same in said bearing to advance and retract the forming die relative to the end of the tube, a bracket mounted

on said shaft, roller members slidably mounted on said bracket in alignment with said forming die for cooperation therewith to form the end of the tube on said die and against said flange, means on said bracket engaging the rollers to normally urge the latter away from the forming

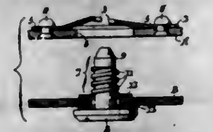
die, a cone mounted on said shaft and adapted, on engagement with said roller members, to move the latter toward the forming die for cooperation therewith to form the end of the tube, and means engaging said cone to move the same into and out of engagement with said roller members.

2,470,924
FASTENING DEVICE
Howard A. Flogaus, Wallingford, Pa., assignor to South Chester Corporation, Chester, Pa., a corporation of Delaware
Application August 29, 1946, Serial No. 693,678
1 Claim. (Cl. 85—2.4)



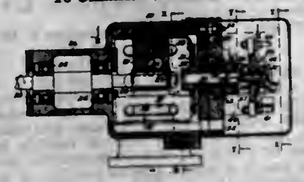
A fastening device comprising a tubular anchor nut formed of relatively soft metal, a plurality of closely spaced external serrations forming longitudinally directed ridges and valleys at the outer end of said nut, an internally threaded portion formed in the outer end of said nut, a radially split inner end portion comprising a plurality of expansible prongs each of said prongs having a series of sharply pointed barbs of angular cross section, said series of barbs extending from the inner end substantially to the serrated portion, said prongs having interior tapering unthreaded surfaces converging towards the inner end of the nut and adapted to be engaged by an expander, and said barbs having outer cutting faces disposed at an angle inclined downwardly with respect to the axis of said nut, the angle of inclination being such that engagement of said tapering surfaces with an expander of substantially uniform cross section radially expands said outer cutting faces to a position substantially at right angles to the axis of said nut, and inner faces on said barbs inclined at an acute angle to the axis of said nut, whereby as an incident to radial expansion and bending of the prongs said barbs will be caused to chisel upwardly into the surrounding material without appreciable crushing of the material adjacent to said outer cutting faces, and the barbed prongs having an outside diameter, prior to expansion, greater than the minimum diameter of the serrated portion, as defined by said valleys, but less than the maximum diameter of said serrated portion, as defined by said ridges.

2,470,925
PISTON SEAL FOR FLUSH VALVES
Edward A. Fredrickson, Chicago, Ill., assignor to Crane Co., Chicago, Ill., a corporation of Illinois
Application January 16, 1946, Serial No. 641,453
4 Claims. (Cl. 309—33)



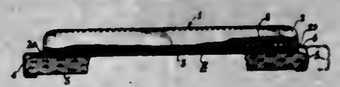
1. In a piston construction, the combination of a plunger within a cylinder having a substantially cylindrical portion with a circumferential flange extending from said cylindrical portion, a removable flexible sealing member mounted upon said flange, the said sealing member having an annular relieved end portion whereby pressure within said relieved portion tends to spread the latter relieved portion apart, whereby peripheral contacts are made by said flexible sealing member with the said piston and said cylinder simultaneously, the said sealing member having annular clearances between said sealing member and the cylinder and between the sealing member and the plunger whereby said sealing member and said plunger are transversely movable predeterminedly, the annular clearance between the said sealing member and plunger being substantially increased immediately adjacent the inner rim-portion of the said circumferential flange.

2,470,926
ELECTRONIC COUNTER
Werner A. Gieseke, Danville, Ill.
Application February 27, 1946, Serial No. 650,663
10 Claims. (Cl. 235—92)



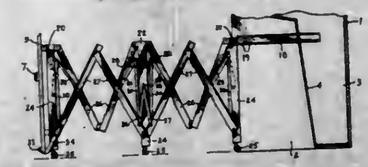
5. A device for counting impulses of short duration comprising a phototube intermittently subjected to light rays, direct current operated, electronic means associated with the phototube comprising means for inverting impulses set up by the phototube when the light rays thereon are interrupted, a trigger tube for receiving the inverted impulses and a power tube fired by the trigger tube, a resistor-capacitor filter associated with the cathode of the trigger tube and the control grid of the power tube whereby the time duration of each impulse fed to the power tube is lengthened, and a counter having an actuating coil with inductive characteristics connected to the plate of and energized by the firing of the power tube.

2,470,927
FASTENING MEANS
William C. Hale, Jr., Chester, Pa., assignor to South Chester Corporation, Chester, Pa., a corporation of Delaware
Application January 10, 1947, Serial No. 721,341
1 Claim. (Cl. 151—21)



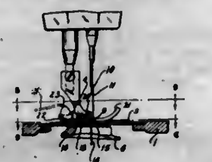
In combination, an apertured panel or the like, fastening means for attaching the panel to another object comprising a screw having a head and a shank with raised threads extending therealong and terminating short of the head, a washer surrounding said shank at its unthreaded portion, said washer being in the form of a thin annular ring having an internal diameter such that it fits over said unthreaded portion of the shank and having a partial radial cut extending from its inner edge towards its outer edge with lips adjacent to said radial cut helically bent out of the normal plane of said annular ring in opposite directions therefrom to conform to the pitch of the screw whereby the washer may enter the screw threads and be progressed along the shank to said unthreaded portion only by relative rotation between the screw and washer; and said washer being of such material and thinness that it may readily be flattened, while so positioned on the screw, to prevent its withdrawal, said panel or like element to be fastened being disposed between said screw head and washer and having an aperture larger than the threaded portion of the shank, and the unthreaded portion of the shank being of a length substantially corresponding to the combined thickness of the elements, including said panel and washer, assembled thereon whereby the screw may be maintained in a position at right angles to said elements.

2,470,928
SPEED RESPONSIVE MEANS
Allan C. Halter, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application May 24, 1946, Serial No. 671,977
13 Claims. (Cl. 200—92)



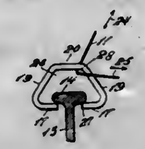
1. In combination: electrically conducting means mounted for rotation; an element actuatable by rotation of said conducting means; means for biasing said conducting means in a given direction to an initial position; means for providing a rotating magnetic field, so constructed and arranged that a predetermined speed of rotation of said field causes induction of current in said conducting means resulting in rotation of said conducting means against said biasing means to move said element from said initial position to a predetermined position; and means causing reduction in the amount of said field effective to cause rotation of said conducting means in response to rotation of said conducting means.

2,470,929
DETACHABLE SEAT CUSHION
Jacque E. Horn, New York, N. Y.
Application April 17, 1947, Serial No. 742,095
5 Claims. (Cl. 155—182)



1. A detachable seat cushion comprising, in combination, a flexible container, a cushion within said container, a hook-mounting member disposed transversely across said container at the middle portion thereof to provide a seat cushion having flexible ends at opposite sides of said transverse mounting member, a relatively stationary hook projecting from one end of said mounting member and extending through said container at the middle of one side edge thereof, a lock-controlled extensible hook mounted at the opposite end of said mounting member and slidably movable through slots in the wall of said container at the opposite edge of said detachable seat cushion, and a controlling lock for releasably locking said extensible hook to said mounting member.

2,470,930
FOLDING BED
Walter Jasinski, Grand Junction, Mich., assignor of one-third to Anna Jasinski, one-third to Robert Jasin, and one-third to Raymond Jasin, all of Grand Junction, Mich.
Application March 24, 1947, Serial No. 736,640
6 Claims. (Cl. 5—175)



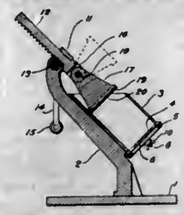
1. A folding bed, comprising three rigid upright cross supports for the ends and the middle of the bed, upper and lower side rail portions pivotally connected to the sides of said cross supports, adjacent upper side rail portions hingedly connected to form a downwardly folding half of the corresponding upper side rail, adjacent lower side rail portions hingedly connected to form an upwardly folding half of the corresponding lower side rail, link systems, each comprising a pair of pivotally interconnected links pivotally connected to an upper side rail portion and the adjacent side of said cross supports and a third link pivotally connected to the juncture of said pair of links and having a lost motion connection with the opposed lower side rail portion in a manner to form a self-locking spider bracing to support said upper side rail portions in a horizontal position upon full extension of said bed.

2,470,931
SEWING MACHINE
Alvin A. Jennings, Lebanon, Mo., assignor to Rice-Stix Dry Goods Company, St. Louis, Mo., a corporation of Missouri
Application May 10, 1946, Serial No. 668,849
6 Claims. (Cl. 112—253)

1. In a sewing machine of the kind described having a needle, a single longitudinally tiltable presser foot extending forwardly and rearwardly of said needle, a feed dog with a row of feed teeth disposed beneath said presser foot, and a throat plate having a slot therein for said feed teeth, the improvement which consists in aranging said slot with its rear end disposed forwardly of the rear end portion of said presser foot, whereby the rear end portion of said presser foot is adapted when the work passes from beneath said presser foot and draws the needle and bobbin threads rearwardly over the throat plate to clamp said threads to the portion of the throat plate located rearwardly of said slot and thus prevent unthreading of the needle, retraction of the bobbin thread or breakage of said threads when the needle is operated without the work in position to be engaged thereby.

2,470,932
RING TRAVELER
Henry G. Joseph, Cranston, R. I., assignor to Victor Ring Traveler Company, a corporation of Rhode Island
Application July 25, 1946, Serial No. 686,244
3 Claims. (Cl. 57—125)

1. A ring traveler of uniform cross section for a horizontal ring comprising horns extending inwardly toward each other in substantial alignment and a bow portion joining said horns with a central portion parallel to said horns and straight side portions joining said central portion and horns, said straight side portions being at an obtuse angle to said center portion and at an acute angle to said horns.



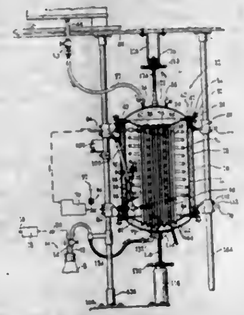
2,470,933
FLEXIBLE-SURFACED BONE CONDUCTION HEARING AID UNIT
Hugh S. Knowles, River Forest, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois
Application June 5, 1944, Serial No. 538,809
4 Claims. (Cl. 179—107)

4. In a hearing aid unit of the bone conduction type, a casing having a recess therein, and elastic material substantially filling said recess and having a concave outer surface to fit smoothly

over a substantial area of the mastoid bone of a user.

2,470,934
POTATO SLICER
Edward F. La Bat, San Pablo, Calif.
Application September 25, 1946, Serial No. 699,132
2 Claims. (Cl. 146—169)

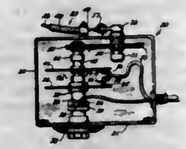
1. A potato cutter comprising a standard having an upwardly sloping position an initially open-ended container mounted on said sloping position parallel thereto and with its lower end hanging clear, a cutting grill over said lower end of the container, the bottom wall of the container at its upper end extending further than the top wall, a pressure plate normally resting on the bottom wall for movement lengthwise into the container, a rack bar slidably guided in the standard back of the plate, means pivoting the plate on the adjacent end of the bar for upward swinging movement of the latter when retracted clear of the top wall of the container, and means to advance and retract the rack bar and plate.



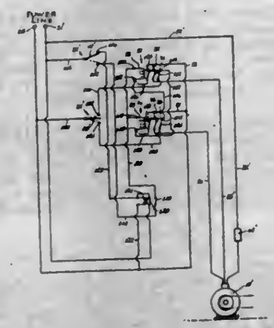
2,470,935
ALLOY ADDITION AGENTS
Arthur Linz, New York, N. Y., assignor to Climax Molybdenum Company, New York, N. Y., a corporation of Delaware
No Drawing. Application September 3, 1947, Serial No. 772,011
7 Claims. (Cl. 75—27)

1. A self-reducing alloy addition agent comprising a mixture of an oxide of a metal selected from the group consisting of molybdenum, chromium, tungsten and vanadium, and calcium carbide, said particles of calcium carbide being stabilized by a coating of a waterproofing carbonaceous material which acts as a reducing agent for the metal oxide.

2,470,936
APPARATUS FOR CHILLING FLUIDS
Salvatore Lo Gerfo, Brooklyn, N. Y.
Application April 13, 1944, Serial No. 530,793
6 Claims. (Cl. 62—141)

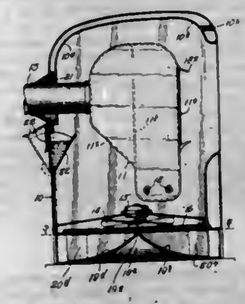


1. A cooler of the character described for chilling a fluid, said cooler comprising an enclosure

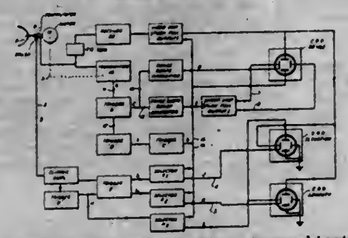


adapted to house a liquid of low freezing point, a bank of fluid-passing tubes running through said enclosure, and means in said enclosure form-

ing a refrigerant passageway around a plurality of said tubes, the outlet end of each tube being restricted so as to impede the passage of fluid therethrough.



2,470,937
ELECTRIC MOTOR PRESET CONTROL
Glen Malcom, Columbus, Ind., assignor to Reeves Pulley Company, Columbus, Ind., a corporation of Indiana
Application May 22, 1946, Serial No. 671,619
15 Claims. (Cl. 318—31)



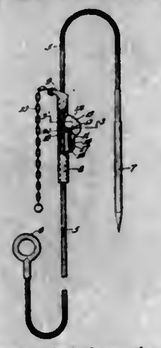
1. In a mechanism for positioning a load accurately in response to manipulation of a control member, a reversible electric motor connected to shift said load, forward and reverse circuits for alternatively energizing said motor, a switch dominating both said circuits, a selector switch connected to activate either of said circuits alternatively, an oppositely shiftable control member, operatively connected to said selector switch to activate one of said circuits upon movement in one direction and to activate the other of said circuits upon movement in the other direction, other means operatively connected to said control member and actuated, by movement of said control member in either direction, to close said first-named switch, whereby said motor is energized, and further means driven by said motor independently of said control member to follow said other means to open said first-named switch after movement of said last-named means to a degree determined by the degree of movement of said other means.

2,470,938
WARM AIR SPACE HEATER WITH AIR CIRCULATING BLOWER
Mark C. McAfee, Wichita, Kans.
Application July 17, 1944, Serial No. 545,338
2 Claims. (Cl. 126—110)

1. In a circulatory heater comprising a housing having means adapted to support the housing in spaced relation to a floor upon which the heater is adapted to be supported, said housing having a downwardly facing inlet opening in its bottom near the floor, said housing having an air outlet opening, heating means located within the housing, and a blower for drawing air in said inlet, passing it in heat exchange relation with the heating means, and forcing it out said air outlet opening, air flow guiding means including: baffle means between the floor and said inlet opening, this baffle means including a plurality of generally triangular portions curved inwardly and upwardly for effecting a gradual and smooth change in direction of air moving along the floor and into the inlet, these triangular portions having their apices meeting at a point adjacent the center of the housing and their lower and broader ends adjacent the floor upon which the device rests and parallel thereto, and a plurality of vertical partition portions for preventing swirls of air beneath said inlet, these partition portions extending up from the junctions of the sides of adjacent triangular portions, said baffle means being adjacent the housing supporting means and directly below said inlet opening.

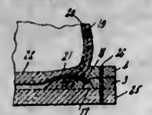
2,470,939
RADIO DETECTION AND LOCATION SYSTEM INDICATING AZIMUTH AND ELEVATION
William A. Miller, Port Jefferson, and Eugene B. Shenk, Brooklyn, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application September 3, 1943, Serial No. 501,050
11 Claims. (Cl. 343—11)

4. In a radio locating system, in combination, a rotatable antenna, a pulse transmitter coupled to said antenna and adapted to produce pulses at a faster rate than the speed of rotation of said antenna, and common drive means for synchronizing the rotation of said antenna with the operation of said transmitter, whereby said transmitter sends out a pulse for each quadrant of the circle of rotation of said antenna, a receiver coupled to said antenna, first, second and third cathode ray oscilloscopes having ray deflection elements coupled to the output of said receiver, a control grid for each of said oscilloscopes, a saw-tooth sweep generator coupled only to said first oscilloscope, and circuits synchronously operated with said drive means and coupled to said control grids for rendering said second and third oscilloscopes alternately visible and said first oscilloscope visible at all times that said second and third oscilloscopes are visible.



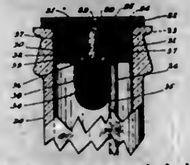
2,470,940
PIPE CLEANER
Clarence H. Mosher, Sacramento County, Calif. Substituted for abandoned application Serial No. 523,149, February 19, 1944. This application April 25, 1947, Serial No. 743,863
2 Claims. (Cl. 285—211)

1. A pipe cleaner of the character described, comprising a sleeve adapted for fastening upon the discharge end of a faucet and having a shoulder adapted to receive a washer for bearing upon the faucet, an angular extension of the sleeve having a groove in the end wall thereof, and a washer disposed in the groove and adapted to have the bowl of a pipe bear thereagainst.



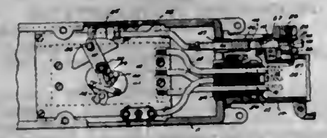
2,470,941
FISH STRINGER
Kenneth L. Orton, St. Paul, Minn.
Application April 27, 1945, Serial No. 590,533
4 Claims. (Cl. 224—7)

1. In a fish stringer, an elongated flexible element upon which fish are to be strung, a socketed member for removably receiving said flexible element and having means thereon for attachment to a support, and a cam-like catch pivotally



mounted on said socketed member and swingable into and out of said member to releasably secure said flexible element in said socketed member.

2,470,942
SHOE WELT
Emil R. Ouimet, Brockton, Mass.
Application October 23, 1946, Serial No. 705,065
3 Claims. (Cl. 36—78)



1. A welt comprising a pair of superposed leather strips cemented together in face to face relation with their flesh faces in mutual contact, the upper and wider of said strips extending inwardly and downwardly beyond and spaced from the adjacent edge of the lower and narrower strip, said space providing an inseam-receiving groove.

2,470,943
APPARATUS FOR CLARIFYING FLUIDS
Bruno Page, New York, N. Y., assignor, by mesne assignments, to William R. Warner & Co., Inc., New York, N. Y., a corporation of Delaware
Application December 14, 1945, Serial No. 634,935
1 Claim. (Cl. 210—170)

Apparatus for dispensing whole blood comprising a container having an open mouth, a stopper seated within said mouth, said stopper having an opening for withdrawing the container contents and an opening for insertion of a vent tube, a recess in the lower face of said stopper surrounding said first mentioned opening, a cylindrically shaped, extensible straining member secured at one end to the lower face of said stopper in said recess and closed at the other end to protect said first mentioned opening from the interior of the container, means depending from said first mentioned opening in the stopper for supporting said straining member, said supporting means including a spring maintained in coiled position when the supporting means is retained in said opening but being adapted to extend when the supporting means is forced from said opening to cause the straining member to assume an extended position.

2,470,944
INTERLOCK MECHANISM FOR SWITCH AND RECEPTACLE UNITS
Willard E. Parish, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a corporation of New York
Application August 14, 1946, Serial No. 690,383
6 Claims. (Cl. 200—50)

1. An interlock mechanism for a switch and plug comprising a switch and plug receptacle housing, a switch and receptacle mounted in said housing, switch actuating mechanism operable to move said switch into on and off positions, a plug lock member mounted in the receptacle and movable into and out of plug engaging position and operable when in plug engaging position to prevent insertion of a plug in the receptacle, and to lock a plug positioned in the receptacle against withdrawal therefrom, a plug lock control member movable manually exteriorly of the casing independently of said switch actuating mechanism to move said plug lock member out of plug locking engagement, a retaining member operable to hold said control member in such position to maintain the plug lock member out of engagement and being operable upon insertion of a plug in the receptacle to release said control member and permit the plug lock member to move into plug locking engagement, and said switch actuating mechanism being cooperable with said control member to prevent such manual movement thereof when the switch is in the on position.

2,470,945
DI(ORTHOACYLAMINOARYL) DISULFIDE SOFTENERS FOR RUBBERS
Philip T. Paul, Naugatuck, Conn., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application January 26, 1945, Serial No. 574,817
18 Claims. (Cl. 260—30.8)

1. A composition of matter comprising a rubber selected from the group consisting of natural rubber, polymers of butadienes-1,3, and copolymers of butadienes-1,3 with a compound which contains a $CH_2=C<$ group and is copolymerizable with butadienes-1,3, and, as a softener therefor, a di(orthoacylaminoaryl) disulfide, the said di(orthoacylaminoaryl) disulfide being present in a quantity not more than 5 parts per 100 parts of said rubber.

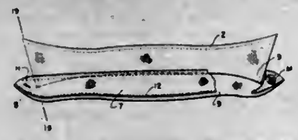
2,470,946
2,2'-DITHIO BIS (N-ARYL CARBAMIC ESTER) SOFTENERS FOR RUBBERS
Philip T. Paul and Lyndon B. Tewksbury, Jr., Naugatuck, Conn., assignors to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application March 15, 1945, Serial No. 582,988
18 Claims. (Cl. 260—30.8)

1. A composition of matter comprising material selected from the group consisting of natural rubber, synthetic rubber polymers of butadienes-1,3 themselves, and synthetic rubber copolymers of butadienes-1,3 with a compound which contains a single $CH_2=C<$ group and is copolymerizable with butadienes-1,3, and, as a softener therefor, a 2,2'-dithio bis (N-aryl carbamic ester) in which the carboxyl groups are linked to aliphatic carbon atoms of radicals containing not more than 12 carbon atoms and selected from the group consisting of alkyl, haloalkyl, alkoxyalkyl, cycloalkyl and aralkyl radicals, the said 2,2'-dithio bis (N-aryl carbamic ester) being present in a quantity not more than 5 parts per 100 parts of the rubber.

2,470,947
2,2'-DITHIO BIS PROPIONANILIDE SOFTENER FOR RUBBERS
Philip T. Paul, Naugatuck, Conn., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Original application January 26, 1945, Serial No. 574,817. Divided and this application February 6, 1947, Serial No. 726,955
16 Claims. (Cl. 260—30.8)

1. A composition of matter comprising a rubber selected from the group consisting of natural rubber, polymers of butadienes-1,3, and copolymers of butadienes-1,3 with a compound which contains a $CH_2=C<$ group and is copolymerizable with butadienes-1,3, with which is admixed .5 to 5 parts of 2,2'-dithio bis propionanilide per 100 parts of said rubber.

2,470,948
DI(ORTHOACYLAMINOARYL)DISULFIDE SOFTENERS FOR RUBBERS
Philip T. Paul, Naugatuck, Conn., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Original application January 26, 1945, Serial No. 574,817. Divided and this application February 6, 1947, Serial No. 726,956
17 Claims. (Cl. 260—30.8)



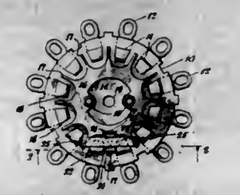
17. A composition of matter comprising a rubber selected from the group consisting of natural rubber, polymers of butadienes-1,3, and copolymers of butadienes-1,3 with a compound which contains a $CH_2=C<$ group and is copolymerizable with butadienes-1,3, and, as a softener therefor, a di(2-aroylaminophenyl) disulfide, the said di(2-aroylaminophenyl) disulfide being present in a quantity not more than 5 parts per 100 parts of said rubber.

2,470,949
DI(ORTHOACYLAMINOARYL) DISULFIDE SOFTENERS FOR ISOOLEFIN-DIOLEFIN COPOLYMERS
Philip T. Paul, Naugatuck, Conn., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application February 8, 1947, Serial No. 727,301
16 Claims. (Cl. 260—30.8)

1. A composition of matter comprising a rub-

bery copolymer of a major proportion of an isoolefin having not more than 6 carbon atoms and a minor proportion of a conjugated diene having not more than 6 carbon atoms and, as a softener therefor, a di(orthoacylaminoaryl) disulfide, the said di(orthoacylaminoaryl) disulfide being present in a quantity not more than 5 parts per 100 parts of said copolymer.

2,470,950
SHIRT COLLAR CONSTRUCTION
Edward C. Pfeffer, Jr., Troy, N. Y., assignor to Cluett, Peabody and Co., Inc., Troy, N. Y., a corporation of New York
Application February 15, 1946, Serial No. 647,919
9 Claims. (Cl. 2—131)



1. A turn-down shirt collar having a neckband part and a relatively stiff top part connected together by a seam, said neckband part having a button near one of its ends and a button hole near the other of its ends by which the neckband part may be secured in closed loop condition, said top part having its end portions only extending into and partly across the neckband part, beyond said seam that connects the top and neckband parts, at least approximately to the theoretical straight line of said neckband part connecting the center of the button and the outer end of the button hole.

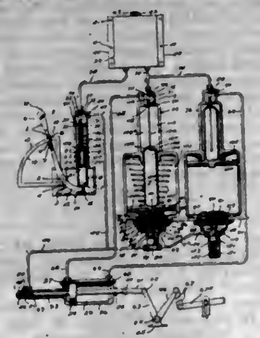
8. A turn-down shirt collar having a top and a neckband connected together by a seam, with a fold line close to and generally parallel with the seam junction between said top and neckband, the neckband having a button hole in an end thereof and a fastener at the other end of the neckband, each end portion of said top extending beyond said seam and into the neckband solely for a distance less than about one-fourth the length of the neckband, each of said extending portions being generally triangular in shape with one side of the triangle in approximate end to end alignment with the adjacent end edge of the top part, and another side adjacent and generally parallel to the fold line, and each of said portions also extending from the fold line toward the opposite edge of the neckband, at least approximately to a theoretical straight line through the outer end of the buttonhole and the center of said fastener.

2,470,951
STATOR CONSTRUCTION FOR SWITCHES
George O. Puerner, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application November 21, 1944, Serial No. 564,440
5 Claims. (Cl. 200—11)

1. A rotary switch comprising in combination a stator plate, a plurality of individual contacts spacedly mounted on said plate at a uniform distance from each other and from the center of said plate, at least one common contact mounted on said plate, at least one bridging contact slidably displaceable with respect to said contacts adapted to selectively connect said individual contacts to said common contact, and extensions integrally formed with said common contact protruding into the interspaces between adjoining individual contacts to prevent the bridging con-

tact from dropping into the said interspaces while passing from one individual contact to the next one.

2,470,952
PRODUCTION OF CHLORINATED SYNTHETIC RUBBERS
Theron P. Remy, Los Angeles, Calif.
No Drawing. Application February 7, 1945, Serial No. 576,711
2 Claims. (Cl. 260—85.1)



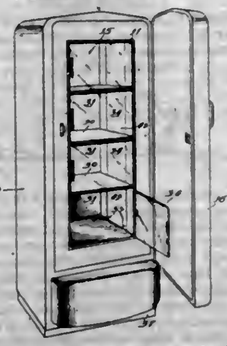
1. The process of production of chlorinated rubbers from butadiene-styrene copolymers which comprises reacting chlorine with a dispersion of said copolymer with carbon tetrachloride which contains a metallic napthenate from the group consisting of sodium napthenate and copper napthenate, said napthenate to be present in amounts from 0.1% to 10.0%.

2,470,953
ALKYD RESIN-OXIDIZED BUTADIENE POLYMER EMULSION
John W. Robertson, Englewood, and John B. Rust, East Hanover, N. J., assignors, by direct and mesne assignments, of one-half to Montclair Research Corporation, Montclair, N. J., a corporation of New Jersey, and one-half to Ellis-Foster Company, a corporation of New Jersey
No Drawing. Application August 31, 1946, Serial No. 694,412
9 Claims. (Cl. 260—7.5)

1. A composition capable of depositing a heat-sensitive non-tacky flexible film on textile fibers, which comprises a fusible oil-modified alkyd resin emulsion, and an emulsion obtained by adding a peroxide to an emulsion of a soluble tacky butadiene polymer and heating until the polymer reaches a stage where it is insoluble and non-tacky.

2,470,954
PNEUMATIC HYDRAULIC TRAVEL CONTROL APPARATUS
Edward A. Rockwell, Cleveland, Ohio
Application June 4, 1943, Serial No. 489,711
17 Claims. (Cl. 60—54.5)

17. In combination, a part to be moved, means for applying a varying degree of hydraulic pressure, a source of fluid pressure differing from the atmospheric pressure, controlled thereby, fluid pressure operated apparatus, including a valve mechanism, constructed to receive the said fluid pressure and apply a hydraulic pressure so as to move said part in one direction, and a fluid pressure operated device, including a valve mechanism, constructed to receive the said fluid pressure and deliver a hydraulic pressure so as to move said part in the opposite direction, the valve mechanism of said apparatus and the valve mechanism of said device being connected together

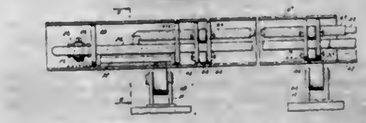


hydraulically for respective hydraulic self-adjustment independently of each other.

2,470,955
PROTEIN HYDROLYSATE CONTAINING ESSENTIAL AMINO ACIDS AND PROCESS FOR THE PREPARATION THEREOF
Melville Sahyun, St. Johns, Mich., assignor to Sterling Drug Inc., New York, N. Y., a corporation of New York
No Drawing. Application June 3, 1948, Serial No. 30,972
15 Claims. (Cl. 195—29)

1. In a method for the preparation of an amino acids composition containing a relatively high proportion of the naturally-occurring tryptophane present in a protein material, the steps of fermenting carbohydrate material present in the protein material and then hydrolyzing the protein material with acid, to give an amino acids mixture which retains naturally-occurring tryptophane present in the protein material.

2,470,956
REFRIGERATOR UNIT
Clinton W. Savidge, Minneapolis, Minn., assignor to Franklin Transformer Manufacturing Company, Minneapolis, Minn., a copartnership
Application August 1, 1945, Serial No. 608,216
7 Claims. (Cl. 62—116)

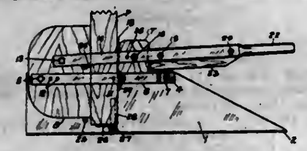


1. A refrigerator comprising a double walled, heat insulated cabinet formed to provide a food storage chamber and having a door affording access to the interior of said chamber, each of a pair of opposite vertical walls of the cabinet being formed with an upright, elongated cavity, contiguous to said chamber, for accommodating an evaporator unit therein, and a refrigerating mechanism disengageably associated with the cabinet and having a pair of spaced apart, upright evaporator units telescopically mounted in said cavities for refrigerating said storage chamber.

2,470,957
SOFT SOLDERING FLUX
James E. Strader, Columbus, Ohio, assignor to Battelle Memorial Institute, Columbus, Ohio, a corporation of Ohio
No Drawing. Application August 27, 1945, Serial No. 613,023
14 Claims. (Cl. 148—25)

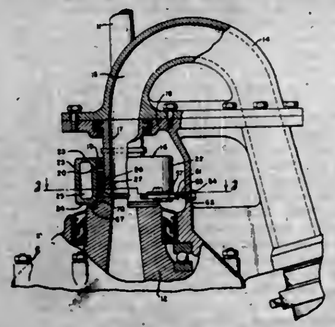
1. A soft solder flux comprising a mixture of a glutamic acid compound and an organic amino compound.

2,470,958
METHOD OF COATING PIPE
Russell C. Stromquist, Westfield, N. J., assignor, by mesne assignments, to Koppers Company, Inc., a corporation of Delaware
Application October 25, 1945, Serial No. 624,458
2 Claims. (Cl. 117—49)



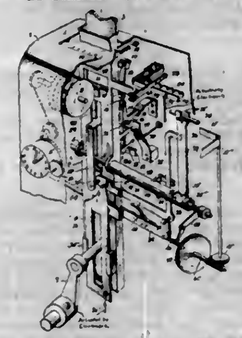
2. In the method of obtaining a substantially continuous uniform coating of bitumen on the interior of a metal pipe of substantial length by first applying heat to the pipe and subsequently applying the bitumen in a melted state; the improvement which comprises rotating the pipe, simultaneously with the rotation of the pipe applying intense local heat successively to portions of the interior surface of the pipe to be coated, the intensity and duration of the heat applied to such successive portions being correlated so as to raise uniformly the skin only of the successive portions of the pipe to a temperature at which bitumen will adhere without appreciably raising the temperature of the body of the pipe wall underlying the heated skin, causing relative motion between the source of heat and the pipe in a direction longitudinally of the pipe and simultaneously applying the hot melted bitumen to the successively heated portions of the pipe immediately after the application of the heat thereto and while said successive portions of the pipe are at such temperature.

2,470,959
APPARATUS FOR FORMING THE ENDS OF WOOD PIECES
Joseph W. Swenson, Summit, N. J.
Application May 12, 1944, Serial No. 535,303
10 Claims. (Cl. 144—30)



1. An apparatus for forming the ends of fence pickets including, a support, a rigid fixed bar fastened at one end to the support and extending longitudinally of the support in spaced relation thereto, the bar having its opposite end fastened to the support by a pivot stud, a member carried on said pivot stud between the bar and support

and having an engagement edge to receive one edge of a picket, a positioning stop for said member fastened to the support, a pair of spaced bars extending on opposite sides of said member above said fixed bar and pivoted to the member nearer said engagement edge than the said pivot stud for the purpose described, a grip block fixedly carried between said pair of bars to grip, between itself and said member, a picket adapted to be passed between said pair of bars, the block

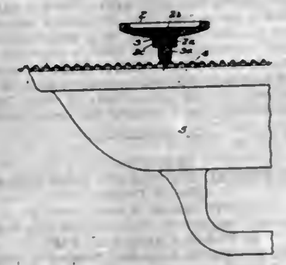


and said member, a stop carried by the support for the end of the picket, a cutter carried between the fixed bar and the support so as to engage the picket and cut it on a curve when the picket is moved in the manner described by the conjoint action of said member and the block, means for lifting the bars carrying said grip block, and means carried by said member for engagement by said pair of bars when they are brought back to starting position for returning said member to starting position against its stop.

2,470,960
AUTOMATIC WASH PIPE OILER FOR ROTARY SWIVELS
Guglielmo R. Tremolada, Los Angeles, Calif., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif., a corporation of California
Application July 20, 1946, Serial No. 685,065
9 Claims. (Cl. 285—97.1)

1. The combination with a rotary swivel of the character described having a shell, a pipe supporting rotatable member carried by said shell, said member having a passage therethrough, means on said shell for supporting a wash pipe above said rotatable member in axial alignment therewith; of a wash pipe sealing device on the upper end of said rotatable member having walls defining a packing opening to receive the lower portion of said wash pipe and rotating with said member; a packing means in said opening comprising a plurality of annular lips facing toward the open end of said wash pipe and engaging the same; walls forming an annular oil reservoir surrounding said opening, a pump-receiving recess having a valved oil inlet passage communicating with said reservoir and a valved discharge passage communicating with said packing opening so as to deliver oil into said packing means at a point spaced from the end of said wash pipe; a pump unit insertable in said recess, comprising a pump cylinder and a pump piston member operative in said cylinder; a lever pivoted on said device for reciprocating said piston member, said lever having an external engageable face; and means on said shell to engage said engageable face and actuate said lever when said device rotates as the result of rotation of said rotatable member.

2,470,961
CARD HOLDER ACTUATED TIME RECORDER
Philipp Vannini, Zug, Switzerland, assignor to Landis & Gyr, A. G., Zug, Switzerland, a corporation of Switzerland
Application February 19, 1945, Serial No. 578,699
In Switzerland August 18, 1944
11 Claims. (Cl. 346—78)

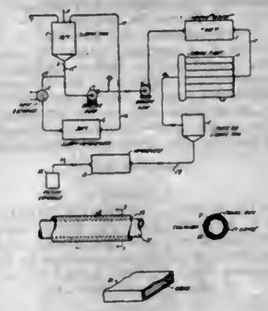


1. In a workman's time recorder, a time controlled printing mechanism, a movable card holder, detent means operating on the card holder and releasable by insertion of a card in the card holder, and means actuated by movement of the card holder for operating the printing mechanism.

2,470,962
FIGURINE BALL PROJECTOR
Harvey M. Wescott, South Westport, Mass.
Application September 26, 1946, Serial No. 699,403
1 Claim. (Cl. 124—7)

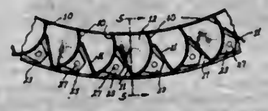
A game apparatus comprising a board, a figure mounted on said board adjacent one end thereof and facing the other end thereof, said figure having an arm depending therefrom and pivoted thereto, said arm having a cup-shaped ball receptacle at the lower end thereof adapted to receive a ball, means for swinging said arm in a rearward direction through an arc, resilient means normally urging said arm in a forward direction, a limit stop to the forward swinging of said arm, said first-named means being releasable and upon release thereof after swinging said arm through said arc in the rearward direction permitting said resilient means to swing said arm suddenly through said arc thereby causing said arm to eject said ball in a forward direction, said board having a transverse slot therethrough, said figure having spaced downward projections registering slidably in said slot, said figure thereby being slidable on said board in a transverse direction, said arm having a pivot pin on its upper extremity pivotally mounted on said figure, a cross-arm secured to said pin, said resilient means comprising a spring having one end anchored to the figure and the other end anchored to one end of said cross-arm, said board having a passage through the end thereof extending into and at right angles to said slot, said first-named means comprising a flexible cord having one end anchored to the other end of said cross-arm and extending from said figure through said slot and said passage out of said board, the other end of said cord being adapted to be held in the hands and pulled.

2,470,963
ATTACHMENT OF BUTTONS TO FABRIC
Bernard A. Weyl, Pittsburgh, Pa.
Application December 21, 1943, Serial No. 515,102
6 Claims. (Cl. 24—90)



6. In combination, a fabric, a button of relatively high melting point material having an integral annular bottom portion of the same material, the bottom surface of said portion being disposed in contiguous relationship with the fabric, and a thermoplastic material of relatively low melting point filling the opening of said annular portion and mushroomed through the fabric and onto said bottom surface of said bottom portion to form a rigid localized bond between the button and fabric.

2,470,964
ROSIN ACID ESTERS
Harold Witticoff, Minneapolis, Minn., assignor to General Mills, Inc., a corporation of Delaware
No Drawing. Application June 16, 1945,
Serial No. 599,949
10 Claims. (Cl. 260—104)



1. A rosin acid ester of a polyhydroxy condensation product resulting from the condensation of formaldehyde and a ketone, in which the molal ratio of formaldehyde to ketone is not substantially less than one mole of formaldehyde per mole of active hydrogen in the ketone.

2,470,965
MANUFACTURE OF GREASE
Harold A. Woods, Wallace J. Yates, and Leendert Klingen, Martinez, and Robert C. Barton, Piedmont, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application January 18, 1947, Serial No. 722,846
16 Claims. (Cl. 252—40)

16. In a process of preparing alkali and alkaline earth metal soap greases, wherein the hot grease is rapidly and uniformly cooled, the improvement which comprises forcing the hot liquid state grease from an enclosed heating and mixing zone directly into a zone of restricted cross-section having a thickness of not more than about 4 inches and cooled by suitable means, said grease being kept in said cooling zone and cooled statically therein substantially at a uniform and uninterrupted rate for a period sufficient for the grease to form a pronounced gel structure throughout and have a desired texture and uniform consistency.

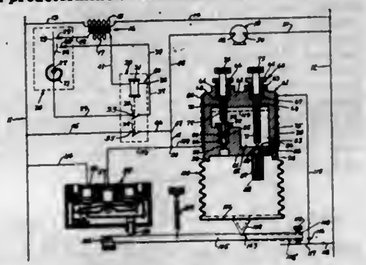
2,470,966
ROTOR
John H. Abbott, Los Angeles, and John W. Anger, Maywood, Calif., assignors to Utility Appliance Corp., Los Angeles, Calif., a corporation of California
Application September 28, 1945, Serial No. 619,030
6 Claims. (Cl. 230—134)

1. A rotor for a rotary blower including a plurality of adjacent elongated vanes having substantially parallel longitudinal axes, said vanes being disposed in spaced relationship along a circular line and being so positioned relative thereto that one longitudinal edge of each vane is disposed inwardly of the line and the other longitudinal edge thereof is disposed outwardly of the line to define a substantially cylindrical rotor having a longitudinal axis which is substantially parallel to the longitudinal axes of said vanes, adjacent ends of adjacent vanes being joined by narrow segments each of which is joined at one end to one vane and at the other end to an adjacent vane, said segments not having any connection with any other part of the rotor, each end of each vane having a separate

radial tab which is formed integrally therewith and is substantially perpendicular to the longitudinal axes of said vanes.

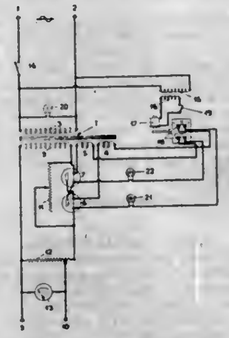
2,470,967
YEAST TREATMENT
Donald Kenneth Alexander, Dolbeau, Quebec, Canada
No Drawing. Application November 21, 1947, Serial No. 787,469
4 Claims. (Cl. 99—14)

1. A method of treating yeast for subsequent extraction therefrom of stable, biologically active proteinaceous and like substances which comprises thoroughly admixing diatomaceous silica with an aqueous suspension of yeast, filtering the mixture, and drying and comminuting to a fine powder the resultant filter cake.



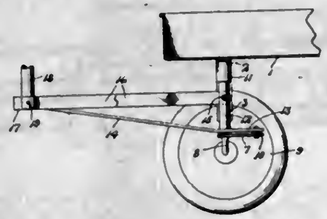
2,470,968
RHEOSTAT CONTROL DEVICE
Leonard E. Aske, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application June 27, 1945, Serial No. 601,815
17 Claims. (Cl. 201—48)

1. A manually operable controller of the class described which includes: a fixed member; a first movable member pivotally attached to said fixed member for movement in a first plane; a first spring means urging said first movable member to a predetermined normal position; a second movable member adapted for manual actuation and pivotally attached to said first movable member for movement with respect to said latter member in a plane at an angle to said first plane; a second spring means urging said second movable member to a predetermined normal position whereby a greater force is required to move said second member about the axis of said second member than about the axis of said first member; a first variable impedance controlled by movement of said first movable member; and a second variable impedance controlled by movement of said second movable member.



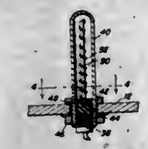
2,470,969
HYDRAULIC STOKER CONTROL
Albert E. Baak, Los Angeles, Calif., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application August 9, 1943, Serial No. 497,897
19 Claims. (Cl. 236—46)

1. A stoker control system comprising a stoker motor, a first switch connected in circuit with the stoker motor for controlling the operation of said motor in response to calls for heat, a second switch connected in circuit with said motor for operating it to maintain combustion in the stoker, thermal means for operating said second switch including an expansible bulb, a reservoir chamber above said bulb, a fluid in said bulb and reservoir, fluid connection means between said reservoir and bulb, flow regulating means in said fluid connection means for restricting the flow to a predetermined rate in each direction between



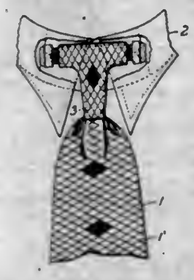
said bulb and reservoir, an electrical heater element for said reservoir connected to said first switch, said second switch means also in circuit with said heater element, said switch means being closed so as to energize the heater and motor when the expansible bulb is in a contracted condition and open when said bulb is expanded to a predetermined amount, and means for controlling said first and said second named circuits to cause a selectively greater expansion of said bulb by said first circuit than by said second circuit.

2,470,970
ELECTRICAL APPARATUS FOR USE IN OBSTETRICS
Frederic Benoit, Vassy, France
Application August 10, 1945, Serial No. 610,130
In France October 12, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires October 12, 1963
8 Claims. (Cl. 128—407)



5. In an apparatus as claimed in claim 1, the provision of an electrode adapted for use at the point of utilization and comprising a thin tin folio, a thick plate of sponge rubber carrying said folio, a lead wire passing through said rubber and adapted to connect the tin folio with the means feeding the current to the point of utilization and a belt of elastic fabric carrying the plate of sponge rubber, and adapted for wear by the patient.

2,470,971
FRONT WHEEL AND STEERING APPARATUS FOR WAGONS
Clifford L. Blackburn, Grand Rapids, Mich.
Application September 15, 1947, Serial No. 774,051
2 Claims. (Cl. 280—87.01)

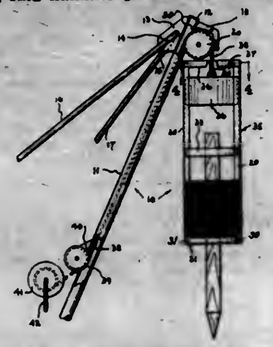


1. In a structure as described, a horizontal bar having a downwardly extending leg at each end thereof, a vertical sleeve secured to each leg, a rod rotatably mounted in and extending through each sleeve, a rearwardly extending arm connected to each rod, a second horizontal bar pivotally connected at its ends to said arms at their rear ends and extending between them, a wheel spindle secured at the lower end of each rod, each having an outwardly extending spindle portion on which a wheel may be rotatably mounted, a vertical rod rotatably connected at its upper end to said first mentioned bar substantially at the middle thereof, a bar secured at the lower end of said rod having an arm extending to the rear thereof, pivotal connections between said arm and said second horizontal bar, said bar secured at the lower end of the last mentioned rod extending upwardly and forwardly at its front portion, a horizontal rod connected with said last mentioned rod extending to either side thereof, a stirrup having sides, the rear ends of which are connected to the end of said horizontal rod, said sides extending forwardly and converging toward each other and joining with a substantially circular loop, said forwardly extending bar having connection with said sides adjacent the loop, and a tongue pivotally connected at one end with said loop and extending upwardly therefrom.

2,470,972
CRANKCASE OIL HEATER
Sam Boger, Dodge City, Kans.
Application May 11, 1948, Serial No. 26,401
1 Claim. (Cl. 219—38)

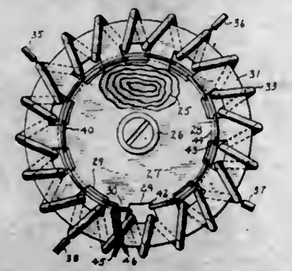
An electric heater for tanks having a threaded bore comprising a shell threaded externally at the lower open end thereof received in the threaded bore of the tank, an internally threaded portion at the lower open end of said shell, a dielectric core positioned in said shell, a dielectric eternally threaded plug received in said internally threaded portion, a bored bushing threadedly engaged in said internally threaded portion above said plug for holding said core in vertical position, a heating element about said core communicative with said plug, a housing about said plug secured to said tank, and a cable extending into said housing communicative with said plug and an electric source.

2,470,973
NECKTIE AND COLLAR COMBINATION
Ransom Y. Bovee, Van Nuys, Calif., assignor of one-fifth to Earl E. Moore, Los Angeles, Calif.
Application January 1, 1945, Serial No. 570,831
10 Claims. (Cl. 2—137)



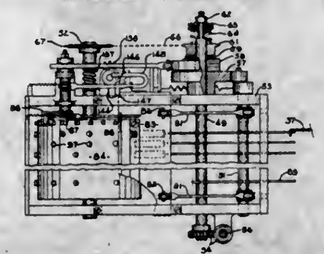
4. In a combination, a quick attaching preformed necktie and a hook-pocket necktie attaching collar adapted to receive hooks adjacent the ends of the neck-band and under the skirted lapels thereof, a preformed necktie secured to a necktie knot-forming fixture, a channel extending through the fixture, a resilient band extending through the channel and secured to hooks at each extremity thereof, said hooks having stop shoulders to prevent them entering the channel by the tension of the resilient band, a compression grip fold in the hooks to engage and hold the resilient band, said stop shoulders on the hooks designed to lean the hooks over for easy catch engagement in the hook-pockets of the collar, and an angle projecting heel upon the knot forming fixture to rest against the front of the collar to project the necktie outward and downward under the attached tension of the resilient band.

2,470,974
POST DRIVER
Willard R. Boydstun, Baker, Oreg.
Application November 3, 1945, Serial No. 626,520
1 Claim. (Cl. 61—73)



In a pile driver including a boom having a housing at one end and a pulley rotatably mounted in said housing for supporting a hammer engaging line, a hammer guide frame including an upper portion and a lower portion, angle members connecting said portions for guiding a hammer slidable therein, means pivotally securing the upper portion of the hammer guide frame relative to the housing, a hammer slidably and non-rotatably mounted in said hammer guide frame, and hand receiving means carried by said cage for retaining the same at an inclined angle relative

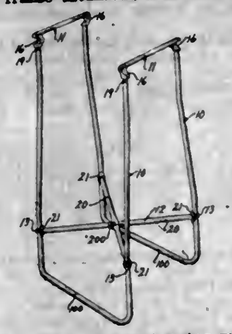
to a ground surface in which a post is being driven, said hammer guide frame being open at



one side facilitating the same to engage an existing fence wire during the driving of a post.

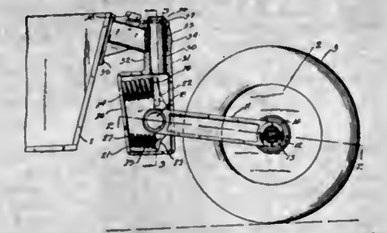
2,470,975
ELECTRICAL APPARATUS
William H. Bussey, Chicago, Ill., assignor, by direct and mesne assignments, to Robert L. Kahn, Glencoe, Ill., as trustee
Application October 26, 1945, Serial No. 624,849
13 Claims. (Cl. 321—68)

1. A static frequency multiplier having a ferromagnetic core consisting of two body portions connected by a path-defining portion, said path-defining portion containing spaced ferromagnetic teeth elements extending transversely thereof, exciting windings for generating a cyclically moving magnetic field within said core with the magnetic flux extending longitudinally of the teeth and the field as a whole moving transversely to the teeth and lengthwise of the path-defining portion, said path-defining portion having a length corresponding to an integral number of path units, each unit of which has a length corresponding to 360 electromagnetic degrees with reference to exciting current, a path unit containing the following for one output phase; a series of ferromagnetic teeth elements forming an odd number of pole pairs; the exciting field creating two conjugate saturated zones spaced from each other by two spaced conjugate unsaturated zones, the teeth in one saturated zone having a magnetic polarity opposite to that of the teeth in the other saturated zone, each unsaturated zone containing a magnetic neutral region with the two neutral regions spaced 180 electromagnetic degrees apart, each unsaturated zone including substantially no more than one entire pole at one time, winding elements linking all teeth, each winding element having a cooperating tooth and becoming active for generating action when its cooperating tooth is swept by an unsaturated zone, and means for connecting the winding elements corresponding to one pole pair in series with the winding elements corresponding to other pole pairs to output terminals to provide a potential at a multiplied frequency whose step-up ratio is said first-mentioned odd number.



2,470,976
APPARATUS FOR PACKING PRODUCTS OF VARIABLE WEIGHT
Eben H. Carruthers, Warrenton, Oreg., assignor to E. H. Carruthers Co., Warrenton, Oreg., a corporation of Oregon
Application June 11, 1945, Serial No. 598,880
26 Claims. (Cl. 214—16)

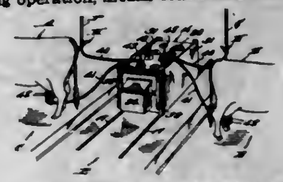
16. A machine of the character described in which components have been segregated into groups in accordance with their weight, a stop for each of said weight groups, means for predetermining a plurality of combinations of components, each combination including components from a plurality of segregated weight groups and each of such combinations including components which combine to add substantially to a predetermined total weight, a column of elements, means shiftable by the predetermining means to positions between the elements of the column for increasing the total length of the column, and means actuated by the column when it reaches the proper total length for actuating a plurality of said stops to thereby release components from the corresponding weight groups.



2,470,977
BAG STAND
Charles A. Chidsey, Jr., Detroit, Mich.
Application March 29, 1948, Serial No. 17,777
2 Claims. (Cl. 248—97)

1. A bag stand comprising a pair of tubular U-shaped frame members each having an aperture in the outer side and near the top of the upright portions thereof, a pair of bag retaining bars each including a horizontally disposed flange and a depending anchorage element at the outer ends thereof generally cylindrical in shape, an anchorage button extending from the outer side of each anchorage element of each of the bag retaining bars over which anchorage buttons the said outer side of the upright portions of the said U-shaped frame members are engaged when assembled onto the said bag retaining bars with the said anchorage elements thereof telescoped into the said tubular U-shaped frame members and with the said anchorage buttons disposed through the said apertures in the said tubular U-shaped frame members, and an X-type bag

supporting floor and cross bracing member disposed and secured between the said pair of tubular U-shaped frame members.



2,470,978
TRAILER CASTER
Stanley R. Du Brie, Detroit, Mich., assignor to Detroit Engineering Laboratories, Inc., Detroit, Mich., a corporation of Michigan
Application September 21, 1946, Serial No. 698,536
6 Claims. (Cl. 16—44)

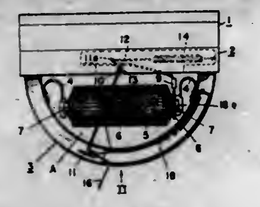
1. In a caster assembly of the type comprising a support arm having a wheel journalled on an axle at the rear end of said support arm and a horizontal pivotal support for the front end of said support arm, means for controlling the pivotal movement of said support arm comprising a pair of diametrically opposed seats mounted on the front end of said arm above and below the pivotal support for the front end of said support arm, a coil spring mounted on the upper seat for carrying the load imposed on said wheel and a coil spring mounted on the lower seat and adapted to serve as a shock absorber, said springs extending forwardly from said seats beyond the front end of said support arm.

2,470,979
MEANS FOR MILKING DOMESTIC FARM ANIMALS AND FOR TEMPORARILY STORING MILK AND COOLING IT
George R. Duncan, Washington, Mo.
Application June 13, 1946, Serial No. 676,368
11 Claims. (Cl. 31—58)

1. A system for simultaneously milking a domestic farm animal and for cooling and storing the milk, without handling, in cans as it comes from the animal comprising a container for holding a milk can in an upright position, a milking machine including a first conduit means adapted for connection to a source of minus pressure, a second conduit means having teat cups for connection to the teats of the animal's udder, closure means closing the open end of said can and for permitting a minus pressure therein during the milking operation, means connecting both of said

conduit means to said closure means and to the interior of said can, whereby minus pressure may be applied to said teat cups through said first conduit means, said receptacle interior and said second conduit means, and controllable mechanical refrigerating and cooling means operatively connected to said container for continuously cooling the milk and removing body heat therefrom during the milking operation and maintaining a predetermined temperature.

2,470,980
COMBINATION BUTTON
Frank Hajny, Newburgh, N. Y.
Application January 7, 1947, Serial No. 720,623
3 Claims. (Cl. 24—113)

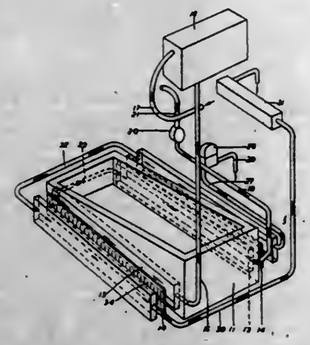


3. A disc-like button comprising a flat primary section and an auxiliary flat section, said sections contactng tightly together throughout their entire inner faces, said primary section being provided with parallel grooves on its inner face only, each of said grooves closed at its inner end and open at its outer end upon the marginal edge of said primary section, said auxiliary section being provided with parallel tongues on its inner face only, said tongues having their inner ends rounded and their outer ends registering with the marginal edge of said auxiliary section, said primary section being provided with an elongated shallow recess only in its inner face between said parallel grooves, and thread-receiving apertures extending at right angles from said shallow recess through said primary section to its outer face, whereby thread in said apertures and shallow recess will frictionally engage said auxiliary section and act as a brake to prevent accidental separation of said sections.

2,470,981
SHUTTLE FOR NARROW WARE LOOMS
Frederik A. Hardick, Enschede, Netherlands
Application June 11, 1947, Serial No. 754,000
In the Netherlands February 26, 1946
Section 1, Public Law 690, August 8, 1946
Patent expires February 26, 1966
6 Claims. (Cl. 139—199)

1. A shuttle for a ribbon loom or the like having a positive weft drive comprising a body mem-

ber, a semi-circular bow secured to said body member forming a semi-circular bobbin receiving opening, said bow being trough shaped in cross-section, resilient bearing members in said opening, a bobbin releasably secured in said bearing members, said trough-shaped bow having a



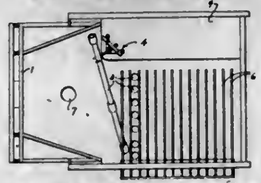
thread guide opening in each side wall thereof, an entrance in the side walls of said bow connecting with said openings in the side walls for insertion of thread from said bobbin and means for closing said entrances.

2,470,982

WATER-COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES AND THE LIKE

Lawrence Hathaway, Oswestry, England, assignor to Coventry Climax Engines Limited, Coventry, England, a British company

Application January 20, 1947, Serial No. 722,998
In Great Britain January 21, 1946
7 Claims. (Cl. 123—170)



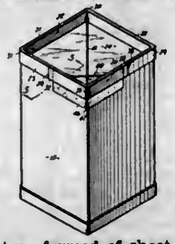
1. A water-cooling system of the closed-circuit type for an internal combustion or like engine, comprising a pair of chambers having intimate contact with one another and one of said chambers having intimate contact with a part of the said engine, means for connecting opposite ends of one of the pair of chambers to the closed-circuit cooling-system of the engine so that it is in series with and forms a part of the said closed circuit, means for supplying cooling liquid from an exterior source of supply to one end of the other chamber and means connected to the opposite end of said other chamber to discharge the cooling liquid therefrom.

2,470,983

SUPPORT AND GUIDE FOR DRILL STEMS

Will S. Hendricks, Wichita Falls, Tex., assignor of one-half to Peyton Castillow, Wichita Falls, Tex.

Application December 12, 1945, Serial No. 634,591
6 Claims. (Cl. 214—1)



4. In a pipe holding device for mounting within a derrick, a base, a pair of arms pivotally mounted on said base and movable with respect thereto, each of said arms having an inturned hook at the outer end thereof for receiving pipe therebetween, means for locking said hooks about said pipe, resilient means for normally urging together the inwardly extending arms, said hooks being releasable from said locking means upon upward movement of said hooks so as to permit the arms to be spread apart for release of said pipe from between said hooks when said pipe is moved upward.

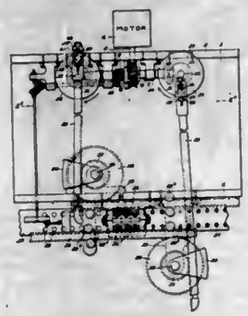
2,470,984

CONTAINER CONSTRUCTION

Raymond H. Horning and Isaac L. Wilcox, Fulton, N. Y., assignors to Oswego Falls Corporation, Fulton, N. Y., a corporation of New York

Application September 7, 1944, Serial No. 552,940
10 Claims. (Cl. 229—5.5)

1. A container formed of sheet material comprising a tubular body, a top closure formed at its periphery with an inverted channel to receive the top edge of the body, the major portion of said channel being sealed to the top edge of the body and the remaining portion being unsealed thereto, the outer wall of the unsealed portion of said channel being weakened intermediate the ends of said portion, a strip of thin sheet material positioned intermediate said unsealed portion of the channel and the adjacent top edge of the body and extending across said weakened part, said strip being sealed to the inner surface of the walls of said channel and being unsealed to the adjacent top edge of the body.



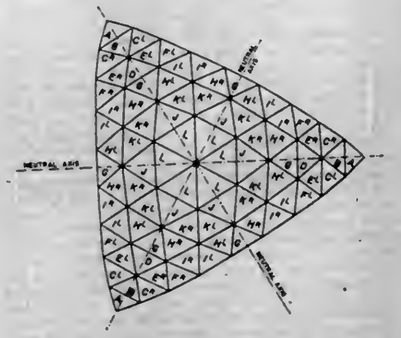
2,470,985

GEARING FOR DRIVING A PLURALITY OF SPINDLES

Arthur Ilsche, Rye, N. Y.

Application March 1, 1946, Serial No. 651,129
7 Claims. (Cl. 74—389)

1. Gearing for operating a spindle assembly the spindles of which are arranged in cooperating pairs and the spindles of each pair in axially aligned relation presenting two cooperating sets of spindles adapted to be driven independently of each other, the said gearing comprising a transmission train for each set of spindles, each train including a plurality of rack bars operatively connected through interposed means to be reciprocated one by the other and terminating in a plurality of pinions driven by one of the afore-



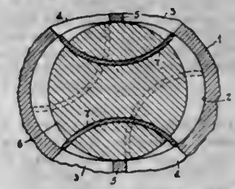
said rack bars, the reciprocation of which periodically reverses the direction of rotation of the pinions, the said pinions being individually mounted fast on the individual spindles of one of the aforesaid sets of spindles, driving means for the trains adapted to impart different speeds of rotation to the two sets of spindles, and an automatic feed for each spindle responsive to rotation thereof for periodically advancing and retracting the two sets of spindles with relation to each other.

2,470,986

INSULATION FOR SPHERICAL TANK SHELLS AND METHOD OF MAKING THE SAME

James O. Jackson, Crafton, Pa., assignor to Pittsburgh-Des Moines Company, a corporation of Pennsylvania

Application January 16, 1947, Serial No. 722,468
8 Claims. (Cl. 154—28)



3. An insulating lining for a spherical tank shell, comprising triangular pieces of slab-like insulating material arranged in edge abutting relation in twelve groups, each of which has an outline approximating the outline of a figure obtained on a spherical surface by intersecting such surface by radial planes which include the edges of one face of a regular convex dodecahedron circumscribed by such spherical surface.

2,470,987

ROTARY PUMP STATOR

James P. Johnson, Shaker Heights, Ohio

Application September 3, 1947, Serial No. 771,887
9 Claims. (Cl. 103—135)

1. A stator for a rotary pump formed with a bore of cross-section which in part comprises a curved line constituting a portion of an Archimedes' spiral, a straight line tangent to one end of such curved line, and another line tangent to the other end of such curved line.

2,470,988

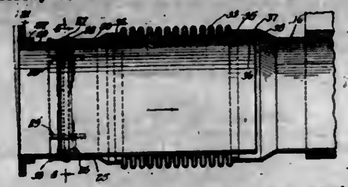
METHOD OF HEAT TREATMENT

Jerome J. Kanter, Palos Park, Ill., assignor to Crane Co., Chicago, Ill., a corporation of Illinois

No Drawing. Application March 15, 1946, Serial No. 654,808
12 Claims. (Cl. 148—14)

1. In a process of the character described, the steps consisting of contacting an article of ferrous material with a ferrous contacting material to purify the ferrous article of interstitially dissolved elements, the contact taking place in a range of elevated temperatures below the A_1 transformation point of the said ferrous article and above the A_1 transformation point of the said ferritic contacting material for a period of time during which a substantial rate of migration of an interstitially dissolved element having lower solubility in ferrite than in austenite is attained from the ferrite to the austenite, the said ferrous contacting material being austenitic at the treating temperature whilst the said ferrous article remains ferritic.

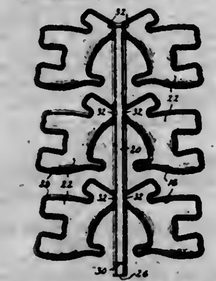
2,470,989



FLEXIBLE CONNECTOR

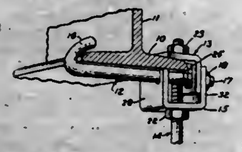
Sidney Keller, Park Ridge, and David Wendell Fentress, Barrington, Ill., assignors to Chicago Metal Hose Corporation, Maywood, Ill., a corporation of Illinois

Application December 16, 1943, Serial No. 514,482
2 Claims. (Cl. 285—97.3)



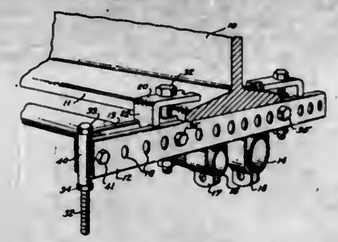
1. A conduit comprising a pair of conduit members arranged in longitudinal continuation, and swivel means for connecting said conduit members for rotary motion relative to each other, said swivel means comprising a pair of concentrically disposed outer and inner band members, said band members being provided with registering inwardly and outwardly directed annular grooves whereby to provide an an-

nular recess between the band members, and an annular ring member disposed within said recess whereby to form a swivel connection between



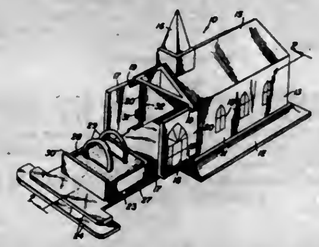
said band members, one of said band members being provided with at least one longitudinally extending slit to facilitate the assembly of the band members with respect to the ring member.

2,470,990
METHOD OF MAKING INFLATED ARTICLES
Frank H. Kennedy, New York, N. Y.
Application August 31, 1948, Serial No. 47,121
12 Claims. (Cl. 154—85)



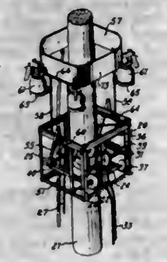
1. A method of making fluid containing bodies from heat sealable plastic sheet material comprising superimposing layers of said material, uniting proximate areas of said layers by heat sealing to form a plurality of inflatable envelopes and a manifold interconnecting them with a common fluid inlet, introducing fluid through said inlet and manifold into said envelopes, and closing said envelopes with respect to said inlet by heat sealing.

2,470,991
ADJUSTABLE BEAM CLAMP
Harry L. Kindorf and Orlan C. Kindorf, San Francisco, Calif.
Application January 13, 1948, Serial No. 2,054
6 Claims. (Cl. 248—72)



1. A beam clamp comprising a rod having a hooked end engageable over one edge of a beam flange, a hook plate slidable on the rod to engage the opposite edge of the flange, a nut threaded on the rod to urge the hook plate toward the flange edge, and means to urge the hook plate toward the rod and into firm contact with the flange.

2,470,992
BEAM CLAMP FOR CONDUIT SUPPORTS
Harry L. Kinderf and Orlan C. Kinderf, San Francisco, Calif.
Application January 13, 1948, Serial No. 2,055
5 Claims. (Cl. 248—72)

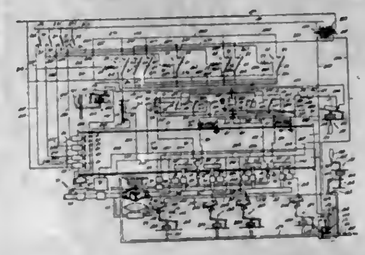


1. Means to clamp a slotted conduit support or the like to a beam flange comprising a U-shaped member secured to the conduit support within the slot thereof, an angle member having an edge resting on the support and an edge overlying the beam flange, and means passing through both members to engage the flange between the support and the angle member.

2,470,993
CABINET HAVING COMBINED DOORS AND SLIDABLE SHELF
Melvin L. Kramer, Newark, N. J., assignor to Marjorie Kramer, Newark, N. J.
Application December 4, 1947, Serial No. 789,665
1 Claim. (Cl. 312—186)

A horizontally elongated container having an open end and including a pair of spaced side walls, a pair of coacting doors provided at the open end of said container and swingable laterally on vertical hinge pins, an elongated panel slidable longitudinally in and out of said container through the open end of the latter, a transverse wall provided on and extending upwardly from an intermediate portion of said panel, said transverse wall being engageable with said doors whereby the latter may be swung from their closed to their open positions when the panel is slid outwardly from the container, and means for automatically closing said doors when the panel is slid inwardly and for locking the closed doors until the panel is again withdrawn, said means comprising a pair of blocks secured to inner surfaces of the doors adjacent the hinge pins, said side walls being formed with block receiving recesses disposed adjacent the ends of said transverse wall when said panel is slid inwardly, the sliding of said panel into said container engaging end portions of said transverse wall with said blocks to effect closing of said doors, whereupon said blocks are received in said recesses and are locked therein by the ends of said transverse wall.

2,470,994
FLAG POLE PAINTING APPARATUS
Daniel Kremko and Joseph Podufaly, Detroit, Mich.
Application June 1, 1946, Serial No. 673,771
6 Claims. (Cl. 91—45)

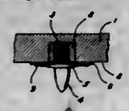


1. A flag pole painting machine of the kind described, said machine including a cage having a set of rollers in stationary brackets and frictionally abutting a pole from one side, and a set of rollers on a movable shaft and frictionally abutting the pole from the other side, means to rotate the rollers in unison by a cable operable from the ground to vary the vertical position of the cage with respect to the pole, a frame slidingly seated on top of the cage, a plurality of paint sprayers mounted on the frame, and directed towards the pole, pivoted arms connecting the frame to the movable shaft and means operable by a cable from the ground to shift with respect to the cage both the movable shaft with the rollers thereon into a frictional engagement with the pole and the frame with the sprayers to maintain the pole in central position with relation to the sprayers, and pneumatic means controlled from the ground to operate the sprayers.

2,470,995
FISHLINE SINKER
Henry J. Lesser, Seattle, Wash.
Application March 4, 1946, Serial No. 651,684
2 Claims. (Cl. 43—52)

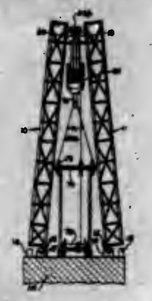
1. In a fish line sinker, a sinker body; a resilient friction clip secured to an end portion of said sinker body adapted to frictionally and releasably grip a fish line; and two bail shaped fish line engaging members carried by said sinker body and extending longitudinally thereof, each fish line engaging member comprising two spaced apart end members embedded in said sinker body and protruding therefrom and a substantially straight bar portion connecting said two end members, the end members of one bail shaped member being spaced a short distance inwardly from the end members of the other bail shaped member and the bar portions of said two bail shaped members being positioned relatively close together in substantially parallel relation with both bar portions spaced a substantial distance from the sinker body and with one bar portion closer to the sinker body than the other and with the bar portion of the shorter bail shaped member extending longitudinally of the sinker body substantially between the sinker body and the bar portion of the longer bail shaped member, said bail shaped members being adapted to receive therebetween a portion of a fish line remote from the ends thereof to removably engage the sinker body with the fish line.

2,470,996
BURNER CONTROL SYSTEM
William L. McGrath, Philadelphia, Pa., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application October 26, 1942, Serial No. 463,340
15 Claims. (Cl. 236—1)



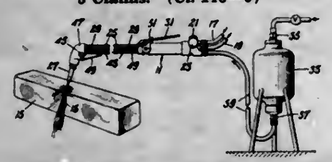
2. In a fluid fuel burner control system, a plurality of burners, an electrically operated shut-off valve for controlling the flow of fuel to all of said burners, a pneumatically operated valve for also controlling the flow of fuel to all of said burners, means responsive to a controlling condition indicative of the demand for burner operation for gradually controlling the pressure of the pneumatic fluid associated with said pneumatically operated valve so as to cause said valve to be modulated between maximum and minimum open positions, further electrically operated valves individually controlling the flow of fuel to said burners, pneumatically operated switches controlling said further valves to cause them to open sequentially as the pneumatic pressure changes, an electro-pneumatic relay for causing said further valves to close and said pneumatically operated valve to move to minimum position independently of said condition responsive means when said relay is deenergized, energizing means for both said electrically operated valve and said electro-pneumatic relay, and means including a main controlling switch effective when moved to one position to cause simultaneous deenergization of said electrically operated valve and said electro-pneumatic relay.

2,470,997
SHOE SPIKE
Robert McKenzie, Glendale, Calif.
Application February 4, 1946, Serial No. 645,270
4 Claims. (Cl. 36—59)



1. In combination: a shoe spike having a shank and a flange disposed around the shank; and a plate adapted to be disposed between the flange and the bottom of the shoe, said plate being in the form of a piece separate from the spike, and

having an area extending beyond the flange, said area having a ridge spaced from the flange and

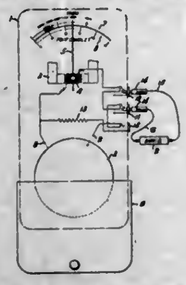


surrounding the spike in a manner to provide additional ground gripping surface.

2,470,998
PORTABLE MAST
Robert H. McPherson, Lynwood, Calif.
Application October 8, 1945, Serial No. 621,105
1 Claim. (Cl. 189—15)

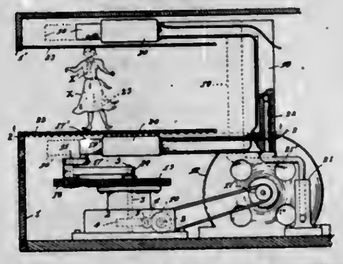
In a portable mast of the class described, comprising: a pair of legs, each leg comprising an upper and lower section of generally rectilinear cross-section, said sections being so constructed and arranged that the sections will telescope together; means hinging the upper sections together adjacent their upper ends; pivoting members on adjacent inner corners of one side of the mast; complementary supporting members fixed to a base; supporting members for the opposite inner corners for supporting the mast when it is raised from a prone to an upright position while the leg sections are telescoped; and supporting means for the outer sides of the lower ends of the lower sections when the legs are extended.

2,470,999
THERMOCHEMICAL METAL REMOVAL
Edward Meincke, Scotch Plains, N. J., assignor to The Linde Air Products Company, a corporation of Ohio
Application July 28, 1944, Serial No. 547,062
3 Claims. (Cl. 148—9)



1. A method of rapidly initiating and effecting a thermochemical metal-removing reaction along a selected path on a ferrous metal body which is readily amenable to ordinary thermochemical metal-removing procedures wherein only a jet of oxygen and a preheating flame are progressively applied against initial and successive portions of said metal body, said method comprising first heating to its oxygen-ignition temperature a selected region of said body at which said metal-removing reaction is to begin by concurrently directing together against said region a jet of metal-removing oxygen, a preheating flame, and finely-divided burning combustible metallic adjuvant powder to cause said powder to impart its heat of combustion to said region whereby said body is heated substantially instantaneously to the oxygen-ignition temperature thereof in said region; then interrupting the supply of adjuvant powder to said region immediately after said body has become ignited therein; and thereafter continuing the thermochemical metal-removing reaction by directing only said jet of metal-removing oxygen and said preheating flame against successive portions of said body along said path in a direction away from said region.

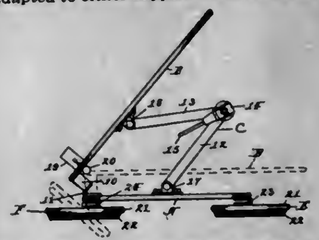
2,471,000
ALUMINA GEL PELLETS
Joseph U. Messenger, Dallas, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application May 23, 1947, Serial No. 750,171
10 Claims. (Cl. 252—448)



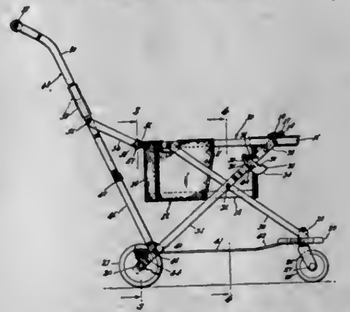
1. The process of preparing spheroidal particles of alumina gel which comprises forming a hydrosol of alumina, maintaining a body of water-immiscible liquid above a body of an aqueous solution of a base capable of converting said hydrosol to a gel, introducing said hydrosol to said body of water-immiscible liquid in a manner to produce sol globules whereby said globules assume spheroidal shape due to surface tension and pass through the interface into said aqueous solution and are thereby caused to gel to form spheroidal particles of alumina hydrogel and maintaining in said aqueous liquid a substantial amount of an inert water soluble organic liquid capable of reducing the density differential and the interfacial tension between the bodies of water-immiscible liquid and aqueous solution.

2,471,001
COMBINED OHMMETER AND ILLUMINATION METER
John H. Miller, Short Hills, N. J., assignor to Weston Electrical Instrument Corporation, Newark, N. J., a corporation of New Jersey
Application October 2, 1944, Serial No. 556,857
5 Claims. (Cl. 175—183)

1. In an electrical measuring instrument, a current-generating photocell, a measuring instrument having scale means comprising a scale graduated in resistance values, said instrument including a permanent magnet establishing a magnetic field and a coil pivotally mounted for movement in said magnetic field and carrying a pointer movable along said scale means, terminal members across which a resistance may be connected for measurement of its magnitude, circuit elements connecting said photocell and moving coil in series circuit with said terminal members, and adjustable light shield means for controlling the light reaching said photocell to regulate the current output to bring the instrument pointer to the zero scale graduation when said terminal members are short-circuited.



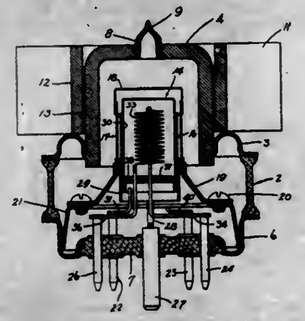
2,471,002
ANIMATED DISPLAY DEVICE
George F. Mohr, Peoria, Ill.
Application February 13, 1946, Serial No. 647,255
5 Claims. (Cl. 46—45)



1. A device of the nature described including in its construction an electro U-shaped magnet mounted to swing, driving mechanism in operative engagement therewith including a rotatable member mounted for orbital movement about a common point in a horizontal plane, and itself rotatable, a part fixed with respect to said member and rotatable therewith, the said magnet being pivotally connected to said part distant from the axis of rotation of said member, the opposite poles of the magnet lying in a vertical plane, an armature-figure interposed between said poles, a magnet coil winding on each pole of the magnet, the number of ampere turns of the windings on the upper pole being greater than the number of turns on the lower pole, thus tending to counteract the weight of the armature-figure by a predominating magnetic attraction in said upper pole, and means for maintaining said armature-figure in spaced relation to the upper of the two poles in opposition to the magnetic attraction of that pole for the armature-figure.

2,471,003
FOLDING LAP TABLE
William Monahan, Los Angeles, Calif.
Application March 8, 1948, Serial No. 13,609
2 Claims. (Cl. 311—23)

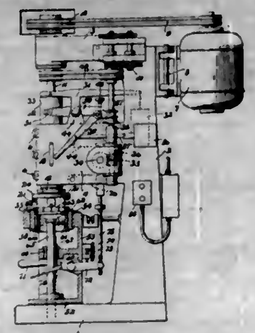
2. A folding lap table, comprising a relatively thin horizontal base plate, a relatively thin rest plate, said plates being hinged together along their rearward transverse edges to permit upward forwardly inclined adjustment of said rest plate on said base plate, brace arm means having links foldably secured together in selectable angular adjustment between and to said plates, a pair of relatively thin friction shoe plates extended lengthwise substantially the width of and below said base plate and hingedly connected along their medial portions to the front and rearward edges of said base plate, said shoe plates being adapted to either support the base plate horizontally in the lap or as a brace at selected inclination between the lap and breast portions of the user, and the rest plate is adapted to be held at selected inclination on the base plate.



2,471,004
BABY STROLLER-WALKER
Robert Moster, Rushville, Ind.
Application May 21, 1946, Serial No. 671,135
3 Claims. (Cl. 280—36)

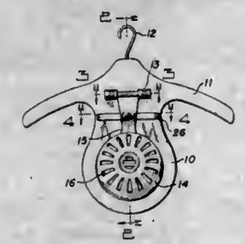
1. A collapsible baby stroller-walker comprising, a top frame portion, a seat carried by said top frame, a bottom portion including front and rear wheel carrying members, wheels mounted on said wheel carrying members, a handle supported by said top and bottom portions, two side frame portions each composed of two bars crossed and pivoted together at their points of intersection, one of the said two cross bars in each side frame portion and its corresponding cross bar in the other side frame portion being pivotally secured to the top frame and fastened to the front wheel carrying member, the other of the said two cross bars in each side frame portion and its corresponding cross bar in the other side frame portion each having one end thereof pivotally secured to the said rear wheel carrying member and each having the other end thereof terminating short of its corresponding side of the top frame portion, a pair of tie bars each having one end thereof pivotally secured to the top frame portion with the other end thereof free for movement, each of the said shorter cross bars being pivotally secured to its corresponding tie bar intermediate the ends thereof, an L-shaped locking element for each of said tie bars having one leg secured to the inner face of each tie bar and ex-

tending therebeyond and the other leg of each locking element extending across a side edge of its tie bar and associated short cross bar, thereby permitting the adjacent portions of each tie bar and its short cross bar to lie in overlapped longitudinal alignment when the frame is in its extended position, a lever pivotally secured to each of said short cross bars and having a portion extending beyond each side of its short cross bar, a spring having one end connected to each short cross bar and its opposite end connected to one of the extended portions of its lever, the other extended portion of each lever constituting a handle for swinging the lever against the tension of its spring, the handle portion of each of said levers being provided with a cutaway portion for receiving the second mentioned leg of its L-shaped locking element.



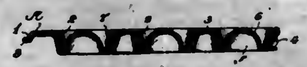
2,471,005
BASE STRUCTURE FOR ELECTRON TUBES
Robert L. Norton, Belmont, Calif., assignor to Eitel-McCullough, Inc., San Bruno, Calif., a corporation of California
Application August 27, 1946, Serial No. 693,223
4 Claims. (Cl. 250—27.5)

1. An electron tube comprising an envelope including a metallic ring and a disk-like vitreous header sealed along its periphery to said ring, a contact prong disposed centrally of the ring and sealed to the header, said prong having an inner end projecting into the envelope and an outer contact end projecting externally of the envelope, and electrodes in the envelope including a control grid connected to and supported by the inner end of the prong and a screen grid connected to said ring.



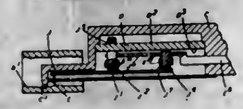
2,471,006
PISTON RING BORING AND BEVELING MACHINE
Holly M. Olson, Muskegon, Mich., assignor to Sealed Power Corporation, Muskegon, Mich., a corporation of Michigan
Application December 14, 1946, Serial No. 716,267
1 Claim. (Cl. 77—1)

In a machine of the class described, a vertically positioned sleeve adapted to hold a plurality of parted piston rings in compressed condition, means for periodically moving all of said rings upwardly in said sleeve a distance equal to the thickness of a ring whereby one ring is ejected from said sleeve at each such movement, means for machining the uppermost of said rings in said sleeve between said periodical movements, and a block fixed above said sleeve close to the ring opening therein, whereby upon ejection of a



ring and sudden expansion thereof it will strike said block and bounce away from the sleeve.

2,471,007
COAT HANGER
Frank Pasznicki, Hamtramck, Mich.
Application February 8, 1946, Serial No. 646,251
1 Claim. (Cl. 223—85)

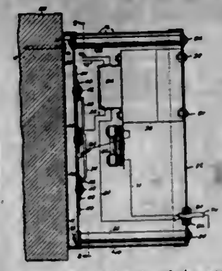


A hanger of the kind described including a flat body member provided with arms extending laterally therefrom in opposite directions for suspension of a coat, a semi-spherical shell to fit over the crown of a hat and a narrow strip extending radially from said shell and hinged at its upper end to the surface of said flat body member at a point midway said arms, the strip having an upwardly forming curl to accommodate the upwardly turning brim of the hat, the open side of the shell tending to abut by gravity, the surface of said flat body portion.

2,471,008
BATH MAT
George E. Pretty, Coshocton, Ohio, assignor to The Pretty-Scheffer Company, Coshocton, Ohio, a corporation of Ohio
Application April 9, 1946, Serial No. 660,629
7 Claims. (Cl. 4—185)

1. A mat of the character described comprising a substantially flat body of resilient material having integral vacuum cup gripping members formed therein upon each of the opposite surfaces of the mat.

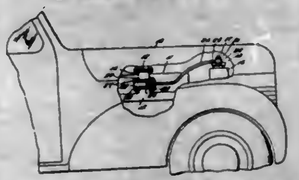
2,471,009
APPARATUS FOR MEASURING OR INDICATING THE ROUGHNESS OR UNDULATIONS OF SURFACES
Richard Edmund Reason, Leicester, England, assignor to Taylor, Taylor & Hobson Limited, Leicester, England, a company of Great Britain
Application August 15, 1944, Serial No. 549,580
In Great Britain May 13, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires May 13, 1963
19 Claims. (Cl. 73—105)



1. Apparatus for measuring the roughnesses or undulations of a surface, comprising in combination a stylus for engaging the surface under test, means for effecting relative movement between the stylus and the test surface whereby the stylus is traversed along said surface, guiding means for constraining the traversing movement to take place substantially parallel to the test surface, a detector member, means whereby the detector member is traversed relatively to the test surface with the stylus but is movable during traversing in accordance with the working movements of the stylus approximately normal to the test surface, a reference member which remains stationary relatively to the test surface during the traversing movement and is provided with a reference surface coupled with the detector member through at least one gap which is caused by the relative movement between the parts to travel along the reference surface during traversing and is varied by the movements of the detector member in accordance with the working movements of the stylus, said reference surface lying substantially parallel to the direction of traversing and constituting a datum with respect to which the working movements of the stylus can be measured, a measuring instrument, and means whereby said variable coupling controls such instrument.

2,471,010
SEALING COMPOSITIONS CONTAINING CHLORINATED DIPHENYL AND GRAPHITE
Laurence L. Rector, Fort Worth, and Charles L. Cron, Houston, Tex.
No Drawing. Application February 26, 1948, Serial No. 11,328
10 Claims. (Cl. 260—37)

1. A sealing composition including, 45% to 55% chlorinated diphenyl containing 45% to 65% chlorine, and 55% to 45% amorphous graphite.

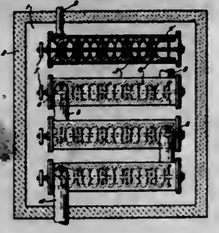


2,471,011
BATTERY CHARGER AND RECTIFIER THEREFOR
Arthur L. Shapiro, Wilmette, Ill.
Application December 19, 1946, Serial No. 717,176
7 Claims. (Cl. 175—363)

1. A battery charger of the type described comprising a housing having a back cover plate and a front cover plate, a transformer mounted on said front cover plate, a plurality of binding posts extending back from said front cover plate, a rectifying unit mounted on said binding posts,

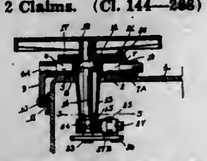
said unit comprising a back plate and a plurality of rectifier plates individually mounted on said back plate.

2,471,012
FUEL SAVING DEVICE
Clifford Spaw, Detroit, Mich.
Application September 14, 1944, Serial No. 554,081
1 Claim. (Cl. 123—25)



In combination with a humidifying attachment for internal combustion engines having a conduit communicating with a radiator and an intake manifold, a connection for releasably securing said conduit in communication with said radiator including, a radiator cap, a hollow bolt extending through said cap and in open communication with the interior of the radiator, a collar on said bolt on said cap, a lateral bore in said collar communicating with the interior of said bolt, a laterally extending pipe supported by said lateral bore, and adapted for releasable engagement by said conduit.

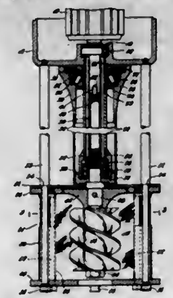
2,471,013
AMMONIA RECOVERY IN SODA ASH PRODUCTION
John Ross Taylor, Westmount, Quebec, Canada, assignor to Richard Kellogg Wurtele, Goderich, Ontario, Canada
Application June 17, 1944, Serial No. 540,784
In Canada June 24, 1943
1 Claim. (Cl. 23—193)



In the production of soda ash, the method of recovering ammonia from filter liquor which comprises maintaining a series of separate bodies of predetermined fixed depth of liquor and lime, continuously feeding a supply of fresh liquor and lime to the first body only of said series, continuously discharging a portion of the last body in the series, continuously withdrawing by gravity flow a portion of the first and intermediate bodies and feeding each withdrawn portion to the next body in the series, separately agitating and sweeping each body to prevent sedimentation therein and to discharge solids with the liquor

in each said withdrawn portion, continuously subjecting all of said bodies to a common heating medium maintained free of contact with the bodies, maintaining each of said bodies free from

contact with external gases to prevent dilution therewith of the liquor and ammonia vapors arising from said bodies, and separately removing said ammonia vapors from each body as it is liberated therefrom.



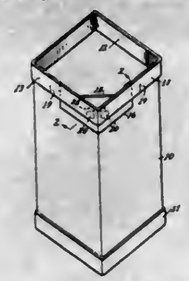
2,471,014
UNIVERSAL WOODWORKING MACHINE TABLE
Henry L. Trebert, Jr., Canandaigua, N. Y.
Application September 21, 1943, Serial No. 503,292
2 Claims. (Cl. 144—266)

2. In a wood working machine, a base, bearings carried by said base, a vertical housing between said bearings, trunnions projecting from opposite sides of the housing through said bearings and mounting the housing for vertical tilting movement, a spindle extending vertically through the housing and rotatably mounted, a work table at the upper end of said spindle, a motor at the lower end of said housing, means for transmitting rotary motion from said motor to said spindle, a bearing bracket carried and shiftable along one trunnion, a manually rotatable shaft carried by said bearing bracket and shiftable with the said bearing bracket into and out of position for imparting rotary motion to the work table and the spindle, a gear carried by the second trunnion, a bearing bracket carried by said base, and a shaft rotatably carried by the last mentioned bearing bracket and carrying a worm meshing with said gear for rotating the trunnions and tilting the spindle to move the work table to an angularly adjusted position.

2,471,015
ENCLOSED SHAFT DRIVE
Jack Watten, London, England
Original application July 21, 1947, Serial No. 762,225. Divided and this application March 29, 1948, Serial No. 17,690. In Great Britain September 11, 1946
3 Claims. (Cl. 308—227)

1. Drive transmitting means for a mixing or emulsifying apparatus having an impeller driven by an electric motor enclosed in a housing, comprising a tube rigidly secured to and extending downwardly from said housing, driving shaft means extending through said tube to the impeller and located by bearings at the lower end of said tube, a casing surrounding said tube, a thrust bearing at the top of said tube to support

said casing, and means at the lower end of said casing for supporting the driving shaft means against axial movement, whereby end loads in said shaft are transmitted through said casing to the tube and motor housing.



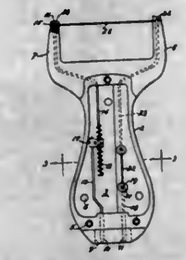
2,471,016
HARD COMPOSITIONS FOR USE IN TOOLS AND METHOD OF MAKING
Beryl Westmoreland-White, Coventry, England, assignor to Messrs. Hard Metal Tools Limited, Coventry, England, a British company
No Drawing. Application July 3, 1945, Serial No. 603,106. In Great Britain May 15, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires March 23, 1965
6 Claims. (Cl. 106—43)

1. A process of making a hard composition for tools, consisting in adding clay to alumina, the resulting aggregate containing from 1½ to 10 per cent of silica and from 90 to 98½ per cent of alumina, grinding the aggregate with abrasive bodies comprising tungsten carbide until an intimate and finely divided mixture is obtained, compressing the mixture, breaking the compressed product into granules corresponding in size to 10 to 100 meshes, moulding the granulated product under pressure and sintering it at a temperature from 1450 to 1700 degrees centigrade.

2,471,017
CONTAINER
Isaac L. Wilcox, Fulton, N. Y., assignor to Oswego Falls Corporation, Fulton, N. Y., a corporation of New York
Application December 4, 1946, Serial No. 714,017
4 Claims. (Cl. 229—5.5)

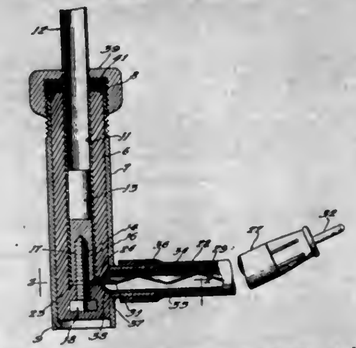
1. A container comprising a body member formed of sheet fibrous material, an end closure having an inverted peripheral channel engaging the inner and outer surfaces of the top edge portion of the body, one of said members being provided with an adhesive material effective to permanently and fixedly seal the channel portion of said end closure member to the contiguous portion of the body member, a strip of material interposed between a portion of said channel member and the contiguous portion of the body member and being non-sealable to said members, said unsealed portion of the top closure member being movable from the body to provide a pour opening, that portion of the strip lying between the confronting surfaces of the outer wall

of the channel and the body being formed with a cut-out to permit a small area of the outer wall of the unsealed portion of the channel member



to seal to the body, said seal being effective to hold said unsealed portion of the channel in liquid tight engagement with the top edge of the body.

2,471,018
PRODUCTION OF SALTS OF AMINO METHIONIC ACID
Michael Henry Miller Arnold and William Eric Perry, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application July 24, 1946, Serial No. 685,910. In Great Britain November 7, 1941
6 Claims. (Cl. 260—513)

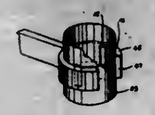


1. A process for the production of alkali metal salts of amino methionic acid, which comprises reacting an alkali metal cyanide and water with the bisulphite of an alkali metal, acidifying the reaction mixture by the addition of sulphur dioxide, whereby the corresponding alkali metal salts of amino methionic acid are precipitated, separating the precipitated salt, and returning the residual liquor to the reaction stage.

2,471,019
SINGEING TOOL
Merle E. Baker, Santa Cruz, Calif.
Application April 24, 1946, Serial No. 664,615
1 Claim. (Cl. 219—29)

An electric hair singeing device, comprising a hollow handle having spaced arms to form a fork, a pair of prongs in the handle for connection to a source of electrical energy, an electric conductor embedded in each fork arm and projecting from the free end thereof in a short stud, each said conductor being connected at its other end to one of said prongs, a variable resistance arranged on one conductor within said hollow handle, a replaceable fuse arranged on one conductor within said handle, a demountable resistance element arranged across the fork arms and connected to the studs, and a removable cover plate on the handle.

2,471,020
RADIO ANTENNA MOUNTING AND CONNECTOR
Harold Z. Benton, Woodstock, Ill.
Application April 25, 1945, Serial No. 590,196
2 Claims. (Cl. 173—324)



2. A moisture proof junction between a lead wire and an antenna mast for the transmission of radio frequency energy at relatively low wattage between the antenna and the lead wire which comprises, an antenna mast, an insulating plug having a blind cylindrical opening extending into one end thereof to receive and embed an end of said antenna mast, a screw mounted in the other end of said insulating plug and coaxially disposed with and projecting through the bottom of said plug and into the opening thereof, and being threadedly engaged with the inner embedded end of said antenna mast, a metallic housing for said insulating plug, an outlet sleeve carried on one side of said housing adjacent the bottom of said plug opening and connecting into said housing, a terminal strip positioned at the bottom of said plug opening for engagement by the embedded inner end of said antenna mast, an electrical conductor leading from said terminal strip through said outlet sleeve for transmitting radio frequency energy at relatively low wattage to or from said antenna, an insulating tube embracing said conductor and having its end projecting into said outlet sleeve, said tube being heat sealed at its end to said terminal strip, a braided shield enclosing said insulating tube and contacting the end of said outlet sleeve, and an insulating jacket enclosing said shield and the outlet sleeve.

2,471,021
RADIO WAVE GUIDE
William E. Bradley, Swarthmore, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Original application August 15, 1944, Serial No. 549,618. Divided and this application August 31, 1944, Serial No. 552,174
11 Claims. (Cl. 178—44)

1. In a high frequency system, a first wave guide conducting high frequency energy, a sec-

ond circular wave guide, said first wave guide having two branches extending on opposite sides of said second wave guide, a symmetrical arrangement of slots diametrically opposed in said second circular wave guide, a symmetrical arrangement of slots diametrically opposed in said first wave guide and in juxtaposed relation with

said first mentioned slots in said circular wave guide for providing a coupling between said second circular wave guide and said first wave guide, means for driving said slots from the first wave guide in the same time phase with respect to the TE_{01} mode and in the same phase for exciting the TE_{01} mode in said second wave guide.

2,471,022

PROCESS OF PRESERVING VEGETABLE TANNED LEATHER

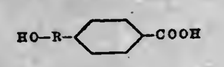
Arthur Cheshire, Cottingham, England, assignor to Richard Hodgson and Sons Limited, Beverley, England, a company of Great Britain

No Drawing. Application December 12, 1945, Serial No. 634,611. In Great Britain January 13, 1945

2 Claims. (Cl. 8—94.21)

2. The process of preserving tanned leather which comprises treating vegetable tanned leather with an aqueous solution of oxalic acid and then with an aqueous solution of a calcium salt to precipitate from about 5% to about 10% of calcium oxalate therein.

2,471,023



HIGHLY POLYMERIC LINEAR ESTERS

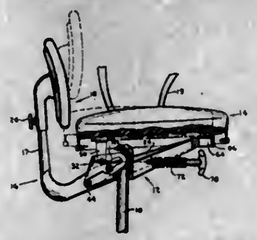
James Gordon Cook, James Tennant Dickson, and Arthur Reginald Lowe, Blackley, Manchester, and John Rex Whinfield, Accrington, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application November 21, 1946, Serial No. 711,470. In Great Britain December 11, 1945

5 Claims. (Cl. 260—78.3)

1. A process for the manufacture of highly polymeric linear esters which comprises heating a compound from the group consisting of (1) acids of the general formula

wherein R is a divalent radical from the group consisting of $(CH_2)_x$ and $(CH_2)_z—O$ wherein x is an integer not exceeding two and z is an integer greater than 1 but not exceeding 3, (2) ester forming derivatives of said acids, and (3) low molecular weight polymers obtained by heating said acids, the heating of said compound being effected under conditions whereby, at least during the later stages of the reaction, volatile by-products are removed, and being continued until filaments formed from a melt of the product can be permanently extended by cold-drawing into useful fibres.



2,471,024

CHAIR WITH TILTING BACK AND AUTOMATICALLY SHIFTABLE SEAT

Roy A. Cramer, Kansas City, Mo.

Application October 4, 1946, Serial No. 701,320

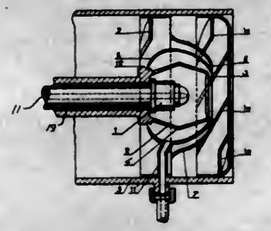
19 Claims. (Cl. 155—77)

1. A chair comprising a support, a seat slidably mounted on said support, a back pivotally connected with the support beneath the seat so as to be capable of tilting movement, and means interconnecting the back and seat for moving the latter forwardly with respect to the support as the back is tilted rearwardly.

2,471,025

OIL BURNER

Börje Konrad Danielsson, Abrahamsberg, and Lars Axel Widing, Goteborg, Sweden, assignors to Aktiebolaget Gotaverken, Goteborg, Sweden, a corporation of Sweden



Application March 30, 1945, Serial No. 585,732

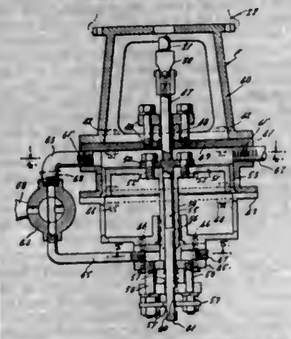
In Sweden March 14, 1944

Section 1, Public Law 690, August 8, 1946

Patent expires March 14, 1964

1 Claim. (Cl. 158—73)

In an oil burner, a conduit for combustion air, a nozzle in said conduit for ejecting a spray of fuel oil, a tubular member surrounding said nozzle and spaced therefrom for catching and collecting part of the oil discharged from the nozzle, a hollow guide member outwardly and radially spaced from the tubular member and co-acting therewith to form a passage having an outlet portion extending obliquely toward the longitudinal axis of the nozzle, said passage receiving a minor part of the combustion air in said conduit and having a cross sectional area decreasing toward its outlet, the outer wall of said guide member and the inner wall of said conduit forming a second air passage through which a major part of the combustion air passes, and spaced slanting guide blades connected to the inner wall of said conduit and extending into said second passage to impart rotary motion to the combustion air passing therethrough.



2,471,026

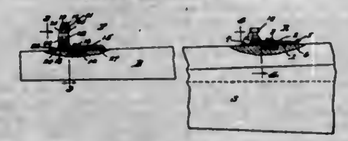
DEVICE FOR DETERMINING THE DEPTH OF LIQUIDS

Ivan D. Eby, New York, N. Y.

Application September 27, 1945, Serial No. 618,880

7 Claims. (Cl. 73—299)

7. An attachment for weighing scales having a frame and a pendent load suspending rod to convert it to a liquid depth measuring device, comprising a dial reading in depth, a scale supported body member having a downwardly opening cylinder and a cylinder closing upper wall provided with a central aperture, and an air supply connection opening into the upper part of the cylinder, a piston freely slidable in the cylinder, the effective area of the piston being predetermined in accordance with the specific gravity of the liquid, and a piston supporting shaft extending through the aperture in the top cylinder wall and connected with the rod whereby the weight of the piston and the apparent load created thereon when air pressure is applied to the upper surface thereof in excess of that applied to its lower surface when the latter pressure equals the pressure on the surface of the liquid whose depth is being measured, whereby the scale reading due to air pressure applied to the top of the piston corresponds with the depth of the liquid at which air bubbles can be released.



2,471,027

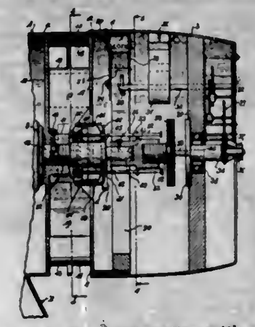
GUN SIGHT

Ambrose H. Evans, Hutchinson, Kans.

Application February 4, 1946, Serial No. 645,265

6 Claims. (Cl. 33—47)

1. A gun sight including front and rear members each including a base pivotally connected intermediate its ends to a gun barrel for lateral swinging movement thereon, whereby to permit reverse positioning of each of the members, parallel elongated upper and lower spaced beads carried by one of the members, and parallel elongated spaced side beads carried by the other member, all of the beads cooperating to define a peep-hole for exposure of the target at which the gun is aimed, the beads of one of the members being of contrasting shades of color at one end, one end of the beads of the other member corresponding with one of said shades, the remaining ends of all of the beads being luminous.



2,471,028

SIREN

John Floyd Fletcher, Cleveland, Miss.

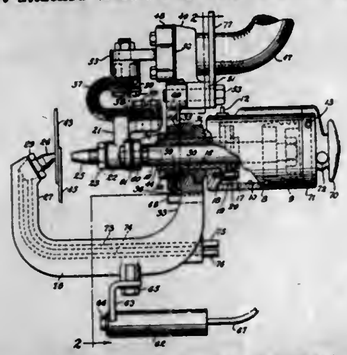
Application December 5, 1945, Serial No. 632,886

6 Claims. (Cl. 116—147)

6. In a siren, the combination with a housing having an annular series of spaced discharge ports formed in a wall thereof, a power driven impeller in the housing for circulating air under pressure and expelling it through said discharge ports at rapidly recurring intervals to produce the usual continuous siren sound, of a control sleeve angularly movable in opposite directions in the housing radially inwardly of and having an annular series of discharge ports spaced to register with the housing discharge ports, the movements of the control sleeve in opposite directions effecting alternate aligning and disaligning of the two series of discharge ports for intermittently interrupting said continuous siren sound, and drive means operated by said impeller for moving the control sleeve at a frequency that is substantially lower than that of the impeller, said drive means including a shiftable clutch member rotatable with the impeller, centrifugally actuated weight means rotating with the impeller and operatively connected to the clutch member to shift the latter when the impeller is rotating in excess of a predetermined speed, a speed reducing gear set having a driving clutch member engaged by the first mentioned clutch member, when it is shifted, to drive the gear set from the impeller, and means at the output end of the gear set for moving the control sleeve.

2,471,029

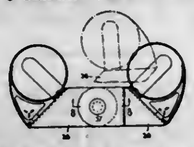
PORTABLE WELDER



Ewell W. Forkner, Cincinnati, Ohio

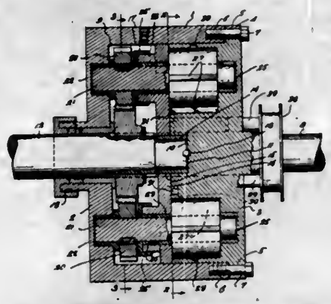
Application June 19, 1947, Serial No. 755,665

3 Claims. (Cl. 219—4)



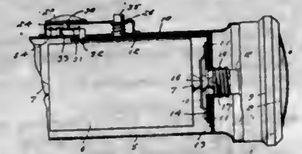
1. An electric welder of the gun type comprising a cylinder having a reciprocating piston therein, said cylinder being provided with ports for alternately admitting fluid pressure to the respective ends of the cylinder to drive the piston in forward and reverse directions, a piston rod for said piston extending through the forward end of said cylinder and projecting beyond the same, a sleeve bearing for said piston

rod projecting from the forward end of said cylinder, a bushing on said sleeve, a suspension member attached to and embracing said bushing, a swivel yoke of substantially C-shape having one end journaled on said bushing between said suspension member and said cylinder, the other end of said yoke being provided with an electrode in substantial alignment with the longitudinal axis of said piston rod, the adjacent surfaces of said suspension member and the journaled end of the yoke being parallel and adapted to be abutted into firm electrical contact, an electrode attached to but insulated from the free end of said piston rod, an overhead support attached to said suspension member, said



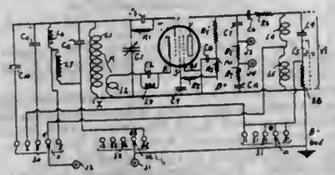
support being provided with electric current input conductors, an electrical connector connected to one of said input conductors and to the piston rod electrode, means electrically connecting another of said input conductors to said suspension member whereby the electrode on said yoke is connected through said yoke and bushing to said suspension member, the journal of said yoke and said suspension member being forced into firm positive electrical contact and also locking said yoke against rotation on said bushing when fluid pressure is applied to the cylinder to move said piston forward to engage work pieces disposed between said electrodes.

2,471,030
TABLE ATTACHMENT FOR BEVERAGE CONTAINERS
Ted E. Foulke, Lyndhurst, Ohio
Application May 10, 1947, Serial No. 747,285
3 Claims. (Cl. 211—75)



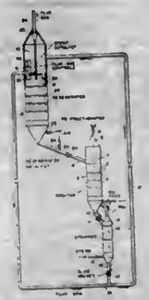
3. A table attachment of the character described comprising a body portion of sheet material having a flat top and two depending side walls, said flat top being adapted to rest on a table top near the edge thereof, and said side walls depending vertically from the opposed ends of said flat top in planes mutually convergent so as to contact the respectively convergent edge face portions of the table top in contact with said walls, beverage container-holding means carried on the respective outer faces of said side walls and comprising collar members formed from sheet metal strip each said strip having an excess end portion extending beyond the periphery of said collar for attachment to its respective side wall at a point spaced from said collar, the wall of said collar being of substantial vertical extent for secure retention of said beverage container therewithin, a vertically reciprocable plunger slidably retained on the outer face of each said side wall below the level of said top plate, a vertical slot in said plunger, a headed retaining stud having its shank passing through said slot and its shank tip fixed in said side wall whereby to guide said plunger and limit vertical travel thereof, said side wall being provided with an aperture near the lower end of said plunger, a clamping finger fixed on the lower end of said plunger, and extending inwardly through said aperture, spring means carried by said side wall and abutting said plunger whereby to urge said finger upwardly into contact with the under side of said table top, the upper end of said plunger having manually operatable horizontal tab means thereon normally resting in the general plane of said top plate and adapted, by manual pressure thereon, to move said plunger and said clamping finger downwardly out of clamping contact with said table top.

2,471,031
HYDRAULIC TRANSMISSION
Vernon E. Gleasman, Elmira, N. Y.
Application September 19, 1944, Serial No. 554,821
17 Claims. (Cl. 74—774)



1. In a hydraulic transmission, a casing open at one side, a block closing the open side of said casing and spaced from the opposite side thereof to provide a chamber in the casing for containing liquid, a rotary drive shaft extending outwardly from said block, a driven shaft passing through the center of the second side of the casing into said chamber and rotatably mounted in a bearing at the center of said block, said block being formed with pump chambers spaced from each other circumferentially thereof, rotary pumps operating in said pump chambers and having shafts extending into the liquid chamber in spaced parallel relation to the driven shaft, a gear carried by the driven shaft within the liquid chamber, gears carried by the pump shafts and meshing with the gear of the driven shaft, the pump chambers each having an inlet adjacent the periphery of the block and an outlet communicating with an annular channel having discharge openings leading therefrom to the liquid chamber, and a valve for controlling flow of liquid from the pump chambers into the liquid chamber consisting of a collar fitting about the drive shaft and slidable along same and plungers projecting from the collar through openings formed in the block and across the channel and the discharge openings transversely thereof to control flow of liquid through same.

2,471,032
FLASHLIGHT SWITCH
Oscar Gray and Howard Lewis, Bloomington, Ind.
Application February 27, 1946, Serial No. 650,422
1 Claim. (Cl. 200—60)

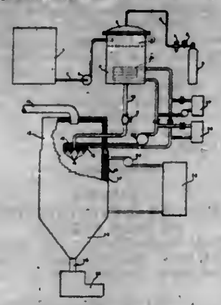


A flashlight including a case forming part of the electrical circuit of the flashlight, a conductor member in said case forming a part of the electric circuit, means insulating the conductor member from the case, a switch housing removably connected to said case and formed of an electrically conductive material, a switch slidably connected to the switch housing and movable into and out of engagement with said conductor member for making and breaking the electrical circuit of the flashlight and a spring-retracted plunger switch in electrical contact with the case, said plunger switch being disposed to be manually projected into contact with said conductor member for closing the electric circuit of the flashlight while the plunger is held in a projected position, said case having spaced openings communicating with the interior of the housing, said connector member having a stud projecting radially outwardly through one of said openings and disposed out of electrical contact with the case and for engagement by the slidable switch when the latter is moved to a circuit closing position and said plunger switch being reciprocally disposed in the other of said openings to contact the conductor member when pressed inwardly against the action of the spring.

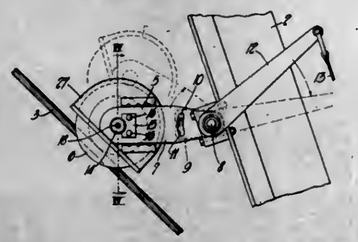
2,471,033
RADIO-FREQUENCY TESTING DEVICE
Philip H. Greeley, Washington, D. C.
Application March 26, 1946, Serial No. 657,173
3 Claims. (Cl. 175—183)

1. Apparatus for testing electric reactance elements comprising, in combination, an oscillating current generator having voltage output terminals, means for tuning said generator over a predetermined frequency range, and indicator means responsive to the setting of said generator tuning means including a scale calibrated in terms of electric reactance element values; a resonant circuit having inductive and capacitive branches of preselected element value; voltage coupling means including a series coupled resistor connecting said resonant circuit for parallel resonance to the output terminals of said oscillating current generator; a voltage indicating device coupled with said parallel resonant circuit for indicating voltage developed thereacross; and means including fixed test terminals and a switch for selectively connecting an unknown reactance element in at least one of the branches of said resonant circuit.

2,471,034
FLUIDIZED CATALYTIC CONVERSION OF HYDROCARBONS
Ralph E. Hall, East Chicago, Ind., and Marion J. Wilcox, Harvey, Ill., assignors to Sinclair Refining Company, New York, N. Y., a corporation of Maine
Application April 30, 1947, Serial No. 745,038
5 Claims. (Cl. 196—52)



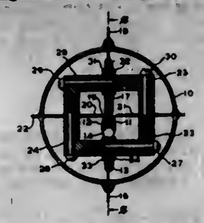
1. In a fluid catalyst process for the conversion of hydrocarbons wherein a gaseous medium is passed upwardly in contact with a dense phase fluidized body of the catalyst in a contact zone, the step of maintaining in the contact zone a plurality of dense phase fluidized bodies of the catalyst interposed between alternate vertically spaced zones of lower catalyst density in which the catalyst in relatively low concentration is entrained in an upwardly rising restricted stream of the gasous medium of substantial height, introducing catalyst to the upper portion of the contact zone, permitting the catalyst to gravitate downwardly from a higher zone to the next lower zone through an annular space surrounding the upwardly rising gaseous stream, and withdrawing catalyst from a lower portion of the contact zone.



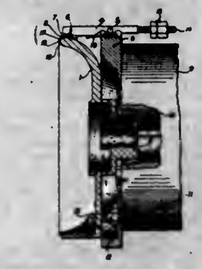
2,471,035
APPARATUS FOR THE DESICCATION OF ORGANIC SUBSTANCES
Frank E. Hurd, New York, N. Y.
Application October 2, 1943, Serial No. 504,794
4 Claims. (Cl. 34—92)

1. Apparatus for desiccating a liquid which comprises a vessel for holding the liquid, a cooling worm in the vessel, a vacuum chamber, atomizing means within the chamber, means connecting the vessel with the atomizing means for conducting liquid from the vessel to the atomizing means, a heat exchanger associated with the atomizing means and means for circulating a

coolant between said heat exchanger and the cooling worm for utilizing the cooling effect produced at the atomizing means to cool the liquid in the vessel.



2,471,036
RUNNING ROPE LUBRICATOR
Wesley R. Jenkins, Whiting, Ind., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application February 21, 1945, Serial No. 579,109
3 Claims. (Cl. 184—17)



1. In a running rope lubricator including a shaft journaled in spaced bearings, a pair of lever arms spaced along said shaft and rotatable thereon, an axle extending between said arms, and a sheave wheel journaled on said axle, said axle and wheel having lubricant-supply passages therein, the improvement comprising a lost-motion connection between the shaft and said levers including a member rigid with said shaft and engageable with the levers, whereby the wheel when in engagement with the rope, is free to float and accommodate itself to movements of the rope transversely of its direction of travel.

2,471,037
ELECTRON DISCHARGE DEVICE EMPLOYING CAVITY RESONATORS
Russell R. Law, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 29, 1944, Serial No. 542,717
18 Claims. (Cl. 315—6)

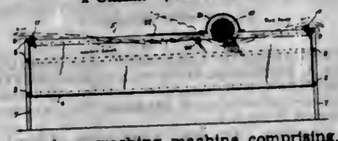
1. An electron discharge device for use at high frequencies and having a cathode provided with an elongated emitting surface, and anode having an elongated surface registering with the emitting surface of said cathode and a grid therebetween, and cavity resonators coupled between said grid and cathode and between said grid and anode and having transverse sectional dimensions less than the length of said elongated emitting surface and having longitudinal walls coextensive with the elongated surfaces of said anode and said cathode.

2,471,038
WORK CENTERING ATTACHMENT FOR METAL TURNING MACHINES
Emil Luginbuhl, Bedford, Ohio, assignor to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application October 29, 1946, Serial No. 706,452
6 Claims. (Cl. 279—51)

1. In a device for holding and centering work for machining operation thereon, the work consisting in a thin light weight metallic bell shaped plate with a centrally located extension on its convex side, a chuck, a work holder detachably secured to said chuck and including means for gripping said central extension of said work, leaving the remainder of said work holder spaced from said work holder, a plurality of pivoted centrifugally responsive arms on said work holder adapted to be forced into clamping engagement with said work upon rotation of said work holder.

2,471,039
MANUFACTURE OF IMPROVED FIBROUS MATERIALS AND THE MATERIALS THUS OBTAINED
Ludwig Orthner, Gerhard Balle, and Heins Schild, Frankfort-on-the-Main, Max-Otto Schürmann, Dormagen, and Karl Brodersen and Matthias Quaedvlieg, Dessau, Germany; vested in the Attorney General of the United States
No Drawing. Application February 26, 1941, Serial No. 380,632. In Germany February 21, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires February 21, 1960
7 Claims. (Cl. 106—165)

1. The process of improving cellulose fibrous materials distinguished by a soft and agreeable feel without the usual treatment with softening agents which comprises incorporating with the aqueous cellulose spinning solution colloidal alkali compounds of a sulfonic acid amide obtained by the simultaneous action of chlorine and sulfur dioxide on a mixture of saturated aliphatic hydrocarbons boiling from 240° C.–340° C. formed by the reduction of carbon monoxide, and subsequent reaction with ammonia, said sulphonic acid amids being insoluble in alkali carbonates and being uniformly subdivided in the interior of the fiber.

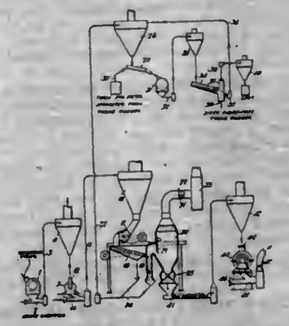


3. Cellulose fibrous materials distinguished by a soft and agreeable feel without the usual treatment with softening agents and having uniformly distributed therethrough a colloidal sulfonic acid amide being insoluble in alkali carbonates and obtained by the simultaneous action of chlorine and sulfur dioxide on a mixture of saturated aliphatic hydrocarbons boiling from 240° C.–340° C. formed by the reduction of carbon monoxide, and subsequent reaction with ammonia.

2,471,040
ELECTRIC SWITCH
Jack L. Mehar, Long Beach, Calif.
Application July 3, 1946, Serial No. 681,180
1 Claim. (Cl. 200—33)

In an electric switch, an inflated bulb, a bracket to which the bulb is secured, a stationary contact member mounted on the bracket directly opposite to the bulb, a flexible partition mounted within the bulb directly over the stationary contact member in spaced relation therewith, said partition having a central opening, and a movable contact member mounted on the flexible partition within the opening thereof and having vent openings, said movable contact member being movable into engagement with the stationary contact member completing a circuit under pressure, created within the bulb, when the bulb is compressed by contact with a stationary object.

2,471,041
SCRUBBING MACHINE FOR FIRE HOSE
Irvine E. Parker, Transfer, and Thomas W. Brydon, Slippery Rock, Pa.
Application July 24, 1945, Serial No. 606,864
1 Claim. (Cl. 68—90)



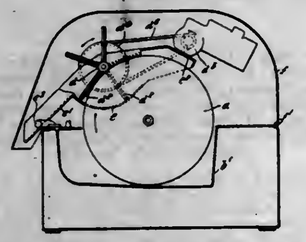
A fire hose washing machine comprising, an elongated trough supported on legs, a feed guide roller journalled at one end of the trough with a portion thereof disposed above the upper edge of the trough, a rotatable brush journalled on the upper edge of the trough closer to the feed end than to the discharge end thereof and having its lower portion submerged in a washing fluid within the trough and its remaining portion disposed outwardly of the trough, power transmitting means connected to the rotatable brush, a tension guide roller journalled within the trough in close proximity to the discharge side of the brush with its upper portion disposed above the lowermost portion of the brush, a discharge guide roller journalled on that end of the trough opposite the feed end thereof and having its upper portion disposed above the edge of the trough and upper portion of the tension roller, a splash guard disposed over the brush and tension roller, and a rearwardly extending rectangular cover plate hinged to the rear side of the splash guard and lying over the trough and tension guide roller.

2,471,042
COAL HANDLING SYSTEM
Erskine Ramsay, Birmingham, Ala.
Application October 30, 1944, Serial No. 560,930
4 Claims. (Cl. 104—173)

1. In a mine haulage system including an endless cable, mine cars with detachable grabs adapted to engage the cable at random, and drive means for the cable, the combination of a sheave included in the drive means and having spaced fingers thereon shaped to engage and cause the grabs to enter into the spaces between the fingers, and a track for the cars passing around beneath the sheave.

2,471,043
TREATING WASTE RUBBER, ETC.
Edward L. Schenck, Hughesville, Pa., assignor of one-fourth to Benjamin Epstein, one-fourth to Leonard Sylvan Epstein, and one-fourth to Stanley William Epstein, all of Norfolk, Va.
Application June 19, 1945, Serial No. 600,353
8 Claims. (Cl. 241—14)

1. The method of mechanically treating used rubber tires containing embedded metallic and non-metallic foreign particles, which comprises chopping the tires into relatively coarse pieces, removing the tread rubber of said pieces in coarse granular form from the pieces of carcass and friction rubber adhering thereto, while leaving the pieces of carcass substantially undisintegrated, separating the removed granular tread



rubber from the pieces of carcass, separating metallic and non-metallic particles of foreign material from the granular tread rubber, recovering the granular tread rubber substantially free from separated metallic and non-metallic particles, and from friction rubber and fibres of the carcass, cutting the granules of the tread rubber into smaller particles with a minimum of fine granules, delinting the resulting granular tread rubber, separating substantially all of the friction rubber, substantially free of tread rubber and in granular form from the pieces of fibres of the carcass, separately recovering the granular friction rubber and the remaining fibres, sizing and delinting the recovered granular friction rubber, and maintaining both the tread rubber and the friction rubber during their entire treatment at a temperature below that at which objectionable change in composition would take place, whereby there are recovered as products of the method, a fine granular tread rubber product substantially free from friction rubber and from fibres and foreign material, a sized granular friction rubber product substantially free from tread rubber and from fibres, and fibres substantially free from rubber and lint.

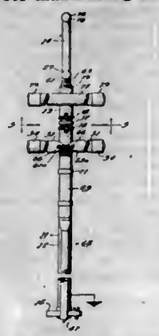
2,471,044

MAGNETIC SEPARATOR HAVING MEANS FOR WIPING AND SCRAPING THE CARRIER DISK

Arthur Scrivener, Birmingham, England

Application October 26, 1945, Serial No. 624,882
In Great Britain November 11, 1944
3 Claims. (Cl. 209—229)

1. A magnetic separator including a rotary magnetic disc and means for rotating and scraping the same, said means comprising, in combination, a rotary scraper having a hub in frictional engagement with the periphery of the disc and two sets of radially extending arms mounted on said hub, one set bearing on each side of said disc, means for rotating said hub, a trough for housing the lower part of said radially armed scraper and a chute connecting with said trough.



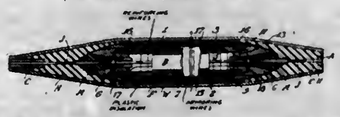
2,471,045

ULTRA HIGH FREQUENCY ANTENNA SYSTEM

Harner Selvidge, Silver Spring, Md.

Application October 21, 1944, Serial No. 559,670
11 Claims. (Cl. 250—33.57)

1. In an antenna system, a supporting conductor, a pair of hollow radiator elements coaxially supported at their outer ends on said supporting conductor, a mast for engagement with said supporting conductor between said radiator elements, and means providing a balanced transmission line for connection to the inner ends of said radiator elements for maintaining same in substan-



tially perfect balance to provide substantially exact symmetry to the resulting radiated field.

2,471,046

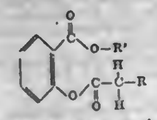
SUBMARINE CABLE REPEATER

Esmond Wassell Smith, Beechcroft, Chislehurst, and Richard William Presswell, Kensington, London, England, assignors to The Telegraph Construction and Maintenance Company Limited, London, England, a company of Great Britain

Application January 21, 1947, Serial No. 723,334
In Great Britain December 9, 1946
1 Claim. (Cl. 174—70)

In a submarine cable, the combination with a core including a central conductor; of a repeater housing comprising an entry gland at each end thereof for locating said central conductor; a series of annular elements which nest one within the other to form a metallic sheath and which form with each other, ball and socket joints so as to be capable of limited relative angular displacement while contiguous elements of said series are maintained continuously in annular surface contact to thereby provide a constantly uninterruped housing irrespective of their angularly displaced condition, and means for centering the end elements of said series in relation to the glands.

2,471,047



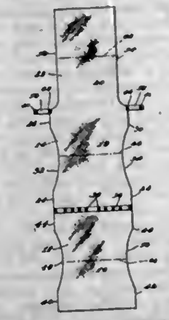
SYNTHESIS OF 4-HYDROXYCOUMARINS

Mark A. Stahmann, Madison, and Karl Paul Link, Middleton, Wis., assignors to Wisconsin Alumni Research Foundation, Madison, Wis., a corporation of Wisconsin

No Drawing. Original application August 29, 1942, Serial No. 456,710. Divided and this application February 21, 1947, Serial No. 730,206
9 Claims. (Cl. 260—344.6)

1. The process of producing 4-hydroxycoumarins, which consists in condensing with an alkali metal in an inert high-boiling hydrocarbon which boils at not less than 260° C. and with which the initial acyl salicylic acid ester

and the alkali metal and the final 4-hydroxycoumarin do not react, a compound of the general formula



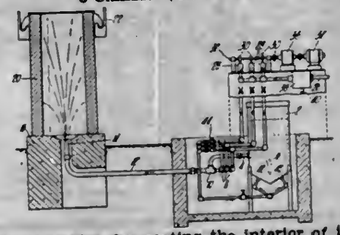
in which R represents a member of the class consisting of hydrogen and monovalent hydrocarbon groups, and R' represents a monovalent hydrocarbon group.

2,471,048

BABY GARMENT

Kathryn A. Terchick, Venetia, Pa., assignor of one-half to Anthony W. Terchick, Venetia, Pa.

Application May 12, 1948, Serial No. 26,682
8 Claims. (Cl. 128—284)



1. A new article of manufacture, an infant's diaper comprising a body portion of web material and extensions on both ends thereof, the body portion having cut-out leg portions at the sides thereof, strengthening means at the junction of the body portion and an extension, cooperating cut-out leg portions on said last-named extension, and snap fastening elements on said strengthening means, snap fastening elements positioned at the junction of said body portion and the other extension adapted to have cooperative engagement with the snap fastening elements on said strengthening means.

2,471,049

APPARATUS FOR COATING INGOT MOLDS

Arthur W. Thornton, Pittsburgh, Lindsey Stewart, McKeesport, and Francis Susa, Pittsburgh, Pa.

Application December 5, 1945, Serial No. 632,824
3 Claims. (Cl. 22—88)

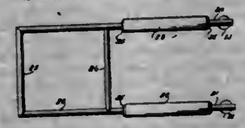
1. Apparatus for coating the interior of ingot molds and the like comprising in combination a base for holding a mold, an upwardly directed nozzle in said base, a loosely fitting cover for the top of said mold, and means for conducting a mixture of air and comminuted coating material under pressure to said nozzle.

2,471,050

DEVICE FOR THE MEASUREMENT OF LENGTHS

Fernand Turrettini, Bellevue-Geneva, Switzerland, assignor to Societe Genevoise d'Instruments de Physique, Geneva, Switzerland, a Swiss firm

Application December 18, 1947, Serial No. 792,432
In Switzerland July 9, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires July 9, 1962
2 Claims. (Cl. 33—1)

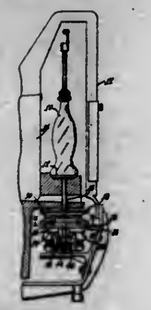


1. A device for the measurement of lengths comprising in combination with the frame of an instrument or machine, a recess in said frame having an elongated aperture, two longitudinal flanges secured to said frame and limiting said elongated aperture, a trough-shaped piece mounted in said recess and resting by its long sides on said flanges, a graduated scale on the inner bottom surface of said trough-shaped piece, a slide shiftable along said elongated aperture, an optical device for observation of said scale mounted in said slide, a cover plate secured to said slide and engaging between the inner faces of said flanges, a flexible band attached at each extremity of said cover plate and having its edges engaging in longitudinal grooves provided in the inner faces of said flanges, means for holding said flexible bands in stretched conditions, whereby to protect said graduated scale against entrance of dirt.

2,471,051

WHEEL AND TIRE DOLLY

Walter M. Tway, Maricopa County, Ariz.

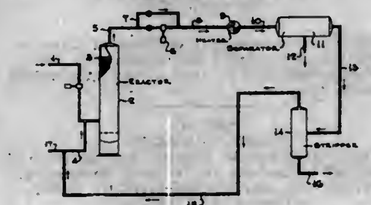


Application February 1, 1946, Serial No. 644,882
2 Claims. (Cl. 280—53)

1. A dolly for mounting automobile wheels and tires on wheel hubs comprising in combination, a

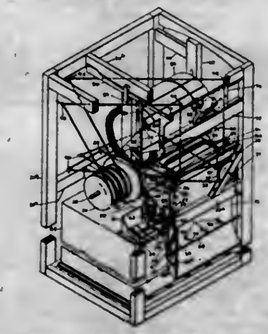
U-shaped frame having tubular parallel side members arranged and secured in spaced relation by a transverse tubular member at one end providing a handle, a second parallel transverse member positioned toward the open end acting as a brace and leaving a substantial length of said side members as arms of said U-shaped frame, casters attached to and depending from the outer ends of said arms, and tubular rollers substantially co-extensive with said frame arms, coaxially disposed relative to said arms and journalled thereon.

2,471,052
SPRING MOUNTED BRAKE
John F. Wein, Indianapolis, Ind., assignor to Radio Corporation of America, a corporation of Delaware
Application March 30, 1945, Serial No. 585,750
7 Claims. (Cl. 188—166)



1. A brake for a plurality of movable objects, each provided with a braking surface which may be misaligned with corresponding surfaces of others of said objects, said brake comprising a pair of brake shoes, a support for said shoes, means for moving said support relatively to said objects to bring said shoes into confronting relationship with each of said surfaces successively, springs independently associated with each of said shoes and arranged to urge each of said shoes into braking engagement with the surface confronting it independently of the other of said shoes, further springs common to and associated with both of said shoes and arranged to urge both of said shoes into common braking engagement with said surface, and means including a universal joint interconnecting said springs whereby to compensate for variations in placement of said surfaces.

2,471,053
AMINO ACID EXTRACTION
Herman J. Almquist and John Gorton Davis, Berkeley, Calif., assignors to F. E. Booth Company Inc., San Francisco, Calif., a corporation of Nevada
Application February 15, 1946, Serial No. 647,961
5 Claims. (Cl. 260—529)

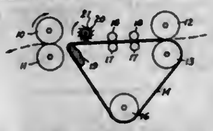


1. In the extraction of an amino acid in an aqueous solution by phenol as an amino acid solvent, the step of adjusting the pH of the solution to a predetermined value to fix the distribution coefficient of said amino acid between the solvent and the water phases at a value enhancing such extraction of the amino acid by said solvent.

2,471,054
REMOVAL OF SOLUBLE CATALYSTS FROM PRODUCT STREAMS
Erwin H. Amick, Jr., Linden, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application December 26, 1946, Serial No. 718,302
4 Claims. (Cl. 260—683.5)

1. Improved process for the conversion of saturated hydrocarbons into branched chain hydrocarbons which comprises contacting a feed stream comprising saturated hydrocarbons in an isomerization zone with a catalyst comprising an aluminum halide, maintaining temperature and pressure conditions in said isomerization zone adapted to secure the desired conversion, removing a product stream from said isomerization zone, further heating said product stream in a heating zone to a temperature near but not above its critical temperature, maintaining a sufficient pressure on said product stream to maintain the same in the liquid phase, passing said product stream at said elevated temperature and pressure to a separation zone, whereby a phase relatively rich with said aluminum halide catalyst separates from a liquid product phase substantially free of said aluminum halide catalyst, separating said phase relatively rich in aluminum halide catalyst, passing the product phase substantially completely free of aluminum halide catalyst to a fractionating zone and separating a gaseous stream from said product stream in said fractionating zone.

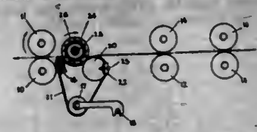
2,471,055
DISPENSING APPARATUS
Clarence M. Asbill, Jr., La Grange, Ga., assignor, by mesne assignments, to Callaway Mills Company, La Grange, Ga., a corporation of Georgia
Application February 14, 1945, Serial No. 577,800
12 Claims. (Cl. 194—4)



1. A dispensing apparatus which comprises means for rotatably supporting a roll of towels, means for rotating the roll to dispense towels therefrom, means biased to lock the supporting means against rotation, means operable by a towel deposited thereon to put the locking means out of operation, means for holding the locking means inoperative, and means operable by a towel being dispensed for releasing the holding means.

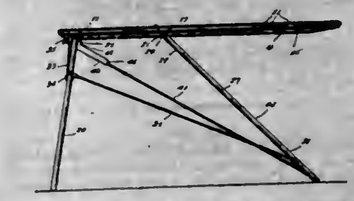
2,471,056
APPARATUS FOR DRAFTING TEXTILE FIBERS
Whitworth F. Bird, Swarthmore, Pa., assignor to Collins & Aikman Corporation, Philadelphia, Pa., a corporation of Delaware
Original application February 2, 1946, Serial No. 645,055. Divided and this application April 22, 1948, Serial No. 22,686.
4 Claims. (Cl. 19—131)

1. In a drafting device for textile fibers comprising a pair of front drafting members, stock feeding means including an apron, guiding, supporting and tensioning means for the apron, a positively driven pressure roller in superposed relation to the apron, rotatable collars on said roller, said collars being in running contact with the apron during operation of the device, and means for positively driving the pressure roller at a predetermined rate.



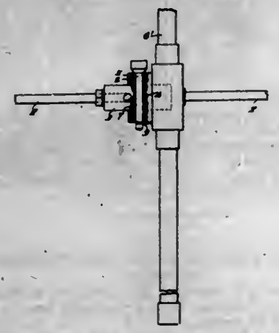
2,471,057
METHOD AND APPARATUS FOR DRAFTING TEXTILE FIBERS
Whitworth F. Bird, Swarthmore, Pa., assignor to Collins & Aikman Corporation, Philadelphia, Pa., a corporation of Delaware
Application December 18, 1945, Serial No. 635,642
41 Claims. (Cl. 19—131)

14. In a drafting mechanism for textile fibers, front and back rollers defining a drafting area, a movable supporting apron for the fibers as they pass longitudinally through said drafting area, said apron being positioned rearwardly of the front rollers, a pin roll combing member in running contact with said supporting apron, said pin roll member being driven by the supporting apron in its forward movement.



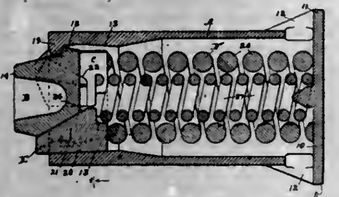
2,471,058
CONTROL OF TEXTILE FIBERS DURING DRAFTING OPERATIONS
Whitworth F. Bird, Swarthmore, Pa., assignor to Collins & Aikman Corporation, Philadelphia, Pa., a corporation of Delaware
Application October 8, 1947, Serial No. 778,637
17 Claims. (Cl. 19—130)

1. In a drafting mechanism for strands of textile fibers, means forming a front nip to draw off the fibers as they are being drafted, a stationary strand guide for fibers as they pass forwardly to the front nip, said stationary guide extending lengthwise along the path of the fibers for a predetermined distance, means including the said



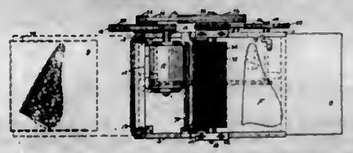
front nip forming means for moving a strand of fibers in contact with the stationary guide, and a rotatable fiber control pin roller for initially penetrating into only that portion of the length of the strand in contact with the stationary guide as the pin roll rotates in operation.

2,471,059
COLLAPSIBLE SUPPORT FOR IRONING BOARDS
Earl C. Booth, Columbus, Ind., assignor to Nobilit-Sparks Industries, Inc., Columbus, Ind., a corporation of Indiana
Application February 8, 1946, Serial No. 646,367
2 Claims. (Cl. 38—117)



1. In an ironing board, a top, a pair of rear legs pivotally connected to said top near the rear end thereof, a front leg pivotally connected to said top at a point intermediate the length thereof, a pair of links respectively connecting said rear legs with said front leg, said links being so arranged as to cause said legs to swing jointly between substantially coplanar position adjacent the lower surface of the top and positions in which the legs diverge from each other to form a stable support for the top, a brace pivotally connected to said front leg and adapted to extend upwardly and rearwardly therefrom to a point beneath said top, a latch member pivoted to said top and slidably receiving said brace, said latch member being formed of sheet metal bent into channel-shaped cross-section and having two generally parallel, spaced flanges between which said brace is received, said flanges having relatively wide portions forming ears through which the latch member is pivoted to the top and relatively narrow portions provided along their edges with in-bent lips preventing removal of said brace from between the flanges by lateral movement, said brace being provided with an abutment engageable with said latch member to limit rearward movement of the brace in the latch member, said brace and latch member having releasable provisions engageable with each other when the brace is at the upper limit of its movement in the latch member to prevent downward movement of the brace, said provisions being engageable with and disengageable from each other by movement of the brace laterally of itself with respect to the latch member.

2,471,060
FLEXIBLE SEWER ROD COUPLING FEELER
Robert E. Cooper, Fort Monroe, Va., assignor to Flexible Sewer Rod Equipment Co., Los Angeles, Calif., a copartnership
Application July 14, 1947, Serial No. 760,917
4 Claims. (Cl. 287—52.08)



4. A turning, lever device having a socket for a rod coupling to be operated thereby and having a movable locking pin, and a rod coupling telescopic in said socket and having a diametrical hole for registration with the pin; the body of the coupling having a peripheral feeling-in groove entirely therearound to which the hole opens at each of its ends.

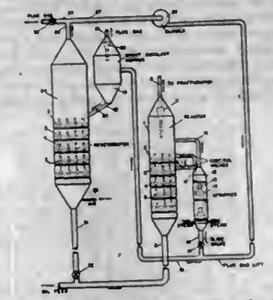
2,471,061
FRICTION SHOCK ABSORBING MECHANISM
George E. Dath, Mokena, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application March 1, 1947, Serial No. 731,857
1 Claim. (Cl. 213—32)

In a friction shock absorbing mechanism, the combination with a friction casing having three lengthwise extending, interior friction surfaces of V-shaped, transverse cross section arranged symmetrically about the central longitudinal axis of the mechanism; of a friction clutch slidingly telescoped within the casing, said clutch including a central wedge block and three friction shoes arranged symmetrically about said block, said shoes having V-shaped friction surfaces engaging the V-shaped friction surfaces of the casing, said block and one of said shoes having wedging engagement with each other on substantially flat wedge faces, and said wedge and two remaining shoes having wedging engagement with each other on cooperating wedge faces of V-shaped, transverse cross section; and spring means yieldingly opposing inward movement of said clutch.

2,471,062
FISH SCORING MACHINE
Eugene W. Davis, Meredosia, Ill.
Application July 12, 1946, Serial No. 683,199
7 Claims. (Cl. 17—2)

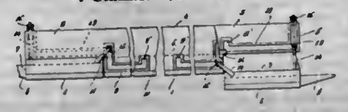
1. In a fish scoring machine the combination with a series of rotary knives and a work board having a reciprocating movement thereunder, of a receiving pan for the scored fish at one end of the board, means for scraping a scored fish into the pan, and means for successively raising and lowering the scraper as the board reciprocates.

2,471,063
NONMETAL NOSE GUARD
Arthur R. Devoe, North Attleboro, Mass., assignor to The Bishop Company, North Attleboro, Mass., a corporation of Massachusetts
Application February 27, 1946, Serial No. 650,657
3 Claims. (Cl. 88—50)



2. A nose guard constituted wholly of an integral one-piece plaque of unreinforced molded nylon-plastic material having upper and lower nose-bearing portions continuously connected together by an intermediately disposed nose-bearing portion integrally provided with a reduced neck of the nylon-plastic material terminating in an enlarged head of the nylon-plastic material, the nylon-plastic material of the upper and lower nose-bearing portions being flexible for adjustment into conformity with the configuration of the nose but hard enough to retain the shape to which they are adjusted yet yielding for engagement with the nose.

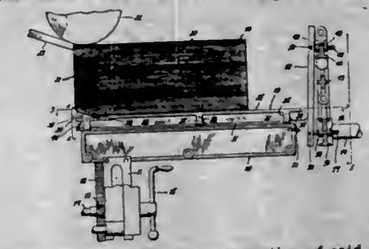
2,471,064
STRIPPING OF SPENT CATALYST IN HYDROCARBON CONVERSION
Ralph E. Hall, East Chicago, Ind., and Marion J. Wilcox, Harvey, Ill., assignors to Sinclair Refining Company, New York, N. Y., a corporation of Maine
Application April 30, 1947, Serial No. 745,037
2 Claims. (Cl. 196—52)



1. In the fluid catalyst process for the conversion of hydrocarbons wherein the hydrocarbon to be converted is brought into intimate contact with the catalyst in a reaction chamber, the spent catalyst is withdrawn from the reaction chamber and stripped of absorbed hydrocarbons by passing a gaseous stripping medium upwardly through a dense phase fluidized body of the catalyst in a stripping chamber, the improvement which comprises introducing the spent catalyst from the reaction chamber in relatively dense phase into the upper portion of the stripping chamber and causing the catalyst to gravitate generally downwardly therethrough, introducing

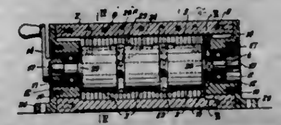
a gaseous stripping medium into the lower portion of the stripping chamber and passing it upwardly therethrough through a plurality of alternate zones of low velocity and high velocity, the transverse area of the low velocity zones being substantially that of the stripping chamber and the superficial velocity of the stripping medium in the low velocity zones being within the range of 0.3 to 1.5 feet per second, the high velocity zones being composed, respectively, of a single restricted substantially vertical stream coaxially positioned within the chamber and the superficial velocity of the restricted stream of

stripping medium through the high velocity zones being within the range of 3.5 to 7 feet per second, whereby dense phase bodies of catalyst will form in the low velocity zones, permitting the catalyst to gravitate downwardly from the respective dense phase bodies of catalyst to the next lower zone of the stripping chamber in an annular stream surrounding the upwardly flowing high velocity stream of the stripping medium, withdrawing the stripping medium and stripped hydrocarbons from the upper portion of the stripping chamber and withdrawing stripped catalyst from the lower portion of the stripping chamber.



2,471,065
FLOATING DRY DOCK
Frederic R. Harris, New York, N. Y.
Application February 1, 1948, Serial No. 644,703
7 Claims. (Cl. 114—46)

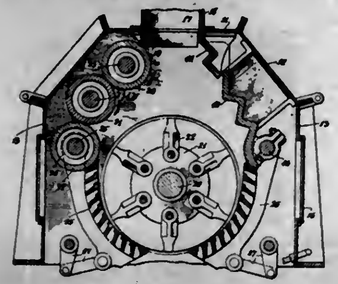
1. A floating dry dock having sections comprising a center and ends, and means comprising channels of predetermined length on one section, and parts on the remaining sections engaging said channels for permitting limited relative movement of said center and ends in both a horizontal and vertical direction.



2,471,066
LABELER
Charles M. Hesson, Hanover, Pa., assignor to Chisholm-Ryder Company, Incorporated, Niagara Falls, N. Y., a corporation of New York
Application June 6, 1945, Serial No. 597,789
9 Claims. (Cl. 271—62)

1. In a labeler for labels having portions of less thickness than other portions thereof, said labeler having a supporting plate for a stack of said labels, the uppermost one of which is adapted to be applied to a container, and means for moving said plate vertically relative to the label application zone to maintain the uppermost label of said stack in alinement with said zone, the combination therewith of a label pack adjusting means, comprising a section mounted on said supporting plate for vertical movement relative thereto and supporting the thinner portions of said stack of labels, and means moving said section vertically relatively to said supporting plate in response to the vertical movement of said supporting plate.

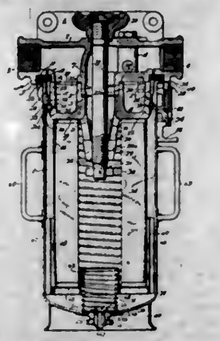
and maintaining the thinner portion of said uppermost label of said stack in a predetermined angular relation to the thicker portion thereof regardless of the height of said stack, comprising a member carried by said supporting plate and guided for horizontal movement relative thereto, means operatively connecting one part of said member with said section for moving said section vertically in response to the horizontal movement of said member, and stationary cam means arranged alongside said plate and engaging another part of said member to move it horizontally in response to the vertical movement of said supporting plate.



2,471,067
MAGNETIC WORK HOLDER
Stanley Isaiah Hitchcock, London, England, assignor to Tropical Plantations Limited, London, England
Application October 19, 1945, Serial No. 623,219
In Great Britain November 6, 1944
7 Claims. (Cl. 175—367)

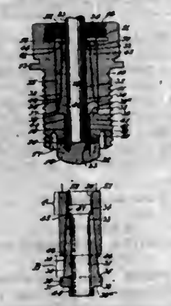
1. A magnetic work holder comprising a nonferrous casing, a shaft rotatably mounted in said casing, a substantially cylindrical permanent magnet fixed to said shaft, said magnet having diametrically opposite arcuate poles, two armature members spaced from said poles, said armature members being of concave configuration to conform to the shape of said poles, a plurality of soft iron strips extending substantially parallel to said shaft, a plurality of non-ferrous strips alternating with said soft iron strips, all of said strips together providing a work-supporting surface, and supporting means maintaining said strips adjacent respective faces of said two armature members whereby a magnetic circuit including said members, certain of said strips and a work piece supported on said surface may be

formed, said strips being dimensioned so that a plurality of said soft iron strips register with each of said faces and with the space separating said faces.



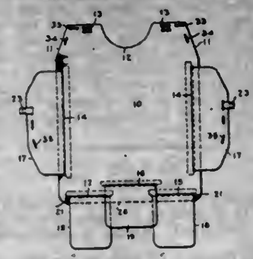
2,471,068
REVERSIBLE HAMMER MILL WITH POWER-DRIVEN IMPACTOR SURFACES
Edwin H. Keiper, Philadelphia, Pa., assignor to Pennsylvania Crusher Company, Philadelphia, Pa., a corporation of New York
Application July 11, 1944, Serial No. 544,370
4 Claims. (Cl. 241—89)

1. A crusher having a rotor carrying hammers, a feed chute terminating vertically above the center of the rotor a distance of the order of the radius of the hammer circle and providing an entrance space through which the material is freely dropped vertically downward into the top center of the hammer circle of the rotor and symmetrically on each side thereof, a continuous impenetrable movable power-driven anvil means extending above the level of said rotor to the upper portion of said entrance space at the side of said central feed to permit material to drop vertically into said rotor and comprising an upper portion power driven to carry its surface downward substantially parallel to the vertically entering material in said entrance space and closely adjacent thereto and then downward and outward at an angle thereto and above the hammer circle of said rotor and separated therefrom by said entrance space and adjacent intermediate space through which material is projected by said rotor hammers, and intermediate and lower portions continuing in said downward and outward direction and power driven to carry their surfaces downward and outward with movement in planes transverse to the axis of the rotor and approaching progressively closer to said hammer circle to a terminal throat opening at the side of said circle and providing a continuation of said intermediate space having power-driven moving surfaces above and below and tapering to closest approach at said throat opening, and a downward discharge of said material from said throat opening between said rotor and anvil means.



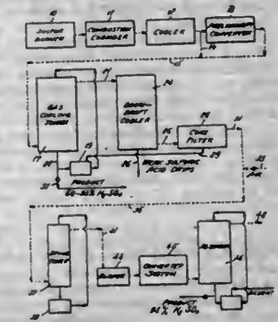
2,471,069
OIL OR LIQUID FILTER
Camille Clare Sprankling Le Clair, Acton, London, England, assignor to Tecalemit Limited, Brentford, England, a corporation of Great Britain
Application March 19, 1945, Serial No. 583,585
In Great Britain March 28, 1944
12 Claims. (Cl. 210—164)

1. A filter of the type described, comprising a container, a head formed of a main head part and a subsidiary head part, an inlet passage in said main head part, an outlet passage in said main head part, a filter element in said container, means for holding said filter element in contact with said subsidiary head part, ducts in said subsidiary head part interconnecting said inlet passage and the interior of said container and through which liquid can flow into said container around said filter element, other ducts in said subsidiary head part, interconnecting the interior of said container and said outlet passage and through which the filtered liquid can flow to said outlet passage, means rotatably mounted in and carried by said subsidiary head part, said means having a stem part projecting through said main head part and rotatable therein, means on said projecting stem part for rotating said means, said stem part being movable longitudinally relative to said head parts upon rotation of said means, said main and subsidiary head parts being drawn into clamping engagement upon a first rotation of said means and being spaced apart a predetermined distance while still being physically connected upon a second rotation of said means, a plurality of circumferentially spaced lugs carried by said container adjacent its upper end, and a plurality of similarly circumferentially spaced lugs carried by said subsidiary head part, both sets of lugs being spaced sufficiently to pass the lugs of the other set therebetween and being arranged with cooperating faces adapted to face and engage each other and to hold said container to said main head part, whereby said container may be removed from or connected to said subsidiary head part when the head parts are spaced apart and secured in working position when the said parts are drawn together, said lugs being rendered effective for holding said container in this latter position by said rotatably mounted means.



2,471,070
SPARK PLUG
Frederick L. McCarthy and Charles Schandler, New York, N. Y.
Application March 26, 1945, Serial No. 584,800
1 Claim. (Cl. 123—169)

In a spark plug, having an exteriorly screw threaded shell with a central main cylindrical bore, a central spark tip stem surrounded by an insulating lining spaced within said bore, an inner sleeve within the main bore having a cylindrical bore of substantially the same diameter as that of the lined stem, and of a length substantially equal to the depth of the main bore, and having an outer inclined surface converging to the entrance end of the bore, and providing a space of frusto-conical volumetric shape between it and the walls of the main bore, and an outer sleeve within the bore having a cylindrical outer surface of substantially the same diameter as that of the main bore, and having a conical bore of the same inclination as the inclination of the conical outer surface of the inner sleeve and diverging towards the bottom of the main bore, the material of the outer sleeve being harder than the material of the inner sleeve, and harder than the material of the shell, the combination of a shoulder for said inner sleeve having an outer diameter equal to the diameter of the main bore and having a bottom surface at right angles to the axis of the main bore with a curved lower corner and having a fillet at its upper portion merging into the inclined surface of the inner member, said outer sleeve having a curved entrance portion of a curvature corresponding to said fillet, and a shoulder on said shell having a part at right angles to the axis of the main bore merging into a fillet which forms a continuation of the cylindrical wall of the main bore, in registration with the bottom of the shoulder of the inner sleeve, which fillet has the same curvature as the curved lower corner of the shoulder of the inner sleeve, said shoulder of the shell forming a

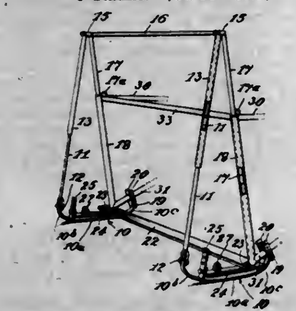


subcaliber bore in the shell for the spaced passage of the lined stem, the longitudinal length of the outer shell extending from said inner sleeve fillet to the upper end of the main bore, when said parts are assembled, said inner and outer sleeves prior to the assembly of the sleeves having the largest diameter of the entrance end of the inclined bore of the outer sleeve equal to a diameter of the inclined outer surface of the inner bore at about two thirds of the length of the inclined surface of the inner sleeve from its smallest diameter portion, with the entrance end of the outer sleeve spaced from the fillet of the shoulder of the inner sleeve a certain distance, and with the outer sleeve extending beyond the inner sleeve a distance equal to that spaced distance, each increment in diameter of said inner sleeve along said spaced distance being slightly larger than the internal diameter at the entrance end of the outer sleeve and each increment of the internal diameter of the extending part of the outer sleeve being smaller than the external diameter of the inner member where it is spaced from the extending end of the outer sleeve, whereby on pressure being applied to the extending end of the outer sleeve it is moved over the inner sleeve until it abuts the fillet of the shoulder of the inner sleeve, the inner sleeve being radially displaced increment by increment.

2,471,071
BODY PROTECTING SHIELD
Matilda Margaret McDonald, Columbus, Ohio
Application May 14, 1946, Serial No. 669,597
11 Claims. (Cl. 2—2.5)

1. A protecting shield or armor, comprising an enlarged front portion, and means for supporting the same on the body of a user, in combination with depending leg protecting members having slidable and swinging connecting means with the lower end of said portion for self-adjustment thereof longitudinally with respect to the body portion and in a forward swinging direction to conform to the raising and lowering movements of the legs of the user, said slidable and swinging connecting means comprising slotted portions of the front enlarged portion through which the leg protecting members may slide and hinge.

2,471,072
MANUFACTURE OF SULFURIC ACID
Henry F. Merriam, West Orange, N. J., assignor to Allied Chemical & Dye Corporation, a corporation of New York
Application April 3, 1946, Serial No. 659,410
3 Claims. (Cl. 23—167)



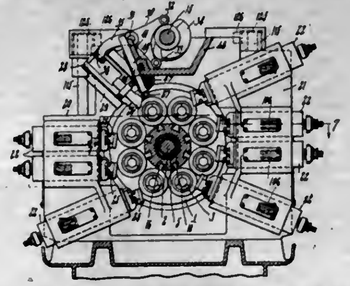
1. In the manufacture of sulfuric acid by the contact process, the steps comprising forming an SO_2-oxygen gas mixture heated to temperature high enough to initiate catalytic oxidation, subjecting the gas mixture to the action of an SO_2 oxidation catalyst under conditions to catalytically oxidize a substantial but minor amount of said SO_2 to SO_3, contacting the resulting gas stream in a gas-liquid contacting zone with sulfuric acid of H_2SO_4 strength not in excess of 93%, and in said zone, substantially by conversion of sensible heat of the gas to latent heat of vaporization of water, boiling water out of

said acid and into the gas stream as water vapor, concentrating said acid, and cooling the gas stream to temperature not more than 300° F., whereby there is formed a contacting zone exit gas stream containing SO_3, acid mist and water vapor, cooling the gas stream containing acid mist and moisture to temperature low enough to condense the bulk of the water vapor as weak sulfuric acid and to facilitate removal of acid mist from the gas stream, separating acid mist from the gas stream, drying the gas stream, subjecting residual SO_2 to the action of an SO_3 oxidation catalyst, and recovering resulting SO_3 as sulfuric acid.

2,471,073
MOWER

Leslie C. Meskimen, Shawnee on Delaware, Pa., assignor to Fairmont Railway Motors, Incorporated, Fairmont, Minn., a corporation of Minnesota

Application October 16, 1945, Serial No. 622,501
3 Claims. (Cl. 56—26.5)



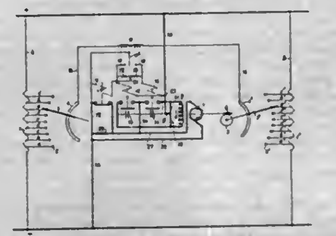
1. In a motor actuated, wheel type, sickle bar mower having a motor, actuating means from the motor to the sickle bar, a platform for the motor, ground wheel supports intermediate the front and rear of said platform extending downwardly therefrom, stub axles on said supports, and a ground wheel for each axle, the combination of a transverse front bar for supporting the sickle bar, and a pair of vertical spaced parallel frames one at each end of the transverse front bar, each frame being exterior to a ground wheel, and each consisting of a horizontally disposed side bar forming the side of the platform, a substantially vertical bar extending downwardly from the front end of the horizontal side bar to a lateral end of the front bar, and a second bar extending downwardly and forwardly from the rear of the horizontal side bar to the lower end of the vertical bar and connected therto, each juncture of the lower ends of the vertical and second bars being connected with the lateral end of the front bar, and each second bar intermediate its length secured to the wheel support in proximity to the wheel axle.

2,471,074
MULTIPLE SPINDLE LATHE

Carroll E. Miller and John M. Ingalls, Windsor, Vt., assignors to Cone Automatic Machine Company Inc., Windsor, Vt., a corporation of Vermont

Application May 6, 1943, Serial No. 485,804
6 Claims. (Cl. 29—37)

6. A multiple spindle lathe comprising an indexing work spindle carrier, a plurality of work spindles mounted in said carrier in circular array about the indexing axis thereof, a frame member extending transverse to the indexing axis of said carrier at one side of work pieces projecting from one end of each of certain of said work spindles, a plurality of tool supports carried by said frame member and movable toward and from such work pieces, a single cam shaft mounted in said frame, the axis of said cam shaft being at right angles to said indexing axis, certain of said tool supports being mounted to slide transverse to the cam shaft axis and others of said tool supports

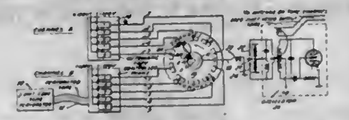


being disposed at an acute angle to the cam shaft axis, cams on said cam shaft individual to the respective tool supports, rockers pivotally mounted in the frame member having a portion thereof engageable and operable with the cam shaft, and a gear sector on each rocker, all of said gear sectors being arranged transversely to the cam shaft, each of said tool supports having rack teeth engageable with the respective gear sectors for actuation thereby.

2,471,075
ELECTRIC REMOTE SELECTIVE CONTROL SYSTEM

Louis Eugene Widolt Montrose-Oster, Brussels-Boitsfort, Belgium, assignor of one-half to Pollopas Patents Limited, London, England, a British company

Application February 25, 1948, Serial No. 10,806
In Great Britain June 1, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires June 1, 1965
2 Claims. (Cl. 318—29)



1. An electric remote selective control system comprising two electrically similar potentiometers with movable selectors positioned at the controlling and controlled ends respectively of the system, a control motor having a field winding and an armature, for controlling the movement of the selector of the potentiometer at the controlled end of the system, a circuit for said motor including two resistances in series, of which one resistance is connected in parallel with said field winding and has a midpoint connection to one pole of a current supply source, and the other resistance is connected in parallel with said armature and is connected at one end to the other pole of said source, two single-pole relays each for controlling the opening and closing of both the field and armature circuits of said motor, one of said relays having an off position and a circuit-closing position connecting the other end of said second-mentioned resistance to one end of said first-mentioned resistance for causing rotation of said motor in one direction, and the other of said relays having an off position and a circuit-closing position connecting said other end of said second-mentioned resistance to the other end of said first-mentioned resistance for causing rotation of said motor in the opposite direction, and a third single-pole relay connected in parallel with said armature for controlling short-circuiting of said armature, a compensating circuit connecting said selectors of said potentiometers, said compensating circuit controlling all three of said relays and being responsive to establishment of a potential difference between said selectors caused by movement of the selector at the controlling end of the system, for selectively operating one or the other of said two first-mentioned relays according to the direction of current flow in said compensating circuit, whereby the field and armature circuits of said motor are closed by the operative one of said two first-mentioned relays to effect, in response to the movement of the selector at the controlling end of the system, a rotation of said motor and movement of the selector controlled thereby in the direction and to the extent necessary to establish an equipotential condition between selectors, said third relay being timed differently from said two first-mentioned relays whereby establishment of such equipotential condition causes said third relay to short-circuit said armature before the operative one of said two first-mentioned relays opens the field and armature circuits to interrupt current supply from said source to said armature, said field winding and said resistances, whereby to effect a rapid stoppage of said motor responsive to establishment of such equipotential condition.

2,471,076
PRINTING TELEGRAPH SYSTEM

John B. Moore, Brooklyn, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Application May 23, 1945, Serial No. 595,303
9 Claims. (Cl. 178—4)

1. A printing telegraph system for transmitting intelligence by means of an m-unit code, the individual elements of which comprise one of three predetermined conditions of signal, comprising an m-unit-code tape perforated in accordance with the code combinations to be transmitted, an m-unit-code automatic tape-controlled transmitter fed with said tape and having m pairs of pins for cooperation with the perforations in said tape, the pins in said tape-controlled transmitter being arranged in similar relation to the perforations in said tape, said tape-controlled transmitter having m pairs of contacts controlled by its m pairs of pins, a distributor having m different connections for operative association with the m different pairs of contacts of said tape-controlled transmitter, and means in said tape-controlled transmitter for supplying each connection with a positive voltage when one contact of its associated pair of contacts is closed, with a negative voltage when the other contact of its associated pair of contacts is closed, and with no voltage when neither contact of its associated pair is closed, an oscillator, means in circuit with said oscillator and under control of the output from said distributor for changing its frequency of operation to a second frequency when a positive voltage is supplied by said distributor and to a third frequency when a negative voltage is supplied by said distributor, means for transmitting signal waves of said three different frequencies, receiving apparatus including frequency responsive means for converting the received signal waves to three conditions of signal constituting positive, negative and no current, a receiving distributor having m pairs of contacts coupled to said converting means, and a printer having m selector bars and associated therewith m polarized code-selector-bar magnets corresponding to the m units of the code coupled to said receiving distributor, said magnets controlling different code selector bars to cause said bars to assume any one of three different positions corresponding to said positive, negative, and no current conditions of signal.

PRODUCTION OF CYCLIC SULFIDES

Robert J. Moore, Berkeley, and Robert A. Trimble, El Cerrito, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application September 23, 1946, Serial No. 698,862
19 Claims. (Cl. 260—329)

1. The method of converting a cyclic sulfone to the corresponding saturated cyclic sulfide, said sulfone being selected from the group consisting of sulfolanyl compounds and 2-sulfolenyl compounds, which method comprises contacting said cyclic sulfone in the vapor phase with an excess of hydrogen in the presence of a hydrogenation catalyst at a temperature below that at which said cyclic sulfone will undergo thermal decomposition.

CATALYST QUALITY BY MAGNETIC SEPARATION

Henry J. Ogorzaly, Summit, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

Application June 12, 1946, Serial No. 676,236
5 Claims. (Cl. 196—52)

1. Improved catalytic cracking operation which comprises maintaining a fluid bed of non-magnetic catalyst particles in a reaction zone, passing feed gases through said bed under cracking conditions, removing hot reactant vapors from said reaction zone and separating substantially all the catalyst from said vapors, thereafter passing at least a portion of said hot vapors containing only small residual amounts of active catalyst fines and undesirable particles comprising iron through a segregation zone, imposing an

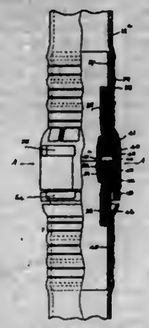
electro-magnetic field in said segregation zone whereby the particles comprising iron are sepa-

rated from said vapors and from said small residual amounts of active catalyst fines.

2,471,079
GLASS SEALING ALLOY
Carl B. Post, Wyomissing, and Warren S. Eberly, Temple, Pa., assignors to The Carpenter Steel Company, Reading, Pa., a corporation of New Jersey
No Drawing. Application August 28, 1947, Serial No. 771,146
12 Claims. (Cl. 49—92.5)

10. A glass-to-metal seal between a glass and an alloy said alloy being substantially gas-free at the glass-to-metal interface during glass sealing operations at temperatures in the range of 1700° F. to 2200° F. and having the composition carbon 0.07 per cent maximum, manganese 0.50 to 2.00 per cent, silicon 0.25 to 1.00 per cent, nickel 30 to 60 per cent, columbium 0.50 to 2.00 per cent and the balance iron and incidental impurities.

2,471,080
AUSTENITIC STEEL HAVING HIGH HOT HARDNESS
Carl B. Post, Wyomissing, Pa., assignor to The Carpenter Steel Company
No Drawing. Application November 21, 1946, Serial No. 711,469
1 Claim. (Cl. 75—128)



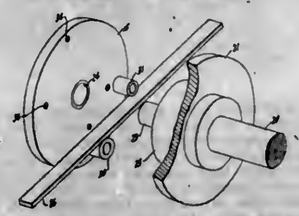
An austenitic stainless steel having a high hot hardness exemplified by Brinell hardnesses of 131 at 1200° F. and 113 at 1400° F. respectively, said steel having the following composition:

	Per Cent
Carbon	0.15 to 0.25
Manganese	1.00 to 1.50
Silicon	0.50 to 1.00
Chromium	20.00 to 22.00
Nickel	10.00 to 12.00
Nitrogen	0.15 to 0.20
Phosphorus (maximum)	0.02
Sulfur (maximum)	0.02

Balance iron except for incidental impurities

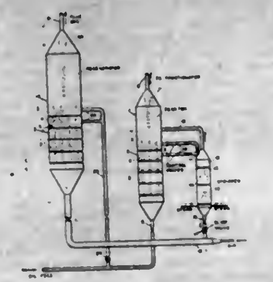
2,471,081
HOSE
Philip K. Saunders, Mamaroneck, N. Y.
Application April 13, 1945, Serial No. 588,084
22 Claims. (Cl. 138—60)

1. A hose for transferring fluids, which comprises end sections and at least one intermediate section, each end section having a head at its outer end formed with an opening provided with a removable closure, coupling members on the inner ends of the end sections and both ends of the intermediate section, adjacent coupling members cooperating to form fluid-tight connections, and reinforcing means extending lengthwise of each section through the interior thereof, the means within each end section being connected to the head and to the coupling member on that section and the means within the intermediate section being connected to the coupling members thereon.



7. In a hose for transferring fluids, an end section having a coupling member on one end and a closed head on the other, the head having an opening provided with a removable closure, and reinforcing means extending lengthwise of the section within the interior thereof and connected to the coupling member and the head.

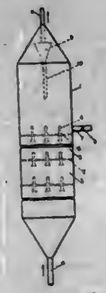
2,471,082
CALCIUM CADMIUM SILICATE PHOSPHOR
James H. Schulman, Cambridge, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
No Drawing. Application March 28, 1946, Serial No. 657,919
3 Claims. (Cl. 252—301.6)



1. A luminescent material consisting essentially of calcium cadmium silicate, activated by manganese and lead, in which the cadmium is about 10 mol percent of the calcium cadmium compound.

2,471,083
MEANS FOR BENDING STRAIGHT STRIPS INTO ANNULAR COLLARS OR FLANGES BETWEEN A DISK AND OSCILLATING ROLLERS
Arvin Tuttle, Berkeley, Calif.
Application November 21, 1947, Serial No. 787,352
9 Claims. (Cl. 153—45)

1. Mechanism for producing arcuate metallic bodies, comprising a cylindrical anvil, a disc arranged coaxially with and adjacent to said anvil, a pair of rollers pivoted to said disc at angularly spaced points with their peripheries spaced equal radial distances from the periphery of said anvil, and means for selectively turning said disc in either direction of rotation.



2,471,084
FLUIDIZED CATALYTIC CONVERSION OF HYDROCARBONS
Marion J. Wilcox, Harvey, Ill., and Ralph E. Hall, East Chicago, Ind., assignors to Sinclair Refining Company, New York, N. Y., a corporation of Maine
Application April 30, 1947, Serial No. 745,036
5 Claims. (Cl. 196—52)

1. A fluid catalyst process for the conversion of hydrocarbons including the following steps: passing the catalyst in suspension in hydrocarbon vapors to be converted into the lower end of a vertically elongated reaction chamber of relatively large transverse dimension, passing the vapors upwardly through said chamber through a plurality of alternate zones of low velocity and of high velocity, the superficial velocity of the vapors in the low velocity zones being within the range of 0.3 to 1.5 feet per second, the high velocity zone being composed of a plurality of restricted streams of substantial height and the velocity of the restricted streams being within the range of 3.5 to 7 feet per second whereby catalyst will drop out of suspension in the low velocity zones, forming relatively dense fluidized bodies of catalyst therein, permitting catalyst to gravitate downwardly from the respective high density bodies to the next lower zone in annular streams surrounding the respective upwardly flowing high velocity streams of the hydrocarbon vapors and withdrawing the spent catalyst and hydrocarbon vapors from upper portions of the reaction zone.

2,471,085
FLUID CATALYST PROCESS FOR THE CONVERSION OF HYDROCARBONS
Marion James Wilcox, Harvey, Ill., and Ralph Elden Hall, East Chicago, Ind., assignors to Sinclair Refining Company, New York, N. Y., a corporation of Maine
Application June 28, 1947, Serial No. 757,908
2 Claims. (Cl. 196—52)
